A semi-official statement issued last week regarding the punitive operations against the Kurds adds but little to what was already known. Two British columns of two and a-half battalions each were engaged, and apparently several sharp engagements with well-armed bands of Kurds have taken place. Happily, our losses have been slight, while heavy casualties have been inflicted on the enemy. The latter showed that he has not lost the cunning in mountain warfare with which he is usually credited, and the fact that in some parts the fighting was of some hours' duration indicates that he showed plenty of courage, too. It is satisfactory to find our anticipations realised, and to have the semi-official assurance that the prompt action taken by General Marshall "has had excellent influences . . . and has dispelled the widespread belief that everyone could do as he liked, as we had so few troops left in the country." The more swiftly this intelligence spreads through Kurdistan the better for the Kurds.

The difficulty of obtaining passages for the East appears to be increasing rather than diminishing as time goes on, and officials who were unable to come home this year may find some consolation in the statement made by a correspondent of *The Times* that Government servants are spending most of their leave in searching for accommodation for their journey back. Men of business, too, are complaining that important journeys are rendered impossible, and it is significant that offers of a premium for berths already secured are now being advertised for various Eastern lines, a practice which we had hoped to see confined to the Atlantic, where it had its origin. Premiums, of course, mean "stags," those amiable persons who take berths merely in the hope of selling at a profit, and while we have no doubt that the practice is discouraged by the various shipping companies, there can be little doubt that money in astute hands tells. Anglo-Indians devoted so much abuse to the Passage Controller who was established in Bombay last spring that perhaps they deserve on object-lesson, but we trust it will not continue too long, and that the supply of accommodation will soon overtake the demand.

Such time as Anglo-Indians on leave can spare from the hunt for passages seems to be devoted less to the high politics of the Reform Bill than to speculation regarding the future of the rupee, and one hears conversation which recalls the great days of 1890, when American purchases of silver sent exchange up with a bound, and the difference between 1s. 3d. and 1s. 9d. was a matter of days. As has usually been the case, there is a marked difference between the wishes of merchants and of salary-earners in this matter. Men of business want, above all things, stability, and are inclined to blame the Indian Government for failing to maintain a fixity of exchange which scarcely any country in the world enjoys just now; to them the important thing is to fix the rate somewhere, and the precise point is a matter of less moment; but the man who draws a salary in rupees is very naturally hoping that the high rate now reached may be maintained, or even that it may be raised to the old, convenient figure of two shillings.

Such aspirations deserve at least our sympathy, all the more so that this year leave has been something of a disappointment to men of moderate means. They paid heavily for their passages, and when they got home they found that money went a very short way; everything was much dearer than they expected, and the enhanced value of their rupees made but a small set-off against the increased charges which they had to meet, while to most of them the future was clouded by the threat—as yet we believe unrealised—of a big rise in school-bills, the item that bulks so largely in the budgets of those who serve the East. To this large class the difference between a high and a low rupee means primarily the difference between a good and an imperfect education for the children, and we cannot wonder that they are anxiously awaiting the termination of the labours of the Currency Committee, and speculating whether the rupee will be "pegged" at the point to which it has risen, or allowed to sink back to the level from which it started.

We do not, of course, mean to suggest that the Committee should be guided by such considerations as these, or even by the weightier matter of the needs of a Government which has large arrears of sterling expenditure to make up. The requirements of commerce and industry must be the decisive factor, and the Government, like private individuals, must adjust its finances to the rate which results. We have no intention of prophesying what that rate will be; the problem is exceedingly complex, and the adjournment of the Committee pending the arrival of additional evidence from India must be taken as an indication of the difficulties in the way; but we can at least express the hope that on this occasion the various interests may be found to coincide, and that the value assigned to the rupee for the advantage of industry and trade may at the same time bring some consolation to consumers buying in the English market, whether their purchases consist of bridge-work and locomotives, or of sound learning for the coming generation.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 16.

The Strike Fever.

The week has been marked by a succession of strikes in both public and private enterprises, and most of these are still in being. Several of them appear likely to be complicated with lock-outs, following the example of the big restaurant owners, who have put up their shutters, and who are supposed to have fixed three months as the duration of their reply to the strike. The public is beginning to get rather tired of these demonstrations; and sympathy is likely to ebb altogether from the side of the men, if they remain as obstinate and unreasonable as some of their leaders would like. It is instructive to see the unemployed in Alexandria flocking to the Egyptian Labour Corps recruiting offices to enlist for five piastres a day and their food—equal, say, to five piastres more, whilst very much the same class of men in Cairo are standing out for clothes, boots, greatcoats, bonuses, and salaries about twice those of the Labour Corps men, for doing half their work. At least, this is how it strikes the man in the street.

The Spirit of Lower Egypt.

The situation in the provinces of Lower Egypt is still far from satisfactory, and Europeans who have to do with the villages, contractors, merchants in cereals, etc., are saying that the insolence they meet with is quite a new thing in their long experience. Rightly or wrongly, they put this down to two principal causes. First, the fact that very few, if any, severe punishments were meted out to the authors of the very serious disturbances in the provinces north of Cairo, in contrast to the executions and floggings which have produced a most salutary effect in Upper Egypt. There the temper of the population seems to leave little to be desired, and to be very different from that of the peasantry in Sharkieh, Behera, Gharbieh, and the northern Mudirias. Secondly, the abolition of Military Courts of Inquiry and the handing over of the inquiry to the Parquet. It is notorious that the disorders were fomented by lawyers and law students; and that the Parquet, which is a part of the same judicial system, should be entrusted with investigating the causes, and determining the responsibilities for the outrages and destruction of State and private property, appears to those who are best able to judge by the results to have been premature and a regrettable error.

Whether these arguments are true, and whether these are the precise causes for the xenophobic spirit in Lower Egypt, would require close examination to decide. But that there is such a spirit abroad little divergence of opinion exists. The Extremists declare that the animus is against the British alone, but any Greek or other foreigner with business amongst the villagers will tell another tale. Often the pretext is insolently made that the stranger is a friend of, or working for, the British, and, therefore, is to be treated with contempt; but whatever his nationality may be, it does not protect him now from contumely, and still less would it protect him from violence of every sort at the first opportunity.

Good (?) Old Customs.

In endeavouring to analyse events in Egypt it should never be lost sight of that, except in one or two of the large towns, the country is still more or less under feudal customs. The Omda, in the majority of cases, lives in a fine house like a castle, and dispenses justice and all the smaller issues of life, if not of death, almost at his own will. If he is on good terms with the Ma'mour or any other high officials, his authority can never be questioned by the fellaheen, however he may abuse it. In the March disturbances things probably really happened as were told me by a landowner describing his own losses:—"The people who loted and destroyed my farm and the railway and Government buildings were usually peaceable enough and good friends. One of them told me that when he found hundreds of fellaheen bent on rioting, he could do nothing else but join in. The Omda of Hamra, for example, would hear that the Ma'mour had spoken in praise of the Omda of the smaller hamlet of Hadra, because he 'came with fifty men and had done good work'—*i.e.*, torn up a railway embankment or some such exploit. This was not to be borne. He immediately called out his village, and, abusing them all as 'sons of donkeys and dogs' to let themselves be beaten by the men of Hamra, led them off at once to do some better deed. Then the Omdeh of Safra would get mad at this, and fly into a rage. 'Are we to have our faces blackened by villages like Hamra and Hadra? Out with a hundred men, and show the world what you are like!' And so on!"

There was very little enthusiasm at first amongst the peasants; but freedom to loot and destroy, and, what is more, to vie with rivals in such work, soon made "patriotism" very popular; until the strong arm of order appeared on the scene, when, as if by magic, nothing remained of the mad fury of the day before but the wreckage. The authors were not to be found, much less recognised amongst the obsequious creatures discovered on the spot by the military.

Now that the military have gone, however, the obsequiousnes has gone with them, and the voice of the Omda echoing the propaganda of the Extremists is again the dominant note. This, at least, is the story that one hears from all experienced observers on their return from visiting the provinces, and so far it awaits public denial.

The Zaghlulites.

The return of several members of the Saad Zaghlul Pasha Delegation has led to very contradictory suppositions. The general opinion is that these gentlemen perceived that they were not making any headway nor were likely to do so, and neither were they playing any rôle in Paris. Therefore, they preferred to come back and resume their business at home. There are, of course, many other rumours, such, for example, as that some of them are laden with Bolshevist money in order to start Bolshevism here. Another story is that one or two of them have determined to "rat" from Zaghlul, and go over to the Government in the hopes of obtaining some post.

There is no doubt in any case that they have not brought back any glory or more material results from their escapade; and their odyssey is being sung by little street boys as follows:—"Shaloo essheeleh: Hottoo elhotta: Rahoo ala jemel: Ga'oo ala 'utta," which being translated freely means: "They took up a mighty burden: And then they laid it down. They marched out on camels: and stole back like gutter cats." But the original Arabic is more expressive.

Reuter's Alexandria correspondent reports that on September 2 a bomb was thrown at the Prime Minister, but that fortunately he was not hurt.

Cairo tramway strikers, who have been out for three weeks, have refused to accept the offer made by the companies, and the Governor of the city has intimated that the cars will be run without them.

The Roumanian Legation notifies all Roumanian citizens and all those born in the provinces or parts of provinces now reunited that the following have to report in writing their legal status, age, occupation, and address to the Military Attaché of the Legation (4, Cromwell Place, S.W. 7), and notify any further change of address: (1) All men of 19 to 45 years old; (2) all officers (active, reserve, retired) up to the age of 60 who are serving or have served in any capacity in the Roumanian Army or the armies of the countries to which the newly-reunited provinces belonged.

BELGRADE LETTER.

(From Our Own Correspondent.)

Belgrade, August 18.

The long Ministerial crisis has dragged its weary length through three weeks, and was finally settled by the formation of a Coalition Cabinet of Democrats and Socialists, with the assistance of some of the minor groups. Dr. Davidovitch has had his hands full, for he spared no effort to form a complete Coalition of all the parties, but the Radicals resolutely refused to join, or, rather, they made such conditions that Dr. Davidovitch was unable to accept them. These were that M. Stoyan Protitch have the portfolio of the Interior, that M. Pribichevitch have some other portfolio, and that M. Vulovitch, Minister of Communications, and Dr. Alaupovitch, Minister of Religion in the late Cabinet, leave the Government, and that the Radical policy of agrarian reform be adopted.

Party Differences.

The Democrats could not accept these conditions; they could not lose M. Pribichevitch, who leads the Serbo-Croat Coalition, and has worked hard for many years for the dream of Serbian unity, nor would they sacrifice Mr. Vulovitch and Dr. Alaupovitch. As last week dragged on, it became every day clearer that no *modus vivendi* would be found between Democrats and Radicals, although their differences lie more on personal animosities than on principles. The chief differences are that the Radicals, having fulfilled their patriotic function and achieved their ideal of union with their brother across the river, are gradually becoming a purely conservative party. They are opposed to woman suffrage, are in favour of a partial agrarian reform, proposing to spare the German colonists in Dalmatia and the large estates of the Bosnian beys and Croatian landowners and big estates in the Voivodina or trans-Danubian Serbian territories, which would identify them with a Tory agrarian party; and they are accused by the Democrats of favouring a muzzling of the Press and a postponement of demobilisation and of the summoning of the Constituent Assembly for purely party purposes. The Democratic party, on the other hand, propose a radical agrarian reform by dividing up all big estates, subject to due compensation to the owners, and they wish to hasten the meeting of the Constituent Assembly, so as to put the organisation of the country on a proper basis, to expedite demobilisation, to guarantee an entirely free Press, and to give the vote to women who are in Government employment.

Party strife runs high between these two opposing parties, but in the present state of flux of Serbian politics personalities still play a bigger rôle than principles, and there seems to be no fundamental difference between the two except on the question of agrarian reform, where even the Democrats propose to leave estates of 250 hectares, except in the case of specially valuable land, where the maximum for any one owner will be 150 hectares. After a long reign the Radicals now find themselves in opposition, from which their partisans claim they will soon emerge, when the Democrats have proved their incompetence. Certain it is, that M. Stoyan Protitch is a dominating personality, and that the Radicals under Nikola Pashitch and Stoyan Protitch have triumphantly asserted the national cause and brought their country out of subservience to Austria through disaster, to avenge Kossovo, and achieve the union of Yugoslavs which has been the ideal of patriotic dreamers for a century.

The New Cabinet.

On the twenty-third day since the resignation Dr. Davidovitch formed his Cabinet, took the oath, and assumed office. The reconstructed Cabinet does not differ outwardly very greatly from its predecessor, and contains a number of Ministers, many with their old portfolios, such as M. Pribichevitch, Minister of the Interior; Dr. E. Lukinitch, a well-known Croatian lawyer, as Minister of Posts; Dr. Trumbitch, the Dalmatian patriot who is well known in London and Paris, at Foreign Affairs; Dr. Kramer, leader of the Slovenian Liberals, as Minister of Industry and Commerce; Dr. Alaupovitch, a prominent Croat Democrat, as Minister of Religions; and General Sv. Hadjitch as Minister of War. Other members of the late Cabinet who remain in the Government, but with new offices, are: M. V. Vulovitch, who has passed from Communications to Public Works, as befits an engineer; M. P. Marinkovitch, who leaves Mines and Forests for Education; an experienced diplomat, a lawyer by profession—M. Marinkovitch—is a prominent member of the Progressive party that broke away from the old Conservative party in 1906, by way of protest against the methods of the revolution of May, 1903, and have for their motto, "*Rad, Red i Legalnost*," or "Order, Work and Legality"; and the President of the Council, Chief Minister without a portfolio, Dr. Liuba Davidovitch, Minister of Education in the late Cabinet, a post which he has held five or six times. He was a prominent member of the Independents, or *Samostaltsi*, a party which broke away from the Radicals twenty years ago, under the late Stoyan Novakovitch. These two men between them have effected a revolution in education in Serbia; their party is now fused with the Democrats, of which Dr. Davidovitch is to-day a recognised leader, respected for his mental attainments, and popular by reason of his suavity of manner. Whether he possesses that driving force which is so necessary in the present critical stage of the young nation's history remains to be seen.

Three prominent Democrats have joined the new Cabinet. The first of these is Dr. Voja Veljkovitch, one of the richest men in Serbia, formerly a Liberal, and a well-known banker, who is now Minister of Finance, at which post it is hoped his experience in money matters will put some order into the present chaotic state of the country's finances. He is up against a stiff problem, with the burning currency question before him, in which, fortunately, much spade work has certainly been done by his predecessor, Dr. Ninchitch. Then there is M. Milorad Drashkovitch, who hurried from Paris to accept the portfolio of Communications. He is a prominent Democrat, a practical politician, reputed to be a good speaker, and a man of great energy. He will certainly have plenty of scope for the latter quality in his new office. And there is M. K. Timotijevitch, the new Minister of Justice. Like his friend and former partner, M. Drashkovitch, M. Timotijevitch was formerly a lawyer in Semederevo; both were prominent Independents, and both have considerable experience of law and of banking. His scheme for adjustment of the moratorium has been adopted by the Special Parliamentary Commission, and now awaits the justification of the Skupshtina to become law. He has held the portfolio of Justice, and brings ripe experience to the work.

The remaining members of the Cabinet are Dr. Poljak, a prominent Croatian agriculturalist, who combines Agrarian Reform with the portfolio of Agriculture, and the three Socialists, Vitomir, Koratch, and Vilim Buksheg, both Croats, who have respectively the portfolios of Social Policy and Food and Reconstruction; and Anton Kristan, the Slovene, who has Mines and Forests.

In this Cabinet there is one notable omission. Of all the members of the late Government, the one who has made the greatest impression for capacity is Dr. Koroshets, leader of the Christian Socialists of Slovenia. He is taking a well-earned rest for a month or more. His absence will be felt, and it may be true that he will support the Government with his party, and perhaps join the Cabinet after a few weeks' rest.

The strength of the Democrats in the House is 113, which is about the strength of the Radicals, but they have the support of thirteen Socialists, who are of the patriotic type, and of the ten Montenegrin deputies. There are three Dissident Radicals, four Bunjevtsi, or Catholic Serbs from the northern territories, and, oddly enough, eleven members of the Narodni Klub, or Croatian Nationalist party, of which thirteen have sided with the Radicals.

General Prospects.

It will be gathered from this that the bonds of party discipline in Serbian politics are not very strong, especially when we learnt that a prominent Democrat, Dr. Bogdan Medakovitch, is in opposition, on the grounds of agrarian reform, for he is the owner of large properties in Croatia, which he does not want to see divided. The adhesion of these minor groups gives Dr. Davidovitch a strength of 154 in the Skupshtina, which should enable him to carry on the business of Government, especially as all parties are agreed on the fundamental question of national existence and foreign policy. If Dr. Koroshets and his group join the Government, their strength will be assured. But they will want all the support they can get, for there is no doubt that these party bickerings do the country a great deal of harm abroad.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, August 10.

Governors.

All new Governors are applauded, and this is not peculiar to Malta, but the reception which the new Governor, Field-Marshal Plumer, has received has certainly been more than an ordinary one, and this fact is all the more intensified by the knowledge that the new Governor took over the island at a most critical time. His Excellency had the pleasure of receiving the enthusiastic welcome of the inhabitants of the sister island of Gozo last week. Removed as the islands were from the main theatre of the late war, the famous deeds of the new Governor had preceded him, and the people were not slow to recognise his merits. It is hoped that the tenure of office of His Excellency will be long enough to enable him to follow out his own plans as far as the island is concerned. It has hitherto often been remarked that just as soon as the right man has been fixed in the right place he has been removed.

Commissions.

The Committee appointed to inquire into the cause of the recent disturbances and riot has begun its work, and a long process it will be. Up to the present time the proceedings have been but formal in their nature, and hence savour of insipidness, but when such important persons as Major-General Hunter Blair, C.B., C.M.G., the Noble Contino Alfred Caruara Gatto, LL.D., and others are put in the witness-box, surely the guilty pro-Italian party—the real cause of the recent disturbances and present discontent—will learn that to haul down the Union Jack is no trifling matter. Apropos of the riots it should be mentioned that the Court-Martial is still sitting, and is expected to do so until Christmas.

Russian Refugees.

These are still with us, and it is a noteworthy fact that many are willing and anxious to make Malta their future home. The local papers contain many advertisements in which the refugees offer their services in various capacities. In the person of Mr. E. W. Caruaua, the managing director of the Russian-British Commercial and Trading Co., Ltd., of Kherson, and who has just reached Malta, the Russians have a staunch friend, and through him the real state of that country has been made known here. As a matter of interest it should be mentioned that even in April last bread was 10s. a pound butter £1 2s. 6d. a pound, tea £6 a pound, eggs 2s. each, coal £62 per ton. boots £25 per pair. These figures from Mr. Caruaua himself are as authentic as they are staggering. It is little to be wondered at that the Russian refugees look on Malta as a veritable heaven, and all the more to be appreciated as one devoid of Bolshevism.

"Olla Podrida."

His Excellency the Governor has asked H.M. Judges whether they wish to submit concrete proposals for the reforming of the Malta Constitution.

The bulk of the discussion at the cafes, clubs, and casinos is the new constitution. Little hope of a satisfactory conclusion of the matter is held out, and already there are splits in the various camps. The Democratic Party is distinctly peppery.

Despite the economical and political difficulties in the island, there is sufficient humour left to bring out the usual silly summer-season queries. This time it is not related to the size of gooseberries or mushrooms, neither does it deal with the sea-serpent or sharks, but the great query is—whether soup is eaten or drunk!

Emigration. August 15.

The population of the island has increased rapidly during the past thirty years, and up to now there has been no adequate organised system established for reducing this surplus population, but matters have become so bad that the Government has absolutely found itself forced to move. The Maltese would-be emigrant is of capital stuff, but is severely handicapped by his illiteracy and his lack of knowledge of the English language, with the result that he is absolutely debarred from entering some fields of emigration, whilst in others he only fulfils the rôle of a hewer of wood or a drawer of water. Yet a certain section of the people of the island clamour against compulsory education! The reason for this, though patent, had better not be discussed. With a view to improve this deplorable state of things, the Emigration Committee have established a system of evening classes, wherein those desirous of getting a working knowledge may do so. It is admitted that, to accomplish anything tangible, the sum of £100,000 should be provided within the next two years. Here again empty coffers stare the island in the face. As regards the educational effort referred to above, the sum of £800 has been set aside for the current financial year. *Verb. sap!*

Recent Riots and Sentences.

The Commission appointed by His Excellency to enquire into the report on the events of June 7 and 8 last, and the circumstances which led up to them is constituted as follows:—The Senior Judge, the Vice-President of the Chamber of Advocates, Lieut.-Colonel E. W. S. Brooke, C.M.G., D.S.O., Lieut.-Colonel W. T. Bromfield. Other local lights were requested to act on the Commission, but ill-health and other reasons were given for not doing so. It should be noted in this connection that the people of the island looked on those killed as martyrs. The findings of the General Court-Martial on the riots are to hand. Thirty-one persons were tried and charged with causing malicious injury to property in a manner prejudicial to the public safety, and the sentences are as follows:—Three not guilty and acquitted; one to seven years' and three to five years' penal servitude; one to four years, four to three years, three to two years' hard labour, one to one year without hard labour, one to six months' and 13 to three months. His Excellency remitted sentences in the case of the last thirteen, and the one for six months. This should serve as a salutary lesson, but the general opinion locally is that the real culprits—the men behind—have escaped scot-free

CYPRUS NOTES.

(From a Correspondent.)

Visitors from Egypt.

Cyprus still welcomes a stream of visitors to its shores, chiefly from Egypt. The pity is that the mail steamer does not boast of better accommodation, which is far from being what one could desire in these days. The crossing is hardly a pleasant one, and never has been from the date of the occupation. Heat in the plains is oppressive, and the hill camps offer a welcome refuge and change. Mr. and Mrs. Stevenson occupy "Government Cottage." The usual amusements are available, and many picnics are organised by the English. Many a Greek pilgrim rides up to the great Kykkou Monastery to kiss the ikon of the Virgin and to pray for relief from sickness or trouble. From the summit of Olympus—a favourite excursion—you look across to the snow-clad heights of the Taurus range. It is strange to think that Asia Minor (only some forty miles distant from the northern coast) might be as distant as Canada, or non-existent, for all the news that comes from this neighbouring land. During cereal harvest many labourers used to flock over to earn an honest piastre, bringing carpets, furs, antiques, and other wares for sale. When peace is fully restored this custom will no doubt be revived.

The Island's Future.

Allusion to the threadbare subject of the island's future would be tedious, as nothing fresh can be said regarding "Greek" claims. They can, of course, be stated in a few words, and can be more than fully answered in equally few. In Cyprus the state of suspense, though annoying, does not cause so much positive mischief as it would, and does, in many other regions not far off. But a decision is very desirable. The vacancy in the High Commissionership and the absence of so many of the chief officials (very natural after a five years' deprivation of leave) tend to unsettle affairs and invite sarcastic comment in the Press regarding the "paralysis of the Government machine." Legal work may suffer when one District Judge runs two Districts. The Government Analyst and Lecturer on Chemistry presides over the Post Office, and two of the principal departments are directed by an over-taxed chief with undermanned staffs.

The Turkish community (the leaders and principal body are at Nicosia), though weary of the never-ending Greek agitation, have not been dismayed by the reports of the deputation in London, for they have always kept their heads during any crisis. But they have no doubt felt easier in proportion as Greek hopes have subsided, as has been the case. The Greeks profess to base their petition on "British justice." But the Moslems do precisely the same, relying, and with good reason, on the pledges given by the Imperial Government and successive Ministers, that their case would be fully and carefully considered when the time for settlement arrives.

Prospects of sport and game supply are encouraging. Partridge shooting begins on August 12, the date having been changed several times during the occupation. Game is plentiful, notwithstanding increased cultivation, and the reservation of certain areas has done no little good.

The Postmaster-General gives notice that telegraph money orders are now issued for payment at certain offices in Greece (including Crete). Particulars of the offices in question may be obtained at any telegraph money order office in the United Kingdom. The maximum amount for which a single order may be drawn is £40. Telegraph money orders are also now issued in Greece for payment in the United Kingdom.

LETTER FROM SMYRNA.

(From Our Correspondent.)

Smyrna, August 15.

British Representatives.

On August 4 General Allenby's representative in Smyrna, General Hanbury, was installed in his post by General Milne, the G.O.C. for Constantinople and the Black Sea. Colonel Anderson, his Chief of Staff, and Major Blake and fourteen officers serve under him.

Following on General Milne's arrival, Commodore Maurice Fitz-Maurice has hauled down his flag from H.M.S. Centaur, on which it has been flying in Smyrna for the past few months. The Commodore has returned to the Mudros base on H.M.S. Tilbury. Captain Harvey, H.M.S. Mimosa remains in Smyrna as S.N.O.

"Advanced British Headquarters" is now the sign on the two principal Armenian houses on the Smyrna quay. These houses were commandeered by the Greek Archbishop, acting under orders from M. Stergiadis, the Greek High Commissioner, and the owners were given only a few hours' notice to vacate the premises, and were ordered to leave behind all their household effects.

The Crops in Danger.

Colonel Anderson and Major Blake have already shown considerable energy and perspicacity in approaching the Turks with a view to inducing them to stop fighting and to return to their vineyards and fig plantations—to harvest the crop, which is in imminent danger of rotting. At Cheena, in the Meander valley the Turkish farmers were inclined to respond to Colonel Anderson's appeal, but the Turkish military element forbade the farmers to return to the plain; and at Sokia, on the Aidin Railway line, both farmers and military refused to return to the farms until the Greek army retired. Nevertheless, it is hoped that by a skilful distribution of British officers the Turkish farmers may be induced to return to their fruit crops, once they appreciate that General Hanbury and his staff are in the country to maintain order.

Cereal crops are entirely lost, and if the fruit crops cannot be saved, this fertile province will have to depend on food supplies from Europe for the next year.

JERUSALEM NOTES.

(From a Correspondent.)

Jerusalem, August 9.

Agriculture.

The Administration of the O.E.T.A. is paying great attention to agriculture, helping the peasants and improving their conditions. It has commenced to give loans to the poor who are not able to look after their lands. This step will undoubtedly make the land more productive, and will redound to the benefit of the whole country.

New Cemetery.

A large British cemetery is in process of construction, and is now nearing completion. It is well and fittingly situated on Mount Scopus (near the Mount of Olives), and will contain, when finished, about 4,000 bodies. All the British soldiers who fell in or around Jerusalem are being transferred to this new spot. Already all those who fell in the Jordan valley have been removed from those burning sands to this, their last resting-place, to remain for ever in the city for whose conquest they fought, but which they never lived to see. Also all who were buried in the Protestant cemetery of Mount Zion during the Turkish *régime* have been transferred to this place. Recently the young girls of the British High School (formerly the German *Talitha Kumi*) have been going once a week to water and tend the plants and flowers which are growing on the graves of the heroes.

JAFFA NOTES.

(From Our Own Correspondent.)

Jaffa, August 15.

On handing over to Major-General H. D. Watson, Major-General A. W. Money, ex-Chief Administrator for Palestine, conveyed his most sincere thanks to all the British officers and other ranks, to the civilian clerical establishment, and to the Syrian, Egyptian and other officials who have worked with him so loyally and untiringly in supporting this Administration.

Major-General Watson has served for several years in the Sudanese and Egyptian Administrations; and as he is familiar with the habits and wants of the Near East much is expected of him as Chief Administrator for Palestine.

Jaffa had the great pleasure and honour of welcoming the new Chief Administrator on the 12th instant. The population in general have submitted the following demands:—

1. To forward the construction of a harbour at Jaffa.
2. Instead of the light railway between Jaffa and Ludd, to arrange to bring the Palestine military railway to Jaffa.
3. To help in the immediate delivery of the Government Agricultural Loan to landowners and agriculturists.

As to the last two demands Major-General Watson has promised to do his utmost in gratifying the real needs and desires of the Jaffa population, but as to the first demand he can do nothing to this effect before the destiny of Palestine is settled by the League of Nations.

Major-General Watson has left for Jerusalem.

JERUSALEM: OLD AND NEW.

By Victor L. Trumper.

Probably few people who saw it realised the significance of the small case containing a topographical model of the city of Jerusalem, which was on view recently in the Academy Exhibition. The Holy City has nearly always been inhabited by people who did that which was right in their own eyes, consequently it is the conglomeration of ruin extending from the surface to seventy feet below that we find it at the present day. With the exception of the Jews' Wailing-place, it is doubtful if there is anything above ground which is older than the Christian era, and its twenty-eight sieges and captures have added their quota to the general confusion, while, to crown all, the Holy City has been under Turkish rule, which destroyed the last vestige of any order or sanitation that it may ever have had.

However, all is changed now, and with the advent of a stable and sympathetic rule, Jerusalem bids fair once more to become the "joy of the whole earth," with "living waters" flowing into it, due to the skill and enterprise of the authorities. The next thing to be done was to cleanse the city and remove the superfluities, by which is meant all buildings which have no religious, historical, or architectural values; and to this end a zone is being cleared round the present walls, which will be laid out with paths and shrubs, so that one may "walk round about Jerusalem and tell her bulwarks." Also inside the city walls all fresh buildings are to be absolutely prohibited, and sites where possible cleared where archæological investigations under proper supervision can take place. Jerusalem will then be looked upon as a shrine containing the holy places of the three great religions of the world.

Outside the cleared zone around the walls will be a zone on which no buildings will be erected, except those which have the special sanction of the authorities as being in keeping with the site. Outside this zone, again, is the plan for the new city, which will principally extend along the comparatively level ground to the northward and westward of the present city.

It is probable that nothing has ever been done before along these lines, though the reproof to Shebna, the scribe in Isaiah xxii. 15-16, may refer to the fact that he had hewn out a sepulchre in a prohibited area.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

GREAT BRITAIN AND EGYPT.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your number of the 15th inst., with regard to Dr. A. J. Butler's article in the *Nineteenth Century* on "The Fortunes of Egypt," in which he says "it was French capital mainly and French engineering genius which made the Suez Canal, and, during Ismail's reign, French and English influence were much on a balance." This is hardly correct, considering that the Suez Canal shares owned by Ismail Pasha and bought by England were 177,000 out of the 400,000 total of the company. Further, that the concession obliged the Egyptian Government to provide forced labour for digging the Canal, and when the Government found it impossible to do so, it had to indemnify the Canal Company for providing it. The concession gave the Canal Co., gratis, enormous tracks of land that it could not possibly utilise for the purposes of the canal, and the Government had to buy back these grounds from the Canal Co.—for instance, tracts on each side of the fresh water canal between Cairo and Ismailia—besides other details elsewhere, and concerning this canal, for which by the Napoleon award the Canal Co. received 39 millions of francs. Surplus grounds of the concession not required for canal development are still sold to private persons on joint account between the Government and the Canal Co., and not returned to the Government as beyond the requirements for the canal.

Obviously it was Egyptian capital and French engineering genius which made the canal. During the greatest part of Ismail's reign, it was French influence that predominated, although each Power had a Minister or Consul-General at the Khedive's court, not in his Cabinet.

The Canal Co. honoured the memory of Waghorn, the precursor of the overland route, in erecting a beautiful statue of him on the quay at the entrance of the canal at Suez, which can be seen any day.

Tewfik Pasha was eminently everything described in this article. "British domination was due to an irresistible purpose working through the shortcomings of human intelligence for the good of the world." For years every act taken by other Powers to endeavour to get England out of Egypt, brought about exactly the contrary result, and established her more firmly in the country, practically preventing her from leaving it, and obliging her to remain, and so it will always be. Egypt can never remain without guidance from some Power.—I am, etc.,

DIXON PASHA.

Nice, August 25.

THE FUTURE OF BURMA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Permit me to point out that there is no danger of a separation of Burma from India, if danger there be in the transfer of that Province from the India to the Colonial Office. Sir R. Craddock, it is true, for reasons best known to himself, has mooted this subject. But the peoples of Burma have not asked for separation. The people of Burma consider that their progress towards self-government will be best assured in conjunction with India. The Burmese, together with the Chinese and Indians settled in their country, are making common cause for the Montagu-Chelmsford reforms, in other words for the inclusion of Burma in the Government of India Bill. That inclusion is the one point on which opinion is concentrated. The Burmese are not concerned with separation from India, nor will they allow their attention to be distracted from the main point at issue by Sir R. Craddock's allusion to separation.

After all, why should the Burmese desire now a transfer to the Colonial Office? The Government of India Bill will give them a greater degree of self-government than they are likely to get otherwise. Under it the Simla Government remains unchanged. Why should it interfere in Burmese affairs more than heretofore? Supposing that the Bill is altered so as to allow a certain amount of popular control, it is unlikely that the reformed Government will interfere more than does the present bureaucracy. The probabilities are all the other way. Those who by hard conflict have won liberty for themselves are little likely to thwart the free development of others.—I am, etc.,

BERNARD HOUGHTON.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—On behalf of the Moslems of Cyprus, and in justice to them, allow me to express through your valuable columns their unbounded gratitude to the fair and noble-minded Britons who have so honourably advocated the retention of Cyprus under British rule, and permit me to make the following observations on the letter published in the *Times* of July 21 last, under the heading of "The Island of Cyprus."

The Greek politicians seem to strain every nerve to prove that the condition of Moslems in Thessaly, Crete, and Macedonia since they became part of the Greek Kingdom is such that the Moslems of Cyprus would have nothing to suffer under the Greek Administration, in lieu of British rule, and they appeal to every "fair-minded man and critical observer" to agree with them; but, on the contrary, the Moslems of Cyprus and, we firmly believe, any other "fair-minded man and critical observer," on past and present experience, hold quite the opposite view, owing to the fact that the Moslem inhabitants of the countries above-mentioned have suffered a great deal since they came under Greek rule.

In 1878 there were 100,000 Moslem inhabitants in Thessaly; now there is almost none. In Crete, in 1897, there were 90,000 Moslems, and at the present time there are only about 30,000 of them in existence. As regards Macedonia, I quote the following extract from the speech of Viscount de Potier, delivered in Caxton Hall, in December, 1916 (*vide* NEAR EAST, No. 294, p. 173).

". . . Towards the end of the Balkan War, Moslems in Greek Macedonia were made so uncomfortable that many left the country. They sold their non-movable property at absurd prices, and in some cases the money so obtained was absolutely stolen from them by the Greek authorities, so that they landed in Turkey penniless. . . ." Besides the above facts, we have the recent example of the unfortunate landing of Greek troops in Smyrna, which made the Moslems of Cyprus, and we are confident, all "fair-minded and critical observers" shudder at the suggestion of the 60,000 loyal Moslem subjects of His Majesty being handed over to Greece, against their will and the moral and material interests of their country.

As regards the attitude of the Greek inhabitants of the island towards their fellow citizens, it is sufficient to mention that even under the present *régime* they lose no opportunity in taking advantage of their numerical superiority even in trifling matters, which can easily be proved.

It is small wonder, then, that the Moslems of Cyprus face the idea of the cession of Cyprus to Greece with great apprehension and alarm, and that they look to the British nation to avert this calamity, to maintain intact the *status quo* in the island, and to allow its Moslem inhabitants to continue to enjoy the rights and liberties conferred by British nationality in common with so many of their co-religionists, as a reward for their consistent and true loyalty to the British Crown since the occupation of the island by Great Britain.

With regard to the strategic importance of the island, a mere glance at the map will, I submit, prove this. The island has undoubtedly been of much use during the present war, as is well known to the military and naval authorities.

In conclusion, permit me, Sir, to express the unshaken belief of the Moslems of Cyprus in the sense of justice of the British nation, which, we are confident, will not destroy the present peace and prosperity of the island on sheer sentimental grounds, and to add that they are convinced that the principle proclaimed by distinguished statesmen will be upheld—*i.e.*, all territorial and colonial settlements must be in the interest of the peoples immediately concerned.—I am, etc.,

M. IRFAN,
Member of the Executive and Legislative Councils, etc.,
. etc., Cyprus.

Nicosia, Cyprus, August 14, 1919.

SOME MEDITERRANEAN QUESTIONS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The August number of the *United Services Magazine* contains an article entitled "From the Straits to the Levant," by Lieut.-Colonel A. C. Yate, which well deserves a perusal by those interested in Near Eastern affairs. The article, emanating from an authority who has spent many years in the East, is rich in details, and covers many of the Eastern problems at present engaging the attention of the Supreme Allied Council, but it contains several statements to which I, as a Greek, cannot agree.

Commenting on the unrest at present prevalent in the Moslem East, and on the presence of Bolshevist agents in Afghanistan, the writer mentions the cool request of General A. N. Briant Chaninoff, that until such time as Russia recovers herself, Great Britain should become "the mandatory for Constantinople on behalf of Russia." Lieut.-Colonel Yate justly condemns any such move, and it is inconceivable after Germany's greedy ambitions have been frustrated, and her treacherous schemes brought to nought, that Russia, which as an Empire perpetually broke her plighted word, and for her own ends drenched the Balkans in a pool of blood, should be again reconstructed into that artificial union of different tongues and creeds formerly composing her, and, receiving that which she has no right to, be thus placed in a better position to threaten the world anew.

Rather than allow the Russian to have the mandate for Constantinople, Lieut.-Colonel Yate would prefer to give it to the U.S.A. To many this would seem the best solution, but it cannot be denied that the Greeks, who are the most progressive and intellectual element in the city, are somewhat suspicious of the Americans, regarding them as staunch pro-Bulgarians. As the Greeks have a strong claim to the city, both on ethnological and historical grounds, but on the other hand do not form the only element in its population, the ideal solution might be a joint mandate between U.S.A., Great Britain, France, and Greece. This would allow the Americans to continue their good work at Roberts College and elsewhere, Britain could undertake her traditional role of protecting and guiding the Moslems, and France could look after her protegés, the Latin Christians. The Greeks of Constantinople are quite capable of looking after themselves,

whilst as everybody in the city speaks Greek, which is the business language, Greece should provide the police, especially as she has such fine material in the Cretans.

Touching the Dodecanese, the glories and prowess of the Hospitaller Knights, who held the islands in the Middle Ages, are recounted, and we are told that "what the Order wrought in and from Rhodes from 1310 to 1523, the Greek would never have done." To contradict this somewhat uncharitable statement, we need not go back to the days of Miltiades and the Persian invasion of Europe, but let us confine ourselves to the perpetual warfare of the Byzantine Empire against the Barbarian in the years after Our Lord. Constantinople proved an unassailable barrier to the progress of the heathen hordes, at a time when the rest of the world was in chaos, and the only place where the light of European civilisation shone, and where the newly-born Christian religion found a haven from the storm, was the Byzantine Empire. Let those who abuse the Eastern Empire tell us where we would be at present if Constantinople had succumbed to the barbarian hordes, and left the world plunged in ignorance and Arianism. Constantinople continued to render services to Christianity by being the main obstacle to the spread of Islam, until fellow Christians treacherously assailed her, and so weakened her, that from that day to this the Greek nation has not been able to recover fully.

The Hospitallers may have been guiltless of the sack of Constantinople—they were undoubtedly staunch fighters against the Moslem—and I have no doubt that what they did was in their opinion the correct thing to do in those bad old days; but two blacks do not make a white, and if Rhodes was stolen from the Greek by the Hospitallers for the general good of Christendom, is it not very surprising to me that Christendom benefited little by it in the long run. The Hospitallers, though brave, were too few in numbers to affect the position materially. The Turk no longer having to deal with the efficient and disciplined Byzantine army, but only with the levies of petty feudal states, which were perpetually warring amongst themselves, was able quickly to conquer the Balkans, and then cleared the Hospitallers out of the Dodecanese at his leisure.

Lieut.-Colonel Yate also appears to think that so deep is the hatred of the Greek against the memory of the Hospitaller that were Rhodes to be ceded to Greece, the Hospitaller monuments would be swept away. If the Greeks were at all inclined to wreak their vengeance on the monuments of their mediæval oppressors they would have commenced long ago on the Venetian walls and Frankish castles that fill their land. On the contrary, however, the Greeks take great care of these monuments, and the *manoirs* and *chateaux* of the Villehardouin, the Delaroche Tremouille, and other worthy sires of the Crusades are still in a good state of preservation in the Morea and Roumelia; and Mistra, a huge Crusader fortress full of mediæval relics, is the pride of the modern Spartans. It should be borne in mind that the Latin settlers intermarried with the local inhabitants and in time lost their separate character, so that in some respects these castles may be regarded as native and not foreign.

If the Greek distrusts the Latin it is not because his hatred has not changed, but simply because the Church of Rome has apparently not yet realised that Greece, which gave the world democracy, cannot and will not bend the knee to a Church which has borrowed all the stifling traits of that Empire which produced autocracy. No Church prays more devoutly for Christian reunion than the Orthodox, but we cannot acknowledge the Pope; for we were Christians long before Christianity ever reached Rome. Moreover, the Roman Church has been used in the past to further the political expansion of certain foreign powers in the Near East, and in face of this it is surprising to see the benevolence of the Hellenic Government towards the Holy See, with its propaganda carried out by numerous and polynomastic monkish "educational" orders, which have established themselves in our land after having been expelled from a Catholic State like France. And yet were Greece to expel these dangerous foreign agitators, what an outcry would be raised all over the world!

To prevent the Greek playing the Bosche in Rhodes, Lieut.-Colonel Yate wishes the fraternities which to-day represent the Old Knights of Rhodes to use all their influence "to keep in Italian hands the island which General Elia has administered so well since 1912."

If the extermination of women and children by hunger, the expulsion of all the young men, and the compulsory teaching of Italian in Greek schools is accounted as good administration, General Elia and his colleagues have done extremely well. The Italian nation cannot be blamed for these regrettable incidents; Italians have been found who have vigorously protested against the state of affairs, but it cannot be denied that the Imperialism of the Government of Signor Orlando knew no bounds, and the authorities in the far-off Dodecanese were able to do as they wished. Racial self-determination is not, and never has been, the sole arbiter of national destiny, but if ever a people deserved to be free, if ever they bled to be joined to the rest of their race and expressed their determination to obtain their liberty unequivocally, that people is the Dodecanesian, who have three times in seven years, in the face of the bayonets of the occupying power, voted and proclaimed their union with Greece.

The importance of Cyprus to Britain as a watch station is next pointed out, and the undesirability of the cession of the island to Greece is expressed. Now, the Greek is not so anxious to obtain Cyprus as he is to get possession of Thrace and Asia Minor. Unlike the Turk, whose sole object in life appears to be the re-establishment wherever he goes of those primitive deserts from which his ancestors came, the British have done a lot for Cyprus, and the island has progressed materially under their administration. But because most of the inhabitants of the island are Greek in race, religion, and culture, Greeks feel confident that sooner or later Britain will of her own accord cede the island. The Greeks do not want to receive favours, they want justice. The island might not be so well administered under the Greek authorities as it is under the British, but the Ionian Islands, which enjoyed a much greater degree of self-government, never regretted their cession to Greece, though they have enjoyed in the past a much less able administration than that which Greece possesses at present.

Britain and Greece are natural allies. Both are a mercantile people. The majority of the population of both countries live on or near the sea. The first man to write about Britain was a Greek; one of the first Archbishops of Canterbury was a Greek; the guard of the Emperors of Constantinople was composed of Englishmen mostly; and when Theodore Lascaris defended Constantinople, amongst his troops were English archers. Last, but not least, Byron, Navarino, and Gladstone form the best links of the traditional "entente de cœurs" between Britain and Greece. If approached in the proper spirit an arrangement could be entered upon, whereby the military needs of Britain in the Mediterranean could be satisfied, and at the same time the union of the Hellenic race into a political whole be achieved.—I am, etc.,

THE MIRACULOUS CURE OF EX-KING CONSTANTINE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Referring to "Corsair's" sceptical notes in his "Caravanserai" of your issue of yesterday concerning the "miraculous" cure of ex-King Constantine, I beg to point out that "Corsair" made a slight error in his interesting narrative. The Icon he is referring to was brought over from the Church of the Evanghelismos (Annunciation), in the island of Tenos (Cyclades). Two "pardons" are held every year in this island. The first is celebrated on Lady Day, and the second on Assumption Day, and even Turk pilgrims far from Anatolia come to Tenos to offer up prayers before the shrine of "Our Lady of Tenos."

"Corsair" would be interested to know that ex-Queen Sophia, the consort of Constantine de Holstein Glücksbourg, on hearing the miraculous cure, adorned the Icon with her pearl necklace, worth many millions of pounds. The necklace had been given her by the Kaiser, but the *mauvaises langues* of Athens pretended since that the gift to the Icon made in *coram populo* was a "kolossal" bluff, as the ex-queen was seen wearing her necklace as usual some time after she "gave it away."—I am, etc.,

THEODORE D. MOSCONAS.

PEACE CELEBRATIONS IN BAGHDAD.

An occasional correspondent writes from Baghdad as follows regarding the Peace celebrations in the City of the Khalifs:—

"The signature of Peace by Germany was celebrated in Baghdad on July 19. A general parade and march-past of the Army of Occupation took place at 6 a.m., followed in the evening by a 'naval review' on the Tigris and a fire-work display.

"For the naval review two or three gunboats and a number of paddle-steamers had to make the best showing that they could, and right well they succeeded, with their illuminations and rockets. In view of the fact that an occasional oil lamp was the utmost in the way of illumination that the city was accustomed to before the British entered, the impression made by the 'display' on the mind of the Arab can well be imagined."

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB, J.P.
Vice-Chairman—SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.

AN ARMENIAN CHRISTMAS AT ALEPPO.

(From a Correspondent.)

"And they shall teach their children's children."

It was a cold, wet, windy evening, such as one frequently experiences in Aleppo during the winter. We had left our "Rolls-Ford" at one of the entrances of the bazaar, beyond which even a Ford could not pass, so narrow was the way; and now, guided by a short, thick-set Armenian boy, we picked our way through the slush and darkness of the alley-way, passing as we did so queues of happily expectant Armenian youngsters, who respectfully made way, and touched their caps to the British uniform as we passed. We had been bidden to a Christmas entertainment which was being given by the British to the children of the Armenian Orphanage, and these youngsters were awaiting their turn to be ushered into the unknown joys which awaited them in their school hall.

At last we were led by our guide into an archway, and, mounting a flight of stone stairs, found ourselves in a large stone-floored hall with classrooms leading off on either side. A gaily-lit Christmas tree stood at the entrance, and at the far end was a raised daïs on which were ranged chairs for the guests of the evening, leaving an open stage in the centre. The entire floor space was covered with serried ranks of children, sized from front to rear, squatting on the floor; and still more were being marshalled in to any spare nook and cranny. Even the windows overlooking the hall were packed with the eager faces of boys, for whom there was no room. Shrill cheers were raised as we were led up to our seats on the daïs, and were renewed upon the arrival of the French *Haut Commissaire* and the Arab Military Governor. At last room had been found for everybody, and the excited chatter of the children was silenced by the headmaster, a little grey-haired old man who, despite frequent imprisonments at the hands of the Turks, had kept the orphanage going through the strenuous years of war. Children's memories are mercifully short, but if ever that man had his reward in this life it must have been that night when he saw the happy faces of hundreds of children whose parents had been brutally massacred in 1915. After a short speech of welcome he announced the programme for the evening, which commenced with a "march past" of the boys of the orphanage, who were the butchers and bakers and candlestick makers, for all are taught a trade, and the food is cooked and the clothing is made entirely by the children themselves. Thereafter followed a varied programme of Armenian songs and dances by tiny tots and children of all ages up to fourteen. One could not help being struck by the extraordinary ability of the very little ones, who seemed advanced beyond their years.

An interval followed, when one hoped that the sacks bulging with toys, which were awaiting distribution at the foot of the daïs, would be speedily emptied. Not so. Much opening and closing of doors and whispering "up stage" betokened theatricals of some sort.

As it was Christmas Eve, and the entertainment was by way of providing a really happy evening to these unfortunate children, who had all experienced the worst horrors of war, we little thought that such a tragic plot would have been chosen. For the drama that was so faithfully enacted before our eyes was the story of the 1915 massacres. Arrogant Turkish officers with fierce, cork-blackened moustaches, strutted and postured, denouncing, in no measured tones, the Armenian and all his works. A mock court-martial was held, and men and women were condemned to death ruthlessly. Then followed the march from condemned cell to place of execution, the laggards being flogged along by the escort. Arrived at the place of execution, the huddled men and weeping women were ranged opposite the firing party. Not one gruesome detail was omitted. At the word of command four rifles cracked, and the prisoners dropped to the ground in horribly realistic attitudes. Some still moved, and the executioners dashed across the stage to complete their work with their knives; to add even more realism, pig's blood had been provided for the final scene.

The scenes which followed were sufficiently revolting, even to those of us who had experienced five years of war. What must they have been to the tiny mites who had but recently seen their own parents murdered before their eyes in similar fashion? As their brains began to grasp the first details of the execution scene, whimperings broke out among the tiniest, and at the exultant rush of the executioners upon their victims a perfect howl of terror—it was nothing less—broke out. And this was their Christmas treat!

Mistresses rushed to their charges, and the first few rows of youngsters were turned bodily round that they might no longer see the horrors which the boys were still enacting with fiendish glee. But upon the earnest request of the guests, executioners and victims were driven, expostulating, from the stage, and the more welcome business of distributing the toys commenced.

Some time later I again met the little grey-haired old man, the producer of the potted tragedy; and I asked him *why*—on a would-be festive occasion—he had produced such a very harrowing plot? "But," said he, "it is necessary to foster in these children the hatred of the Turk."

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

Obtainable at HARROD'S, SELFRIDGE'S and all the leading Stores.

THE CARAVANSERAI.

The report that the newsboys in Cairo have struck for an increased commission on their sales comes as rather a cheerful piece of impertinence. One really cannot be angry with these mischievous little devils, but one does wonder who put them up to it. It is quite possible, however, that they have a case—newsboys in this country get one penny in the shilling, I believe, and that does not strike me as being exorbitant. Probably in Cairo the rate is less than that, and the newsboys, full of the discontented atmosphere, will, I expect, back a winner in asking for more. For, in spite of the war, people will have their newspapers; and, in counting on this unwisdom, the boys, who cannot be "locked out," should be able to force the newspaper proprietors to "hand over." It is my secret belief that the regeneration of the world will begin when newspapers cease to be read; but as this seems a very long way off, the Cairo newsboys can persist in their demands with every chance of success. And if they don't succeed, what of it? They'll have had a good run for their money!

***

Those writers who smile at the efforts of Bolshevism in Egypt and in the East generally are not to be taken seriously. In Egypt particularly it is certain that Bolshevist publicists (and secret agents) are doing their nefarious work most efficiently. Their propaganda, for those who care to be told, is most telling. I am surprised therefore to read that the course of training for Soviet journalists which is being opened at Moscow is to be of six weeks' duration only. For it is impossible of course, in that short time to attain such a standard of self-discipline as the profession of anarchistic doctrines imposes. It is not easy in six weeks to crush every feeling of decency and to persuade oneself that it is done in a good cause. The souls of some journalists are small enough, God knows; but the concealment of truth by them is not so offensive as the proclamation of falsehood by Bolshevists. However, the trumpeting of lies is not learned in a day, and we need not fear anything very dreadful from this "six weeks' training."

***

A friend of mine has just had a grievous disappointment. A little while ago he heard that a certain blue postage stamp of the E.E.F. was fetching £8, and as he was in the habit of receiving many letters bearing Egyptian stamps, he began to picture himself taking a few weeks' holiday by the sea with wealthy munitioneers, scavengers, and other newly rich. Oddly enough, none of the blue stamps came along. There were yellow, green, and other colours, but no blue. And meanwhile my friend learned that it was not every blue that fetched the fancy price. In fact, all sorts of rumours reached his ears, and sapped the foundations of his belief, so to say. Then, in the way these things do happen, three blue E.E.F. one-piastre stamps fell into his hands; two dark blue and one light; and he flattered himself that one or other was likely to prove a winner. So off he went to a well-known dealer, and asked, with as offhand an air as he could assume, what the value of these things might be. He had heard they were worth £8. Was that correct? "Humph!" said the dealer. "Some one-piastre blues are catalogued at £8, but as to being worth it, that is quite another question." And he turned to his trade catalogue. "Yes," said he, and showed the entry. "But it is the narrow rouletted variety—not the kind you have. And even if you offered me a narrow rouletted, *I* should be very sorry to give you £8 for it. But it would be worth it if"—a pause—"you met a mug." My friend's interest in philately is less marked now, and the rich munitioneers and others must rub along without him by the sea.

Corsair.

NEAR EAST BOOKSHELF.

A SERVICE VIEW OF INDIAN REFORM.*

This brochure was well worth publishing, and though it comes too late to be of much service in moulding general opinion, we hope that some, at least, of the members of the Joint Committee now sitting may find leisure to study it as it deserves. Mr. Barker contributes some appropriate introductory matter, but in the main the papers contain the views of some comparatively junior officials serving in the Central Provinces, and are marked by that liberal spirit which prevails so widely among the Indian services, though its existence is ignored by their hostile critics. Like so many practical administrators, the writers are opposed to the official scheme of dyarchy, and they contribute some acute observations to the mass of criticism which it has to face, while on the constructive side they urge the maintenance of a unified executive containing an increasing popular element. In essentials their scheme resembles that which has been put forward by the heads of provinces, and it is open to most of the criticisms offered in the Government of India's recent despatch. For ourselves, we think its main weakness lies in its failure to make clear to the masses what is really happening. In the first stage of the unified scheme we should have an Executive comprising two official and two non-official councillors, acting as a whole: where the two sides differed, policy would be decided by the Governor's casting vote, and we should often have the non-officials defending before the Legislature measures to which they themselves were opposed. Such collective responsibility might be an excellent experience for the Councillors, but it would be incomprehensible to the electors, whose education is the most important point of all. In the first years of the experiment what is wanted is a single Minister telling the Legislature, and through it the electors, that he has done this, or will not do that, and submitting to their verdict on the clearest possible issues: the dyarchy at least offers that prospect, and surely it is a more hopeful beginning than to have Ministers defending a Governor's casting vote with which they entirely disagree. Some of the other suggestions put forward by the writers are less open to such criticism, and in particular there is much to be said for their plea that the Legislatures should consist of two chambers from the start, instead of a single chamber and a rather shapeless adjunct, such as is contemplated in the official scheme.

The writers' outlook is occasionally somewhat provincial, as in the suggestion that, if dyarchy must come, the department known as law and justice should be transferred to popular Ministers. That course might be feasible in the Central provinces, where the people are, on the whole, a fairly happy family, but it is as yet unthinkable in the country further north, where religious disturbances have to be expected, and where no minority would feel safe if the Minister came from the ranks of their opponents. We are not, however, recommending the brochure as an infallible guide: it has strong points as well as weak, and perhaps its most valuable feature is the spirit which it breathes.

*"The Future of the Government of India," and "The Indian Civil Service." Papers edited by Ernest Barker, Fellow and Tutor of New College, Oxford. (London: Methuen. Price, 1s. 6d. net.)

SLAVONIC LITERATURE.*

The anthologist is usually fair game for the reviewer, both for what he includes and what he leaves out of his selection. In the present case Mr. Selver has the advantage of his critics in one respect, since few people in England have sufficient knowledge of modern Slavonic literature to detect his omissions, far less his reasons for the omissions, and any suggestion that he might have found better extracts could probably be countered by the retort that nothing better exists in the young literatures of which he has made an anthology. In that event we can only criticise the translator. Many of the prose extracts from Russian, Ukrainian, Polish, Czech, and Serbian writers are of little importance; the selector, indeed, admits they are inadequate. Since his Russian section includes no Tolstoy and his Polish section ignores the author of "Pan Tadeuz," we are not concerned to labour its inadequacy further. The verse is more inclusive, and although the translation makes some of the poems seem feeble and others wooden, there is at least one which is full of fire—the tremendous onslaught on Mommsen, who is used by the Czech nationalist poet as a typical Prussian Imperialist. But we cannot deny the feeling that a good deal of the verse is somewhat trivial, and we are left with the painful dilemma that either it is easy to succeed as a poet in the Near East or difficult to succeed as a translator in England. Mr. Selver himself should be able to resolve that difficulty, if ever a second edition is required. But we are grateful to him for the short biography at the end, with the descriptive accounts of the authors whom he presents. A. W. T.

BOOKS RECEIVED.

"The Eyes of Understanding," by C. R. Milton. (London: Andrew Melrose. 6s. net.)

"With the British Army in the Holy Land," with maps, by Major H. O. Lock. (London: Robert Scott. 7s. 6d. net.)

"Political Map of the New States of Europe in 1919, according to Treaties of Paris." (Coloured.) (Edinburgh: John Bartholomew and Son, Ltd. 2s. 6d. net.)

"Without the Walls," by Katrina Trask. (London: Macmillan and Co. $1.40.)

"The City of Palms," by Kathlyn Rhodes. (London: Hutchinson and Co. 6s. 9d. net.)

"The Round Table," No. 36, September issue. (London: Macmillan and Co. 2s. 6d. net.)

"The Singing Caravan: A Sufi Tale," by Robert Vansittart. (London: William Heinemann. 6s. net.)

"Nationalities in Hungary." By André de Hevesy. (London: T. Fisher Unwin. 6s. net.)

BOOK NOTES.

"Red Easter in the Dodecanese" is the title of a pamphlet containing letters written in THE NEAR EAST and other journals. These letters deal with the alleged Italian atrocities in the Dodecanese.

"Mesopotamia: Sonnets and Lyrics at Home and Abroad, 1914-1919" is the title of a volume written by Captain Griffyth Fairfax. It includes the memorial lines which were circulated by G.H.Q. at Baghdad. The book will shortly be published by John Murray.

*"Anthology of Modern Slavonic Literature." By P. Selver. (Kegan Paul. 5s. net.)

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Arabic.	Jewish.
1919. September	1919. August		1337. Julheggia.	5679. Elul.
5	23	Friday	10	10
6	24	Saturday.....	11	11
7	25	Sunday	12	12
8	26	Monday	13	13
9	27	Tuesday	14	14
10	28	Wednesday	15	15
11	29	Thursday	16	16

Dr. F. G. Clemow has returned to London, on sick leave.

M. Metaxas, formerly Greek Minister at the Court of St. James's, has arrived in London from Athens.

M. Gennadius, honorary Greek Minister, and Mme. Gennadius have left their town residence for the country.

Admiral Sir S. A. Gough Calthorpe, High Commissioner at Constantinople, arrived at Marseilles on August 30.

General Sir George and Lady Younghusband have returned to St. Thomas's Tower, Tower of London, from Dublin.

Colonel Bromis, Paymaster-General to the Greek Army, left London on August 28 for the Greek Legation in Paris.

Colonel Dimitresco, Military Adviser to the Roumanian Peace Delegation, left London on August 28 for the Legation in Paris.

The Council of Administration of the Ottoman (Aidin) Railway Company have appointed Mr. F. S. McVittie, Smyrna, local auditor to the company.

Colonel Amery, the Under Secretary for the Colonies, arrived at Malta on August 31. His mission is to inquire into the financial position of the island.

Field-Marshal Viscount Allenby left Port Said on September 3 on the P. and O. liner Caledonia, and is due to arrive in London on Wednesday of next week.

Admiral Bristol has been appointed High Commissioner of the United States, having charge under the State Department in political matters at Constantinople.

Captain Hugh E. Poynter has been appointed Paris representative of Messrs. Baldwins, of Port Talbot Steel Works. He is leaving for Paris to-morrow with Mrs. Poynter.

M. Adossides, Greek Governor-General of Macedonia, has been awarded the Grand Cross of the Order of the British Empire in recognition of his services to British troops in Macedonia.

A marriage has been arranged, and will shortly take place, between Mr. Edward Alexander, P.W.D., India (Assam), and Phyllis Evelyn, daughter of Mr. and Mrs. R. P. Taunton, of Edgbaston.

The Shah of Persia, with his suite, arrived at Brig (Valais) yesterday morning. It is expected that his Majesty will arrive in England early in October. According to latest reports he will not go to the United States.

Lieut.-Colonel T. H. Parry, D.S.O., M.P., who received an injury to a lung while in Palestine, has had a recurrence of the trouble, and has been ordered by his medical advisers to take two or three months' complete rest.

The marriage arranged between Henrietta Sybil Douglas, daughter of Lieut.-Colonel and Mrs. H. P. Picot, and Major Stephen Keith Thorburn will take place at St. Mary Abbot's, Kensington, on October 7, 1919, at 2.30 p.m.

M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, accompanied by Colonel Rosetti, the newly-appointed Military Attaché to the Legation, on August 29 visited the Foreign Office and introduced Colonel Rosetti to Sir Ronald Graham.

A marriage has been arranged, and will take place early in November, at Leathley, between John Ughtred Thornton Shuttleworth, fifth son of the late Allen Thornton Shuttleworth, of the Indian Navy and Indian Woods and Forests, and Gwendolen, younger daughter of Sir Rowland Barran, of Leathley Hall, Otley, Yorkshire, and 24, Queen's Gate, S.W.

The marriage was celebrated on August 30 at Holy Trinity Church, Twickenham, by the Rev. Henry Mitchell, M.A., late Chaplain to the Forces, between W. R. B. Williams, Captain, 7th Gurkhas, son of Mr. and Mrs. Bridgewater Williams, of Richmond, Surrey, and Eveline Agnes, younger daughter of Mr. and Mrs. Edmund Image, of Strawberry Hill, Middlesex.

The engagement is announced between Reginald L. Phillips, Bank of Bombay, Bombay, only son of Mr. and Mrs. E. Carrington Phillips, of South Norwood, and Ida Wallen, youngest daughter of Mr. and Mrs. H. Bristow Wallen, of South Croydon.

Our Smyrna Correspondent writes:—Brigadier-General Hare, and Colonel Thompson, Chief of Staff, have arrived in Smyrna as British representatives on the commission which will investigate the incidents connected with the landing of Greek troops in Smyrna on May 15.

The marriage arranged between Major E. H. Impey, M.C., son of Lieutenant-Colonel L. Impey, C.S.I., C.I.E., and Miss M. A. R. Cowie, daughter of Brigadier-General H. Cowie, C.M.G., R.E., will take place on Saturday, September 6, at 2 p.m., at Hordle Church, near Brockenhurst.

The marriage was celebrated on August 31 at the Parish Church, Chelsea, by the Rev. C. J. Millar, B.A., between Stanley James, second son of James Killby, of Holly Bank, Pembury, Kent, and Johanna (Joan), third daughter of the late John Haller, of the Knutchury Estates, Coorg, Mysore, India.

The marriage was celebrated on August 27 at the Parish Church, Charmouth, by the Rev. Glen Dalyrymple, assisted by the Vicar, between Arthur Beatson Reid, Indian Civil Service, son of the late John Maitland Reid, and of Mrs. Reid, and Norah, daughter of the late Frank S. Bird and of Mrs. F. S. Bird.

The engagement is announced between Ian Vincent Hamilton Campbell, elder surviving son of Mr. R. H. Campbell, C.I.E., I.C.S., retired, and Mrs. Campbell, of Mysore, India, and Madeline Lowe Reid, eldest daughter of Mr. H. Anglin Whitelocke, M.D., F.R.C.S., of Oxford, and 52, Harley Street, and Mrs. Whitelocke.

The marriage was celebrated on August 27, at S. Mary's Church, Witney, Oxon, by the Rev. A. W. Douglas, Chaplain, Dhanbad, India, assisted by the Rev. Reece Unsworth, Rector of Witney, between Edward Smedley Tarlton, of Humerdhubi, Bengal, and Helen Mary Habgood, of Witney, late of 52, Beaumont Street, London.

A marriage has been arranged, and will shortly take place, between Mr. E. J. B. Greenwood, M.Sc., A.M.I.E.E., P.W.D., Madras, son of the late Colonel J. Greenwood, R.E. Staff, and of Mrs. Greenwood, 1, Bartrams Park, Hampstead, and Grace Ryan, daughter of Mr. W. P. Ryan, J.P., and Mrs. Ryan, of 18, Ellerdale Road, Hampstead, London.

The marriage was celebrated on August 28, at Holy Trinity Church, West Hill, S.W., by the Rev. Canon Woodhouse, assisted by the Rev. George Trevor (father of the bridegroom) and the Rev. F. J. Sibree, vicar of the parish, between Major Arthur C. H. Trevor, 24th Punjabis, and Dorothy Noel, youngest daughter of Coventry A. Woodhouse, Southmead, Wimbledon Park, S.W.

The King has granted permission to Miss Francesca Wilson, Miss Margaret MacFie, Miss Dorothy Brown, and Miss Ellen Hill to wear the Insignia of the Fifth Class of the Order of St. Sava conferred upon them by the King of the Serbs, Croats, and Slovenes in recognition of their services in relation to the Serbian Relief Fund.

Reuter's Paris correspondent writes:—A message from Jerusalem states that the Government of the Hejaz has asked Mrs. Anna Fisher, of the American Red Cross, to accept the post of permanent member of the Department of Public Works, with the rank of captain, in recognition of her valuable services in organising a large orphanage at Damascus.

Our Malta Correspondent writes:—

Vice-Admiral the Hon. Sir Somerset Gough-Calthorpe, the retiring commander-in-chief, has left on H.M.S. Hussar.

Major B. Richie has taken up duties as General Staff Officer of the Malta Command.

The King of the Hellenes has bestowed honours on the following Maltese officers: Major J. V. Aspinall, Major C. D. Vella, Major F. Suvala, and Major E. J. Briffa de Piro.

Lieut.-Colonel A. Briffa, C.M.G., has relinquished his commission, and Major F. P. Denaro has been promoted to lieut.-colonel.

On Wednesday a joint session of the Royal Asiatic Society, Société Asiatique, American Oriental Society, and Scuola Orientale of the University of Rome was held at the Royal Institution under the auspices of the Royal Asiatic Society. In the absence of Sir Mortimer Durand, director of the R.A.S., the session was opened by Sir Charles Lyall. He said that during the war the pursuit of scientific studies had been impossible. Now came the epoch of reconstruction and they were assembled to inaugurate a fresh effort in Oriental studies. They aimed at concerting plans for the advancement of archæological research among the nations brought together by the war in bonds of closer friendship. Among the changes wrought by the war were the severance of outlying provinces from the Turkish Empire and the entry of India as a nation into the field of politics. The new conditions had thrown open to scientific research large tracts hitherto in a great measure closed. Professor A. T. Clay, of Yale University, M. Emile Sennart, of the Société Asiatique, and Professor Cordier also spoke.

Digitized by Google

The marriage was celebrated on August 27, at St. Mary's, Twyford, Hants, by the Rev. John Pim, B.D., Canon of Christ Church Cathedral, Dublin (father of the bridegroom), assisted by the Rev. H. S. Morris, M.A., vicar of the parish, between Capt. Hugh Maxwell Pim, M.C., 24th Punjabis, and Nora Beatrice Mary, elder daughter of Lieut.-Colonel and Mrs. H. E. Drake-Brockman, Beachborough, Twyford, Winchester.

The engagement is announced of Tudor P. Williams (late Special Reserve, attached 1st Battalion Oxfordshire and Buckinghamshire Light Infantry, and Political Department, Mesopotamia), Egyptian Education Service, youngest son of the late Rev. M. P. Williams, rector of Peppard, Henley-on-Thames, and Mrs. Williams, to Madge Garvey, Cartref, Oxford, youngest daughter of the late Rev. F. E. Thomas, rector of Gorton, Manchester.

APPOINTMENTS, PROMOTIONS, &c.

The *Catholic Times* states that Father Alban Goodier, S.J., has been chosen Archbishop-elect of Bombay. Father Goodier, who is at present in England, is attached to St. Francis Xavier's College, Bombay.

Nearly all the new British diplomatic appointments are those of statesmen who have seen service in the Near East, but the ones with which we are most closely concerned are those of Sir Charles Alban Young and Sir Ronald Graham—both excellent choices. Sir Charles Alban Young, who is to be Envoy Extraordinary and Minister Plenipotentiary to the King of the Serbs, Croats, and Slovenes, was born in 1865 and was first appointed to Constantinople. Afterwards he served, among other places, at Rome, Teheran, and Athens. No better selection could have been made for the first British Minister to the new Triune kingdom. Sir Ronald W. Graham, who is to be Envoy Extraordinary and Minister Plenipotentiary to the Queen of the Netherlands, is best known for his work in Egypt. Born in 1870 he was in 1907 appointed Counsellor to the British Agency at Cairo, and in 1910 was seconded for service under the Egyptian Government. From 1910 to 1916 he was adviser to the Egyptian Minister of the Interior. Other appointments include:—Sir George Buchanan, who served in 1903 at Sofia, to be Ambassador to the King of Italy; Mr. C. A. de R. Barclay, who has served in Sofia, Bucharest, and Belgrade, to be Envoy Extraordinary and Minister Plenipotentiary to the King of Sweden; and Sir George Clerk, who has served in Adis Abeba, Abyssinia, and Constantinople, to be Envoy Extraordinary and Minister Plenipotentiary to the Czecho-Slovak Republic.

OBITUARY.

The death occurred on August 24 at Jersey of Colonel Charles Henry Stoddart, late 103rd Fusiliers and Indian Army,. Colonel Stoddart served in Afghanistan from 1879 to 1881, and in Burma from 1886-1889.

Lieutenant-Colonel Rowland J. Beech, late 2nd Life Guards and Warwickshire Yeomanry, of Brandon Hall, Warwickshire, died on August 30 at Folkestone. He served in the Sudan Expedition of 1884-5, when he received the medal with two clasps.

Mr. W. S. Lilly, the well-known writer, died on August 29. In 1861 he passed into the Indian Civil Service, and occupied various posts in Madras until 1869, when he was appointed Under Secretary to the Government; but for reasons of health he was forced to leave India. His numerous writings on history, religion, and politics included one book on "India and its Problems."

The death occurred on September 2 at Cambridge of Dr. Alexander Macalister, Professor of Anatomy at Cambridge University. He was a man of very wide interests, and he achieved fame as an Egyptologist. He had travelled extensively in the East, where for a time one of his sons, Dr. R. A. S. Macalister, was Director of Excavations under the Palestine Exploration Fund.

Colonel John Gordon Geddes died suddenly on August 26 at the Army Headquarters at Shoreham. He was born in 1863, and became a lieutenant in the Royal Artillery at the age of twenty. He was D.A.A.G. of the Royal Artillery in India from 1897 to 1900. He served with the Tirah Expeditionary Force in 1898 as Orderly Officer Royal Artillery, and had the medal with clasp for that expedition.

Our Malta Correspondent writes:—
The island has received a great shock in learning of the death of Miss Cicely Gage at Plymouth, as the deceased, whilst in Malta, was ever in demand at all local musical functions, and was practically the *prima donna* of the Malta Dramatic Society. Sympathies are extended to her mother and her step-father, Mr. E. A. S. Hayward, Assistant Director of Stores at the Admiralty.

Sir Duncan Colvin Baillie, K.C.S.I., late of the Indian Civil Service, died at Glenquaich Lodge, Amulree, on August 30. He was appointed to the Indian Civil Service in 1879, and served in the North-West Provinces and Oudh. After seventeen years' service he was appointed secretary to the Board of Revenue, and was subsequently opium agent and Commissioner for Benares, and a member of the Board of Revenue. He was appointed a member of the Lieutenant-Governor's Council in 1909, and in 1913 officiated as Lieutenant-Governor of the United Provinces.

A correspondent writes:—The news of the death of Sir Duncan Baillie, K.C.S.I., will be received with widespread sorrow in Northern India, where he was known and loved, by men of all classes, and not least by the peasants whose interests lay so near his heart. A man of great abilities, he was too impatient of routine and detail for the ordinary secretariat career, but he dealt with large questions with the sure hand of the statesman, and he has left his mark on many branches of the administration in the United Provinces. His relations with Indians were characterised by extraordinary insight, and by a genuine sympathy, which enabled him to go straight to the heart of difficult and complex problems, and at the same time to win the respect and admiration of the men with whom he came in contact; he was idolised by his subordinates, and Englishmen in India will mourn him as the wisest of counsellors and the best of friends.

NEWS IN BRIEF.

Newsboys in Cairo have struck for an increased commission on their sales.

Marshal Liman von Sanders has arrived at Berlin from Malta, and complains of his imprisonment.

After a debate on August 26 the Belgrade Parliament passed, by a majority of eight, a vote of confidence in the Government.

The Indian troops encamped at Hampton Court, who were to have left for India on August 26, will stay until September 10.

An order for khaki frieze to the value of £11,000 for the Greek Army has been received by the woollen mills at Meaford, Ontario.

According to the Exchange Telegraph Company, a Bolshevist delegation has arrived at Kisheneff on a peace mission from Lenin to Roumania.

The French airman, Major Guillemin, reached Constantinople on August 28 from Beyrout, where he had arrived two days before from Cairo.

It is announced from Simla that the Commission which is to mark the boundary between India and Afghanistan started its work on August 23 in the West Khyber.

The Roumanian Legation in London states that by Royal decree the study of the English language has been rendered obligatory in all boys' and girls' secondary schools in Roumania.

The Board of Trade has received a copy of a notice, issued by the Government of Malta on August 19, imposing quarantine measures on vessels arriving from Constantinople on account of cholera.

ROUMANIA AND THE ALLIES.

The announcement that the Supreme Council is presenting an ultimatum to Roumania has an ugly ring about it; but it is not too late to hope that a satisfactory solution of the *contretemps* will yet be found. The trouble is due in no small measure to the fact that the Peace Conference during all these months could evolve no clear-cut policy with regard to Hungary. When, therefore, the Roumanians intervened with a very definite programme and proceeded to carry it through *vi et armis* the Supreme Council took alarm and began to realize the disastrous effects of their own dilatoriness. Roumania in the first instance fell from grace because she exploded the belief that the Near East can be regulated according to the complacent theories of Western chancelleries without reference to concrete facts. National characteristics as well as the actual course of events had been ignored. While the Supreme Council were experimenting with Magyar Bolshevism, they forgot that the Roumanians had long ago been overrun by Austro-German armies, that they had endured many months of enemy occupation with its consequent spoliation, and that they were in danger of repeating the experience at the hands of Russian and Magyar Bolshevism. The Roumanians would have been false to all their traditions if they had sat still with folded arms and allowed themselves to be overwhelmed while the Paris Conference deliberated as to the best way to deal with Bela Kun. They struck swiftly without waiting for instructions, and in view of the fact that they had already had cause to resent what they regarded as interference with their sovereign rights, we may well imagine that they felt no little satisfaction in launching their military operations before the Supreme Council had become aware of the necessity or were able to appraise the seriousness of the situation not only for Roumania, but for Europe as well. All that followed showed that the Roumanians, while not wholly devoid of pique, were practical people and not mere theorists. The Roumanian army defeated the "Red" levies of Bela Kun, entered Budapest and imposed terms which promised to put an end to Hungary's capacity for mischief. These terms, it is true, were reminiscent of Brest-Litovsk conditions. In this respect the Roumanians, perhaps, only showed themselves to be human, and the Paris Conference, instead of being carried away by surprise and indignation, should have blamed itself for allowing a situation to develop which placed the Roumanians in a position to give full play to their natural instincts.

The Allied Governments, it is to be hoped, will allow their common sense to prevail in this matter. They can press for unity of policy among the Allied and Associated nations, but the phrase pre-supposes definite action and not a weak-kneed waiting upon events. The first thing in regard to which they can disabuse their minds is that the East can be relied upon to regulate its affairs on Western lines. The East wages war and makes peace in a way of its own; the whole record of the Balkans and the Treaty of Bucharest of 1913 are evidence of this fact. Consequently it is of no avail to leave South-Eastern Europe to itself to adjust the relations between the different States according to the ideas of Western diplomacy. If it is desired to apply Western principles in regard to international relations to the whole of Europe, provision must be made for their adoption by all the States concerned. Such a course would be far less arbitrary, far more justifiable, under the conditions created by the war, than the attempt already made to interfere with some of Roumania's domestic concerns. The delimitation of the boundaries of the New Roumania and the enforcement of genuine peacefulness in the Balkans are, strictly speaking, the very proper concern of the Supreme Council; the same cannot be said of the desire to prescribe for the protection of racial and religious minorities in the Roumanian kingdom. In all probability the independent action taken by Roumania in Hungary has in some measure been prompted by resentment felt against the Peace Conference over this minorities question. Rightly or wrongly, Roumania objects to being classed in the category of States which have been resuscitated or called into existence as a result of the war. She prides herself on being an old-established State, with a particularly proud record in regard to the Turkish domination of the Balkans. Her independence, moreover, was regained as a result of her own efforts, in contradistinction to the Balkan countries that were directly assisted by one or more of the Great Powers. To-day Roumanian interests are too closely bound up with those of the Allies to justify any breaking off of relations, from whichever side it may come. We may hope, therefore, that before any more drastic action is taken by the Paris Conference a careful attempt will be made to adjust all misunderstandings. In view of all that Roumania has suffered during the war it is not unnatural that some of her people should labour under the belief that she has been persistently neglected by the Allies, and the conviction will have been confirmed by the way in which the Roumanian army was left to deal with the Magyars without Allied help. There is, of course, no foundation for these misgivings; but their existence should be taken into account, and allowance made for Roumanian exasperation at the severe wording of the rebuff administered by the Paris Conference.

The gravamen of the charge against the Roumanians is that they have laid hands on locomotives and rolling stock, foodstuffs and other goods, and have removed them to their own country without reference to the Allies. It is held in Paris that the Roumanian army was not engaged in a separate war against Hungary, but was carrying out disciplinary measures on behalf of the Allies against Bela Kun's Government. Bucharest is hardly to be blamed for finding the distinction too subtle for the conduct of a campaign which opened with a Bolshevist advance and a Roumanian withdrawal. There can be little doubt that, if Bela Kun's "Red" army had been successful, the Roumanians would have had a repetition of their experiences in 1917-18 before the Allies could have come to their rescue. For them it was another phase in their war against Austria-Hungary, with this difference, that they were now the victors and that they were in a position to recover some of the property that had previously been taken from them and to make good some of the loss which they had suffered at the hands of the same enemies. Ever since the Armistice Roumania has been appealing to the Allies for locomotives and rolling stock, of which she was denuded during the Austro-German occupation. It is necessary to have visited the country to appreciate the ravages carried out so systematically by the Central Powers. The Allies have provided some relief in the way of foodstuffs, but have been unable to supply the no less pressing requirements of railway material. Is it surprising, therefore, that the Roumanians should have been tempted to help themselves when a considerable quantity of rolling stock fell into their hands? The Allies may feel obliged to examine the ethics of this proceeding, but it should be done with the utmost goodwill towards Roumania and with appreciation of her position. They may find, indeed, that the Roumanian Government, if driven into a corner, will decide that the material wealth already derived from the campaign against Hungary outweighs any benefits that it stands to gain from the Allies, to say nothing of the political capital accruing to M. Bratianu at a critical period of his administration. In the long run, however, Roumania has nothing to gain by quarreling with the Allies, and it is to be hoped that statesmanship on both sides will find a way out of the present *impasse*.

MOUNT ATHOS AND THE WAR.

(From a Correspondent.)

The famous monastic community on Mount Athos has led for ten centuries a tranquil life, rarely troubled by the wars and tempests of the outside world. The oldest monastery, that of Lavra, at the apex of the peninsula, was founded by a certain Saint Athanasius Athoites in 961, the necessary funds being supplied by the Emperor Nicephorus Phocas. The wealthy institution of Vatopedhi, it is true, is said by tradition to have existed already, and to have been sacked by the Arabs in the ninth century, but the earliest historical mention is in 972, when it was built or restored by three noblemen of Adrianople. The fashion thus set was quickly and widely followed. In 980 General John Torkikion founded Iviro. As its name implies, this was originally a Georgian institution, for this people is referred to under the name Iviri or Iveri in mediæval Greek writings, but it has long since been Hellenised. In all there are seventeen Greek monasteries, the remaining three being Slavonic. In 1197 Stepan Nemanya, founder of the Serbian empire and of a dynasty that reigned for three centuries, became a monk, and, in conjunction with his son, Saint Sava, patron saint of Serbia, bought an estate from Vatopedhi, and founded the famous Serbian monastery of Hilendar, in a beautiful glade near the north-east coast of the promontory. This monastery has been of great national importance, for it has kept alive through the long centuries of Turkish oppression the tradition of Serbian sovereignty.

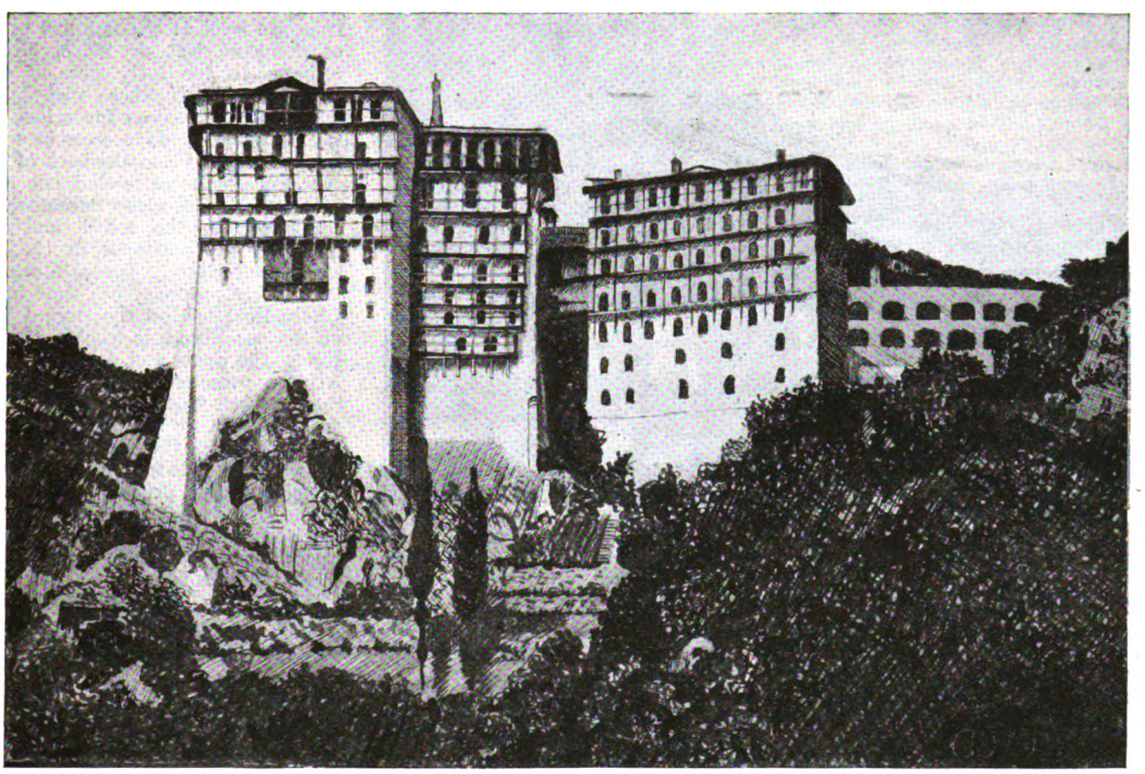
Some time in the ninth century another Slavonic monastery was founded by three noblemen of Ochrida, in a shaded grove a few miles south of Hilendar. It is dedicated to Saint George, as a portrait of the saint was miraculously found on the site; hence the Greek name Zographou, or portrait. The third Slavonic foundation is the great and wealthy Russian monastery of St. Panteleimon, founded in the eleventh century, and removed in the eighteenth to a beautiful spot on the south coast.

Many of the monasteries are extremely wealthy; Vatopedhi owns nearly half the peninsula, while nearly all have much property in Chalcidice and Macedonia, and Panteleimon had vast estates in Russia. By the constitution granted by various Byzantine emperors, the number of monasteries is limited to twenty; each sends a delegate to the Holy Conclave at the capital, Karyes, where each has a konak or club-house. In addition to these there are a number of semi-official monasteries called "skites," which rent their land from their neighbours. The palatial buildings of the wealthy Russian skite of Saint Andrew, founded in 1849, dominate the town of Karyes, but are built on land rented from Vatopedhi. Finally, there are a number of small units or hermitages called "kellia."

The fundamental law of the community is that it is essentially celibate. No female, even no female animal, is allowed on the peninsula; consequently, animal produce must be imported, and many a Greek merchant has made a fortune selling meat, poultry and eggs to the monks. So strict is this law that at the entrance to the peninsula, at the isthmus where Xerxes cut a canal, there is a special guard of sturdy monks to see that no travellers arrive riding even on a jenny mule.

Through the Turkish days, as Russia was the protectress of the Orthodox Christians of the Ottoman Empire, the community enjoyed a large degree of autonomy under the protection of the Tsars. With the acquisition of Macedonia by the Greeks in 1912, Mount Athos became Hellenic territory. Relations had for some time been rather strained between the Greeks and the Russians, as in many cases the former had mortgaged their lands to the Russians, who had greater capital resources, and as they outnumbered them in the Conclave, they at once assumed superiority. The Russians had little to say, and with the collapse of the Muscovite Empire they lost the last traces of their influence. The rich monastery of Panteleimon has fallen on evil days. By the cessation of the flow of novices owing to the war, the death of the elder members of the community, and the call to the colours of monks up to the age of forty-two, the strength has been reduced to about a thousand, a bare quarter of the nominal accommodation of the monastery. Its great guest-house is now nearly always empty, and the worthy Russian monks, famed for their generous hospitality, apologise, not without bitterness, that they are unable to offer the occasional wayfarer anything better than gruel and salad, *arrosé*, however, with excellent home-brewed wine and fragrant coffee. Shorn of their influence and their wealth, the good Russians bear their misfortunes with dignity and resignation.

The Bulgarian monastery of Zographou, too, has felt the effect of the war: a Bosnian monk who deserted and preferred road-making for the British army in Macedonia for three drachmæ a day, related that though there were thirty good Serbian brothers at Zographou, there were seventy stalwart Bulgarian brothers, who made life uncomfortable for the Serbs, till French and British intelligence officers removed the more zealous of them, fearing that the nooks and creeks of the rocky coast afforded too good a shelter for German submarines. Consequently, by

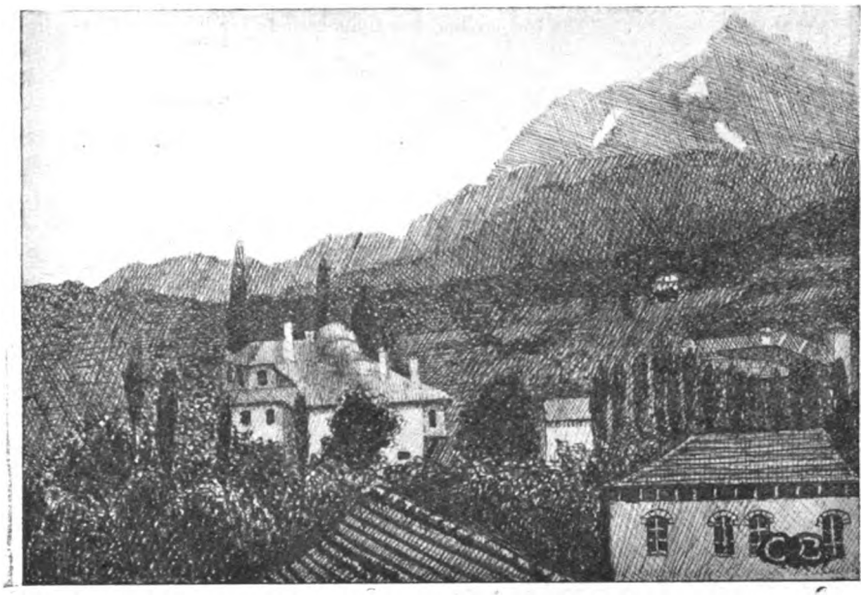


THE MONASTERY OF SIMO PETRA.

Digitized by Google

the summer of 1918 there was little to show that this was an enemy institution. One searched the walls of the reception chamber in vain for portraits of Ferdinand, until one saw his foxy nose protruding from among a group of officers in an obscure photograph in a corner of the room; on the other hand, portraits of the young Greek King, of M. Venizelos, and even of King George occupied prominent places on the walls.

Of the two monks detailed to receive a party of Allied officers who visited the monastery in the summer of 1918, one was an old gentleman who had lived for sixty years a quiet life in these isolated surroundings, and so left his birthplace before the jealousies of Russia and Austria-Hungary had created and fostered that desperate but artificial rivalry between Bulgar and Serb. The other was a native of Ochrida, who had visited Cetinje and Belgrade, but had never been in Bulgaria in his life. Here, as at Panteleimon, there was no meat, but excellent octopus and lettuce, which both looked and tasted like lobster salad. The Serbian monastery was abundantly supplied with fish, tunny and swordfish, which the worthy monks were busy salting and drying for the year's supply.



VIEW FROM KARYES.

Of all the monasteries, Hilendar alone, on the north-east coast and near the base of the promontory, could see the flash and hear the deep booming note of the big guns of our monitors when they were engaged upon their nightly practice of bombarding the Bulgar lines across the Gulf of Orphano.

At Vatopedhi the monks complained that there was great difficulty in obtaining white flour for sacramental bread, and oil for their electric lighting plant; otherwise they appeared little affected by the war.

Hospitality is the most noticeable virtue of the monks; it is impossible for the stranger to spend money in the community, for each monastery has a guest-house, which is an hotel without a bill; one cannot hire transport, for the monks send travellers on from place to place by relays of their own mules. A little bakhsheesh to the muleteers, who are simple peasants, is the only possible form of expenditure, other than a little shopping in Karyes, a quaint little town with neither women nor children, where one can collect a few curiosities, such as Anatolian rugs, quaint water-bottles made of gourds, exquisitely carved wood, and albums of photographs.

On arriving at the gates of a monastery the stranger is struck by the reposeful atmosphere, especially after the war-stricken plains and rocks of Macedonia, of the stately buildings, with flagged and paved courtyards recalling some of the Oxford quads., though the southern colouring and lofty cypresses at once strike an exotic note. A portly monk politely receives the visitor, leading him to a higher official of benevolent aspect, who in turn conducts him up interminable staircases, through long corridors, into a large reception-room, where the walls are lined with Austrian Bentwood chairs. The procedure is invariably the same. Several benignant old gentlemen take their seats near the visitors, and in turn make polite inquiries after the health and families of their guests. Presently an aldermanic individual, whom no difference in costume distinguishes from the rest, walks in with stately gait bearing a tray laden with jam, good *raki* and cigarettes; ten minutes later a colleague offers coffee, which in turn is again followed by *raki* and cigarettes, in almost endless succession. The walls of the reception-room are decorated by large photographs of venerable *igumens*, of the monastic hierarchy, together with those of King Alexander of Greece, M. Venizelos, Admiral Kondouriotis and even of King George and Queen Mary.

The whole atmosphere is one of peace and repose, passing into stagnation; the monks are all portly, bland, smiling and placid, both in manner and appearance. Novices are recruited young and trained for the monastic life. As they live well, and the country is hilly and steep and their staircases high, the commonest end to their earthly career is by apoplexy when they attain the age of sixty.

The scenery is charming. On arrival at Vatopedhi, the traveller rubs his eyes to see the dainty little bungalows with lichen-covered shingle roofs, broken outlines and walls tinted with buff, pink, and blue. But for the inevitable rounded dome on each of these *kellia*, they would be taken for a fishing or golfing bungalow in one of the English southern counties. The peninsula is a narrow ridge, rising from sea-level at the isthmus to a couple of thousand feet or more, till it culminates in the lofty cone of the Holy Mountain itself, whose rocky peak is a landmark for sailors for miles, and was visible on clear days even to our troops on Gallipoli. From the back of the ridge one can see the olive-clad isle of Thasos to the north and rocky Samothrace in the far east; to the south and west the Sporades are scattered in the blue sea, while immediately beneath one are the two other prongs of the trident of Chalcidice; behind the rugged fastnesses of the mainland is visible the peak of Kotos, the pride and delight of Salonika. All the promontory is well wooded; on the northern flank, which is rather bleak, are dense groves of pine, ilex and chestnut, while on the milder southern side wild pomegranates, the bright green leaves of the Judas tree and darker green of the pistachios stand out against the deep hues of the bay, of juniper, myrtle and glaucous green of the wild olives, the whole splashed with the golden patches of broom. The dense and thick vegetation is especially welcome after the treeless wastes and parched and scrubby hillsides of Macedonia.

INDIAN MEDICAL SERVICE.

The Secretary of State for India announces that 204 medical men are urgently required to fill vacancies in the Indian Medical Service. Of these two-thirds (136) will be Europeans and the remainder Indians. The appointment of European candidates will be made by nomination on the recommendation of a selection committee in England. Applications from Europeans, and from Indian candidates resident in this country, will be received at the India Office. Candidates must be over 21 and under 32 years of age at date of application. Preference will be given to candidates who are or have been serving with his Majesty's Forces during the war. All service rendered as a medical or combatant officer, or in a position usually filled by an officer, during the war will count both for promotion and pension on appointment to the Service.

The scale of pay has recently been greatly increased. A lieutenant on appointment now receives Rs.550 a month (equivalent at the present rate of exchange, the continuance of which cannot be guaranteed, to £605 per annum). Those who have had three years or more previous service will enter in the rank of captain on Rs.700 a month (or £770 a year). An officer who is appointed to the Service in 1919 or 1920 may claim to retire on a gratuity of £1,200 on completion of eight years' service from date of permanent appointment, provided he has given eighteen months' notice of his intention to retire.

Application forms and further particulars can be obtained from the Secretary, Military Department, India Office. The correspondence should be clearly marked on the top left-hand side of the envelope, "Medical Recruitment."

PRESS ON THE NEAR EAST.

Persia.

The *New Statesman* dealt recently with the Anglo-Persian Agreement and the sources from which criticism of the Agreement has come. It begins its argument with the following premise:—

If we put aside prejudice and view the matter dispassionately, it must be allowed that there is a case for this Agreement. We have an obvious and legitimate interest in a settled and prosperous Persia. Persia, on her side, has an obvious need for foreign assistance in the task of setting herself on her feet. The Persian nationalists have always admitted that, and have always professed themselves ready to accept help from this country.

It proceeds to examine the causes of criticism, and concludes that the case against Britain, though superficially strong, is, in fact, an exceedingly weak one. In any case, it says, the British case can be put to the test.

The Agreement, we are willing to believe, is honestly intended. Doubtful as it may look, it does not necessarily imply the strangling of Persia. It gives us, certainly, an enormous influence in Persia. But it also gives Persia the material help which she urgently needs, and, provided we carry out our obligations in an honourable manner, the Persians should have nothing to fear. But this is not to say that they will not, in fact, fear us. And they will be fearful with good reason unless and until we give an earnest that our intentions are really honest. How are we to give such an earnest? It is not an easy task to win back the goodwill which existed towards this country in Persia, and which by our sinister co-operation with the Russians, and later by many ill-advised actions in Persia during the war, we have done our best to alienate. We can surely, however, do something to dispel the anxiety which is still felt lest a new Imperialistic Russia, arising presently on the ruins of the Bolshevik régime, should be welcomed back by us into Persia. This may, perhaps, be done when we come to deal with the revision of the existing treaties between the two Powers. The official words are vague, but they point, we presume and hope, to a complete abrogation of the 1907 Agreement. We shall certainly give satisfaction again if we can ensure reparation to Persia for the heavy damages she suffered during the war at the hands of the belligerent troops, notably the Turks. But these are, after all, small matters beside the main question, which is the integrity and independence of Persia. In all the circumstances there is only one guarantee which will now satisfy Persian, as well as European and American, opinion in that respect. The Agreement can be put before the League of Nations.

The Balkans.

The *Manchester Guardian* recently published a sound article upon "The Balkan Settlement." It traces the idea of a Balkan League, and derives from its history the axiom of the exclusion of non-Balkanic interests—an axiom which, it says, the Supreme Council must adopt. It continues:—

Ultimately it will rest, however, with the Balkan peoples themselves to make their peninsula immune from noxious interference from outside. For if it is true to say that Balkan unity depends on the exclusion of extraneous interests, it is equally true that such exclusion cannot be fully realised without Balkan unity. One can, perhaps, understand the frictions which disturbed it in the past. Baulked as they were on all sides in their national development, and living constantly in a feverish expectation of the final struggle for national unity, the Balkan peoples watched with jealous eyes every inch of ground, every cluster of thatched cottages. An insatiable greed for territory thus became the mainspring of their politics. It would consequently be futile to expect, however much circumstances may have changed, that any solution will meet with the immediate approval of all the parties concerned. But if there is one likely to prove a settlement, it is that contemplated by the promoters of the Balkan League in 1912 and 1913. There is more than one circumstance which marks it out for commendation. It is the only solution which sprang from a dispassionate attempt to adjust conflicting claims by agreement and with reference to the whole region; it was based upon acknowledged national rights and interests, and it was inspired by a conscious aim to reach a lasting settlement which should pave the way for a Balkan federation. That is precisely what is at stake now.

It then discusses the disputed territorial questions of Thrace, Macedonia, and the Dobruja. It concludes:—

And there still is, indeed, much talk of the need to subdue Bulgarian dreams of hegemony in the Balkans. One need only glance at the new map to see the incongruity of it all. Bulgaria may certainly prove a danger to the peace of the Balkans, but it will be a Bulgaria so distracted as to abandon herself to internal anarchy or external servitude.

Syria.

In the *Daily Telegraph* of August 27 Mr. Percival Landon makes an examination of the Syrian problem and brings forward, in explanation of the English attitude, two points which France appears to have overlooked.

It is first of all to be remembered that the Arabs do not want to be placed under the tutelage of any nation at all. They do not want any mandate on their behalf to be given to any other race whatever. They desire, are striving for, and will continue to strive for complete independence. Let there be no mistake about this. From the highest to the lowest, Mohammedan and Christian alike, the natives of Syria demand independence, and nothing less. The point is not worth labouring, so obvious is it; but it is not unimportant to notice that the Patriarch of Antioch, whose arrival was recently hailed in France as that of a champion of a French mandate for the Lebanon district, coldly and categorically announced to his interviewers that his people demanded complete and unqualified independence. By that I do not mean that the Emir Faisal is under any misconception as to the need of foreign assistance in developing the new Arab dominions. But he insists that the choice of these helpers shall be left in Arab hands, and not in the hands of any foreign Government, whether it be French or whether it be English. That brings me to my second point.

The creation of Arabia as a State has proved to be of such result and importance that neither France nor England, nor any other Power, can now deal magisterially with its development or with its future. This is a matter of such cardinal importance—and, I may add, of such obvious truth—that even if, under the ægis of the Covenant of the League of Nations, compulsion could even be dreamed of, the blunt facts of Arabian determination would prove the folly of any such unwise policy.

Cyprus.

In the *Spectator* of August 30 Mr. Percy White discusses the future of Cyprus, and concludes that control of the island should remain with Great Britain. He says:

Cyprus never was a Greek island. It is a Greek-speaking island—a very different thing. The present population is about 307,000, of whom 61,000 are Turks and about 243,000 nominally Greeks, but in reality a confused race mixture, in which the blood of many tribes and peoples from both sides of the Mediterranean is blended.

To union with Greece the 61,000 Turks are naturally bitterly opposed, knowing full well, in view of what has happened to the Turkish populations in New Greece and the Ægean Islands, that under Greek rule their lives would be intolerable. "Why," they ask, "should we be sacrificed?" The Pan-Greek propagandists, it is true, deny misrule; but the experience of impartial witnesses has shown the complaints of the Turks to be justified. Nor must it be forgotten that the Cypriot Turks have deserved well of us. But for their support our government of the very island for the last forty years would have been a far more difficult task. Ever since we took it over the Moslem population have stood loyally by the British Administration, and by their votes in the Legislative Council have made it possible for Government to pass useful and beneficial laws in spite of the constant hostility and systematic opposition, not of the Cypriot Greek-speaking peasantry, but of the professional politicians by whom they are exploited. However much the Greek politicians may now protest that they have always respected the impartial justice and liberal spirit of the British Administration in Cyprus, those who have watched the course of events can never forget that these would have been frustrated but for the support of the Turkish members of the Legislative Council. This is no secret at the Colonial Office. Moreover, the Turks, now British subjects, ask for nothing better than to remain under British rule, and their past loyalty at least entitles them to our generous consideration. The 61,000 Turks, so to speak, represent the Ulster of Cyprus. The analogy breaks down because in Cyprus no real Nationalism exists. Even now, at the eleventh hour, it is not too late for us to realise that with the Greek-speaking Cypriots the agitation for union with Greece is merely a cry raised to please a propaganda fanned and kept alive by politicians and the Press they own, bishops, office-seekers, and schoolmasters, but finding no echo among the peasantry, who form the bulk of the population and only ask to be let alone.

To what, then, it will be asked, does the alleged desire for union with Greece owe its weight? The explanation will be readily appreciated by anyone acquainted with the usurers in the Near East. In Cyprus the politicians are almost to a man advocates and moneylenders, and to these men the peasantry is almost universally indebted. Thus, under the usurers' whip, and ever at the risk of being sold up, the heavily indebted peasants do lip-service to the union and shout "Zeto e Enossis!"—"Long live the Union"—whilst in secret they dread it for the following reasons: They know (*a*) that taxation per head under Greece would be doubled or trebled; (*b*) that they would be liable to conscription; (*c*) that were Greece to take over the island Cyprus would be overrun by a host of "carpet-baggers" and adventurers from Greece greedy for loot, and by whom all the posts in the Administration would be occupied. The Cypriot, moreover, after more than a generation's experience, has entire confidence in the integrity of British officials, whilst he is well acquainted with the absence of it among the swarms of officials in Greece.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Lord Wolmer's speech at the meeting of the Abyssinian Corporation this week will strengthen the confidence widely entertained in the future of this undertaking. He dealt very fully with the prospects before the corporation, and was able to give a most satisfactory record of the work that has already been accomplished. The well-known business of Messrs. Gerolimato and Armanza, the principal trading firm in Western Abyssinia, has been acquired, and this, he pointed out, would form an excellent starting point for their trading operations. In order to be able to commence purchasing and selling operations without delay, the corporation had appointed the Levant Co., Limited, as its commercial agents in this country, and large purchases in this country have already been commenced, and some considerable consignments of Abyssinian produce are on their way here.

***

As regards openings for enterprise other than trading, Lord Wolmer pointed out that one of the most important lay in the development and improvement of internal communications in Abyssinia. The question of the most suitable form of transport has been engaging the attention of the board, and arrangements have been made for an engineer to be sent out to report on the various questions which will confront the corporation. Other matters have been under consideration, as, for instance, the very important question of obtaining certain concessions from the Abyssinian Government or of acquiring some of those already acquired by others. In this connection Lord Wolmer stated that certain very interesting concessions had been offered to the corporation.

***

A particularly satisfactory feature to which reference was made by Lord Wolmer is the establishment of very cordial relations between the corporation and the Abyssinian Government. When Mr. Rey, the general manager, arrived in Abyssinia the Regent took the unusual course of inviting him into his presence within twenty-four hours of his arrival, and he has since offered free land to the corporation on which to erect residences for Mr. Rey and the staff. This speaks volumes for the attitude of the Abyssinian Government towards the undertaking, and in the circumstances it must be admitted that the conditions augur well for the achievement of the ambitious programme of the corporation. In his tribute to the resources of Abyssinia, Lord Wolmer in no way over-estimated the position. Potentially, the country is immensely rich, and only lacks development, and the corporation has undoubtedly a really unique field of enterprise before it. The corporation starts its career under the most auspicious circumstances, and the review of its initial operations simply serves to confirm the optimistic view that has been formed of its prospects.

A marked fall in the prices of silver has been followed by the resumption of the upward movement, and the price is now about 61d. The probability is that the metal will see an even higher price, but the position is uncertain, as there are so many unknown factors, and there may be considerable fluctuations in the price. It goes without saying that the continuance of the present tendency makes the 2s. rupee inevitable, for the price has almost reached the point at which it is impossible to coin rupees at the present rate except at a loss.

***

The unsettling effect on trade of continued changes in the sterling exchange value of the rupee need scarcely be emphasised. Combined with present transport delays, it means that exporting firms in India have to transact business largely in the dark. As an example, a firm may have exported goods when the rupee stood at 1s. 8d., and by the time the consignment, after the normal shipping and dock delays, is at length sold, the rate may have changed altering the whole aspect of the transaction, and, perhaps, converting an expected profit into a loss. Obviously, it is impossible to continue business in an atmosphere of such uncertainty, and it is not surprising to hear that merchants in India are avoiding commitments as far as possible, pending the establishment of more satisfactory conditions.

***

The financial crisis at Malta affords an apt illustration of the widespread economic effects of the war. The revenue of the Island for the current year is estimated at £592,978, and the expenditure at £878.240, leaving a deficit of no less than £285,262. In the original estimate the expenditure was given as £555,086, which would have left a balance of £37,892, but to that amount have had to be added £192.745 for the subsidy on bread, £40,000 for the revision of salaries, and £19,600 for a bonus to officials, to say nothing of compensation for damage in the recent riots.

***

It is urged that assistance should be given to the Island in this crisis by the Imperial Government, and, failing that, it is stated that resort will have to be made either to a loan on or a sale of Government property. The plea for help from the Imperial funds will, no doubt, be most sympathetically considered, the more especially since Malta's predicament arises directly from war conditions. But whatever may be done in this direction will have to be supplemented by internal measures. It is apparently impossible at present to reduce the expenditure; there remains, therefore, the possibility of an increase in taxation, and in this connection it may be noted that the Governor has foreshadowed the imposition of an income tax as one of the relief measures.

***

The revised financial estimates of Travancore State for the year ended in August throw an interesting light on the increasing prosperity of this progressive Indian State. The original Budget estimates allowed for a surplus of Rs. 4 lakhs, but in the revised estimates this surplus is increased to over Rs. 16½ lakhs. For the current year the revenue is estimated at Rs.1,75,23,400 and the expenditure at Rs.1.69.07,600, and it may be noted that the Budget includes substantial provision for the development of new industries, for the expansion of the Agricultural Department, and for the extension of the co-operative movement.

***

Until the summer of 1917 the "P. and O. Express" service was continued, but war conditions then made its suspension necessary. The announcement is now made by the P. and O. Company that the service will be resumed on Saturday, which will be most welcome hearing to passengers to the East.

***

Apropos of a reference by our Constantinople Correspondent to the recent strike of bank clerks there, the Crédit Lyonnais inform me that they, as well as the Imperial Ottoman Bank, were able to keep going during the strike, for while 65 of their clerks joined the strikers, 52 continued working, so that they were fully able to satisfy their customers.

***

In their advertisement in this issue, Messrs. W. H. Allen, Son and Co., Ltd., the well-known engineering firm, of Bedford, invite offers from old-established companies to act as their representatives in the following districts of India: Bombay and Hyderabad, Madras and Mysore, Bengal, Central India and Central Provinces, and United Provinces and Northern India.

Trade with Turkey.

Difficulties of the Present Position.

(From a Correspondent.)

In view of the prospects of renewed activity in the business world now that the holiday season is drawing to a close the present position as regards the development of British trade with Turkey deserves consideration. The outstanding feature at the moment is that there appears to be a very considerable amount of hesitation on the part of exporters to Turkey. There is little tendency so far as would appear to underestimate the importance of the Turkish market, but the general view seems to be that it is desirable to await developments for the time being. In the prevailing circumstances it is difficult to blame prudent shippers for adopting this course, for fluctuations in prices, the difficulties of transport, the possibility of a glut in the market, and the uncertainty of exchange, afford very adequate reasons for the exercise of great care and caution on the part of merchants on this side.

But there is another, and a very important, factor to be taken into consideration. It is beyond doubt that if the trade in Turkey is to be captured by the British merchant, it must be captured now, and the question is how this end can best be accomplished. Delay will result in nothing but advantage to our competitors, but, on the other hand, precipitate and unconsidered action on the part of British merchants is fraught with obvious dangers. The market position in Turkey is particularly difficult at the present time, and if it is entered without adequate knowledge merchants may find their first experiences to say the least of it unpromising. It is very undesirable that merchants, new to the market, should meet with trouble, annoyance, and possibly loss on their first shipment, as it would have a most disheartening effect, and would tend to affect adversely the newly-developed interest in Near East trade, but to ship haphazardly and without knowing something of the market is to court the very thing that is to be avoided. At the present time, as the result of the activities of speculative exporters, the market is overstocked with goods of a number of varieties, and that makes it more than ever essential to have precise information as to openings for trade. As to other difficulties one illustration will show the kind of problem that confronts exporters. A merchant may quote for certain goods, but owing to the slowness of communications he may have none of the goods in stock when he receives his reply. Or the fluctuations of prices in the meantime may have made business on the suggested basis impossible without loss.

The real problem is the policy to pursue now with a view to the establishment of permanent trade. On this point opinion generally is inclined to the view that the position at the moment calls rather for the despatch of samples than of goods in bulk, and that the best way to bring British manufactures before the Turkish market would be by means of an exhibition at Constantinople on the lines of that shortly to be held at Athens by the Federation of British Industries. It has been stated that the intention is, if possible, to transfer the exhibition to other Near Eastern centres. If so, Constantinople will no doubt be included, as the Federation has established a branch there, and is fully cognisant of the local trade conditions. But an exhibition, while of extreme utility, would not of itself be sufficient. Firms must be represented in Turkey by active and capable agents who have nothing to learn as regards the trade, and who may be trusted to do their utmost for their clients. Then the distribution of catalogues broadcast is also very advisable, as part of a reasoned scheme of publicity. There is nothing like the written word for impressing itself upon the memory, and by means of catalogues the names of British merchants would become well known, and, what is all-important, certain lines of goods would be associated with each name.

There are other measures, too, which might with advantage be taken, but these suggested should prove among the most useful, and on these lines will very probably be found the best solution for bridging over the difficulties with which traders are now confronted, and at the same time of doing everything possible to secure a footing in what will ultimately prove one of the best markets in the world. By cultivating the market with care, our manufactures suitable for the market will be brought to the notice of buyers, who will thus come into touch with British merchants, and the result will be that our traders, as soon as labour settles down, and other adverse factors improve, will be in a position to enter the market with confidence and with every hope of success.

The one thing that will not pay is, as we have already pointed out, to adopt a waiting attitude pending the return of normal conditions, since the only result of a Fabian policy would be to give our competitors their opportunity, and they have already shown themselves so wide-awake to the advantage of trade with Turkey that competition from them is certain to be quite severe enough without any help on our part.

M. Nicolas Yovanovitch has been appointed delegate of the Yugoslav Ministry of Commerce to London.

The International Mercantile Marine Company announces that a new passenger and freight service will sail from New York via Constantinople to Constanza. The first vessel to sail will be the *Black Arrow*, formerly the *Rhaetia*, which will leave on September 15.

LANCASHIRE COTTON.

(From Our Own Correspondent.)
Manchester, Wednesday.

A slow feeling has prevailed throughout the market during the week, and demand has fallen off to a greater extent than ever. Traders undoubtedly hold bearish views, and the opinion is strongly held that values will be on a lower level in the near future. Irregular fluctuations have transpired in Egyptian cotton futures, and users have purchased sparingly. Rather diverse reports have come to hand relating to the crop. In Egyptian yarns demand remains very quiet. Although engagements are steadily running down, producers have still extensive order lists. It has been difficult to obtain price concessions, although spinners have not been able to sell at quotations. Less activity has occurred in cloth for Egypt and the Near Eastern outlets generally. Exporters believe that the correct policy to be adopted at the moment is to hold aloof until the outlook is more settled. Shipments, of course, continue on a considerable scale. Piece goods for India and China, especially in standard makes, have attracted very little attention. The home trade has given very little support. In most kinds of cloth it is now possible to purchase on more favourable delivery terms than a little time ago. American yarns have dragged in demand, and prices have favoured buyers. Export numbers have been in request for India, the Levant, and Germany, but contracts of any importance have been isolated.

MEASURES AGAINST PHYLLOXERA IN ALGERIA.

The *Journal Officiel* (Paris) publishes the text of a law modifying Algerian legislation respecting the combating of phylloxera. Article 2 of the Law provides that the importation into Algeria of vines and all other plants, waste of plants, fresh fruit and vegetables, coverings, packing material, stakes and props which have already been used, vegetable manure, soil, mould, and all objects the utilisation of which might involve a danger of contamination of vines, is to be governed by regulations issued, in the form of decrees, by the Governor-General. The Governor-General may prohibit the entry, and order the destruction, of all plants which might convey insects, cryptogams or other growths harmful to agriculture; and may also cause to be destroyed, without compensation, plants or articles which have been exposed to contamination.

A branch of the Tata Industrial Bank has been opened at Cawnpore.

Cairo tramway strikers, who have been out for three weeks, have refused to accept the offer made by the companies, and the Governor of the city has intimated that the cars will be run without them.

The traffic returns of the Egyptian Delta Light Railways for the period ended August 10 amounted to £E9,918, making the total for the year £E76,878. The corresponding figures for 1918 were £E9,816 and £E100,300.

PERSIA'S TRADE.

War Time Diversion.

The following are further extracts from the despatch from the British Legation, Teheran, which was quoted from last week—

There has been very marked diversion of trade from accustomed channels. In 1913 the distribution of the total import and export trade of Persia was:—Russia, 63 per cent., British Empire, 21 per cent., and other countries 14 per cent. The first cause of diversion of trade was the closing of the Dardanelles, which diverted traffic by the Black Sea route with Persia and reopened the Baghdad—Kermanshah route to trade, via the Persian Gulf. Lastly, anarchy in Russia has almost completely interrupted trade with that country. Cotton tissues and other goods formerly supplied to Persia mainly from Russia are now being sent in considerable quantities from India, through Persia, to the Caucasus and Transcaspia.

On account of war difficulties of communication and direct shipment between Persia and Great Britain much commercial business formerly done direct with Great Britain has been transacted in Bombay. The comparative returns of the trade of Great Britain and India with Persia for the years ending March 20, 1914 and 1918, were as follows:—

	1914 Krans.	1918. Krans.
Great Britain	130,000,000 (£2,400,000)	170,000,000 (£5,600,000)
India	104,000,000 (£1,900,000)	253,000,000 (£8,400,000)

Probably there will be a readjustment when former postal, telegraph, and shipping facilities are resumed.

Trade with India continued to increase because the Persian Gulf route was more or less free from the inconveniences and dangers of war. The British imports into Persia showed a marked increase in 1917-18, and amounted to krans 313,136,268, showing an increase of krans 83,621,276 compared with 1916-17. It must be stated that this sum includes the value of krans 3,433,047 of different goods imported by the British military authorities for their troops quartered in the ports of the Persian Gulf. The increase in Indian trade is principally made up of cotton and woollen textiles, sugar (mostly from Hong-Kong), iron goods, rice, farinaceous foods, cereals, indigo, coal, clothing, etc. It is, however, certain that the goods, which are stated to be of Anglo-Indian origin, are in reality of Japanese origin, and pass through British India before being re-exported to Persia. It must also be stated that the increases in exports are due to the fact that the price of most of the products has greatly increased, and also that large quantities of goods were sent by the Northern route to British India for export to Persia by the Seistan.

Increased British Imports.

In 1913-14, the year before the war, the total value of British imports reached krans 177,954,608, and this value is now doubled. The total imports from British sources represents approximately 65 per cent. of the whole imports of Persia, and have taken the place formerly occupied by Russian goods. The figures of imports from the British Empire are greater than the Persian exports to the British Empire. This unfavourable balance for Persia became less in 1917-18, though if the value of petroleum, sources of which are exploited in Persia, and the value of silver are deducted from the total of exports, only a sum of krans 41,746,283 remains. The British Empire therefore obtained from Persia a value of krans 41,746,283 of goods, and in return sold krans 297,778,082, about seven times as much. As a result of this, British and Indian trade now stands first among foreign countries both in imports and in exports.

The aggravated economic situation of Russia and the measures of export prohibitions of the Russian Government have had their inevitable effect on the commerce of that country with Persia. The imports from Russia, which in 1916-17 reached krans 227,413,251, fell to a value of krans 107,482,215 for 1917-18. In reality this decrease is more pronounced because the price of the greater part of the goods increased and because the total importations includes krans 4,910,892 of goods and munitions imported by the Russian military authorities for the supply of troops operating in Persia, and also krans 8,184,980 of silver money for these troops. The value of commercial imports reached krans 94,386,343. In 1913-14 they amounted to krans 355,888,133, from which must be deducted krans 4,518,500 silver money, and show a decrease of 270 per cent. The decrease shown in 1917-18 principally affects textiles, sugar, timber, linen, hemp, jute and cotton thread, tea, clothing, tobacco, etc. There is, however, an increase as regards matches, petroleum, iron and steel, paper and live animals. Exports from Persia to Russia amounted to krans 162,076,293 for 1917-18, as compared with krans 299,429,196 for the previous year, a decrease of krans 137,352,903, or 46 per cent. This decrease is due partly to the measures taken by the Persian Government to prevent the export of foodstuffs, and affects principally fruits, raw cotton, rice, opium, raw wool, raw hides, cereals, silk, silk goods and carpets. On the other hand, the increase shown in the exports of live animals and fresh and salted meat is due to the fact that the Russian military authorities, in spite of the prohibition decreed by the Persian Government, exported numbers of live and slaughtered animals coming from the Azerbaijan.

Russia, which always occupied first place in the list of countries in commercial relations with Persia, has been obliged to give way to the British Empire, the imports from which actually became three times as great as those of Russia. Before the war they were no more than half. Egypt occupies third place in the list of countries, due solely to the fact that commerce with other nations being seriously affected by the war large quantities of sugar were imported from Egyptian refineries, and petroleum was exported from Persia to Egyptian ports.

General Conclusions.

Persia is a large country, but the population is only about seven to eight millions, and can be overstocked. It uses a silver standard currency. The rate of exchange on London in 1916 was krans 54 per £; it is now krans 26. There is considerable risk in long-dated operations in Persian currency. On account of war restrictions on imports and exports, and owing to insecurity of roads and insufficient means of transport, the kran prices of commodities are exceptionally high, and should not be taken as a fair basis for calculating the probable margin of profit obtainable under normal conditions. The available means of transport in the country being insufficient, there is much delay in getting goods forwarded, and as trade increases the congestion of traffic will become more acute.

YUGOSLAVIA'S IMPORTS.

Certificates of Origin Required.

Certificates of origin are required for all goods imported into the Kingdom of the Serbs, Croats and Slovenes, and the application of the "maximum" or "treaty" tariffs on all goods imported is made conditional on the submission of certificates of origin. Certificates of origin may be issued by the local Chambers of Commerce or by Commercial Associations acting as such Chambers, by Chambers of Industry, and by the police and communal authorities of the place from which the goods are sent. The origin of the goods may also be certified on the original invoices, whilst direct bills of lading (by rail or ship) may also serve as proofs of the origin of the goods. Certificates of the origin of the goods written on the invoices or on the export declarations by the exporting Custom Houses are also considered valid. Unless proper certificates of origin are produced when the goods are being passed through the Custom House, the "maximum" (general) tariff rates will be applied. Certificates of origin should indicate the quantity (gross weight), number of packages, marks, numbers, place of origin, and the name of the sender, but it is not necessary that certificates of origin should be viséd by a Serbian Consul.

ROUMANIAN PETROL PRODUCTION.

The *Basler Neuste Nachrichten* publishes the official statistics of Roumanian petrol production from 1917 up to and including the first quarter of the current year.

—	1917.	1918.	1st Qtr., 1919.
	Tons.	Tons.	Tons.
Steaua Romana	182,456	313,701	146,186
Astra Romana	101,871	300,138	131,451
Romana-Americana	140,372	270,822	92,807
Concoria	26,822	72,274	31,626
Internationala	11,082	40,275	24,010
Orion	6,620	22,463	16,436
Alfa	2,624	11,453	4,390
Steco (State-owned territories)	6,360	63,468	28,142
Roumanian Consolidated Oilfields and Chiciura Oilfields	985	21,874	8,563
Aquila Franco-Romana	—	7,934	4,630
Petrol Block	—	3,807	3,540
Naphta	—	14,052	6,895
Traian-Roumanian	2,837	5,436	2,479
Anglo-Roumanian	169	2,235	1,092
Sphinx Petroleum Co.	226	2,824	1,786
Baicoi	2,069	1,550	730
Orchria	—	705	810

It will be noticed that, in several instances, the results for the first quarter of the current year are almost as high as those of the entire previous year. Production has risen from 499,000 tons in 1917 to 1,199,000 tons in 1918, and the total for the first half of the current year (527,000 tons) exceeds by 28,000 tons the entire output for 1917.

THE HELLENIC COMPANY OF MARITIME ENTERPRISES

PALIOS LINE).

Head Office - PIRÆUS.

A. P. PALIOS, Founder. M. P. PALIOS, General Manager.

REGULAR MAIL, PASSENGER, and FREIGHT SERVICES from PIRÆUS to MEDITERRANEAN PORTS, GREECE, SEA OF MARMORA, BLACK SEA, SEA OF AZOF, ASIA MINOR, SYRIA, and EGYPT.

26 PASSENGER and CARGO STEAMERS.

85 AGENCIES in Greece, Sea of Marmora, Black Sea, Sea of Azof, Asia Minor, Egypt, Mediterranean and principal Ports of the World.

Engineering Notes.

Tractors and Horses.

The results of a competition between tractors and horses in ploughing will be of much interest to farmers in the Near East, where the question is often argued. Three teams of three heavy draught horses, each team pulling a 14-in. plough, were matched against a tractor pulling a 16-in two-furrow plough. The horse teams had the first choice of the field, and at a given signal the competition commenced. In 4½ hours the allotted tracks were finished, and independent judges found that the tractor had won both for speed and the quality of the work. A comparison of the working costs gave a difference in favour of the tractor of over £3 for the afternoon's work. The tractor's record was: Ploughed 3.68 acres in 4½ hours, using 7½ gallons of kerosene and less than a half-pint of gasoline.

Tractors for Poland.

Well-informed engineering circles believe that with the approaching settlement of the political differences in Poland there will be an increasing demand for agricultural tractors in that country. One of the reasons for this is the vast petrol production in this country, and another the fact that Poland is one of the most progressive districts in Eastern Europe as regards agricultural industries. It must be remembered, however, that the farming conditions there do not require a heavy machine, for the soil is light, somewhat sandy, loam, and a light, low-priced tractor would speedily establish itself in the market. It is stated that several inquiries have already been sent to England from Poland, and the matter is regarded as one of some urgency, for those first in the field will reap big advantages.

Electric Kitchen Utensils.

Among the novelties which American manufacturers are introducing in the East are the electric kitchen utensils, which seem to attract considerable attention, and, according to reports, there is a good future for them in that region. It is hoped that British manufacturers will not omit to make a good show at the forthcoming exhibition in Athens of their latest electric utensils, which in design, construction, efficiency, and practicability are admittedly superior to the American or other foreign design.

The advantages of electricity as a culinary agent consist of the cleanliness which attends its use, the complete control over the amount of heat employed, and the rapid heating of ovens and utensils up to the point necessary for cooking. For the benefit of those who have not used or seen such utensils the following description is given, which will reveal the manifold uses to which electricity is capable of being put nowadays. There are electrical cooking ranges suitable for all cooking operations, saucepans, grills, kettles, frying-pans, egg-boilers, irons, hot-water jugs, etc. The resistances are composed of metallic films deposited on insulating bases of thin mica sheets. The film is enclosed in a metal case, and electrical continuity is established by means of flat metal terminals held in close contact with the two ends of the film. Different forms of these resistances, or "elements," are used, according to the condition under which they work and the size and shape of the apparatus. A "closed" element for example, is suitable for hot plates or flat bottomed utensils; and a "ring" element for jugs and for vessels with cylindrical-shaped water containers. By means of a self indicating regulator the temperature can be regulated, and the user guarded against making wrong connections on the apparatus or wall plug. The electricity can be used in a hundred and one ways about the house to the great saving of time and trouble. By the simple adjustment of the switch in the electrically-equipped breakfast room the housewife can make the coffee herself. Placing the socket upon the egg boiler, she can have the egg boiled to a nicety on the table before her. Afternoon tea is equally simple. The electric flat iron is now widely popular; but the milking of cows by electricity will no doubt be new to many. It will please particularly the Oriental cow-keeper, for the electric milking machine does all the work well and cleanly.

Machine Tools.

Before the war the machine tool trade in the Balkan States was practically in the hands of German and Austrian firms; and in view of the schemes for the reconstruction of workshops, railways, etc., in those States, it is advisable that British manufacturers should give special attention to that line of business, which in the circumstances will undoubtedly prove, in the very near future, more valuable than ever. American machine tool makers are already very energetic on the spot, and in the absence of their British competitors may secure a very great part of the trade.

Roumania's railways are large purchasers of machine tools of all kinds for their numerous workshops, and there is also an increasing demand for light machine tools for iron and wood working for use in Roumanian repairing workshops. It is known that in 1912 the Roumanian Army workshops obtained their supplies of machine tools principally from merchants' stocks, as the manufacturers required too long a period for delivery. For the year 1913 it was stated that extensive purchases of machine tools were in contemplation by the Roumanian railways; but apparently such purchases were not effected; then the war began, and the need for tools is now very evident.

Serbia was also at the time in need of machine tools of all kinds, stone, wood, and metal working machinery, such as planing and drilling machines, turning lathes, cutting and sawing machines, and polishing machines. Germany succeeded in obtaining a large share of the increased trade. German manufacturers took the trouble to send out technical experts to Serbia to study the market, and appointed their own agents in the country to study their interests. By these methods they managed to secure a large share of the orders emanating from the largest works and factories in Serbia. But it is said that no trace of these machines can be found in Serbia, and the representatives of American firms are doing their best to book orders in the absence of others.

Motor Cars for Greece.

It appears that French and German automobiles have in the past been mostly used at Athens and Piræus, whilst British makes have rarely been seen, though one would suppose there would be a good opening for them. A good remand for all classes of motor cars is anticipated as soon as peace is quite settled; and in existing conditions it seems that English makers will have an excellent opportunity of securing a foothold in the Greek market if they act promptly and with the requisite energy.

NISH-SOFIA-CONSTANTINOPLE ROUTE

The British Economic Mission in Serbia state that the requirements for constructing the three temporary bridges on the Nish-Pirot line are now forthcoming, and two of the three bridges in question are completed. The third is almost ready for use. The line Nish-Pirot-Sofia-Constantinople will then be open to traffic. The work on these bridges is of a temporary nature, the permanent construction being under discussion with certain British interests.

SOFIA, BULGARIA.
BANKING HOUSE.
The largest Import and Export Firm in Bulgaria.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated August 28:—

Nearly general rain throughout except in Assam and North-West Frontier Province where fall was local. More badly required plains districts Assam.

Floods extensively damaged paddy crops three districts Lower Burma. All India wheat forecast 23,764,000 acres (last year same time 35,497,000 acres), 7,502,000 tons (last year same time 10,174,000 tons). Present condition cotton crop generally good.

Bombay cotton market dull. Fully good Broach quoted August Rs. 462, April-May Rs.502. Piece goods market quiet. Calcutta jute steady. Hessians steady though little doing. Sackings dull.

Hydro-electric survey report published. Over one and three quarter million horse-power anticipated, including great rivers.

Birla Jute Manufacturing Company, Ltd. Floated capital 50 lakhs of rupees. Managing agents, Birla Bros., Ltd., Calcutta.

DISTRESS IN INDIA.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agriculture Department, dated August 29:—

My telegram dated August 22. Except for some damage by incessant rain and floods in Bundelkhand, Central Provinces, Gujarat, Sind and Rajputana, condition and prospects of standing crops continue satisfactory. Relief works have been closed in three States and seven jagirs of Bundelkhand Agency in Central India. Test works in Poona and relief in Satara and Nasik districts of Bombay Presidency have also been closed, but distress continues severe in Hyderabad. Numbers relieved:—Bengal: Relief works, 7,567; test works, 452; gratuitous relief, 17,334. Bihar and Orissa: Relief works. 1,527; test works, 3,812; gratuitous relief, 48,811. Feudatory States of Orissa: Test works, 7,573; gratuitous relief, 30,697. United Provinces: Test works, 469; gratuitous relief, 11,631. Ajmer Merwara: Gratuitous relief, 394. Central India: Relief works, 3,900; gratuitous relief, 8,400. Central Provinces: Relief works, 11,985; test works, 6,527; gratuitous relief, 39,932. Bombay: Relief works, 17,690; dependants, 7,845; village works, 1,637; test works, 21; gratuitous relief, 75,046. Hyderabad: Relief works, 35,000; gratuitous relief, 50,000. Madras: Relief works, 40,370; test works, 565; gratuitous relief (incomplete figures), 91,810.

Sir William H. Clarke, K.C.S.I., C.M.G., Comptroller-General of the Department of Overseas Trade, after an absence of 11 months, due to ill-health, has again taken up his duties.

Sir Harry H. Johnston,
G.C.M.G., K.C.B., writes:—"I am not myself much of a smoker, but my friends have tried your 'De Reszke' Cigarettes and like them exceedingly."

H. M. Bateman, Esq. writes:—"I appreciate the delicate flavour of your 'De Reszke' Cigarettes, and can describe them in one word—beautiful!"

Max Darewski, Esq. writes:—"Your 'De Reszke' American Cigarettes are a cool, soothing smoke, and unlike most brands I have tried do not irritate the throat."

A CIGARETTE that has won such high approval is surely worth knowing. That is why we suggest your giving "De Reszkes" a trial.

MALTA'S FINANCIAL CRISIS.

(From Our Own Correspondent.)

Malta (undated).

As regards our critical financial position the facts speak for themselves. The expenditure of the Island, as shown in the annual estimates for 1919-20, is £555,086. To this amount has to be added the following:—Supplementary estimate of bonus to officials £19,600, for revision of salaries £40,000, relief works £10,000, compensation for damage in the recent riots, subsidy to maintain the price of bread at 4½d. per rotolo (24 oz.) £192,754, making the total £878,240. These figures give an excess of liabilities over assets at March 1919-20 of £285,262. The statement has been forwarded to the Secretary of State by H.E. the Governor, who has urged that in the exceptional circumstances financial assistance should be given from the Imperial Funds. If this be refused, resort will have to be made either to a loan on or a sale of Government property.

American Enterprise.

There is a general impression that America will soon have a monopoly of Maltese trade, and it is a belief based on no unstable foundation. Already American goods are on the market, and the establishing of regular sailings direct from Naples to New York will help the hustlers of the West in their enterprise.

Miscellaneous.

H.E. the Governor has been pleased to approve of the repeal of the Government notice regarding the supply of Government coal for the use of certain essential industries, and for household purposes.

A determined attempt is being made to grow cotton in the Island, and just now the crops are looking very healthy and promise good returns.

Food is still controlled, but we in Malta have much to be thankful for, as the following prices show: Beef (fresh) 3s. 6d. per rotolo (24 oz.); frozen, 2s. 1d.; rabbits, skinned and cleaned, 1s. 6d.; capons, dressed for cooking, 2s. 9d.

SALT IN BURMA.

The salt revenue of Burma in 1918 produced Rs. 33 lakhs, of which over Rs. 17 lakhs was from Burma-made salt. The consumption was seventeen per cent. above that of 1917, despite the high prices. The Government intends to assist increased production so as to meet the competition when the prices of imported salt fall.

An order for khaki frieze to the value of £11,000 for the Greek Army has been received by the woollen mills at Meaford, Ontario.

TUNISIAN PHOSPHATE INDUSTRY.

Effects of the War.

In a report on the phosphate industry of Tunis, the British Consul-General at Tunis says:—The activity of the phosphate mines was greatly restricted during the war by lack of labour, high wages, lack of fuel and raw materials necessary for working and for the upkeep of underground galleries, new material, plant, etc. The requirements of sulphuric acid for war purposes increased gradually to the detriment of those factories manufacturing superphosphates. Together with this, the shortage of tonnage greatly impeded the supplies of those factories as regards phosphates and pyrites. The demand of agriculture, although reduced, has only been partially supplied, and that after considerable delay owing to the congestion on the railways. Moreover, the prices of superphosphates have been affected like those of most other commodities by a great increase, 30 francs per 100 kilos instead of 5 to 6 francs before the war.

A certain number of important markets in enemy countries were quite closed to phosphates and superphosphates. Moreover, neutral countries and even some Allied countries have not been able to obtain the quantities they required on account of shortage of tonnage. On the whole, the demands for raw phosphates were less as regards tonnage than the demand before the war, but these demands could only be supplied within the limits of the tonnage available. The following table shows the quantities of phosphates exported from Tunis according to countries in 1913 and in 1918:—

—	1913.	1914.	1917. (1st half-year)	1918. (1st half-year)
	Tons.	Tons.	Tons.	Tons.
United Kingdom	181,305	193,397	204,645	219,343
France	698,529	399,529	142,281	80,767
Italy	453,185	412,810	225,908	72,344
Portugal	40,404	36,508	12,730	—
Spain	52,985	49,295	16,315	4,960
Denmark	12,437	7,025	10,562	—
Other countries	546,037	328,597	—	290
Total	1,984,880	1,427,161	612,441	377,704

As regards the direction of the exports, it will be seen that there were no exports to enemy countries, Belgium, Russia, Roumania, and Japan. Exports to neutral countries, after a slight decline in 1914-15, reached the figure of 189,000 tons in 1916, which is greater than that of 1913 (177,000 tons), on account of the greatly increased demand of Denmark (37,000 tons in 1915, and 77,000 tons in 1916, as against 12,000 tons only in 1913). On account of the measures taken to limit the tonnage to destinations which might appear doubtful, the exports to neutral countries fell to 27,000 tons in 1917 and 5,250 tons during the first half-year of 1918.

Before the war the two greatest consumers of Tunisian phosphates were France and Italy. As regards France, exports fell from 700,000 tons in 1913 to 142,000 tons in 1917. The first half of 1918 seems to show a slight increase with 81,000 tons. As regards Italy, the decrease was less acute—450,000 tons in 1913 and 205,000 tons in 1917—and the first half-year of 1918 shows a very great decrease to 72,000 tons. The United Kingdom, on the other hand, increased her demands from 181,000 tons in 1913 to 205,000 tons in 1917, and the first half of 1918 shows a considerable increase to 219,000 tons. This result is due to the fact that the United Kingdom before the war imported great quantites of phosphates from Florida, and that for the moment she could only get her supplies from North Africa. It is, moreover, evident that after this war the British market will be more open to African phosphates than it was before 1913.

SHIPPING INTELLIGENCE.

British Services to German Ports

The official announcement is made that the Peninsular and Oriental Steam Navigation Company, the British India Steam Navigation Company, and the Well Line will, this month and onwards, have steamers loading in Hamburg, Bremen (if sufficient inducement offers), and Rotterdam, in connection with their services to India. Both sides of India and the Persian Gulf will be served by the P. and O. and British India companies, and Colombo, Madras, and Calcutta will be served by the Well Line. Antwerp is already served by these companies, and this connection will be sustained and augmented.

SHIPPING AT MALTA.

(From Our Own Correspondent.)

Malta (undated).

The latest arrivals are s.s. Polynesia from Famagusta, and the sailings have been the s.s. Roma for Algiers, s.s. Penang Maru for Antwerp, H.M.S. Toy and Joanna.

August 18.

An echo of the war is found in a notice issued from our local Lloyd's Office for the purchase of the steel steamer Norseman, stranded as the result of torpedo action twelve miles from Salonika. The steamer is of 9,542 tons gross, and was built at Belfast in 1897.

The latest arrivals are:—S.s. Ashenburg from New York with flour for Batoum, the Rumanian transport Oltul from Alexandria with general cargo, H.M.S. Glengorn, from Constantinople for Marseilles, British transport Caledonia from Marseilles for Alexandria, H.M.S. Ivy from Taranto, s.s. Glasgow Maru from Padang to Port Said, s.s. Teutonic for Marseilles.

Sailings have been as follows:—For Constantinople, s.s. Errington Court; for the Piræus, s.s. Jacinth; for Devonport, s.s. Partridge; for Port Said, s.s. Glenslow. From the above it will be seen that Malta is getting more to her normal state as far as shipping activity is concerned. She badly needs it.

AN ORIENT STEAMER LINE.

The Swedish-America Line, the Swedish-East Asiatic Company, the Swedish-America-Mexico Line and the firm of Brostoem and Sons are starting a new line, the Swedish-Orient Line, which is to trade between Gothenburg, Stockholm, Gefle and the Piraeus, Salonika, Constantinople and Odessa. Eight steamers of between 2,000 and 3,800 tons are to sail under this company's flag.

Mr. Richard Sims Donkin, of Albemarle, Wimbledon Common, Conservative M.P. for the Tynemouth Division, 1895-1900, a director of the Suez Canal Company, who died on February 5, left estate of the value of £369,172 14s. 10d., the net personalty being £344,940 5s. 2d.

Near East Markets.

Cyprus Carob Crop.

(From a Correspondent.)

The carob season is approaching, the date for gathering of the crop in the principal area being fixed for August 22. The Law which provides for fixed dates in this important industry is fully needed. The trees are scattered over wide areas in lands of all categories, and properties not being anywhere enclosed, every facility would be given to marauders, and no owner could cope with the depredations of thieves at night. Persons found in possession of carobs before the date fixed for gathering can be dealt with. Unfortunately the season will not be a satisfactory one as regards quantity, but will probably fall short of last year's by some 25 to 30 per cent. On the other hand, high prices may be expected, since Government requisitions and restrictions are now removed, freights are falling, and shipping facilities should improve.

Cereal Harvest.

The cereal yield has been unsatisfactory, the wheat harvest having been below that of 1918. Tariff prices are maintained: wheat being 9s. the bushel, barley about 3s. 9d., and oats 2s. 3d. There have been numerous breaches of the regulations in connection with these prices; and heavy fines have been inflicted ranging up to £90.

Sudan Produce.

Dura and Dukhn.

The following particulars are given in the C.E.B. report for June:—

White Nile Province.—Five hundred tons of Government dura reached Kosti during the month, and distribution has been proceeding from there to other centres in the province. The arrival of this dura has had the expected effect of making the fixed prices effective. At Kosti and Tendelti the population would already have been in considerable straits for dura had it not arrived.

Blue Nile Province.—Dura has been coming in fairly satisfactorily, thanks to the importation of Government dura.

Kordofan Province.—Sales in El Obeid market during June in ardebs of 420 rottles (189 kilos) were 133 ardebs of dura at an average price of £E3.297 and 141 ardebs of dukhn at an average price of £E3.316. Grain has been scarce, especially in Bara, Nahud and Um Ruaba districts, though there has been a plentiful supply in El Obeid.

Red Sea Province.—A shortage of dura began to be apparent at the beginning of the month, and representations were made to the Director, Commercial Intelligence Branch, and he allotted a considerable quantity of imported dura for sale in this province. A large portion of this is now available at Port Sudan, Suakin and Sinkat.

Livestock.

Berber Province,—The following animals were sold in Damer market during the months of May and June:—May, 183 cattle, 3,883 sheep and goats; June, 129 cattle, 1,580 sheep and goats. The prices during May and June varied from £E6.375 to £E10.350 per head of cattle, and from £E1.550 to £E2.200 per sheep.

Red Sea Province.—19 head of cattle and 214 sheep were exported during the month.

Senna Province.—171 head of cattle were imported from Abyssinia, via Kurmuk, and proceeded to Renk (Upper Nile Province).

LONDON PRODUCE REPORT

Currants.

There is little to add to last week's report. It would take large stocks to satisfy the present demand, but there are now practically no supplies available for the market. A consignment is on its way, but as it is said to be small it will scarcely make much difference.

Sultanas.

The position is much the same as in regard to currants. The keen demand for the small available stocks is very marked. There is no recent news from Turkey, but even if the outlook for the fruit crops there improved, which is scarcely possible, it is difficult to see how this country would benefit, for the predominant factor in the market position is the demand from the Continent.

Coffee.

Offerings at auction last week comprised 4,014 bags, while this week 6,786 bags were offered. The demand was fair and rates were steady. East Indian good extra bold realised 155s. 6d., while the prices for medium were 134s. to 141s. 6d. Costa Rica bold to fine bold brought 141s. to 159s., and medium 138s. to 144s. The futures market is quiet, quotations being for September 125s. 6d., December 118s. 9d., March 117s. This week sees the new preferential duty of 35s. as against 42s. in force in regard to coffee grown within the Empire.

Sugar.

A feature has been the demand from the Continent. There has been a marked rise in feeding and coarse sugar. Java has reached 53s. per cwt., at which price it is practically as dear as common table sugar. Excellent news continues to be received regarding the Cuban crop, which, it is believed, will prove the best on record Prospects are also very favourable as regards the West Indies, but production, it is understood, will not be very considerable in South-East Asia.

Seeds.

The market has been rather quiet. Fine Bombay linseed is 55s. per cwt.; Bengal is slightly cheaper, 53s. being asked, while Argentine is 48s. In rapeseed there has been little business. Quotations include Toria 49s., Ferozepore 48s., yellow Guzerat 51s., and brown Cawnpore 45s. The cottonseed market has shown weakness. Egyptian is quoted September-October 28s.

Oil Cakes, etc.

The demand for oilcakes exceeds the supply. Latest prices are linseed 500s., coconut 440s., soya bean and decorticated groundnuts 480s., rapeseed 360s., and Egyptian cotton seed 300s. Seed oils have been steady and rather easier. Wood oil is 125s. spot and 120s. afloat.

OPIUM REPORT.

Messrs. Barker Brothers, Smyrna, report as follows under date August 14:—

Our market since last writing on the 2nd ult. has not altered in its piastre price, but owing to the exchange having dropped, there is fully 1s. per lb. advance all round. The lowest quotations therefore we can give today are 15s. to 18s. per lb. as to quality. Low rendering adulterated material ranges from 8s. to 13s., which qualities are bought for mixing with rich stuff and thus obtaining an average of 11 to 11½ per cent. of morphia. The average lower price offered attracts buyers, and the shippers of such goods get orders, but on arrival at destination they very often turn out much below the guarantee. The moral is better buy from the regular old established firms at 1s. or 2s. per lb. higher, where you are certain to obtain ¼ to ½ per cent. more morphine on what has been guaranteed, than to buy from newcomers who don't know the article, and trust to the assays of analysts who make mistakes both in the sampling and analysis, and ship a poor article of lesser value even than the lowest price. In an article which requires an expert's eye, every one is liable to be deceived on an ocular inspection, especially now as our growers have become past masters in mixing the drug with ingredients which make it difficult to tell what is genuine and what is not.

CROP PROSPECTS IN TRANS-CAUCASIA

A report has been received from His Majesty's Consul in Batoum in reference to the harvest in Trans-Caucasia, which is described as universally good, and abundant crops of wheat, barley, rye, and maize are likely to be harvested. A proposal has been made to the Georgian Government by the Food Committee to control the marketing and export of any surplus by means of the "Erobas" or rural administrations. The suggestion is that these rural administrations should be entrusted with powers to carry out barter transactions of surplus supplies in exchange for general merchandise.

TRADE PUBLICATIONS FOR JERUSALEM.

The Chief Administrator of the Occupied Enemy Territory Administration at Jerusalem states that he would be glad to receive commercial publications, such as trade journals, from the United Kingdom. There are frequent enquiries for these. They should be sent at least in triplicate, so that copies can be handed to the three Chambers of Commerce. Trade directories are also required. Even with the out-of-date copies which he has, enquirers have been put in touch with English firms. He also recommends a number of leading manufacturers to send out travellers to find out the requirements of the country and to book orders which can be shipped within a reasonable time. Local merchants know pretty well what they want, and the requirements of the country have now become fairly audible through Chambers of Commerce, traders' associations, and a few pushing firms of commission agents. Publications, etc., should be addressed to Headquarters, Occupied Enemy Territory Administration (South), Jerusalem.

THE INDIAN EXCHANGE POSITION.

The *Times of India*, says *Reuter's* Bombay correspondent, in a message dated August 25, in the course of a vigorous article, demands that Mr. Montagu shall explain his exchange policy. The repeated rises, it says, which are not justified by the currency position, are plunging all the markets of India into indescribable chaos, the Indian export trade is practically at a standstill, the Calcutta tea sales have been suspended, and the price of cotton has fallen heavily. The newspaper declares that the continuance of instability and the rises in the exchange will sooner or later create the biggest financial crisis ever experienced in India. Other newspapers comment in a similar strain. The Bengal Chamber of Commerce has telegraphed to the Government of India urging the taking of immediate action and emphasising the fact that business is practically impossible in present conditions.

ECONOMIC CONDITIONS IN TURKEY.

PANDERMA, August 11.

Trade during July has not, unfortunately, been any better than during the previous month. The reasons for this fact are the same as those given in our previous report, namely the instability of the situation and the increasing insecurity of the neighbourhood. The only transactions to be noted have been in raw skins. It is now known that there has been a good yield of maize, which, unlike other seeds, has been greatly assisted by the rain.

It is easy to foresee that, as soon as commerce is freed from the present paralysing uncertainty, much musiness will be done in cereals.

RODOSTO, August 7.

General Situation.

Our district, which has been particularly hard hit by the effects of the war, and especially by the wholesale deportation of the Armenian and Greek elements, commences, a little uncertainly, to resume its pre-war aspect. Matters would have righted themselves more quickly but for the uncertainty of the situation and possible eventualities (especially those arising from the question of Thrace). However, we note with satisfaction the general improvement which is making way in local commerce.

It can be foreseen that the possible change in the political administration of our district will cause certain sections to leave the place and go to live elsewhere. The uncertainty thus created makes merchants in this district hold their hands to such a degree that business here is strictly limited. It would be very pleasant to see the situation recover a little of that animation which before the war characterised our market, and to see the development of commercial activity to the gain of Anglo-French interests.

Imports and Exports.

Independent of the reasons given above, imports have been adversely affected by the fluctuating rate of exchange, which prevents local traders from giving direct orders to Europe. Petrol and sugar are still imported direct from Constantinople in limited quantities. Business generally is insignificant.

We noted during the month of July a certain activity on the part of the Standard Oil Company of New York, which has been represented here for twelve years, and which has constructed a permanent depot for petroleum.

The arrival on the market of some consignments of the new corn and barley crops has caused some activity on the local Exchange. Export of articles being still prohibited, transactions in cereals are limited to our sphere of action only, and the price of these articles is subject to slight variations. The corn has been sold at prices from Pts. 10 to 14 the oke, and barley between Pts. 5 to 7 the oke, according to quality.

As the restoration of local agriculture will have the most beneficial effects on the commerce of this region, efforts should be made to introduce agricultural machinery before the next season.

The Eastern Telegraph Company announces that the contemplated reductions of rates between the United Kingdom and the Far East must be suspended during further arrangements with the Governments interested.

TRADE ENQUIRIES.

ROUMANIA.—S. N. Iancovici, Bucharest, Str. Academiei 6, desires to obtain English agencies. English correspondence. First-class references.

COMPANY MEETING.

ABYSSINIAN CORPORATION.

An Auspicious Start.

The statutory meeting of the Abyssinian Corporation, Ltd., was held on September 3 at Winchester House, Old Broad Street, E.C., Viscount Wolmer, M.P., presiding.

The London manager and secretary (Mr. T. H. Darton, A.C.A.) having read the notice convening the meeting,

The Chairman said: Gentlemen.—The resources of Abyssinia are very rich, and of late years the trade of the country with the outside world has been rapidly increasing. The country, which is of 350,000 square miles in extent, contains a population of over 8,000,000 people, and is for the most part fertile. There is an immense amount of cattle, reckoned at about 15,000,000 head, besides a great many sheep and goats. The export of hides and skins from Abyssinia is already important, and is likely to become more so in the near future. The agricultural potentialities of the country are very great indeed, as Abyssinia is capable of producing many of the commodities, such as corn of all sorts, coffee, cotton, wax, etc., of which Europe stands in need. The foresight of the Honourable Wilfred Thesiger, D.S.O., until recently his Majesty's Minister at Adis Abeba (and on whose promotion to the Consul-Generalship of New York the Board would like to tender their respectful congratulations), perceived that it would be of great benefit to the Abyssinian people, with whom this country has ever been on terms of the closest friendship and goodwill, as well as to the trade of the British Empire, that a strong British corporation should be formed to stimulate trade between the two nations, to assist the Abyssinians to develop the magnificent resources of their country by providing the fruit of European science in machinery of every description and improved methods of stock raising, transport and cultivation, and by selling to them the products of British industrialism, cotton goods, hardware, agricultural implements, etc., which they are well able to pay for by the exports of foodstuffs and raw materials which Europe so urgently requires.

British Government Support.

This is the role which the corporation is endeavouring to fulfil, and I am glad to say that we have the assurance of that support of the British Government which it is now recognised must be afforded to British trade throughout the world. I do not suppose, gentlemen, that any of you imagine that in the short period which has elapsed between the date when we received permission to do business, June 6, 1919, and that of this meeting, it has been possible for the corporation to achieve any great part of this ambitious programme, especially in times when the shipping and telegraph services of the world are still disorganised and all methods of communication are, indeed, exceedingly unreliable. It is certainly not the policy of your Board to sacrifice sound policy for showy appearances, and it is my duty to-day to report to you the steps that we have taken to lay firmly the foundations of what we have every reason to believe will become at no far distant date a great and prosperous business. In the first place, the Board have been fortunate enough to secure the services of Mr. Charles Rey as their general manager in Abyssinia. I am glad to be able to say that my personal acquaintance with Mr. Rey, since we have been working together, has fully borne out what I was led to expect of him.

Acquisition of Business.

In order to be able to commence trading operations on a large scale at the earliest possible opportunity, the Board had from the first considered it desirable to take over one or more of the firms already established as profitable and going concerns in Abyssinia. In January of this year the Board despatched a mission to Athens in order to make an arrangement with Mr. John Gerolimato, C.M.G., and Mr. T. Armanza to take over their well-known business in Abyssinia. After many delays, occasioned by the difficulties of travel and cable at that time, our representative succeeded in obtaining an option to buy out the business of Gerolimato and Armanza, subject to the subsequent verification of their assets and trading profits on the spot. The rest of the mission returned home, but Major Holmes, one of its members, proceeded to Abyssinia, taking with him an accountant from Messrs. Price, Waterhouse Peat and Co., in order to examine the books of Messrs. Gerolimato and Armanza. I am glad to be able to report that our general manager has recently informed us that the examination of the assets and trading profit of Messrs. Gerolimato and Armanza has proved satisfactory, and that he has exercised our option to take over the business. This forms an excellent starting point for our trading operations. The firm of Gerolimato and Armanza enjoys a high reputation in Abyssinia and the Sudan. It is the principal trading firm in Western Abyssinia, having branches in most of the important centres, as well as soap works and wax cleaning plant, and does a large export business in coffee, wax, and hides. In order that the corporation might be able to commence purchasing and selling operations in this country with the least possible delay and to the greatest possible advantage, the corporation has appointed the Levant Company, Ltd., as its commercial agents in this country. The Levant Company has absorbed the experienced firm of Henderson Lane and Co., and your directors are satisfied that the purchasing and selling work of the corporation could not be in better hands. In this connection it gives me great pleasure to be able to announce that we have lately elected Mr. Alexander Henderson, managing director of the Levant Company, to be a member of our Board. I think we may claim that the corporation has already made a promising start. We have already commenced large purchases in this country, and some considerable consignments of Abyssinian produce are also on their way to us.

Transport Facilities.

There are, however, several other avenues of progress open to the corporation besides trading. One of the most important of these lies in the development and improvement of the transport facilities in Abyssinia. The question of the most suitable form of transport in Abyssinia has been engaging the closest attention of the board. The board has also made an arrangement with Messrs. Pauling and Co., whereby that firm are about to send out a qualified engineer at their own expense to make a preliminary report on the various questions which will confront the corporation. There are other matters which have been engaging the continuous attention of your directors—questions of assisting the Abyssinians to improve the breed and the treatment of their stock, of promoting agricultural development, of obtaining certain concessions from the Abyssinian Government or of acquiring some of those already acquired by others. Certain very interesting concessions have been offered to the corporation, but the board is determined to examine every proposition with the most careful scrutiny before we decide our policy of the matter. I am sure, gentlemen, that at this juncture you will not expect me to say more upon the subject One happy result of these labours has been the establishment of cordial relations between the corporation and the Abyssinian Government. When our general manager, Mr. Rey, arrived in Adis Abeba, his Excellency the Regent Ras Taffari, took the unusual course of inviting him into his presence within twenty-four hours of his arrival, and has since generously offered the corporation free land for the purpose of erecting residences for our general manager and staff. These cordial relations are a happy augury of future co-operation, and it is, therefore, especially a source of satisfaction to the board that when the mission from the Abyssinian Government was visiting Great Britain in July we were able to afford hospitality to the members thereof, and to assist them materially in seeing something of the industrial greatness of this country.

Some shareholders may be desirous of knowing when the first call is likely to be made. I regret at this moment that I cannot give a precise answer on that point. At present it is not possible to say, because we cannot definitely state how long our various purchase orders will take to complete, or what future payments will be expedient. This, however, you can be assured of, that the Board will incur no expenditure which the most careful investigation does not show to be prudent. The Board of the Abyssinian Corporation works in the happiest harmony and in full confidence of the future of the company. We believe, gentlemen, that you, who have shown your confidence in the Board and in the prospectus by subscribing for shares, will find that confidence fully justified. In the near future the Chairman or the Vice-Chairman will proceed to Abyssinia on the corporation's behalf. I have every confidence that at the first annual meeting we shall be able to report that the work which has been well begun will have been successfully continued.

Mr. G. C. Howard thanked the Chairman for his full statement of the position of the company, and expressed confidence in its future.

The proceedings then terminated.

COMPANY RESULTS, Etc.

The directors of the National Bank of Egypt have declared an interim dividend of 4 per cent., payable September 4. Last year no interim dividend was paid.

The directors of the Financial Times, Ltd., have declared an interim dividend at the rate of 5 per cent. per annum on the preference shares for the half-year ended June 30 last, payable September 16 to holders registered September 8.

Etablissements Orosdi-Back.—An extraordinary general meeting will be held at the company's offices in Paris on September 9.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Our market for Egyptian securities has shown a better tendency this week on the whole, although here and there some prices are rather lower than last week.

In Government stocks Egyptian Unifieds, after being down to 80½, have improved to 82.

In Bank shares Nationals have remained a firm spot, but Agriculturals weakened at one time to 5 13-16, and close 1-16 down at 5⅞. However, all the shares offered have been absorbed to-day. Anglo-Egyptian Banks have further sharply improved ⅞ to 18⅜, Bank of Abyssinias are wanted, but there are no sellers; Bank of Athens shares have dropped ⅜ to 3¼, on the removal of selling restrictions.

In Land shares Aboukirs are fractionally firmer at 25s. 3d. Egyptian Consolidated Lands improved at one time about 6d. to 3s 3d., but are closing rather a nominal market round 3s. Gharbieh Lands are 1-16 higher at 2 5-16, and New Egyptians have jumped 9d. to 22s. 6d. On the other hand, Sudan Plantations are ¼ lower at 8, and Union Foncières have shed 6d. at 72s.

In Miscellaneous shares Alexandria Waters are 1-16 lower at 11 13-16, while Markets have receded 6d. to 23s., and Salts and Sodas are 1-32 down at 2 31-32.

In Oil shares Anglo-Egyptian B have been as low as 5, but are closing only 3-32 lower at 5 3-16; Roumanians and Traians are both fractionally easier at 19s. 9d. and 10s. 9d. respectively.

As regards Greek securities, the market has continued dull, with a weak tendency. The 1881, 1884, and 1890 loans are all a point down at 70, while the Monopoly Loan and Rentes have also each dropped a point, being now quoted at 5⅝ and 53. Otherwise there is no change to report.

SPECIAL AVIATION SUPPLEMENT, pages 285-296.

NOTES OF THE WEEK.

Mr. Kipling once wrote a short story about wireless currents going astray and playing strange pranks with the individuality of a chemist's assistant, who took to writing Keats's poems as his own. It was an uncanny but fascinating story, but it was no whit more startling than the explanation officially offered and officially accepted of Roumania's failure to reply to the Allied Notes. Briefly, this was to the effect that Roumania had received none of the seventy-five radio-telegrams sent from Paris owing to a breakdown at a station near Bucharest. The Supreme Council, in view of this explanation, withdrew its ultimatum, and has despatched a fresh Note to the Roumanian Government.

The "reserved" clauses of the Peace terms offered to Austria were made public last week. They call for little notice here save as regards those concerning the Serb-Croat-Slovene State. It is stipulated that a Commission, representing the Allied and Associated Powers and the two countries concerned, shall be constituted, within fifteen days of the coming into force of the Treaty, to trace out the frontier line, and that in cases of dispute the decision of the majority of the Commission shall be binding. This arrangement, as favouring expedition, is commendable. The conditions for the taking of a plebiscite to decide the fate of the Klagenfurt area are quite elaborate. The area is to be divided into two zones—north and south—and the vote will be taken in the south zone first; if it results in favour of Austria, no vote will be taken for the second zone, but the whole area will remain under Austrian sovereignty. If, on the other hand, the vote in the first zone is in favour of Yugoslavia, a plebiscite will be taken in the second zone. The operations will be carried out under another Commission similar in character to the first.

Both Roumania and Yugoslavia objected strongly to the clauses regarding the protection of minorities. The Roumanian Government requested to be allowed to sign the Treaty with reservations, while the Yugoslavs appear to have authorised their delegation to sign only if what was Serbian territory before the war of 1914 was exempted from the conditions which are regarded as objectionable. The Supreme Council in Paris decided that the Treaty must be accepted or refused as a whole, pointing out, at the same time, that it involves no principle that has not already been accepted by the Independent and Allied Powers. Roumania and Yugoslavia, however, refused to budge from their positions, and their delegates were not present when the Treaty was signed by the representatives of the other nations on Wednesday afternoon. There is, moreover, a persistent rumour that Roumania will now sign a separate peace with Hungary. If this be true, it will obviously be due to resentment at the treatment meted out to Roumania by the Supreme Council; and, while the unwisdom of such action is not to be denied, it is impossible to withhold all sympathy from the little country.

The tour which President Wilson has undertaken in order to instruct his countrymen regarding the Peace Treaty and the League of Nations has thus far been attended by so much success that the chance of America ultimately being willing to accept a mandate at least for Armenia has distinctly improved; though it would be going too far to say that it is yet a good one. Apparently the President has not actually made any strong appeal on the subject of mandates, probably desiring first to ascertain how far the country is prepared to accept the idea of taking part in world politics before entering into any details of the kind. But, on the other hand, he has not hesitated to refer to the necessity of protecting the weaker nations, such as Yugoslavia and Roumania for example, against Germany's Bremen—Baghdad schemes, which he thus leads his hearers to regard as a still existent danger; and the favourable reception accorded to him and his arguments augurs well for future developments.

An illustration of the effect that the uncertainty regarding the measure of support that he may count upon is likely to have on President Wilson's policy in the Near East is afforded by the warning which he lately addressed to Turkey in regard to the massacres in Trans-Caucasia. On this occasion the Turkish Government was warned that, if massacres occurred, the President would use his influence in Paris to exclude Turkey from benefiting by the principle of self-determination. In view of the great weight attaching to President Wilson's opinion, and to the almost hypnotic effect which he appears to exert over the Paris Conference at times, this threat was undoubtedly a serious one, even though the Turks may consider that they have little to lose by ignoring the principle referred to. It is, however, impossible to avoid feeling that the remoteness of the threat must have rendered it far less terrible to the Porte than the prospect of some more direct action. The Turks are quite shrewd enough to understand the fable of the Skylarks and the Farmer. It will be remembered that until the latter ceased talking of asking his neighbours to help him, and

Digitized by Google

announced his intention of cutting his corn himself, the old skylarks refused to abandon their nest.

Whatever may be the case with regard to other countries, there can be no doubt that the delay in settling the peace terms for Turkey is no good thing for Great Britain. Nor is it to our interest—as it admittedly is to the interest of certain other nations represented at Paris—that Turkey should be treated too harshly. It is to be hoped that our representatives at the Conference will not lose sight of British and Indian interests in this matter; and that no anxiety to please our friends will lead them to neglect those interests. The "keen concern" with which Moslem India awaits the decision on the Turkish peace terms was pointedly referred to by Lord Chelmsford at the opening of the Legislative Council; and Mr. Lloyd George has just received an eloquent address on the same subject signed by many highly distinguished men whose opinion on this matter cannot be lightly ignored.

Through the Archbishop of Laibach, the Pope has announced that after the conclusion of peace he will do everything in his power to further the conclusion of a Concordat with the Belgrade Government, and that he will send his representative to Belgrade, to enter into official relations with the Government of Yugoslavia. His Holiness took occasion at the same time to refute the impression that the Vatican is unfavourably disposed to the newly-formed Kingdom, and explained that his failure to recognise it officially before the definite fixing of the frontiers was due to an uncertainty regarding the dioceses to be included within the new boundaries. These statements, and the very friendly manner in which they were expressed, have naturally given much satisfaction in Yugoslavia; and in so far as they will tend to remove some of the bitterness that has undeniably existed between the adherents of the Orthodox and the Roman Churches, the satisfaction will be widely shared outside Yugoslavia also. For in the immediate future, as in the past, the Balkans are likely to be a potential source of danger to the world's peace; and the elimination of any cause of friction affords matter for gratitude

The news of the attempt on the life of the Egyptian Prime Minister reached us too late for comment last week. It can have caused little or no surprise; for in the present state of Egypt, or, rather, of a section of the Egyptian public, such an attempt was almost bound to come sooner or later. It has nevertheless been received with very real indignation both in Egypt and elsewhere, and Mohammed Said Pasha—who, it is reported, showed great coolness and courage—must have been almost overwhelmed by the expressions of sympathy that poured in on him from all sides and all classes. The Sultan, who was among the first to offer congratulations on the escape, has since bestowed on him the coveted Grand Cordon of the Order of Mohammed Ali. It is almost unnecessary to add that the would-be assassin is described as ignorant and ill balanced, and that he was merely a catspaw—in all probability used by those responsible for the late outbreak of "nationalism." It is a point to the good that he has already named over a dozen accomplices, of whom some are already under arrest. The authorities, who, it is announced, had been for some time aware that attempts on the lives of the Sultan, Lord Allenby, and the Prime Minister were likely, have doubtless taken measures accordingly; and it would not be surprising if many more arrests should follow.

Everyone who thinks, or feels, Imperially must regret that the old differences between India and South Africa have emerged into fresh prominence. We do not propose to go into the details of the latest dispute, regarding which we are not yet in possession of the official case for the South African authorities, but there can unfortunately be no doubt that political India is very seriously aggrieved by the new Trading and Land Act, and that the Government in Delhi, as well as Mr. Montagu in Whitehall, consider that the grievance is real and serious. India is in fact united on this question, if on no other, and she feels strongly that the promises made at recent Imperial Conferences have not been fulfilled. Possibly the South African leaders went somewhat further in this matter than was warranted by the state of opinion among their followers, but however that may be, Mr. Montagu's reply to the recent deputation shows that we are within measurable distance of legislation providing reciprocity of treatment for South Africans in India, legislation which would do South Africa practically no direct harm, but which would be an evil precedent for that international harmony to which modern civilisation aspires. It now rests with the South African authorities to say whether this precedent shall be brought into existence; they are masters in their own house, and we can only express the hope that they may see their way to effect a satisfactory settlement.

The letter from Mr. Bernard Houghton which we published last week may serve as an illustration of the importance of the point of view. Mr. Houghton tells us that the people of Burma consider that their progress towards self-government will be best assured in conjunction with India, and in view of his long experience of the country that statement is entitled to every respect. But then other authorities of scarcely less experience tell us that the aspiration for continued union with India is confined to the small but vocal section which has been instructed, we will not say educated, on the peculiar lines hitherto fostered by the Calcutta University, and that the masses regard India and Indians with something like dread, a sentiment which is likely to increase rather than diminish with the development of the inchoate national consciousness. A Karen representative informed the Joint Committee that an Indian Civil Service in Burma would be just as foreign as an English one, and that remark really goes to the root of the matter. We are dealing with two potential nationalities not with one, and consideration is justified before we start ploughing with such an unequal yoke.

We wish we could share Mr. Houghton's confidence that a reformed Indian Government will not interfere with Burma more than does the present bureaucracy, but as a matter of fact we regard the possibility of increased interference from the centre as one of the greatest of the dangers which lie ahead. Centralisation is in the Indian blood, and while it is possible that the new constitution may bring forward statesmen of the calibre required to counteract this tendency, we question if it is wise to assume that this will happen. It will be a long time before the Indian Government comes completely under popular control, and in the interval there is in our opinion a serious risk, not only in regard to Burma, but in regard to almost every Indian province, that increased centralisation, coming at a time when centrifugal forces are gaining in activity, may give rise to serious difficulties, with the possibility of the whole machine flying to pieces.

It is, of course, unfashionable to allude to these centrifugal forces at the present juncture, but their reality is unfortunately beyond dispute. During the last century the forces making for unity have had full play, and popular passions have counted for comparatively little, but we are now going to admit passion to the field of politics, and those who best know the bitterness of Indian passions, are least inclined to make a confident prediction as to the result. They hope indeed that sectional passion will abate, and that the great Indian nation will at last become a reality, but, not being practical politicians, they recognise that high hopes are sometimes frustrated. They know how Oudh, for instance, hates Bengalis and dreads Mahrattas, and how the Punjab hates and scorns all three; they foresee that Provincial Legislatures will be under strong temptations to play to galleries in which such sentiments predominate; and they wonder whether any Indian Government, whatever its constitution, will be able to hold the reins until the team is broken in. The effort is well worth making, and they wish it every success, but they are unable to overlook the possibility that the coach may be kicked to pieces in the process.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

August 23.

Egypt on Strike.

No sooner has one strike been temporarily settled than another is ready to break out. The Cairo tramway strike is the exception, as that has now lasted nearly a fortnight, and the demands of the men have been referred to the headquarters of the company in Europe. This is the situation in Cairo, but in Alexandria the local company has announced that it intends to proceed to extreme measures unless the employees return to work. Both in Cairo and Alexandria the "Tramway Employees' Syndicates" are presided over by native lawyers—Maitre Hussein Kamel and Maitre Bashbishi—and the general direction of the strike movement appears to be in the hands of an Italian ex-typographer, who issues statements, dated from no less a centre than the Bourse du Travail, of all the new syndicates that are in process of formation and the progress of the disputes between strikers and employers. These bulletins he signs as "Secretary," though how he obtained the appointment of General Secretary to the Labour movement the public is not given to understand.

Emissaries of mysterious powers are hard at work endeavouring to induce the employees of Railways, Posts, and other Government administrations to turn out, and are equally busy with the men of the waterworks, electric light, and kindred companies. It would look as if every category of labour had suddenly waked up to a realisation of its "down-trodden" and "oppressed" position. Egypt, hitherto a comparatively contented, happy, and prosperous land, must really have been the home of unbridled tyranny, according to the claims of the various strikers. Few of them ask for less than what amounts to at least a 50 per cent. increase all round.

There is no syndicate or trade union in Egypt, as far as we know, that is more than six weeks old, and consequently there can be no funds in reserve to dole out strike pay. Nevertheless, the men have not yet shown any signs of suffering, and, on the contrary, they are good customers in the cafés, where they sit and smoke and drink and discuss their grievances with cheerful mien. There can scarcely be two explanations of this state of affairs. The strikes must be supported by money provided either by the Nationalists or from abroad. If there is any cash available from other sources, the Nationalists are not very likely to divert any of their somewhat diminishing capital from their own propaganda and personal needs to assist a movement principally directed by foreigners, and one which, if it is likely to produce any political effect at all, should lead either to a vigorous repression by the authorities or to an overthrow of all authority by a Bolshevist regime. It can hardly be conceived that Bolshevism in Egypt could suit the Nationalists. An outbreak of this political leprosy would never be tolerated by England or Europe, and it could only result in a brief riot and incalculable and indiscriminate damage to the properties of Egyptians far more than to those of the British, followed by an extended period of martial law in the severest sense, if not by something worse.

A Bolshevist Attack.

Yet it is impossible to escape a suspicion, amounting practically to a conviction, that the rapid and organised spread of syndicalism, under foreign guidance and putatively foreign financing, is nothing else than a Bolshevist attack on Egypt.

The publication in the Press of the *Fetwa* already mentioned in The Near East has given the opportunity to Egyptian Bolshevists to fill the newspapers with pretended confutations and queries, the generality of the correspondence tending to excite public curiosity as to what Bolshevism is and aims at, and indirectly eulogising it as being something like a new gospel that, in spite of every effort of the victorious Entente, has conquered Russia, and, spreading westward, has even gained over Portugal.

The following extract from the *Afkiar* is a fair specimen of the Bolshevist propaganda that is openly indulged in by the uncensored Press:—

As to Portugal, we have no news to-day except a telegram from Lisbon, which says: "Very grave disturbances of a Bolshevist nature have occurred affecting the whole of Portugal. The Government is exerting every effort to re-establish order." The telegram speaks of disturbances of "a Bolshevist nature" as if Bolshevism were nothing but a movement necessarily accompanied by grave disturbances which overwhelm a country at a single stroke. All this is very strange, as Portugal is the westernmost country of Europe, whilst Bolshevism is in the extreme East. As a matter of fact, a great barrier was placed between Portugal and Bolshevism. How, then, did this contagion spread? And why is it that the telegrams report nothing to us about Bolshevism except things of a grave nature and its rapid spread? . . .

The thing that perplexes us about this new doctrine is its very nature, which its adversaries are unable to oppose, notwithstanding all their power, strength, wealth, greatness, and authority. . . . In fact, they have mobilised every arm against it, and yet it has outwitted them. It has managed to slip out of their hands, for, while trying to strangle it in the East, it has slipped into the West as if it were a human necessity; so that wherever people live there it is sure to exist, and wherever the sun rises there it is sure to rise too.

The secret propagation of the Bolshevist idea is less easy to follow, but the Italian advisers to the syndicates are said frankly to admit to their friends and associates that Syndicalism and Bolshevism are to them synonymous terms. Under these conditions it does not look as if the day were far distant when Egypt will be treated to a Bolshevistic rising *en règle*. We shall hear suddenly of Soviets in various places—probably in the provinces in the beginning, though prophecy is very dangerous—and then the conflict will begin. It should not be a very long one, and this is a comfort that it can do no harm to indulge in. At the same time it is a matter of very general regret that a handful of anarchistic foreigners and intriguing Egyptians should be able to disturb the current of Egyptian life and progress, even for a few weeks.

The Milner Commission.

The advent of the Milner Commission is being expected with increasing interest as the time approaches for it to begin its labours. The curiosity as to the composition of this Commission is naturally very lively, and the secret has been well kept so far. At clubs and places where they talk it is said that many residents intend to ask for a hearing both for themselves and for their friends amongst foreigners and Egyptians if the evidence of such is to be taken.

It would be a pity to reject it in favour of exclusively British experience and opinions, as there are several distinguished old residents here of other than British nationality whose statements of fact and whose conclusions should be of the greatest value in confirming or checking the all-British depositions.

The same sort of contradictory value, though perhaps in a lesser degree, will attach to what Egyptians may have to say, but, on the other hand, the evidence of these witnesses can scarcely be dispensed with if the other side is to have any hearing at all.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, August 26.

The Budapest Question.

The question which is now uppermost in the Roumanian mind is that of Roumania's rights in regard to Hungary resulting from the successful counter-attack which allowed the Roumanians to enter Budapest. For a time, while their enthusiasm was at its height, the Roumanians were inclined to regard the attitude taken by the Peace Conference as unfair and unjustifiable, and vague references were made to the adoption of an independent policy.

Rightly or wrongly, the Roumanians were dissatisfied with the line of demarcation which followed on the Armistice, and which was taken, more or less, as an indication of what might be their definite frontier. The Government was not backward in demonstrating their grievances, with the result that one meets very few people who do not think that they have been wronged. The climax was reached when Bela Kun attacked and drove the Roumanian army back, with the evident intention of eventually effecting a junction with Lenin's forces, and it was here that the Roumanian army showed its splendid mettle. After breaking up the Hungarian offensive, they rolled the opposing forces back across the Tisa (Theiss) with lightning speed.

The opportunity thus presenting itself to the Roumanians to safeguard themselves against future aggression from this quarter, they were not slow in taking advantage of it. They crossed the Tisa, caught up and disarmed most of the retreating rabble, and entered Budapest. The collapse of the Bolshevist Government was the first and most important result of the Roumanian successful counter-attack. Having thus annihilated the Hungarian armies, the Roumanians took advantage of the moment to exact what they could as one condition of an armistice; and the fact that much of Roumania's rolling stock and cattle had been brought into Hungary during the German occupation was an additional incentive to do this. One can readily understand, therefore, that the Allies' objection to Roumania's claim caused much bad feeling, and the Government took no pains to smooth matters over. In fact, judging by the attitude adopted by Government circles, it seems probable that they will not sign the Austrian Treaty. In this case, either a Coalition Government or a transitory Government must come in for the purpose of signing, and as the decisive date approaches the anticipated Government crisis draws nearer. It is almost certain that M. Bratianu will not sign the Treaty in its present form, nor is it likely that any other Government formed from the Liberal party will sign; in fact, the resignation of the Government on this platform seems to appeal to the Liberal party, who will, sooner or later, try to make capital out of it. On the other hand, it is highly questionable whether the present Opposition, consisting of M. Take Jonescu's Conservative party and General Averescu's League, will care to undertake the sole responsibility of definitely renouncing—as they would have to do—the territories which are geographically Roumanian, and which the people have been led to believe—as the result of the Liberals' attitude—are indivisible.

A Coalition Government, in which all parties are represented, would save appearances, and would not give any one party an advantage over another. I believe that this solution would be acceptable to the Opposition, but hardly to the Liberals, whose action, through M. Bratianu, has been intransigeant from the beginning.

Should M. Take Jonescu and General Averescu refuse to take the responsibility without the Liberals, the only solution appears to lie in the formation of a transitory Government composed of functionaries, and the name of M. Rimniceanu, who has just retired from the Presidency of the High Court of Cassation, is mentioned as the possible President of the next Government. His mission would be to sign the Treaty—probably under protest if this is admissible—and to preside over the forthcoming general elections.

The Internal Position.

Travelling in Roumania is not in these days at all pleasurable, as, in addition to a very uncertain train service, such trains as are running are invariably so crowded that it is not always easy to find seating accommodation, even on the roofs of the carriages.

On account of the present high cost of living, Roumania is experiencing a sequence of labour troubles. A fairly prolonged strike on the part of the workmen on the oil-fields has just been settled by conceding the principle of an eight-hour day and a minimum wage. A recent strike of postal officials paralysed the postal services for a period of forty-eight hours until a compromise was effected and a definite promise was given that their grievances would receive serious consideration.

These labour troubles do not arise, however, through any general tendency towards Bolshevism on the part of the workers. Happily, the attitude of the Roumanian people as a whole is entirely antagonistic to Bolshevist teachings, and wherever an attempt at the dissemination of these is discovered it is dealt with by a strong hand. The discovery in Bucharest this week of a group of revolutionaries who were secretly engaged in printing incendiary manifestoes has led to a number of arrests, and provoked considerable indignation among the populace.

Cost of Living.

As is perhaps inevitable in a country where the purchasing power of the currency has depreciated to the extent of the Roumanian *leu*, and where the largest portion of the necessities of life have had to be brought into the country, a considerable amount of speculation and profiteering is being carried on, which the Government find very difficult to combat. Especially is this so in the case of food. It is quite easy to fix a standard of maximum prices, but the immediate effect of enforcing such regulations with regard to market produce is to drive it from the market, and the Roumanian farmer, already enriched by large profits, can afford to withhold supplies until the enforcement of the maximum prices has been relaxed.

However, a definite campaign has been started against profiteers and speculators in commodities of primary necessity, and citizen committees have been formed in various towns under the title of Consumers' League. The Bucharest committee recently hit upon a unique method of compelling *restaurateurs* to reduce prices by means of peaceful persuasion. A number of members of the committee visited the principal restaurants and cafés, and at each in turn pointed out the extortionate nature of the prices shown on the menu, requesting the proprietors to reduce immediately the prices to a reasonable figure. In those cases where the proprietors were not willing to concede these demands the committee successfully appealed to the public to assist them in their propaganda by boycotting the restaurants. By this means, in the course of a few hours the prices charged in all the cafés and restaurants in Bucharest were substantially reduced, and an arrangement has been made for future prices to be fixed by agreement between the *restaurateurs* and the committee. This arrangement, however, is hardly likely to be of long duration.

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the Indian Bishops to carry on religious and educational work among these classes, upon whom so much depends.

BELGRADE LETTER.

(From Our Own Correspondent.)

Belgrade, August 27.

The New Cabinet.

The new Cabinet made its *début* before a crowded and expectant house on Saturday, when the President of Council, Dr. Davidovitch, read a statement regarding the policy of the new Government. This was a reasoned declaration of policy to which few, except partisans, will take exception. Referring first to the Paris Conference and the desirability of keeping warm the bonds of friendship with Serbia's powerful Allies, and to the necessity for all of a final, lasting settlement of Balkan affairs, he maintained that no one was better qualified to speak and judge on Balkan affairs than the men of the Balkans themselves. Passing on to foreign affairs, he referred with gratification to the close and friendly relations with the two new Slavonic states, Czecho-Slovakia and Poland, and expressed the hope that, in collaboration and friendship with Greece and Roumania, they would reach a state of stability and peace in the Balkans. After deprecating the recent crisis, deploring the impression which such a state of affairs in Serbia must create in Paris, and expressing the pious hope of solidarity at home, he passed to internal affairs, among which many pressing problems are crying for settlement.

The most urgent is the summoning of the Constituent Assembly, which will put an end to the present provisional state of affairs, and produce a truly unified and united kingdom. The first step to this will be a new Franchise Bill, and also a Bill for the reform of municipal and local elections. He next referred to a proposal for a new constitution, to the currency reform, the agrarian question (which is a contentious one only outside the old frontiers, for the Serbs settled their agrarian reform three generations ago), agricultural improvements, the question of the cost of living, abolition of the censorship, demobilisation, provision for war orphans and broken men, liquidation of the moratorium, and taxation of war profits.

This is a fairly full programme, which, as one speaker said, would be enough to keep ten Governments busy. The President promised quick-time progress with agrarian reform and distribution of free land to volunteers, and foreshadowed bills for war indemnities and the expropriation of large estates and elimination of the traces of feudal tenure, the unification of the army, the improvement in communications—which are urgently required—the reduction of bureaucratism; then, referring to the labour question, he promised an eight-hour day and insurance against sickness, accidents, old age and unemployment.

He called for co-operation and support, and then moved the adjournment. The meeting was fairly stormy, and Monday's proceedings were decidedly lively, too, several members adducing rather illogical reasons for voting against the Government. The only question on which there seems to be a fundamental divergence of opinion is that of agrarian reform, where, of course, big interests are at stake. It is notable that Mr. Dakovitch, speaking in the name of the ten Montenegrin delegates, stated that he and his group would support the Government unreservedly during the present provisional state of affairs, reserving to his party complete freedom of action at a later date. This is a welcome message from the Black Mountain.

Finally, on a division, the Government obtained the narrow majority of eight, 128 votes for the Cabinet, and 119 for the Opposition. Thus the new Government is in the saddle, even if its seat is not a very firm one; but it is anticipated that a number of those who voted against it will pass over to support the Cabinet when they see it settle down to work; for all except extreme partisans realise the necessity of some stability in the country's affairs in these unsettled days.

After all, apart from the agrarian question, personal feeling seems to play the most important rôle in Serbian politics, and it is this which makes them so difficult for a foreigner to follow and understand. But everything is in a state of transition, and the old Radical party, having completed its programme triumphantly, is looking round for a new one in order to justify its existence, for at present it is the prestige of its leaders that keeps it together. It has had a proud history, being identified with a thoroughly national and patriotic policy. It has avowedly aimed at the union of the Yugoslavs, though perhaps few dared to predict that they would live to see their ideal a *fait accompli*. They saw the Balkan Alliance, the downfall of the Turks, and liberation of the southern provinces, and the avenging of Kossovo at Kumanovo, the discomfiture of the Bulgarians, and, finally, the tremendous events of the past five years. Unshaken through the stress and storm of invasion and exile, unmoved by the meretricious voice of the tempter repeatedly offering a separate peace on most enticing terms, they remained loyal to the end, and were finally triumphantly vindicated by the Iliad of last autumn. Now is the day of their apotheosis, and they feel uncomfortable in their new rôle. They will probably develop into a Conservative Agrarian party, supported largely by the peasant holders of Serbia and the landowners of the new provinces. But many will probably drift across to the Democrats, or some of the smaller parties, most of which will probably soon disappear from the stage.

Serbian Sentry Battalion.

Although Serbs and Britons were comrades in arms in Macedonia for three years, the men of the two armies saw little of each other, although a genuine sympathy sprang up whenever they came into contact. There were several British medical and transport units attached to the Serbian armies, and quite a number of British R.A.M.C. officers and sisters and chauffeurs have picked up the language with varying degrees of efficiency. But it is not generally known that there was a Serbian unit under the British command. Since the arrival in Salonika of the hunted refugees through the frozen mountains of Albania in November and December, 1915, a number of Serb civilians and officials found employment under the British as camp policemen, overseers, and quartermasters in the numerous camps of Macedonians, who were employed in thousands by the British, making and maintaining, among other things, the splendid roads to Seres and Kukush, which were the arteries of our armies, and are now, incidentally, through neglect, being allowed to fall into decay and ruin. These Serbs earned the confidence of the authorities by their faithful service, and in October and November, 1917, an experiment was made of forming a distinctive Serbian unit, armed and equipped by the British, to guard our dumps, depots, camp and hospital sites. The idea, which was suggested by the demands of the man-power problem, was a great success, and before long the Serbian Sentry Battalion was an officially recognised unit, with a strength of about a thousand. These were recruited among Serbs exempt from military service on various grounds, men on long leave, and men discharged on grounds of health or wounds, who were yet capable of standing on sentry duty, and so releasing British personnel. Many a broken veteran was proud once more to hold a rifle in his hands and feel that his days of usefulness were not quite gone, and they were certainly proud and delighted to serve under the British command. The experiment was a great success, and thieving, which had attained formidable dimensions, was quickly and efficiently reduced by these old Serbs, who were to be seen in British uniform, with green shoulder-straps, at various places of the lines of communication, from the boundaries of the corps zones down to the Gulf of Corinth.

On the liberation of their country the great majority claimed the privilege of returning to their homes, which could not be denied them, after their three years' exile; but many, especially from the districts of Vranja and

Leskovats, and other parts of Southern Serbia, found neither home nor family to return to, for the enemy had done his evil work only too thoroughly. Dejectedly these men returned to Salonika and re-entered the British service. And so the unit maintained a reduced and somewhat precarious existence for many months after the end of the war on the Salonika front.

By the middle of summer there were about a hundred left. Even now it is not disbanded, though its character is somewhat altered, for the strength has been brought up by the recruiting of several hundred Macedonians, who guard the remains of British stores, and are in turn guarded and policed by some thirty strapping Serbs who have remained with the old battalion.

Austria and Serbia.

Affairs in Hungary are being watched in Serbia with the attention of closely interested neighbours. Bela Kun failed to excite much misgiving, and the advance of the Roumanian army was regarded rather with amusement, but the Serbians' feelings turned to alarm when the Archduke Joseph appeared on the scene. Surely, tney argued, Paris would never allow a Hapsburg to rule again, nor could the Allies recognise any member of that discredited dynasty which has been a blot on central and eastern Europe for so many centuries, least of all the very man who commanded the invasion of 1914, into the devoted Podrinski, whose Army Order was found, printed in German, Magyar and Serb, threatening extreme penalties to any Austro-Hungarian soldier who failed to do his best to exterminate the Serbian people, rob and loot and destroy their property, and convert their paradise into a hell. Him they blame for that mound in the battered church at Shabats, a mound which is the grave of a crowd of old men, women and children, who were huddled into the church and mown down with machine-guns, just like that other common grave at Loznitsa station, where not a single combatant is buried. Serbs have long memories for these things, and they were relieved to read the news that the Peace Conference declined to treat with the Archduke.

Serbia and Roumania.

With regard to their attitude towards Roumania a change has taken place; and since frank speaking and clear understanding of the other side of the case are requisite to the preservation of goodwill between Allies, the Serbian point of view may here be given. At first Roumania's national pretensions were followed by the Serbs with a natural sympathy, but latterly there has been a change. Your readers are doubtless aware that neither Serbs nor Roumanians are satisfied with the decision from Paris that has divided the Banat. The Serbs point out that the line is drawn regardless of national or practical considerations. Thus it happens that the short railway line from Temesvar to Baziash crosses the new frontier three times, which is bound to make difficulties. It is perhaps merely a temporary inconvenience that the great steelworks at Reshitsa, formerly belonging to the Hungarian State Railways, have been allotted to Roumania before the completion of the contract for the reconstruction of the bridge over the Save at Belgrade; for the Roumanian Government, for some reasons of their own, refuse to allow the works to deliver some steel parts of the bridge which are urgently wanted to complete its reconstruction, so that Belgrade is still separated from direct railway communication with the rest of Europe. But feeling about Temesvar is keener, especially in the district of that mixed town. The other day one of the managers of the Reshitsa Steelworks, a Slovak who has lived many years in America, stated that he would return to the States, for he could not live under the Roumanians, and that about four hundred of the skilled men, who had learnt their trade in America, would re-emigrate for the same reason. In Temesvar itself, it appears, the majority of the population is Magyar-German, who would prefer to be joined with Hungary, or, if that were impossible, with Serbia, but they strongly object to Roumania. The Serbian and Roumanian population of the town seems to be of about equal strength, but while the Serbs are scattered through the town, and have been there for centuries, the Roumanians are new colonists, encouraged by the mixing policy of the Hapsburgs, living all in one quarter.

Bridge Burned.

On August 18 the temporary wooden bridge built by the Sappers on the main line between Vranja and Vranska Bania, was burnt down. This is the nearest part of the line to the Bulgarian frontier, and the incident recalls the attack of the Bulgars on Strumitsa station in May, 1915. The entire bridge, which was 20 metres long, was destroyed. It is reported that two men were engaged on the work, Bulgars dressed in Serbian uniform; one succeeded in escaping, but the other was caught. But the extent of the damage was probably exaggerated, for it was repaired and traffic was restored in ten days.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, August 22.

Waiting for Paris.

The public gaze during the past week has been turned in the direction of Thrace, the Athenian public anxiously awaiting the decision of the Paris Conference with regard to this important question. The Greek Press is very strong in its denunciation of the American proposal for the division of Thrace into five parts, of which Greece should administer two, while Bulgaria would have a central corridor, reaching down to the sea, and including Dedeagatch, and the remaining two divisions would form part of the district administered by the Mandatory for Constantinople. It appears to be suspected that President Wilson is not quite such an altruist as Greece has been led to believe. The public are now awaiting the result of the counter-proposals which M. Venizelos is understood to have submitted to the Paris Conference.

The Athenian Press also has it that an agreement has been arrived at between Italy and Greece, to the effect that Italy shall relinquish the Dodecanese in favour of Greece, retaining only one island in the Ægean (presumably Rhodes) as long as Great Britain retains Cyprus. No mention of any *quid pro quo* is made, however.

On the whole, if one can base oneself on the Greek Press and public opinion here, it would appear that Greece is in a fair way to come out of the war very well, from a territorial point of view. It remains to be seen, however, whether the undoubted opposition which the Greek claims have met with from America will in any way prejudice the very energetic commercial campaign which the latter country is conducting in Greece.

The Shortage of Coal.

The question of coal is, here as elsewhere, becoming a very acute one, and the Greek Government appears to be very urgently occupied with the problem. The inability of Great Britain to supply coal for industrial and marine purposes threatens to become a very serious matter for the interests involved. Up till now, most of the Greek industries and railways have managed to keep themselves going by using lignite and wood as fuel, but this cannot go on indefinitely, as the cost is increasingly high, and the results given are very unsatisfactory. Apparently M. Venizelos' efforts in Paris to secure the supplies of coal that Greece needs from England, France and Belgium have met with no measure of success, and he has now telegraphed to the Athens Government to go ahead and endeavour to secure supplies from America, and to requisition the Greek steamers lying in American ports for this purpose.

The Housing Problem.

The housing problem still presents great difficulties in Athens, and the demand for houses vastly exceeds the supply. Owners of houses have no hesitation in asking rental as high as Drs.700 to Drs.1,000 for an unfurnished house of eight or ten rooms. However, now that the submarine risk has been eliminated, and travelling has become easier, a general exodus of well-to-do Greeks is taking place to France and Switzerland, and every steamer leaving for Marseilles is lamentably overcrowded, hundreds of passengers sleeping in the saloons and corridors, to say nothing of on the deck. A good many of the refugees from Turkey and Russia are slowly filtering back to their own countries, so that it is to be hoped that some improvement will shortly be forthcoming, not only in the matter of house accommodation, but also in the actual cost of living.

An Ambitious Scheme.

The *Progrès* of Athens publishes interesting details of rather an ambitious scheme for providing the Serbian capital with an outlet on the Ægean. It is stated that the Serbian Government meditates the construction of a canal joining the Danube with Salonika. The scheme provides for a canal which would leave the village of Kevavara, at the confluence of the Danube and the Morava, following the course of the latter river in Serbia, then entering the Vardar valley near Kupreli, following the course of the latter river until near Salonika, when it would leave the Vardar in order to approach Salonika. The length of this projected waterway will, it is stated, be about 600 kilometres. There is a difference in level between the termini of the proposed canal of about 300 metres, in order to overcome which some sixty-five locks would be necessary. It is stated that the canal would be accessible to vessels up to 10,000 tons deadweight.

The Indian contingent who came over for the Peace celebrations paraded on September 7 in their full dress at the west front of Hampton Court Palace, and were photographed for the bioscope before returning to India.

THE BULGARIAN ELECTIONS.

(From Our Own Correspondent.)

Sofia, September 4.

The Parliamentary elections were held last Sunday throughout the kingdom. Perfect order and tranquillity reigned, and there was an entire absence of any "incidents." According to the official report, the following results have been obtained:—The Agrarians, the Stambolisky group, have 85 Deputies; the Communists, 47; the Moderate Socialists, 39; the Democrats, 28; the Radicals, 8; the Narodniaks (Old Conservatives) 19; the Tzankovists (Progressive Liberals), 8; Genadieff, 1; Stambolovists, 1, making a total of 236.

Thus in the new Chamber there will be an overwhelming majority, 189 Deputies, in support of the Government, while the Opposition will consist of only the 47 Communists. Owing to the present being harvest time, only 40 per cent. of the peasants voted, instead of 60 per cent., as usual; otherwise it is reckoned the Agrarians would have had 120 Deputies.

JERUSALEM NOTES.

(From a Correspondent.)

Jerusalem, August 23.

Political News.

The situation is very quiet. Nothing has been so far decided in regard of this country, although everyone is anxiously waiting to hear the result of the tour of the American Section of the Inter-Allied Commission on the mandate of this country. The Arabs (Moslems and Christians) seem to believe that as far as the wishes of the people of Syria and Palestine are concerned, the Jewish claims for settling in the country are doomed to failure. They seem to be very glad to have had the privilege of expressing openly their views.

The Jews, on the other hand, and more so the Zionists, are still pouring out their money, hoping thereby to gain the votes of the people—a remote prospect. They are trying to propagate every Jewish idea or thought, but, seeing that they cannot get along without the goodwill of the people of the country, they have begun to study Arabic and to teach Hebrew to those who wish. Whether this will help them remains to be seen.

The truth is that both parties have realised that the best form of government for this country is the British one. The Arabs insist on prohibiting the Jews from making it their national home; otherwise they are content with the Administration. The Jews also regard the Administration with favour if they are given a free hand.

On Thursday last the Jewish Women's Association held an evening party in the Municipal Gardens, the proceeds of which were to help the victims of Poland. They insisted on singing their National Anthem before quitting, but the British authorities had to prevent them and to use the police to disperse them. This led the Government to publish a public notice prohibiting the singing and playing in public places of National Anthems other than the British anthem.

Jerusalem Sporting Club.

The Jerusalem Sporting Club was organised some time ago by the Christian young men of the city. The inauguration of the club was held last Sunday in the presence of the Military Governor, his staff, the Consuls of the Allied nations, and other officers and notables.

R.E. OFFICERS FOR INDIA.

The Secretary of State for India announces that a certain number of officers who have served in the Royal Engineers during the war in or East of Egypt, and have since been demobilised, are required for engineering duties of various kinds with the Army in India. The period of employment offered is one year at least. Temporary commissions as Royal Engineer officers will be given with the substantive or acting rank held on demobilisation. Pay corresponding with the appointment offered will be issued at Indian rates from the date of arrival in India and at British rates for the period of voyage to India. A bonus of Rs.500 will be granted to applicants who are accepted. Applications for these appointments, which should state the age of applicants, details of service during the war, technical qualifications, and nature of work desired, also any experience before the war which is likely to be of value in India, should be addressed to the Secretary, War Office (A.G. 7).

MALTA NOTES.

(From Our Own Correspondent.)

Malta, August 18.

The Political Aspiration of the National Assembly

Following in the wake of so many other small nations, Malta is desiring at the present time what the people of the Island consider to be a more representative form of local Government. For years past it has been a case of an abstention and a non-abstention struggle, for as soon as the chosen representatives of the people have secured their election, they, as a rule, have resigned *en bloc* as a protest because of their always being in the minority on the Council of Government, and because they could be outvoted on all points at issue by the non-elected but permanent heads of Departments. This has constituted a political farce, and up to now it has done little, if any, good. Malta, as an island, holds a unique position, and although a loyal Colony of Great Britain, it contains a strong party which is pro-Italian and decidedly anti-English. Hence the recent riots. This state of things has done much in keeping the Island in the decidedly retrograde state it is in. The draft of the proposed Constitution, as approved by the National Assembly, is, to say the least, very ambitious. It may be summed up briefly as follows: The religion to be Roman Catholic; His Majesty's Representative to be a Civil and not a Military Governor, as heretofore; the legislative power to be vested in the Governor, a Senate, and a Chamber of Deputies; the Senate to consist of twelve members, and the eligible members for such a Senate to consist of Ecclesiastics of the higher orders, people with degrees at the local or foreign Universities, proprietors with an annual income of not less than £100, and those who pay rent of not less than £50 per annum, and business men who have acted for the Chamber of Commerce; the Chamber of Deputies to be composed of twenty-two elected members. As regards the power of the suggested two Houses, it is laid down that no law shall become operative if not approved by both Chambers and sanctioned by the Governor. The Senators and Deputies shall enjoy, besides full liberty of speech in the Senate and Chamber, the Parliamentary privileges granted in England to members of the House of Commons. Questions of purely Imperial interest are to be no concern of the proposed Council and Senate. The above are only some of the more important proposals, and when we write that the scheme is ambitious, we need say little more, except to add that some portions will prove highly controversial, if not impracticable. But already there are murmurs that the scheme is not democratic enough. In support of this, a local quotation may not be out of place: "Let us not encourage any repetition in the form of a Classical Council." I shall refer to this later, and report the amendments, which are likely to be considerable.

Democratic Doings.

Already there are differences arising as to the proposed constitution of Government in the Island, and strong things are being said in favour of a single chamber, this to be selected on democratic lines. It is difficult to say how matters will turn out, but there is something of a Gilbertian touch about it when we find a country clamouring at the same time for Imperial help and a full power to manage their own financial affairs. His Excellency Field-Marshal Plumer has his hands very full.

Drawback to Local Emigrants.

No little annoyance has been caused by the decision of the Commonwealth not to admit immigrants into that country from Malta. As has been written before, the Maltese are capital stuff, but they are handicapped grossly by their lack of a knowledge of the English language. The recent efforts of the Emigration Committee should remedy this in time, but we are afraid it will prove a slow process.

Sentence on Rioter.

There have been further decisions arrived at in connection with the recent court-martial over the recent riots. Salvatore Bartolo has received twenty years of penal servitude for "sedition and attempting to induce His Majesty's Forces to act in a manner which he knew to be in contravention of the orders of the Army." A certain Carmelo Abela was found not guilty and acquitted.

EN ROUTE FOR THE ORIENT.

St. Raphael (Var), September 6.

Major Halse, of the Royal Air Force, arrived here to-day from London on a fighting plane. He flew from Lyons to St. Raphael, the last stage of his journey, in two and a-half hours. Major Halse, who was a specialist in long-distance bombing raids, made arrangements at the British Flying School here for immediately continuing his flight to Egypt and India.—*Reuter.*

THE PROBLEM OF TURKEY.

A POSSIBLE SOLUTION.

(FROM A CORRESPONDENT.)

It is doubtful whether any of the many and vast problems which have confronted the Peace Conference were more complex than that of Turkey-in-Asia and Syria—complex by reason of the many nationalities, creeds, and interests involved. Much on the subject has been written in the Press since the commencement of the armistice, bringing to light difficulties and dangers which may arise before we can satisfactorily unravel the tangled skein and weave a lasting peace. We have heard of the aspirations of a liberated Arabia—the views of the Mohammedan leaders on the danger of crushing Islam—the just demands of Armenians for the punishment of the instigators of the Armenian atrocities, and their hopes of the formation of a new Armenia, etc., etc.

All these theories have been ably expounded by their supporters, and doubtless appear to them severally to be the only questions of vital importance. Yet they are in reality merely some of the many pieces that go to make up a vast picture puzzle entitled "Peace." Just as in a picture puzzle, each piece must fit in exactly with its neighbour, so the concerns of each claimant must be considered and settled with a view to the harmony of the country as a whole and the needs of the other claimants. In the solution of all problems it is necessary to keep always before one a clear statement of the object to be attained. In this case it is the duty of the Allies, as victors, to bring peace to the countries which they have conquered, and to redeem their pledge to grant self-determination to the small nations. Let us consider, then, first of all, the country and the nationalities affected and their various claims; we can then examine the possible solutions and see which attunes best to the object we wish to attain.

Before the war, Turkey-in-Asia consisted of Anatolia, Armenia, Kurdistan, Mesopotamia, Syria, and Turkish Arabia. Turkish Arabia, Mesopotamia, and Syria have been liberated from the Turk by right of conquest, and our troops, under the terms of the Armistice, occupy the villayet of Adana and as far north as the line Marash-Urfa-Nisibin. Anatolia, which is practically identical with Asia Minor, consists of the vilayets of Adana, Angora, Archipelago, Broussa, Kastamuni, Konia, Sivas, Smyrna, and Trebizond, with the Mutesarifats of Bijha (Dardanelles) and Ismid. The total population is 9,175.000, of which about 5,000,000 belong to the Orthodox Greek Church, while over 4,000.000 are Mohammedans. Of the Archipelago vilayet, Rhodes and the other islands of the Dodacanese were occupied by Italy in 1911, and almost all the remaining islands, including Samos and Crete, were obtained by Greece in 1912-13. Cyprus was formally annexed to the British Empire in 1914. Armenia comprises the vilayets of Bitlis and Erzerum and the Mamuret of El Aziz; Kurdistan, the vilayets of Diarbekr and Van. Of the population (2,500.000), about 650.000 were Armenian Christians (but the massacres of 1915 all but succeeded in their object of extermination), 250,000 belonged to other Christian sects, and 1,600.000 were Mohammedans. Syria includes the vilayets of Aleppo, Beyrout, and Syria, and part of the vilayet of Zor; while Palestine now forms the Mutessarifliks of Jerusalem, Acre, and Nablus.

A glance at an ethnographical map of this country shows that if you draw a line from Alexandretta to Birejik (on the Euphrates), thence northwards along the western boundary of the Mamuret el Aziz to Divrik, thence eastwards via Erzingan to Toprak Kale, on the Russo-Turco frontier, you will find that all the country north and west of this line is populated with Turanian or Turkish-speaking people. There are a few small isolated patches of Greeks, Kurds, and Armenians, but they are swallowed up in the very large preponderance of Turks. Draw another line due east from Birejik, via Mosul, to the Persian frontier at Mendeli. Between these two lines you have a preponderance of Kurds, with what is left of Armenia circling round Lake Van. South of this second line and west of the Persian frontier the country is almost entirely Arab-speaking. These rough divisions will be useful later in considering the various claims as to future boundaries.

Let us consider first what are the pleas that the Turks would put forward with regard to terms? They will certainly demand fulfilment of the Allies' pledge of self-determination: that is to say, that whenever there is a predominantly Turkish population there they shall rule. They will also demand that the new frontier between Syria, or the New Arabia, and Turkey shall not be farther north than the line occupied by our troops up to the cessation of hostilities. This would be a line, roughly, from Antioch, passing about 20 miles north of Aleppo and thence east to just north of Mosul. If granted these terms they would remain in Constantinople and continue to rule the Armenians and Kurds; the Greeks would have to turn out of Smyrna, and, what is more vital to us, the Turks would control a very large portion of the Baghdad Railway, including the strategically important bridge over the Euphrates at Jerablus.

Their plea in favour of being allowed to remain in Constantinople is based, first, on the fact that 7-12ths of the population of the city are Turkish-speaking Moslems; secondly, that their removal would be a great blow to Islam and to the millions of Moslems who are subjects of the British Empire; and, thirdly, that if their Government, Court, and educated classes are banished to Konia, or some such Anatolian city, Turkey will become a "poor peasant State, peopled largely by semi-barbarians, whose progress will be intolerably slow." The answers to these pleas are: In so far as Turkey-in-Asia is concerned, she can only rule where she predominates, but she does not predominate in Kurdistan, nor will she be allowed to rule Armenians or Kurds—if ever again—until she has proved herself capable of ruling herself. This being the case, the question of her southern frontier running on the line on which hostilities ceased does not arise; except in the vilayets of Adana and Aleppo. Here a temporary boundary has been arranged (running, roughly, east and west through Azaz and keeping north of the Baghdad Railway) for the purpose of defining who shall exercise government and collect the taxes pending the decision of the Peace Conference. As regards Constantinople, it is at least probable that the Christian population, taken as a whole, predominates. In any case, the fact of moving the Turkish Government and Court from Constantinople should be no blow at Islam, for all Islam knows full well that the properties of the Mohammedan Church will be sacred, and that the Moslem will always be free to practise his religion with Britain as a member of the League of Nations.

Now let us consider the claims of the Allies, working from north to south. Russia wants a mandate for Constantinople, but until she has crushed Bolshevism and evolved order out of chaos she is obviously in no position to take up such a responsibility, and Constantinople, at least, will probably have to be administered as a Free Port by the League of Nations. Greece wants Smyrna and the "Greek lands" of Western Asia Minor; and Italy claims a portion of the southern coastal region of the peninsula. The former claims appear to be favourably viewed by the Paris Conference, and the foothold Greece has obtained at Smyrna is likely to be made good. As to the Italian claims, they belong to quite another category, resting solely upon an agreement which can be described as "unfortunate" only by its best friends. The Armenians and the Kurds both require the assistance of a Mandatory Power: the Armenians in order to carry out the work of repatriation and the formation of an Armenian Republic; the Kurds to teach them to become a law-abiding people and to lead them along the path of civilisation, which they are like to find no easy one to follow. The Arabs have conceived the idea of building up anew a great Arab empire, including Syria, Mesopotamia, and the vilayet of Aleppo. Latterly they have shown a desire to be left largely to their own devices, free from any Mandatory Power's supervision, though willing to accept advisers. If, however, they are to have a Mandatory Power, they have let it be clearly understood that they would prefer either Great Britain or America.

Our Allies, the French, demand a mandate for Syria, and at the time of writing it seems to be practically certain that they will obtain it, and quite certain that we shall do nothing whatever to prevent their doing so.

America, we are now given to understand by the American press and the correspondents of our own papers, is not disposed to accept any mandate for the Near East; and though President Wilson may yet persuade his countrymen to take a more altruistic view, the chance of American intervention is highly problematical.

As for ourselves, what do we want? A mandate for Mesopotamia, and perhaps for Palestine also; but certainly not—in view of all the circumstances—for Syria. Yet if our Allies the Arabs should demand that we be the Mandatory for Syria, it would be our duty, as foster-parents of the rising Arab nation, to take their wishes into consideration as well as those of the French.

Rightly or wrongly, we have, so to say, presented to a liberated Arabia an empire which she is at present quite unable to control efficiently, but those who attack our policy in the French, and in certain sections of the English, Press, would do well to remember that but for the Arab being our Ally our advance both in Syria and latterly in Mesopotamia might have had a very different result. As a particular instance, would the 5th Cavalry Division have been able to advance unaided and live on the country from Damascus to Aleppo had the country been hostile? No; the least we can do is to see the Arabs through, if they

Digitized by Google

wish it; but we have certainly not intrigued in any way against our Allies the French. Why should we? The *New Statesman* of August 10 states that among other complaints of our support of the Emir Faisal, the French ask: "By what right is he to extend his pretensions to Aleppo, to Alexandretta?" Perhaps they forget that Hecjaz troops under General Noury Bey were among the first to enter Aleppo, and, by their presence on his right flank, assisted the late General Sir Henry Macandrew to bluff 12,000 Turks out of the town. As to Alexandretta, they make no pretensions, other than the promise which Monsieur Picot made them of a free port. In a strong article *The Times* recently pointed out that it is our duty honourably to carry out the terms of the Sykes-Picot Agreement. Quite so but since that agreement was signed we and the French have become members of the League of Nations, and have presumably bound ourselves to grant self-determination to small nations. The whole question of Syria would appear to be: Whom do the Syrians want? The reports of the American Commission for enquiring into the wishes of the populace show that a large majority of Syrian villages desire absolute independence. Failing this, they would accept an American or British Mandate. Beyrout and the Lebanon vote for the French. The people of Palestine, with the exception of a Zionist minority, favour British or American protection. It is to be hoped that, on better acquaintance, the Syrian Arab east of the Lebanon will come to see eye to eyes with his brother in the west, and accept a French Mandate.

Taking all things into consideration, it would appear that a settlement which would probably have as good a chance as any of giving satisfaction and of enduring for a while, would be somewhat on the following lines: (1) For Turkey-in-Asia, Armenia, and Kurdistan, either France or America should be the Mandatory Power; (2) for Mesopotamia and Palestine, Great Britain to be the Mandatory; (3) Turkey to consist of Anatolia—her southern boundary and limits of Armenia and of Kurdistan to be settled by frontier commissions. Constantinople to be controlled (by America, if she will accept the responsibility) on behalf of the League of Nations; (4) Syria to be an Arab Republic until such time as it may elect to become a part of the Arab kingdom, France, meanwhile, to be the Mandatory Power; and if at any future time the people vote for a change in the Mandate, France to retain the vilayets of Beyrout and the Lebanon—the rest of the country being taken over by the Power selected by the people.

It is not claimed that the suggestions put forward above are perfect, but they embody the principle of self-determination—which should be the first consideration—and if put into practice they would clear us of any possible suspicion of "intrigue" in Syria. To those who would accuse us of thereby deserting our Hecjaz Allies, it may be pointed out that it would be manifestly unfair to impose the will of a comparatively few Hecjaz and Baghdadi Arabs upon the Syrian Arabs. Many of the latter are better educated and more in touch with Western ideas than their brothers in the south, and they naturally desire some voice in the government of their country. The idea of an Arab Republic in the north has already recommended itself to many Syrians, and also to those Arabs of the Hecjaz who appreciate the initial difficulties that will beset the rulers of the new Arab Kingdom.

PRESS ON THE NEAR EAST.

Egypt.

The Cairo correspondent of *The Times* is devoting a series of articles to the problem of Egypt. In the issue of September 8 he examines the causes of discontent, and, in addition to those usually cited—the requisitioning of crops, th Egyptian Labour corps, and the rest—he points to the decay of good manners as a vital factor. He says this decay is partly due to the war, and is in any case entirely remediable.

It is unfortunate, but true, that one hears the rising described as a rebellion against bad manners. There is a common complaint, which I voice but do not vouch for, that the Anglo-Egyptian has "fallen off." There is an insistent cry, from British residents and Egyptians alike, that we no longer send to Egypt young men of the type common amongst the contemporaries of Scott Moncrieff. One is told that there are young men who are so deficient in real superiority that they attempt to assert themselves by crass boorishness towards the Egyptian. They have forgotten our special position in Egypt, and tend more and more to see little difference between an Egyptian pasha and a Bengali babu. It especially rankles with Egyptians that these men speak of them often in terms of India, without having the ability that is supposed to mark the Indian official. I have not met this type at all, but I have heard its existence vouched for, and if this be so there is something wrong with the selection of candidates.

Rudeness, however, can be assumed to be not the rule among officials, who are not likely to be blind to the fact that the Egyptian is the most tractable person in the world and falls an immediate victim to a gracious manner. But a contributory source of unrest has been the presence of a democratic army of men and women throughout the war. Tom, Dick, and Harry set in authority; Tom, Dick, and Harry moving as officers among civilian "natives"; and Tom, Dick, and Harry's sisters with Arab orderlies at command, and with stately Nubians to fetch their liqueurs while they took their innocent and well-earned rest in Egypt's famous hotels. All this was new in Egypt. Girls who were probably doing their own job devotedly may be forgiven if they sometimes failed to realise that they owed their country something more. One of the most real and beneficent services rendered by Egypt during the war was to be an enchanting holiday-ground for convalescents and for officers and men on leave. But no one can be surprised that subalterns who spent three months in the line on behalf of our civilisation should leave the spreading of it to someone else during their seventy-two hours out. And it is important to recognise that what we may in all charity call the reign of ragtime has been a real element of disturbance, and the farther it recedes the better.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Just a few lines to answer your correspondent "M. B. E.," from Cyprus.

The reason why Cypriots are getting certificates of British nationality is very obvious: it is because, after all, they are bound to have some passports for travelling and other purposes, and the only passport they can get under the law is the British. Does your correspondent really wish to imply that the millions of the unredeemed Hellenes, who were bound to get Turkish passports, prefer Turkish to Greek nationality?

Even the Archbishop and three members of our deputation, whom your correspondent would, no doubt, describe as "fanatic agitators," travel with British passports.

As to the other point, that the wish for the union with Greece is not unanimous, the deputation consists of the Archbishop and all the Greek members of the Legislative Council—viz., of the total representatives of the Greek Orthodox population of Cyprus. Every election of these representatives has been effected on the platform of "Union, only union, nothing but union." Should this be insufficient, we are willing to abide by the result of the plebiscite. As a matter of fact, what we demand is a "self-determination." *Ἰδοὺ ἡ ῥόδος, ἰδοὺ καὶ τὸ πήδημα.*

I am afraid your correspondent belongs to that category of "little Englishmen" who are doing their best, without any reason, to provoke antipathy in the Island by disputing indisputable facts. Such a policy, I am sure, cannot be called a British policy. Fortunately for us, those who hold responsible places in the Empire know thoroughly well our history, our origin, our nationality, as well as our wishes and will, and we know that in their decision for the future of Cyprus they will keep high the British prestige and the British honour. In the meantime, Mr. "M. B. E." may call us simply "Orthodox Cypriots," thus revealing his ignorance of the Island's history.—I am, etc.,

DR. NIC. KL. LANITIS.

Paris, September 1, 1919.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Mr. Percy White, whose article in the *Spectator* you quote, rightly gives prominence to one of the principal motives by which Greeks who advocate union are actuated. Not only advocates and professional usurers, but the large class of merchants and traders are all money-lenders, and derive much of their gains from this source. The peasantry are only too often unmercifully fleeced, and heavily indebted. The money-lender, or "master," as he is called by the debtor, undoubtedly puts pressure in many cases upon his client to induce him to join in the cry for union. Under Greece the burden would remain and be increased. Athens has a host of educated men only too ready to take up posts, but does not possess administrators such as should be sent to Cyprus.

The Cypriot peasantry are not politicians, but they have a shrewd presentiment as to what Hellenic rule would mean.—I am, etc.,

BRITON.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The letter of Irfan Bey in the last NEAR EAST gives ample reasons why any prospect of Greek rule—it is to be hoped now remote—should be regarded with apprehension by the Moslem population. With marked good taste, he says but little though he might say much, respecting their "loyalty to the British Crown" during the forty-one years of British administration. Sufficient attention has not been called in England to this aspect of the situation.

During forty-one years of British freedom and toleration the Greek element has created and fostered a political agitation and disaffection, with frequent marks of bad taste. Liberty brought into existence a number of Greek papers, all anti-Government, and mostly anti-English. The agitation was worked up by the Press, schoolmasters, and Church. In the Legislative Council the Greek members, in order, as they imagined, to further their aims, gave constant trouble by captious opposition; so much so that it became necessary to the Home Government to give them a serious warning that persistence in their course of obstruction could only lead, as at one time in Malta, to an alteration of the Constitution.

The Turkish community and members of Council, on the other hand, have been throughout unswervingly loyal, and it has been principally through their aid and co-operation that progress in legislature has been effected. That Turks and Greeks have lived in peace has been due not only to the British Government, but also to the attitude and exemplary behaviour of the Turkish community, sometimes, as during the Græco-Turkish war, under great provocation. All this has been kept too much in the background, while Greek deputations and missions have endeavoured to monopolise the attention of the public in England. It is high time that the record of the Moslem element were better known and appreciated in England. I should add that there is no spontaneous desire whatever among the rural classes—the bulk of the population—for any change—quite the contrary. The town agitators have entirely failed to arouse any desire for the substitution of Greek for British rule by their artificial "racial" propaganda. The letter of "M. B. E." in THE NEAR EAST of August 22 as to the real feeling of the peasantry would be endorsed by all who know the Cypriot people.—I am, etc.,

I. G. C.

September 8, 1919.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Will you kindly allow me to answer the letter of M. Irfan Effendi, Director of the Moslem Evkaf in Cyprus, which appeared in your issue of September 5?

The Deputation of our island have so clearly placed the matter on various occasions before the British public that it would be hardly necessary to revert again to arguments which, no doubt, have already convinced every fair-minded man of the justice regarding our cause, *i.e.*, the union of Cyprus to the kingdom of Greece. However, there is a point in the above-mentioned letter that would require some answer, or correction rather, and this is the close, referring to the situation of the Moslems in Thessaly, Crete, and Macedonia since they became parts of the Greek kingdom. With regard to Thessaly, those Moslems who left on the eve of the annexation have done so through fanaticism, without knowing the benefits of the Greek Administration. As for Crete, the same motive as above inspired the bulk of the Moslems who left the island on its occupation by Greece. However, realising their mistake, they continue to return to the island in their hundreds, and are now enjoying equal rights with the Christian Cretans. Referring to Macedonia, M. Irfan Effendi mentions as a "fact" the speech of some viscount alleging injustice done to the Moslem inhabitants by the Greek authorities. But, in spite of this feeble argument, the real facts cannot be ignored. The splendid and liberal Greek administration has been officially praised by many a foreign statesman and soldier, and as a proof I might quote the respective declarations made recently by that famous contemporary soldier, General Franchet d'Espérey, who impartially described the liberal policy of the Greek Government towards its Moslem subjects, contrasting with it the treatment of Greeks in Turkey.

With reference to the events of the "unfortunate landing of Greek troops in Smyrna," as M. Irfan Effendi most rightly puts it down, these were caused, according to official reports, through certain fanatical Moslems treacherously opening fire on the troops of occupation without the slightest provocation on the part of the troops; now, however, that some bandit elements of the old regime have been secured, the situation is praised by all elements alike.

Unfortunately, history and recent events are full of barbarous deeds committed by fanatical Moslems to the detriment of the Christian elements; but, fortunately, a lot of the old hot-headed Moslems have recognised at last the impartiality of the Greek administration, and as a most recent proof of this statement I mention the petition signed by the Moslem inhabitants of Thrace urging the Peace Conference to annex Thrace to the Greek kingdom.

There is little wonder for such policy manifested by various Moslem communities outside the boundaries of the Greek kingdom, seeing that their co-religionists in Greece are enjoying equal rights with the Christians: mayors, prefects, and other high officials are to be found in Greece drawn from the Moslem

element; and it is stated that a Moslem Minister is to be one of the Cabinet members.

In Cyprus Christians and Moslems are living in harmony, and the principle of official Greece and of the Greeks as individuals is to see that all elements within the boundaries of our enlarged motherland are treated impartially and liberally. Time only will prove our goodwill and disposition for such a policy, and I trust that M. Irfan Effendi will soon be convinced of this.—I am, etc.,

MEDITERRANEAN QUESTIONS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Referring to the letter of Mr. Callinicos in your last issue, it is surely matter for amazement that a modern Greek should have the hardihood to endeavour to support the usual claims of his country to an extension of territory by an appeal to Byron as forming a link "of traditional 'entente de cœurs' between Britain and Greece."

English poets, in common with others who are not poets, can, of course, have nothing but respect and admiration for the prowess and patriotism of the Greeks of old, suggested by the magic names of Marathon and Salamis, but there is a great gulf fixed between those times and the present, or the nineteenth, centuries. For instance, it is on record that Byron was offered the field of Marathon for the sum of about £900! Well might he exclaim: "Was the dust of Miltiades worth no more?" Love for the land is one thing. The character of its inhabitants may inspire quite another feeling, and such, apparently, was Byron's view when he wrote, "For the Greeks a blush—for Greece a tear."

Byron indeed loved Greece, as we all know, and he even placed his sword at her disposal. What he thought of the people is reflected in the second Canto of "Childe Harold." Have they materially changed during the last hundred years?—I am, etc.,

CYPRIOT.

NORTH EPIRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Some months ago I made a protest in your columns against the proposed cession of South Albania (North Epirus) to the Greeks, giving as one reason that, as there was a Moslem majority there, that alone was a proof that the majority of the inhabitants were anti-Greek. I had in my journeys been repeatedly assured by the inhabitants that the Moslems were in considerable majority. My statement was, however, contradicted by a letter from Mr. Kessary, a Greek, who based his statement on statistics brought forward by M. Venizelos to prove a large majority of Christians, which Christians he erroneously stated to be Greeks. I have now come into the possession of far more recent statistics. They are of indubitable reliability, as they are the French statistics made for the purposes of re-victualling part of the district. M. Venizelos' statement was that all South Albania contained 230,000 inhabitants. From this he deducted certain districts containing 30,000 Moslems which he did not wish to annex—there being, in fact, no possible excuse for so doing. This left 200,000 inhabitants, of whom he declared 120,000 to be Christian and 80,000 to be Moslem. He presumed the Christians to be Greek, and asked how a Greek majority could be given to an Albanian minority.

From the French figures for the Koritza district, which they have now occupied since the winter of 1916, we learn, on the contrary, that this district, one of the most coveted by the Greeks, contains 41,070 Christians to 82,245 Moslems. These figures include Koritza, Ostro Tomoritza, Bilishta, Selenitza, and the region of Pogradec.

To this we must add the population of the remainder of the country in question. This we take from the census of Hilmi Pasha and the International Commission, which cannot be contested by the other side, as they also have made use of it.—These give us:—Christians, 76,651; and Moslems, 91,846.

We thus arrive at a grand total of 290,784, made up of 117,721 Christians and 174,091 Moslems. And even if we deduct the 30,000 Moslems for whom M. Venizelos has no use, the Moslem majority remains. Of the Christians, even M. Venizelos has had to confess that they are of Albanian origin and speak Albanian as mother tongue. And a letter from a Christian Albanian of Korcha which I received a few days ago says: "In July there arrived at Korcha (Koritza) two Greek officers with the ostentatious object of kindling again the dying sparks of Greek propaganda. They were hooted down and hissed all along, and sent away in the same unceremonious manner after only three hours' unpleasant sojourn. Korcha has been almost entirely released from the clutches of Greek propaganda." This speaks for itself.—I am, etc.,

M. E. DURHAM,
Hon. Sec., Anglo-Albanian Society.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

To-morrow (September 13) is the anniversary of the battle of Tel-el-Kebir. Compared with the fighting all over the Old World in the late war, this battle of "The Big Mound" was, of course, a very insignificant affair. Arabi Pasha's force was only about 26,000 men strong, and the total losses on both sides were under 2,000, of which number 1,500 were Egyptians. But at the time it was regarded as a big battle, and Englishmen were—very properly—grateful to Sir Garnet Wolseley and his gallant men. And, in fact, it had far-reaching effects, as we all know. The 'Gippy, who was then—as he seems to be just now again—inclined to fancy himself more highly than the rest of the world fancies him, wanted a lesson, and he got it. My own private conviction is that we might learn from the past once more; that there has been a great deal too much "fine talk," and that it is time to give the men of action a chance. But then I have for some time recognised thankfully that I am hopelessly out-of-date in such matters.

***

The "Enver Pasha Bridge" over the Teltow Canal is, I see, to revert to its old name, the "Castle Bridge." According to the *Lokal-Anzeiger*, the reason for the change is that the local authorities are no longer enthusiastic regarding Enver's heroism, if, indeed, they ever were so; for, after all, the first change was made by express desire of one of the formerly exalted. I have no objection to offer to the change, but I fancy the reasons given are not based on any good foundation. Enver used not to be a coward—at any rate, not a physical coward. But I suppose the truth is that his failure to come up to their expectations has so grievously disappointed his former German friends that they have to let their spite off somehow or other, and have chosen to do it this way. As a matter of fact, is it not unwise to name a street or a bridge after any foreigner? The subsequent change is always a somewhat unpleasant affair.

***

Theoretically, Bolshevism may be an uplifting and ennobling creed, but in practice it is so utterly beastly that to find anyone openly supporting it may well fill us with surprise. Yet even in this country one does, from time to time, meet wild-eyed, long-haired, not-too-clean persons, who talk of the Bolshies as "the only hope for humanity," and so forth and so on, *ad lib.* and *ad nauseam*. I suppose it is due to that contrariness of human nature, that sheer cussedness which was described by B. C. Stephenson in "Dorothy" when he wrote:

"The single would marry, but the husband contrives
To consider his fetters a curse;
While half the world sighs for the other half's wives—
With the risk of a change for the worse."

Judging by the look of some of the Bolshi-phils referred to above, I suspect that the prospect of securing some other men's wives accounts for their views, and they ought really to be in the Monkey House at the Zoo—behind bars.

***

That, however, is a digression. What I set out to remark upon was the attitude of an Egyptian paper, *El Ahaly*, towards the red peril. That enterprising journal, I note, prays God to hasten the introduction of Bolshevism into Egypt. How long will such criminal folly be tolerated? If Bolshevism is not aggravated anarchy under a new name, what is it? And since Anarchists admit frankly that they are against organised society, and would crush it if they had the power to do so, why does not organised society crush anyone who admits that he or she is an Anarchist? It would be simply treating them as they would treat us if they could, and it would rid us of the pests. A short Act of Parliament would make it possible to deal with the peril here, and other countries would surely follow suit. The majority of civilised mankind is just about sick of the spirit of lawlessness and sheer selfishness that has been bred by the war. And to allow such foolish stuff as this of *El Ahaly* to be served out to the ill-balanced Egyptians is simply folly.

CORSAIR.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

NEAR EAST BOOKSHELF.

HINDU SCIENCE.*

Mr. Sarkar sets out to present a comprehensive, though very brief, account of the scientific work done in ancient and mediæval India. He urges that Indian achievement must be judged in the true historical perspective, and not by comparison with the new knowledge acquired during the last century or two in Europe. From this point of view, ancient India may justly claim to stand on the same footing as ancient Greece, and we are not disposed to quarrel with Mr. Sarkar's conclusion that "the story of scientific investigation among the Hindus is thus, like that among other nations, the story of a growth and development in critical inquiry, sceptical attitude, and rationalism." It is not clear how far Mr. Sarkar has gone to the original authorities, but his Bibliography consists almost entirely of titles which must be described as secondary, and we are told, for the most part, not what the old writers actually said, but what other modern writers say that they have found. It is possible that some of them have made mistakes, and a more critical treatment would be justified, but, taking the book for what it purports to be, we can recommend it as a modest and interesting compilation.

THE UNIVERSAL QUEEN.†

The search for a Holy Grail is one which all men, of whatever religion, may undertake. There is no practical Absolute in these matters, and it is recognised that the seeker after truth may be successful or unsuccessful equally in Persia as in England. The ends of East and West may not be identical, and their methods are quite different, but there is something in the mystic journey to the Ideal which is common to both.

In this Sufi tale, which is adequately described by the publishers as "a web of poetical fantasy spun on the loom of Persian mysticism," Mr. Vansittart has chosen to show the quest for the Ideal, certainly with local colouring, but (presumably so that we all may understand) on a canvas of Occidental quality. His caravan of song, bearing a "white Transcaspian Queen," starts from Elborz, and having passed through Enzeli, on the Caspian Sea, sets out on its high way across Persia. It reaches the "great gate of screened Tehran," and there the Queen of the caravan irresistibly attracts the "Dreamer-of-the-Age," a poet very similar to Morris's "idle singer of an empty day." He asks no questions concerning the purpose of the journey, but is content in knowing that in the Queen he has found Love and Prayer and all that he worships, and so joins in the hunt for Truth. On the caravan moves, until its occupants behold "the domes of Kom": thence to "Persia's pride, Rose-Ispahan." But no halt could be made on the urgent quest; they did not pause at "sun-burnt Shiraz," and hastened on to "dank Bushir." They had now reached the Gulf of Pearls, had travelled from sea to sea. But the journey was not over, for the Queen straightway stepped on board a dhow bound for a port which no man has seen twice.

That is the journey; but, on the way, the travellers, like those in the "Canterbury Tales," chant out their various songs. The author has done his verse cleverly, and in nearly every case his metre is fit for his matter. His gift of expression is very considerable, and his command of several styles is as complete as it is necessary. Though we do not like the whole-hearted courage of his rhyming —"the background, silence," with "myriad-while hence," is startling, but "as a man" with "it feels uncann" is unpardonable—and though we object strongly to his frequent use of the word "coolth," yet there is much in the book which even a purist can admire. Browning and Thomas Ingoldsby would not be ashamed of the power of technique displayed here; and though the author's philosophy may be too clearly expressed to have won Browning's approval, there is at least one example of malicious levity over which the Rev. Barham would have chuckled. It concerns a sheikh who had travelled the world over and who understood all doctrines, but his one firm conviction was this:—

> "The Faith, the Pomp, the Loves, the Lives of men
> Outshine the firefly and outcrest the wren."
> He added as he rose: "But God is great."
> And bent, repassing through the city gate,
> Lest he should bump his venerable pate.

Most of the songs are of a semi-lyrical nature—*e.g.*, "The Legend of the Peasant," "The Depth of the Night," chiefly because the caravaners, whose perpetual hunt is for Beauty and Truth, can see the light intensely only for a short time. There is one notable exception to this, "The History of the Adventurer," the longest poem in the book. It represents an impersonation of the spirit which inspired the Crusades, and shows vividly the longings, sufferings, temptations, and ideals of the fighting Christians. But the Adventurer, though his "Sunflower-tress" and the valleys of the Rhone are calling him, though every flower and bramble make him burn with love of home, holds, in spite of the degradation by fellow-pilgrims of the quest, firmly to his ideals, turns not back from his appointed trust, and clings to the one safe illusion in life—that arising from disillusion. As he says, as he approaches the end of experience:

> For whether hope can ever fit the future matters not a whit.
> My duty is to tug my oar—so long as I am chained to it.

The songs of the caravan end with the Adventurer's tale, but there is yet a secret to tell, and the author allows old Tous, the camel who bore the caravan on it long journey, to unfold it. It is that all the caravaners at the end were one and the same man: the various spirits which uttered various songs were, through love, fused at last into a perfect unity. The author has made his Pantheistic case excellently, for his pilgrims all find the universal and eternal Queen, and their unity and common success are but parts of a larger unity to come, in the achievement of which, however, they will not be helpless onlookers. The Dreamer-of-the-Age says (and the author has given his words a very special application to this age of war):—

> Ah, make me glad,
> You that come after me and call
> From summits that outstrip my hopes.
> Yet I shall linger on the slopes
> And dwell with those who gave their all.

BOOK NOTES.

"Poems in Captivity" is the title of a book of verse by John Still, published by the Bodley Head. Many of the poems are written about Ceylon.

Heath Cranton has recently published "War and Sport in India," an officer's diary, 1802-1806, and "Travels East of Suez." by Rachel Humphreys, F.R.G.S.

Messrs. Cassell's autumn fiction includes "Star of India," an Anglo-Indian novel, by Alice Perrin, and "A Thousand to One," by B. M. Croker, which is also concerned with India.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Arabic.	Jewish.
1919. September	1919. August		1337. Julheggia.	5679. Elul.
12	30	Friday	17	17
13	31	Saturday.....	18	18
14	September 1	Sunday	19	19
15	2	Monday	20	20
16	3	Tuesday	21	21
17	4	Wednesday	22	22
18	5	Thursday	23	23

Lord Sinha has arrived at Harrogate for the cure.

Brigadier-General Ronald Storrs, C.M.G., has left London, and is at present in Paris.

The Rev. F. A. Judd, curate at St. Saviour's, Ealing, is shortly going to work at Allahabad under the Bishop of Lucknow.

General Allenby is now in France, and is expected to arrive in England next week, when he will be accorded an official reception.

Admiral de Robeck, on board the Iron Duke, has left Malta for Navarino, Mudros, and Constantinople, where he will assume the High Commissionership.

It is announced that the marriage was celebrated on July 19, at Garrison Church, Kasr-el-Nil, Cairo, between Major Cecil V. Woodcock, R.E., I.W.T., of Liverpool, and Ethel I. Brookes, Simla, India.

Cardinal Giustini has been appointed Papal Legate to proceed to Jerusalem for the celebration of the seven hundredth anniversary of the establishment of the Franciscan Order as guardian of the Holy Places in Palestine.

Major J. L. Baird, M.P., Under-Secretary to the Home Office, has left Scotland for Egypt. He has been ordered a complete rest owing to overwork. The recent death of his sister in Egypt decided him to visit that country.

The marriage took place on September 4, at Holy Trinity, Brompton, S.W., between Duncan James Donne, son of J. P. Donne, Esq., and Marguerite Julia, second daughter of the late Sir Frank Souter, K.C.S.I., C.I.E.

A marriage has been arranged, and will shortly take place, between Major C. A. G. Mackintosh, of the Arab Bureau, G.H.Q., E.E.F., Cairo, and Norna, daughter of the late James Labouchere, of 23, Chapel Street, Belgrave Square.

The marriage was celebrated on September 2, at Hurstmonceux, by Rev. St. John Macdonald, between William Walter, eldest son of the late A. J. Butler, of Wantling, Sussex, and Violet, second daughter of the late F. C. Cooper, Calcutta.

The engagement is announced between Thomas Charles Donald Ricketts, Indian Army, only surviving son of the late T. F. Ricketts, M.D., and Elspeth Ross, elder daughter of W. R. Buckell, F.R.C.S., of Salmon Arm, B. C. (late of Cheltenham).

The marriage was celebrated on September 4, at St. Mark's, North Audley Street, by the Rev. J. Brett-Langstaff, between Major James Gourlie, D.S.O., King George's Own Central India Horse, and Constance Winifred, daughter of the late William McKerrow.

The marriage arranged between Philip Henry Lemon, of Calcutta, elder son of Mr. and Mrs. H. S. Lemon, Upton Leigh, Cheltenham, and Valentine, second daughter of the late Richard Gordon-Smith and of Mrs. Gordon-Smith, Burnside, Prestbury, Gloucestershire, will take place shortly in Calcutta.

A marriage has been arranged between Lieut.-Colonel A. Hewlett, K.G.O., Central India Horse, son of the late General T. G. Hewlett, C.I.E., and Gertrude Margaret (Madge) Hood, younger daughter of the Hon. A. and Mrs. Hood, Gregory, Styvechall Hall, Warwickshire.

The marriage was celebrated on September 5, at the Brompton Oratory, by the Rev. Father Munster, between Lieutenant-Commander G. B. H. Francis, R.N., younger son of Mrs. Francis, Swindon, and Grace Aimée, fourth daughter of General Mason, late Bengal Cavalry, I.A.

An official delegation of the Indian National Congress has been giving evidence before the Joint Committee of the House of Lords and House of Commons appointed to consider and report upon the Government of India Bill. A report will be drafted for the consideration of Parliament when it meets on October 22. In the meantime the delegation is preparing to hold meetings in all provincial centres.

The marriage took place on September 4, at St. Judes-on-the-Hill, Golder's Green, between Captain Maurice Gaskell Sykes, R.A.F. (India Civil Service), youngest son of T. Gaskell Sykes, West Ealing, and Constance Mary Lilian, younger daughter of the late Hugh Stewart Roberts.

A marriage has been arranged, and will shortly take place at Simla, between Major N. A. H. Campbell, Somerset Light Infantry, younger son of the Hon. A. F. H. Campbell, and Enid Muriel, second daughter of Colonel C. H. D. Ryder, C.I.E., D.S.O., Surveyor-General of India.

The engagement is announced between Captain E. E. V. Temperley, M.C., of Jodhpore, India, younger son of the Rev. A. Temperley, South Willingham, Lincoln, and Myrtle Irene Stuart, third daughter of the late Canon E. A. Stuart, of Canterbury Cathedral, and Mrs. Stuart, of 47, Aberdeen Park, Highbury.

The marriage was celebrated on September 4, by special licence, at St. Paul's Church, Slough, by the Rev. B. W. Isaac, vicar, between Zain Maurice Yusif, B.A.(Cantab.), only son of Mr. and Mrs. M. Yusif (Indian Civil Service), and Elizabeth Mary, third daughter of Mr. and Mrs. W. F. Clarke, of Slough, Bucks.

A marriage has been arranged, and will shortly take place, between Major Montague H. Seymour, 10th Gurkha Rifles, elder son of the late Major W. W. M. Seymour, R.A., and Evelyn, only daughter of Mr. M. W. Mattinson, K.C., Recorder of Blackburn, and Mrs. Mattinson, of 18, Phillimore Gardens, Kensington, W.

The marriage was celebrated on September 2, at St. John's Church, Kingston, between Wilfred Graham Thrupp, Indian Police, youngest son of Mrs. H. Keay Gow and grandson of the late Mr. G. A. Thrupp, of Maida Vale, and Mildred Frances, younger daughter of Mr. and Mrs. C. F. A. Poland, The Gables, Fassett Road, Kingston.

The marriage was celebrated on September 4, at the Parish Church, Windsor, by the Rev. E. M. Blackie, vicar of Windsor and Hon. Chaplain to the King, between Major J. G. L. Soames, youngest son of the late J. K. Soames, of Blackheath, and Sybil Erskine, only daughter of Lieut.-Colonel Warren Hastings, late Indian Army, The Firs, Datchet.

Bishop Gwynne arrived in Cairo from England on August 4, and expects to reach Khartoum on August 16 (says the *Sudan Times*). Writing from England on July 1, he said he had succeeded in securing the Rev. H. Hornby, M.C., as a new chaplain for the Sudan. Mr. Hornby has been Senior C.F., 2nd Division, in France. He expects to arrive in November.

The marriage was celebrated on September 6, at All Saints', Hordle, by the Rev. E. P. Boys Smith, assisted by the Rev. G. Mackie, between Major E. H. Impey, M.C., Lincolnshire Regiment, attached M.G.C., only son of Lieut.-Colonel L. Impey, C.S.I., C.I.E., and Marguerite Alysoun Ramsay, younger daughter of Brigadier-General A. H. Cowie, C.M.G., R.E., and Mrs. Cowie.

The marriage was celebrated on September 3, at St. Catharine's Church, Arthog, Merionethshire, by the Rev. Owen Evans, M.A., between Geoffrey Herbert, India Police, Lieutenant I.A.R.O., third son of Mr. and Mrs. Charles H. Mannooch, of 1A, Lawn Road, Belsize Park, N.W., and Irene Kate, youngest daughter of Mr. and Mrs. Morgan W. Griffith, of Bryntirion, Dolgelly.

The marriage was celebrated on September 3, at St. Peter's, Woolwich, by the Rev. Father P. Byrne, between Vivian Claude Hamilton, R.F.A., younger son of the late Lieut.-Colonel Henry Charles Hamilton, 2nd Cavalry, Hyderabad Contingent, and of Mrs. Hamilton, Park Hill Lodge, Shortlands, and Catherine, eldest daughter of Captain John Lynch, Remount Depot, Bangalore.

The eighty-seventh annual meeting of the British Association for the Advancement of Science began on September 10 at Bournemouth. Among the contributions made were papers read by Mr. R. C. Thompson and Lieut.-Colonel Beazeley on explorations and surveys made in Mesopotamia during the war, and one by the retiring president, Sir Arthur Evans, on "The Palace of Minos and the Prehistoric Civilisation of Crete."

The marriage was celebrated on September 3, at St. Michael and All Angels', Bude, by the Rev. Watkin Davies, B.D., rural dean of Chepstow, assisted by the Rev. E. G. Burr, D.D., between Geoffery Swinford Laird-Clowes, Egyptian Civil Service, only son of the late Sir William Laird-Clowes and of Lady Laird-Clowes, and Dulcie Evelyn, eldest daughter of George Glass Hooper, 23, Kensington Court, W.8, and St. Margaret's, Bude.

The marriage arranged between Harry William Hammond, of Colombo, Ceylon, second son of Mr. and Mrs. William Hammond, of Hertford, and Muriel Beatrice, only daughter of the late Professor A. H. Young, LL.D., M.B., C.M., F.R.C.S., of the Victoria University, Manchester, and Mrs. Young, 4, Corringway, Hampstead, N.W.4, will take place at All Saints, Margaret Street, on September 23.

On the afternoon of September 5 a gathering composed of representatives from the various Oriental societies of the Allies was held at the London School of Oriental Studies. Sir E. Denison Ross, on behalf of the school, extended a very hearty welcome to the visitors, among whom France was well represented. He hoped that in the future friends from Italy and America would be able to attend such a gathering in larger numbers. He proceeded to sketch the history of the School of Oriental Studies, attributing its birth to the activities of the Royal Asiatic Society, and especially to the untiring energies of Mr. P. J. Hartog. He then announced the two lectures which were given later in the afternoon—one by Sir George Grierson on the various dialects of India (illustrated with some excellent gramophone records), and the other on "Mesopotamia," by Mr. Campbell Thompson. Afterwards the guests were entertained to tea, and were shown over the buildings of the school.

At a banquet at the Imperial Restaurant, on September 6, the representatives of the *Société Asiatique*, the American Oriental Society, and the *Scuola Orientale* (*R. Università di Roma*) were entertained by the president and members of the Royal Asiatic Society. In the absence of the president, Lord Reay, and the director, Sir Mortimer Durand, the chair was taken by Mr. Longworth Dames. Among those present were:—M. E. Senart (president of the *Société Asiatique*), M. Bacot, M. Basset, M. Boyer, M. Clermont-Canneau, M. Cordier, M. Finot, M. Sylvain Lévi, M. Pelliot, M. Thureau-Dangin, Professors J. H. Breasted, J. H. Woods, and A. T. Clay, Sir Charles J. Lyall, General Sir Percy Sykes, Colonel Phillott, Professor Cowley, Professor Garstang, Sir George Grierson, Sir J. G. Frazer, Sir E. Denison Ross, Sir Hercules Read, and Sir D. Prain. The Italian Ambassador was represented, and the Chinese Minister was also present.

APPOINTMENTS.

The Hon. L. Davidson has been appointed Vice-President of the Madras Legislative Council.

Mr. P. C. Plowden, I.C.S., Joint Magistrate of Agra, is transferred to the Government of India as Under-Secretary in the Revenue and Agricultural Department.

OBITUARY.

Colonel Charles Richard Matthews, late of the Indian Army, died on September 4 at Edith Road, W., at the age of eighty-one.

The death occurred on September 4, at West Cults House, Cults, Aberdeen, of William Arthur Nelson Langdon, late Alliance Bank of Simla, Calcutta, aged 73 years.

Dr. John Cahill, of 12, Seville Street, Lowndes Square, died on September 6, at the age of sixty-two. He was a member of the Egyptian Government Medical Commission, London Board.

The death occurred on September 5 of Major Archibald H. Hogarth, a distinguished English sanitarian. After the Armistice he went on a special mission to the Levant, where he did much hard work in endeavouring to stamp out influenza.

The death occurred on August 31, at 30, Bury Street, St. James's, of Brigadier-General A. H. Ollivant, C.B., C.M.G., R.A., son of Colonel A. Ollivant, I.S.C., and formerly Inspector-General of Police, N.W.P., and grandson of Alfred Ollivant, Bishop of Llandaff.

Mr. Herbert Welch Halton, Vice-President of the Native Court of Appeal at Cairo, was found drowned in the River Clunie at Braemar on September 8. He was one of the pioneers of the English section of the Cairo School of Law, and had been Vice-President of the Native Court of Appeal at Cairo since October, 1916.

The death occurred on September 6 of Admiral Lord Beresford. His name was known throughout the Near East, and at Alexandria in particular he had a host of friends. He was born in Ireland in 1846, and entered the Navy at the age of thirteen. After serving, among other places, in the Mediterranean, he achieved fame at the bombardment of Alexandria in July, 1882. In this action he was in command of the well-known gun-vessel Condor. In 1884 he returned to the Mediterranean, and was attached to the staff of Lord Wolseley during the Nile Expedition for the relief of General Gordon at Khartoum, and in the following year he was in command of the Naval Brigade at the battle of Abu Klea. In 1891 he was appointed to the command of the Undaunted on the Mediterranean station. While thus serving he helped greatly in the salvage of the Seignelay, a French man-of-war which had gone on shore on the coast of Tripoli, and for this service was thanked by the French Government. He was again in the Mediterranean in 1900 and in 1905. His later years were devoted almost wholly to politics.

NEWS IN BRIEF.

The railway between Belgrade and Sofia has been restored for traffic.

The postal and cable censorship will be removed in Malta as from September 15.

A Reuter message from Belgrade states that in Southern Serbia the first harvest since 1916 is now being reaped.

A Bill to make provision for the admission of former enemy aliens has been passed by the Government of Malta.

Addressing the Maltese Council of Government, the Governor said the police, as at present organised, was not an efficient force.

The Pope has entrusted a gift of one hundred thousand francs to the eminent Benedictine Dom Pierre Bastien of S. Anselm's, Rome, towards the erection of a cathedral at Belgrade.

A message from Bucharest states that the Society of Roumanian War Orphans now numbers 100,000 members. The society was organised by the American Red Cross under the presidency of Queen Marie.

The non-Brahmin Federation of Bezwada has passed a resolution in favour of communal representation, and protesting against the reference to the Brahminised Madras Government regarding the allocation of seats.

The Maruz Khaneh Shah-in-Shaheh (Royal Hospital), for many years carried on by the Germans, has been handed over to Drs. Neligan and Scott to reorganise on modern lines. The Persian Government has largely increased the Budget, whilst the British Government gives an annual grant.

Lieut.-Colonel Cheke, accompanied by his staff, has just left Paris for Trieste, en route to Montenegro, as head of the British Relief Mission. This is the first mission of relief from this country that will have entered Montenegro. Reports received by a messenger who has just arrived in Paris tell a tale of the appalling misery of the unfortunate inhabitants of the little country.

The Postmaster-General announces that correspondence intended for transmission to officers and men serving with the British Military Mission in South Russia should be addressed: "British Military Mission, South Russia, Army of the Black Sea." Letters and parcels should be posted in the usual way, and should not be sent to the War Office or any military office for transmission.

Cairo's Hotels de Luxe.

SYRIA AND COMMONSENSE.

It is very evident from the manner in which the question of Syria has been discussed in the French Press that the permanency of the good relations happily existing between the two countries depends in no small measure upon the people and Press of Great Britain maintaining their characteristic *sang froid*. There is no reason to suppose that the outcry raised by the newspapers represented genuine anxiety on the part of the French Government, for no more serious reflection could be made against the responsible statesmen than to suggest that the policy of each nation is so little understood by the other that actual distrust exists between them at this stage with regard to their plans or desires in connection with Syria, or indeed any other region. But so protracted have the proceedings in Paris been, and so marked has been the tendency to avoid decisions and to trust to solutions being evolved of themselves, that the delegations appear to have become alarmed at the unexpected results of their own procrastinations. In these circumstances a little "barking" on the part of the Press may be regarded as a salutary tonic. Hence, perhaps, the unanimity with which the French newspapers raised the question of Syria, with well-founded confidence in the level-headedness and freedom from touchiness of their British Allies. The quarrel has not been taken up in Great Britain, for the subject had only to be mentioned to enable the French to realise that the Machiavellian attributes which they pretended to find in British policy existed exclusively in their own perfervid imagination. The first instinct of the British nation is to regret that the war has made accessions of territory necessary; on the other hand, it has certain well-defined views on the subject of responsibility and the general fitness of things, and is most anxious to see the best possible settlement arranged after the world upheaval. It had been brought up to regard Syria, about which it knew little or nothing, as one of France's special preserves. The course of the war showed that for all practical purposes, Syria was more closely associated with the British Empire than with France. A British force undertook to liberate Syria from the Turks, and in spite of France's claims upon the country no effort was made by her to act up to her responsibilities. No doubt it was convenient to the French Higher Command to make use of the British Army, and it did not trouble itself with political matters, which were the peculiar concern of the Government alone.

However natural France's policy with regard to Syria may have been in the circumstances, it has proved an unfortunate one, for the French have had little chance of coping with two entirely new developments in the Syrian position. They have made no attempt to understand the significance of the Arab movement, and they have ignored the inevitable comparison drawn on the spot between the British Army with its successful administrative methods and the absent French. The arrival of the Emir Feisal in Paris ought to have convinced the Government that the complete absence of Arab cordiality towards the French was a serious factor in the future of the Middle East. But instead of taking steps to placate Arab opinion, the French Government appears to have adopted a policy of *laissez faire* and to have trusted to the mandate putting everything right. In the meantime indiscreet behaviour on the part of the small bodies of troops in the country, and such short-sighted action as the employment of an Armenian legion to carry out French garrison work, still further exasperated the Arabs, until the British authorities were forced to the conclusion that the presence of British troops was actually necessary for the maintenance of peace. In this decision there could be no question of intrigue, for the good reason that the longer the French delayed to take over control of Syria the longer the British Army would be kept away from home and on active service. The pleasant fiction of British land-hunger in regard to Syria, that made such a strong appeal to the French Press, had no foundation in fact. The anomalous situation of France bespeaking a mandate where she was admittedly not wanted by the bulk of the inhabitants compelled attention, and conditions in Syria came to be studied more carefully. There was no desire to belittle what France had done for the country in the past; but, as far as trade relations were concerned, it was not difficult to show that Great Britain would come as no stranger to the Syrians, if circumstances compelled her to have the mandate. The story of the British Empire is to a considerable extent the story of mandates, and Great Britain may be forgiven for not setting such a high value on them, when they bear no relation to neighbouring responsibilities, as our French Allies do.

It would be imagined that it was only necessary for the French to confess their eagerness for the Syrian mandate in order to draw an avowal from the British Government that it was no candidate for it, and for the French to take up their responsibilities in the country in order to secure the blessing of the League of Nations. The latter course they have not adopted. Great Britain is still keeping in Syria an army that would far rather be demobilised or, at least, return home. Officers and men have buoyed themselves up with false hopes of the immediate dispatch of French troops to relieve them; but these have never appeared. There is abundant evidence to show that the spirit of the *entente cordiale* has been faithfully displayed by the Army Command, which has gone out of its way to "nurse" the place for the French. On the other hand, commanders and civilian officials would have failed in their duty if they had not reported what they saw and knew to be the facts of the situation. It would have been an unfriendly act to allow the French to occupy Syria with a small force which might find itself at once in difficulties with the Arabs. The delay in the dispatch of French troops to the country may well be due to prudence, which requires a strict counting of the cost. No one is better able than Lord Allenby to enlighten the French Government on this point. He is understood to be entirely in favour of a French mandate; but he knows the military position, and can warn the French of the nature of the task that they are taking over. In the meantime there is as little justification for talking of British intrigue as there is for attempting to insist upon the letter of the Sykes-Picot Agreement. Naturally Great Britain will carry out such terms of that impossible document as the French insist upon regarding as valid; but if French publicists and politicians would study the Agreement carefully, they would realise that, as it stands, it is contradictory and unworkable. A way out of the *impasse* will have to be found, but it should be by agreement between France, Great Britain, and the Arabs, starting *de novo*, rather than on the basis of a hasty Agreement which a subsequent pronouncement of the two Powers has already modified.

Aviation and the Near East.

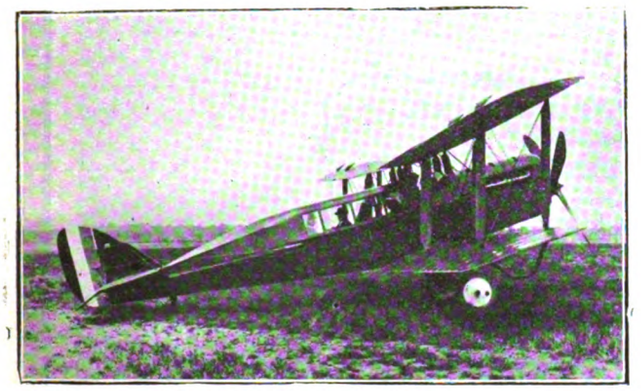
To Western Europe the enormous, not to say unlimited, possibilities of commercial flying are obvious, but this sense of the future of Aviation may not be so developed in Eastern Europe and Western Asia. It is with the purpose of supplying this deficiency that "The Near East" issues to-day a Special Aviation Number, which will bring home to the countries concerned the conviction that a large part of the commerce of the future will be transacted by means of Aviation. In the following pages will be found particulars of some of the pioneer firms in the art of flying and of their products.

COMMERCIAL AERONAUTICS.

By G. HOLT THOMAS.

It is in Egypt, Mesopotamia, and the Near East that the development of commercial aerial power will have such extreme importance, where it will mean so much from so many points of view, and where, indeed, we must now turn our eyes. Britain is too small fully to demonstrate the advantages of aerial transport, and our climate, too, is constantly against us.

Methods of locomotion on the surface of the earth are limited by slow expansion; but this is not so in



I.—One of the Airco 16 machines employed daily in the London—Paris Express Air Service.

regard to aerial transport. The aeroplane requires no permanent way like a train; it is not tied to any highway like a motor-car. For journeys in which speed is the paramount consideration an aircraft possesses an overwhelming advantage over every other means of transport. Airway services will, to a certain extent, create their own traffic. When they are available the community will find uses for them which are not as yet apparent; though, of course, we already see their supreme value for carrying express mails.

As indicating the progress of aeronautics, one may mention that it was only ten years ago that it was considered wonderful if an airship made a day's voyage, or if an aeroplane flew a mile. Now, in connection with the London-Paris service I have just started, and which we regard as the first link in a great and growing chain, we have already demonstrated conclusively that skilled pilots on fast machines can maintain a daily service by air, even in the face of winds rising to hurricane force.

We now see, in fact, that energy in the development of flying will open up to mankind a new era of commercial activity, and that the development of a European system of airways, connecting us with the Near East and beyond, will have a stimulating influence, almost incalculable, not only on trade but also upon international relations.

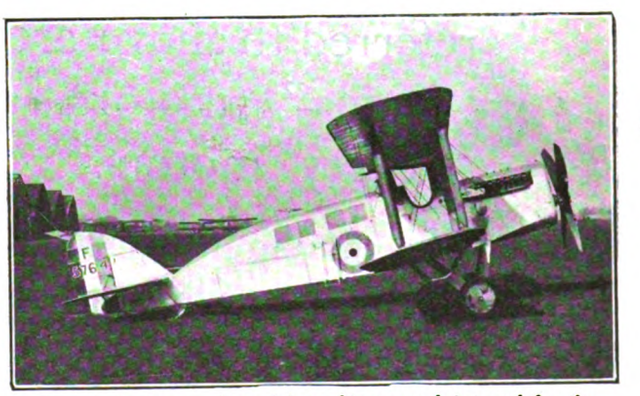
Aeronautics is so much in its infancy still that to talk of its limitations would be ridiculous: with it almost everything is possible. The value of the aeroplane is expressed in one word—speed; and we must remember that every city, whether on sea-coast or inland, is equally a port of call on the ocean of the air.

So far as concerns the enterprise which I personally control (and I am proud to say our ramifications are not only very powerful but also world-wide), our policy is to promise nothing that we cannot accomplish; to study aerial transport not as a competitor with land and sea transport, but as a high-speed adjunct to all existing forms of communication; and more especially to devise means whereby, in the earliest infancy of this new form of travel, we can gain our experience most usefully and profitably, not merely to ourselves, but also to the community at large. It was with such an idea as this in mind that we began on August 25 our London-Paris service. Sceptics asked me, in this regard, what amount of reliability I could promise. I replied that, taking day in and day out, I thought we could promise an 80 per cent. reliability. Well, on our first eight days' working, with all eyes on us, and with the weather atrocious, our average was as high as 94 per cent.

One of the greatest needs, obviously, is to interest the commercial public in the uses and advantages of aerial transport. Our ambition now is to institute, by degrees, a series of airways which will permit mails or travellers to reach any part of the globe by air at an average speed as high as 100 miles an hour. Here I can give some instances. Leaving London by air, say, at 8 a.m. on Monday morning, and travelling at 100 miles an hour, you would reach Paris at 10.20 a.m. Monday, Cairo at 7.8 a.m. Tuesday, New York at 7.24 a.m., and Calcutta at 6.48 p.m. Wednesday. Cape Town, Buenos Ayres, Tokio, and Vancouver would be reached at various hours on Thursday, and Sydney (Australia) on Saturday morning.

If one contemplates anything like a regular use of the air services that are now extending, if we can get the uniform daily loads for our aeroplanes which are so essential for profitable working, it should be possible for a business man to avail himself of these services, with all the advantages they offer, at a charge which will be no more than commensurate with the very special facilities offered, and the great amount of time saved.

We should, too, look upon this question in its broader aspects. Aircraft will be wonderful vehicles for shedding light into dark places. They will, by their facilitation of international transport, turn strangers into friends: they will enable the ordinary citizen of one country to know the ordinary citizen of another in a



II.—One of the famous Airco 4 A machines now being used for the London—Paris Express Air Service.

way which would be impossible were it not for this new power of high speed travel by air. The people most alive to this new power, and ready to save time in a business transaction not merely to the extent of hours, but in many cases of days and even weeks, will most assuredly reap great and immediate trade advantages.

The question whether we are to reap a reasonably quick benefit from the coming of aerial transport, or whether many years elapse before any really profitable use is made of it, is a matter very largely in the hands of the great Governments of the world. If they are unhelpful, or niggardly, the coming of the era of commercial aerial transport on an adequate scale may be many years delayed. If they act sympathetically, if they co-operate with us actively, it will cost no great effort or financial strain to establish international commercial flying on sound and progressive lines.

AIR MAIL TO COLOGNE.

SUCCESS OF FOLKESTONE SERVICE.

The daily aerial service between Hawkinge (Folkestone) and Cologne is proving very successful. The service was instituted on March 1 with four aeroplanes, which carried between them 25 bags of mails; but the mail has greatly increased, reaching the total of 2,276 outward and 386 inward bags for the three months ending May 31. The rapid manner in which the mails are handled on this side is illustrated by the fact that correspondence leaving Cologne one morning has been delivered to all parts of England and Wales from Folkestone by the first delivery on the following morning.

—*Times*, Saturday, June 21st, 1919.

The machines employed on the service referred to above are Airco 9's with Siddeley "Puma" motors and Airco 9A's with Liberty motors.

The management of the Aircraft Manufacturing Co., Ltd., will be glad to discuss with Dominions or Foreign Governments, firms or individuals, any proposal for the use of aircraft as vehicles for high-speed transport.

THE TAXI OF THE AIR.

THE AVRO AEROPLANE.

(By F. A. de V.R.)

In 1909 the enterprising town of Blackpool held a flying meeting, and the great French pioneer pilots, Latham, Paulhan, etc., came over to win the prizes and incidentally to show the British people that flying had become an accomplished fact. British enterprise, however, was not entirely without representation at the meeting, and a young Englishman named A. V. Roe put in an appearance with a triplane, which ran furiously about the ground and earned the nickname of "The Yellow Peril."

Ten years have passed, and now at Blackpool the first four letters of that Englishman's name are familiar in men's mouths as household words. There is one big difference, however. The nickname of the Avro is now "the Safe Machine." A daily service flies from Blackpool to Southport and Manchester and back, while over 10,000 passengers have been taken up at Blackpool without disaster since the middle of May.

About 1912 Mr. Roe arrived at the correct flying design for an aeroplane, and the outbreak of war found the Avro ready to mount the red, white, and blue rings of the British Royal Flying Corps. The war gave a tremendous impetus to aircraft production and aircraft design, but the flying design of the Avro was already correct, and needed no improvement in essentials. The machine was strengthened, of course, and adapted to take engines of increased power, but these modifications did not touch the root principles of the aeroplane's suitability for the air.

It was an Avro which brought down the first Zeppelin from the air, and it was also an Avro which bombed the Zeppelins in their lair at Friedrichshafen. But Mr. Roe's greatest contribution to the Allied victory was that his aeroplane was chosen as the training machine for all the pilots of the Royal Air Force. The signing of the Armistice found that Force the strongest, the best equipped, and the most daring Air Force among the forces of all the belligerent Powers. British pilots were renowned for their skill as much as for their intrepidity, and that skill had been invariably acquired by a course of training on an Avro. Lord Weir, Secretary of State for Air, in a speech in December, 1918, said:—

> It was unique evidence of the perfection of the design of the Avro that to-day it had become the standard training-machine of the Royal Air Force, and was built in larger numbers than any other aeroplane in the world.

The qualities which fitted it so well for this work are its stability and the ease with which it can be manœuvred. War pilots had to learn how to loop and perform all other feats of aerobatics, and these could all be learnt on the Avro with less risk than on any other machine.

The same qualities which made the Avro the ideal training machine now make it the ideal small machine for civil flying. In fact, at the end of the war the Avro began to undertake in earnest the task for which it was originally designed. The expression "small machine" is used comparatively. The single-engined Avros comprise single-seaters, two-seaters, three-seaters and five-seaters.

A moment's reflection will show that the future of the small aeroplane must be quite distinct from that of larger types of aircraft. The problem before the rigid airship and the multi-engined aeroplane is to deal with the transport of passengers and goods in bulk. They must play in the air the part which is played on the surface of the earth by railway trains and steamships. To ensure a profitable freight they must fly to scheduled times, and aim at regularity of service. The importance of this task cannot easily be over-estimated. The objects of the small aeroplane, however, will be different. Although the daily Avro service from Blackpool to Southport and Manchester is the first daily service instituted in Great Britain and recognised in railway guides, the destiny of the small aeroplane is to cater for the needs of individuals. At the moment this resolves itself mainly into giving pleasure flights at popular resorts in Great Britain, and at some twenty places of this nature Avro aeroplanes and seaplanes are teaching the

British public that flying is both safe and enjoyable. Since the middle of May last over 20,000 passengers have been taken up.

But at all these stations the Avros are always ready to answer calls for special flights across country. Some very interesting journeys have been made both for business and for pleasure. Business men have saved valuable time by travelling in Avros. When a well-known actress missed her boat-train in London she took an aeroplane and caught the boat at Southampton. A parson preached at two places thirty miles apart in the same evening by using an Avro. An Avro has waited outside a church near London while a couple were married, and after the ceremony it flew off with them to Cornwall. Fish brought into Blackpool has been taken by air to Manchester and offered for sale within three-quarters of an hour. London newspapers are regularly delivered in the Isle of Man per Avro. Aeroplanes have carried passengers from London to various race meetings when trains were very crowded.

In undeveloped countries where railways are few the aeroplane will find still greater opportunities. Government officials in charge of large districts may often find it very useful. Many a valuable life may be saved if an aeroplane can bring a doctor speedily to the bedside: exploration, surveying, and prospecting can be carried out by aeroplane in regions where a land journey would be both difficult and dangerous. Just as the flat plains and the favourable climates of Egypt, India, and Mesopotamia should make those lands especially suitable for the use of aeroplanes, so also the mountain barriers of South-Eastern Europe and Asia Minor, dividing plain from plain, valley from valley, and the sea distances of the Eastern Mediterranean and the Black Sea can be laughed at by the handy and inexpensive Avro. Whatever the country, aircraft is able to confer upon the inhabitants the great advantages of rapid communications, and there we confidently affirm will the Avro be found fulfilling its rôle as the Taxi of the Air.

COMMERCIAL AVIATION.

Aviation and Modern Athens.

From the days of mythology man, in his continual search for new worlds to conquer, has dreamt of flight. It has been left to the man of the twentieth century to bring it within the realms of practical commercial possibility. One of the most fascinating and interesting sections of the Exhibition that opens in Athens on October 15 is that devoted to the production of commercial aeroplanes. There is no doubt that the public is becoming accustomed to flying. Things move much more quickly nowadays than they used to move, and we

THE machine illustrated above is the B.A.T., F.K. 26—a dual purpose aeroplane equally suitable as a heavy load mail carrier or a four-seater touring machine. Equipped with a Rolls-Royce Eagle VIII motor, an average speed of over 120 miles per hour is obtained at a fuel cost of under eightpence per mile.

UTILITY AIRCRAFT

THE aim behind all B A T aircraft designs is the attainment of maximum utility—it is to obtain superior speed, load carrying capacity, safety, reliability, and general airworthiness with a minimum of prime cost and subsequent maintenance.

Our range of models covers all types from the mosquito craft of extreme performance and attacking power for national defence, to the high-speed load carrier designed for postal and general utility purposes.

Any Government or commercial undertaking intending to employ aircraft should place their requirements before the B.A.T. Company before finally deciding on the type to adopt.

Fullest particulars can be obtained, and demonstrations arranged, by application to:—

THE B.A.T. Company whose designing capacity under the direction of Mr. F. Koolhoven is of the highest standard — a standard which it is determined to maintain—is open to negotiations for the letting of its sole manufacturing licences in Colonial and certain foreign territories.

BRITISH AERIAL TRANSPORT COMPANY LTD.
38, CONDUIT STREET,
LONDON, W. ENGLAND.

Digitized by Google

accept new things with much greater ease than our grandfathers did. A short time ago the thought that man would ever fly was treated almost as a joke. Now its possibilities have been proved beyond doubt. With regular services established between different continents, carrying both passengers and cargo, flying has taken its place in the accepted methods of transport, where speed is absolutely necessary. For the man who has a matter of vital importance to place before a big client, the banker, the merchant, the diplomatist, what a vast difference it makes to be able to do in a few hours a journey that formerly took days. It opens up a vast expanse of new enterprise. The possibilities make one gasp, even more than the means that make them possible. There is quite a controversy going on amongst aeroplane manufacturers on the merits of the small, fast craft and the slower, heavier machines. There is certainly much to be said for both, and it must be left to the future to decide the point.

Among the supporters of the big machine we have the famous firm of Handley-Page, Limited, the designers and builders of the huge bombers that played so large a part in the great European war. The experience gained has decided them to follow on the lines that brought their productions so much to the fore. They are now running regular passenger and goods services between England and the Continent, and as the demand grows they will doubtless extend their activities. At their large factory near London, where over 2,500 people are employed, they have facilities for turning out commercial aeroplanes in large numbers. They are a firm of great enterprise, and any of our readers who are interested in the matter will find that they will welcome all inquiries.

The Chinese Government have placed a large contract with this firm, and a number have already been delivered. The Far East is awake to the possibilities of aerial transport. It is for the progressive man of the Near East to seize the opportunity.

The world's markets spread ever further afield. The productions of one country are sought after by others far away. Aerial transport, the method that takes the direct route untrammelled by roads and railway tracks, enables the quick delivery of advance samples that may secure big orders. Big orders mean success to the individual and the country generally. Big aeroplanes are capable of carrying quite large cargoes, and if our readers will turn to our advertisement columns they will gain some idea of the vast possibilities that are open to forms of enterprise.

NAPIER AERO ENGINE.

AN ENGINE OF PROVED RELIABILITY AND EXCELLENT DESIGN.

The recent remarkable performances carried out by the 450-h.p. Napier Aero Engine have established it as the foremost high-powered aero engine of to-day.

Considering the large experience the well-known firm of D. Napier and Son, Limited, have had in engineering of all kinds, it is not surprising that they should be taking the lead in this young industry. This firm has been engaged on engineering work requiring the utmost skill in construction for over a century, being established in the reign of King George the Third.

Before the war its reputation lay in the fact that they were the originators of the six-cylinder motor carriage, and manufacturers of the model bearing that name. Even before the advent of motor-cars Napiers had a most enviable reputation for high-class engineering.

In 1841 Messrs. Napiers installed the first steam engine, gun finishing machinery, and bullet-making machinery in Woolwich Arsenal. From 1841 to 1853 they were engaged on engineering requiring the most meticulous care in construction, viz.—the manufacture of weighing machines for the Bank of England, the British and Spanish Mints.

From their early days Messrs. Napiers have always been engaged upon the most skilled class of engineering, but space will not permit of us further enlarging upon these earlier days in the history of this well-known British concern.

It was no mean triumph to design and build a 100-h.p. racing car to weigh under 19 cwt., or a gold-weighing machine to register an error of 200ths of a grain, and pass twenty coins per minute. Both these were accomplished at the Napier works, and formed the training ground for the men who were afterwards to "do their bit" on the engine that has become famous as the Napier.

When war broke out Napiers were engaged in the manufacture of high-class six-cylinder motor carriages, but they soon foresaw that if Britain was to gain and hold the mastery in the air a high-powered aero engine was necessary. They, therefore, proceeded to design and manufacture an aero engine which would give a high horse-power without being unduly heavy, and the result was the production of the 450-h.p. Napier Aero

THE PROVED BEST

BRITISH BUILT

AERO ENGINES

FIRST—LONDON TO MADRID—NON-STOP

Messrs. D. Napier & Sons Ltd,
14. New Burlington Street,
LONDON, W.

Dear Sirs,

We beg to confirm our wire to you of the 1st inst. as follows "We have completed our non-stop flight from London to Madrid in 7¾ hours due in great part to the perfect running of your engine for which accept our hearty congratulations".

From the moment we opened the throttle at Acton to the time we switched off on landing at Madrid the engine ran perfectly and never caused us a single moment of anxiety. The petrol consumption on this flight was very low, the fuel used being considerably less than one third of the total capacity of our machine.

We cannot speak too highly of your engine on this flight.

Yours faithfully,

W. R. Curtis · Jas Peters

Catalogue gladly sent on application.

Engine. The total "dry" weight of this engine is 850 lb., which gives a weight of 1.89 lb. per unit of h.p.

When set out in cold print under the prosaic heading of "Leading Particulars," this statement does not stir the imagination; but to obtain this result, coupled with an extraordinary low fuel and oil consumption, has required the patient labours of a host of engineers, chemists, metallurgists, and pilots through many years.

It is interesting to recall a few of the performances which the Napier engine has achieved during the present year. In January last, piloted by Capt. Lang, an Airco machine fitted with a 450-h.p. Napier Aero engine attained a height of nearly six miles up in the air. This same machine was then sent over to Spain, where for the past five months it has been engaged in giving demonstrations to the Spanish King and his Ministers, including such long flights as from Madrid to Seville and back, and Madrid to Barcelona and return. In the latter part of August this machine returned to London by air with only one stop—at Cherbourg—for petrol, and despite the number of flying hours accomplished by this engine, it is still capable of much more, and proves the reliability of Napier's workmanship in the air.

Another performance of great merit was that achieved by a Napier engined Airco machine in the Aerial Derby on June 21. This flight was open to all comers, and Capt. Gathergood, flying a Napier machine, completed the closed circuit of 190 miles at an average speed of 129.3 m.p.h., thereby establishing a British speed record. But Napier's most recent performance is probably the best. On July 31 a 450-h.p. Napier engine carried an Alliance aeroplane from London to Madrid. This is the first non-stop and fastest flight for this trip, and despite extremely bad weather, a journey of considerably over 900 miles was accomplished in 7¾ hours.

These remarkable achievements only go to prove that Napier's world-wide reputation for reliability, excellence of design, and skill in workmanship, is maintained in whatever field of engineering it is engaged.

Speaking at a meeting of those interested in commercial aviation which was held in Australia House, Strand, on Monday, Major-General Seely said the Government was anxious to do the best it could for the State in the disposal of the lighter-than-air type of machine and at the same time to aid commercial enterprise. The Air Ministry had been handed over a certain number of machines, and the Admiralty, having been consulted about its demands in the future, had reported that when the political situation cleared away it would be able to give a definite reply as to the number of airships and aerodromes it would require in case of emergency. The Air Ministry and the Admiralty would then combine to offer existing machines and machines in various stages of construction to those who would undertake the formation of a commercial air scheme. The assistance would include the use of wireless stations and meterological information, and the Post Office would help in every possible way.

THE B.A.T. COMMERCIAL AEROPLANE (TYPE F.K. 26) IN FLIGHT.

This machine was put in hand the day after the Armistice was signed, and was the first British aeroplane designed solely for commercial purposes to appear after the cessation of hostilities.

LONDON-PARIS AIR SERVICE.

Last Saturday the Airco express aeroplanes between London and Paris completed a week of uninterrupted daily service. The machine which left London at 12.30 p.m. with passengers and parcels reached Paris at 2.50 p.m., and that which left Paris at 12.30 p.m. landed at Hounslow at 2.30 p.m.—a quarter of an hour before time, having made the journey of 250 miles at a speed of 125 miles an hour.

"During the fortnight we have been running daily," said an official of Aircraft Transport and Travel, Limited, to a Press representative, "we have made thirty flights. Only once, when there was a hurricane with sheets of rain at Hounslow, did we fail to get a machine away; and on that day, despite squalls of more than 100 miles an hour velocity in the Channel, one machine from Paris fought its way through. On only one flight has there been a forced landing; and in this case our pilot, after a ten minutes' halt at an aerodrome *en route*, was in the air again, and completed his journey. These results, obtained in weather far from favourable, should interest the business world. We have stated that an express air service, besides offering transport at 100 miles an hour, can now be operated on so many days of the year that it becomes a definite convenience in the transaction of urgent business. This statement we are now proving and we shall continue flying till our claim is beyond question. We stated, before we began running, that we expected an 80 per cent. reliability. It may be said that so far the figure is much nearer 100 per cent.

AN AERIAL "PULLMAN."

An impression of the interior of the B.A.T. Commercial Aeroplane, fitted for rapid and luxurious travel.

Among the goods carried by the Airco machines, at rates ranging from 7s. 6d. to 3s. 9d. per lb., have been bankers' scrip, leather, films, photographic plates, champagne, sweetmeats, grouse, bills of lading, plans and drawings, dress material, newspapers, millinery, samples of clothing, and Devonshire cream. Within the last few days the company's agents in Paris have been negotiating for the regular carriage, in consignments spread over various days of the week, of as much as 600 lb. and 1,000 lb. of goods. It is proposed that certain vaccines, which must be used within twenty-four hours if their potency is not to be lost, should be consigned for aerial transport.

In addition to the scheduled service of express Airco machines between London and Paris, on Tuesday, a special machine, the Airco 16, left Hounslow at 4.7 p.m., carrying as passengers General Seely, Under-Secretary of State for Air, and General Sykes, Controller-General of Civil Aviation, who had been called urgently to Paris in connection with the International Air Convention, and who chartered a 100-miles-an-hour aeroplane as a form of "super-special train."

On the regular Airco service, Captain Riley left Hounslow for Paris at 12.30 p.m. with two passengers and parcels, while Lieut. McMullin, with one passenger and express goods, landed at Hounslow at 3.8 p.m., having encountered a good deal of fog in the Channel.

A BRITISH FLIGHT TO ITALY.

Lieut.-Col. W. D. Beatty and Lieut.-Col. W. O. Raikes, of the Air Ministry, set out on Saturday from Hounslow Aerodrome on a visit by air to Italy with a view to arranging a settlement of certain outstanding points with regard to civil aerial communication.

The start of the flight was made at 11.5 a.m., Colonel Beatty himself piloting. Halts were to be made at Paris, Lyons, Frejus, and Pisa.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I would call special attention to the very suggestive article contributed this week on the Rupee exchange problem by an acknowledged authority, who writes over the signature of "Gold Mohur." He calls attention to the possibility of a two-shilling rupee, and does not entirely exonerate Government, which pushed up the value to one shilling and tenpence, even at the time when a Commission is sitting with a view to discussing measures for the avoidance of a rise. Meanwhile, rupee sales are taking place in New York at the equivalent of two shillings all but one farthing, the total applications for 40 lakhs amounting to 180 lakhs. In all the circumstances it may well cause surprise that the Currency Commission has felt justified in interrupting its session for two months.

***

A correspondent complains of the difficulty that British traders in Smyrna experience in obtaining adequate support from our Levant authorities, instancing a correspondence which has recently passed between the latter and the British Chamber of Commerce there. The Chamber asked for assistance in regard to a number of matters; they received a reply in which it was stated that certain measures complained of pressed equally hard on all except Moslems, and that as regards the statement that no European community had been so hard hit during the war as the British, other communities seemed also to have suffered greatly, and that it was not known that their losses could be said to be less, proportionately, than British losses.

***

It is, of course, extremely regrettable that other nationalities should have suffered, but the extent to which they have been affected in no way concerns the question of the safeguarding of British interests. The Chamber replied very forcibly on this point, stating that, even supposing other nationalities had suffered as heavily as the British, the Chamber would still fail to understand how or why the misfortunes of other nationalities could prejudice the urgency of the Chamber's plea for a recognition in principle by the British Government of claims made by British traders in Smyrna.

***

At the same time the Chamber drew attention to a fact, on which, it stated, apparently enough stress had not hitherto been laid, viz., that French, Greek, and Italian subjects had received assistance from their respective Governments. That is, of course, the all-important point, and if British traders are to be enabled to hold their own against competitors in enterprise abroad in the future, it is nothing short of essential that they should be able to depend on the same unstinted support that is ever at the disposal of their rivals when needed.

***

An interesting statement was made at the opening of a new branch of the Tata Industrial Bank at Lucknow. The ceremony was performed by the Judicial Commissioner, and in the course of his remarks he alluded to banking enterprise as a factor in unearthing the hidden hoards of wealth which lie unproductive in private hands. He cited as an instance a case which recently came before the Judicial Commissioners' Court at Lucknow, where a portion of the family property in dispute consisted of 160 gold bricks, valued at nine lakhs of rupees, which apparently had been lying in the family coffers for upwards of twenty years.

***

When it is realised what the present value of this little nest-egg would have been, if it had been placed out at interest all the time, we have some indication of the strength of the hoarding tendency in India. An even better illustration of the frame of mind that prompts it is provided by a prominent Indian businessman who was in the habit of lending money to the foreign banks; he would not take less than five per cent. interest, and rather than break this rule would withdraw the money, when he could no longer obtain this interest, lock it up in a safe over which a watchman stood guard, and loan out the same notes a few months later when five per cent. could again be secured, rather than leave it in the bank at two and a-half or three per cent.

***

It is a matter of extreme regret to THE NEAR EAST that there should have been so much delay in the appearance of our Balkan vernacular supplements. To provide manufacturers and merchants with what may justly be termed an eclectic medium for reaching Near Eastern markets, arrangements have been made for the publication of monthly supplements devoted to engineering and commercial subjects. These will be printed in the Greek, the Roumanian, the Croatian (for Yugoslavia) and the Bulgarian languages. They will circulate widely in the respective countries, and with THE NEAR EAST each week will offer the most practical means of reaching the business public in South-Eastern Europe. The Greek Supplement is due to appear on October 1, in good time for the Athens Exhibition, where it will be, together with THE NEAR EAST, much in evidence. The other supplements, it is hoped, will make their first appearance a few weeks later. I am asked to request that all communications regarding advertising space in these Supplements should be addressed to the Manager.

***

It is difficult to avoid the conclusion that in the agitation about tea prices the parentage of the thought was not altogether unconnected with the wish. In the humbler walks of life it is a simple device for the shopkeeper who has large quantities of a certain item to hint vaguely at a threatened shortage, and so to speed up the rate at which he disposes of his stock. Translated into a higher sphere the same tendency may appear in the pessimistic forebodings of a "big gun" in a trade, which immediately have the effect of intensifying the rate of purchase, and in given circumstances an increase in the price follows. In the case of tea, panic buying would certainly produce a shortage, whereas, if nothing were said and tea merchants, both wholesale and retail, discouraged heavy purchases, everyone is likely to have all the tea he or she wants. There is no shortage in the country, but there has been considerable delay in the distribution, especially from the Government bonded warehouses or from the ships to the retailer. The outcry, however, has ventilated the subject, and it is to be hoped that there will be a determined effort to prevent any further increase in the price of tea.

***

No little consternation has been caused by the decision of the Government to afford no help, by any stipulations in the Peace Treaty, to the British creditors of Austrian firms. They are to be left to collect their Austrian debts as best they can, and the same principle applies to those who have money owing them from Bulgaria or Turkey. The Government's line of reasoning seems to be that, in the case of Germany, we hold enough German securities to make it politic for her to meet her obligations. In the case of her allies, on the other hand, the money or securities that we have been able to impound bear no relation to the amount owed us; consequently, there is no use in dividing the sum up into infinitesimal portions; better to let every creditor fend for himself.

***

Against this contention it is urged that such a policy would have been all right if it had not been for Government's action in September 1914, when British subjects were forbidden to receive money from, or to pay money to, enemy subjects, or to carry on any commercial transactions with them. This embargo was imposed at a time when Austrians were ready to pay their debts, and should carry with it, so the argument runs, the obligation to see that the money which the creditor was prevented from collecting at the outbreak of the war is paid now that Austria-Hungary has been defeated. The depreciation of Austrian currency is going to add to the difficulties of the merchants or banks in obtaining payment of pre-war debts at this time, and is an additional argument why Government help should be forthcoming to prevent enemy

Digitized by Google

firms from shielding themselves behind the misfortunes which Austria-Hungary deliberately brought upon herself, involving the whole world in a common disaster. Provided the Government would grapple seriously with the problem of exchange in enemy countries, the debt collecting difficulty might be overcome, because in the majority of instances firms still in existence, dependent on foreign connections, will be only too anxious to keep a clean record in order to pick up again the threads of their former trade.

***

A correspondent in a Liverpool contemporary points out that many Government servants and non-official residents, both in India and Egypt, are taking the first leave with their families since the outbreak of war, and much of their time is taken up in searching for accommodation for their return. The interests of these travellers, including doctors and commercial men, whose return is urgent, are very seriously affected—apart from the question previously raised on behalf of the representatives of important firms engaged in the development of British trade. The accommodation available for these varied interests is so totally inadequate that it is suggested that the authorities should take immediate steps to provide, if possible, special steamer accommodation from Marseilles for Egyptian and Indian residents so as to release more berths for those wishing to return in October and November.

***

My firm belief that things would right themselves by degrees in Great Britain no longer seems so Utopian as it was at the beginning of the year. The value of exports is increasing steadily each month: Labour, after prancing about perilously near the edge of the precipice, is showing signs of a tardy resolve not to commit suicide, and when the holiday spirit that succeeded to the war weariness has come to the end of its summer we may expect, with the advent of cold weather, a far more general readiness to work. The moral of it all in regard to foreign markets is not to lose heart because the immediate prospect at home is a little gloomy, but to have confidence in Great Britain's trade supremacy, and to set about laying the foundation stones of more and more business overseas.

The Rupee Exchange Problem

The references in THE NEAR EAST of September 5 to the unsettling effects upon trade with India which have been caused by the recent changes in the sterling value of the rupee will be fully endorsed by all those interested in business with our Indian Empire. Although the importer no doubt welcomes an advance in Rupee exchange, inasmuch as he has to pay less for the pound sterling, it must be borne in mind that the prices of imported commodities will very probably adjust themselves to the changed conditions, and it need not, therefore, be assumed that an advance in the rate implies that the full benefit accrues to the importer. On the other hand, exports are handicapped because merchants receive fewer rupees for their sterling drafts; but this loss has been to a great extent offset by the high prices obtained for Indian produce. Such a state of affairs cannot continue without upsetting trade conditions, and a point has now been reached which is practically paralysing the export trade.

A Two Shilling Rupee.

For some time in India those who profess to know currency conditions have been preaching a 2s. rupee. The dealer who has exchange to settle has seen the rupee move up to 1s. 10d., and cannot be blamed if he clings to the belief that the extra twopence is in sight, and for this reason refuses his piece-goods on the chance of reaping the benefit which the higher exchange would confer. We are given to understand that dealers with exchange to fix have been advised to wait for 2s.

Meanwhile this policy is hampering the flow of exports.

The Exchange Banks, whose treasuries are full of money ready to finance the export trade of the country, decline to commit themselves in purchasing bills against exports beyond the meagre amount of cover provided by the weekly sales of Council bills, and such imports as may have to be fixed. The net result of these conditions is that the situation has now become so acute that business is practically at a standstill. With these facts before us is it to be wondered at that Indian merchants are clamouring for a declaration of the Government's policy?

The Currency Commission.

It cannot be supposed that these impossible conditions have not been brought to the notice of the Government; but it would appear that they look to the Currency Commission to find a panacea for their troubles. Yet while trade is held up, as well as an enormous amount of capital and commodities of vital importance, the Currency Commission is enjoying a holiday of two months and does not resume its sittings until towards the end of the current month.

The only Government policy with which we have become familiar is that of pushing up the value of the rupee to keep pace with the advance in the price of silver. It would be interesting to know whether the rise in silver to 61 pence has been assisted by recent purchases by the Indian Government, and if so whether such purchases are justified when their published figures indicate reserves in silver coin of upwards of 50 crores. In any case it is to be hoped that the Currency Commission will have something to say about the last rise in the rupee value from 1s. 3d. to 1s. 10d., which might have been postponed whilst the Commission is supposed to be discussing measures to avoid it.

Whatever measures may be adopted it may be taken for granted that the very able Memorandum submitted by the Bengal Chamber of Commerce will exercise some influence. Every merchant interested in the Indian exchange problem should carefully study the views they have expressed upon the subject. Amongst other recommendations they advocate the free importation of both gold and silver.

Gold Sales.

Since the Memorandum was written Government have recognised that a certain amount of gold should be released, and have invited tenders every fortnight for about 325,000 tolahs of gold. It is their present intention to dispose of a total of 1,950,000 tolahs, and, as the price ruling in the Bombay bazaar is standing round about 32 rupees per tolah for English Bar Gold, against a pre-war figure of 24 rupees per tolah, the Government should pocket a very handsome premium.

It was suggested in one of the London newspapers that a condition should be imposed that payment for the gold should be made in rupee coin, thereby ensuring that an equivalent amount of rupees would be displaced. If this idea can be carried out, it would probably lead to an increase in currency reserves; but payment in notes would have a similar effect, because it would enable Government to withdraw redundant currency notes and curtail their present inflated issue.

It will be recollected that the last sales of gold by the Indian Government took place in 1917, when they released from their store the output of the Mysore Companies and some gold from South Africa to the extent of four million pounds. This proved to be merely a drop in the bucket and had no appreciable effect in alleviating the stringency which was then being caused by the shortage of rupees. It may, therefore, be reasonably assumed that the sales now announced will afford no more than a temporary benefit to the community, and it is earnestly to be hoped that steps will be taken promptly to remove the restrictions on imports.

Rupee Sales in America.

It is announced that at the third sale of Council drafts in New York, the amount offered will be 40 lakhs and the minimum price to be accepted will be 41 cents per rupee. This gives an equivalent of about 1s 11¾d. and is sufficient evidence of the demand for rupees. We learn on reliable authority that the premium paid in India by exporters for rupee cover has been as high as 12 per cent., and telegraphic remittances to India have been settled in the City during the past few days at 2s. 0⅛d. The Jute season in Calcutta will soon be at its height, and, unless means are devised shortly to grant relief to the market, the trade of India will be hopelessly crippled.

GOLD MOHUR.

MOROCCAN PHOSPHATES DEPOSITS FOR TENDER.

The British Vice-Consul at Rabat reports that the phosphate mines at El Boroudj will probably be put up to public tender early next year. Intending tenderers will have at least five months' warning of the call for tenders, "cahiers des charges" being published, and all possible information given to enable them to make out their offers. Competition will be open, and the concession will go to the tenderer who offers the highest amount per ton exported from the Protectorate. The concession is not one which would interest small companies, as it is expected that it will call for Frs. 100,000,000 capital. Railways of at least one metre gauge will have to be constructed by the concessionaires, and it will be probably a matter of two years before any mineral is exported. It is not yet certain which part of the district in which the deposits are found will be first put up to tender, whether the N.E. end, near Oued Zem, or the S.W. end, near El Boroudj. A well-known French company is already at work preparing for the tender. The concession is a large concern, and the Protectorate desire to eliminate small companies who will not put the matter properly in hand. They will welcome British or any capital likely to be able to work the deposits in a large way. Analysis of the deposits already explored, and a map of the district, together with railway and shipping considerations, may be obtained by British interests on application to the Near East Section, Department of Overseas Trade, 4, Queen Anne's Gate Buildings, Westminster, S.W.1.

The Bank of England are prepared to receive the coupons due October 1 on Bonds of the Greek Guaranteed £2 10s. per Cent. Gold Loan of 1898; the necessary lists can be procured on application at the Dividend Pay Office, 5-6, Lombard Street, E.C.

FOREIGN COMPANIES IN ROUMANIA.

A recent commerce report of the United States Department of Commerce contains the following interesting statement of the regulations affecting the operations of foreign companies in Roumania. The Roumanian commercial law, which is largely based upon Italian law, it is pointed out, does not contain any specific division or chapter devoted to foreign concerns doing business in the country. However, from the various provisions regarding this matter the following résumé has been compiled :—

Foreign companies may do business in two ways—(1) by establishing a company (say a joint-stock company) abroad, and later a branch or representation of that company in Roumania; or (2) by forming a company in Roumania under Roumanian law.

If the first method is employed, that is, if a branch company is established in Roumania according to the provisions of foreign law, the branch thus constituted, in order to do business in this country, must observe the following provisions of Roumanian commercial law :—

The company must first obtain authorisation from the Roumanian Government. To effect this, certain documents and deeds are required, namely :—

(*a*) The by-laws duly authenticated and all other documents proving that the company is duly and legally constituted abroad.

(*b*) A declaration of the company that it will recognise Roumanian laws, and submit to Roumanian jurisdiction.

(*c*) A declaration of the Government under which the company is formed that full reciprocity is granted to Roumanian companies there.

(*d*) The receipt of the office having charge of these companies in Bucharest that the security required by the Roumanian Government has been deposited. (Only foreign manufacturing and industrial companies come under this head. Banks or oil companies are not required to comply with this provision.) This security must be at least 100,000 lei, and may amount to 25 per cent. of the capital of the company.

(*e*) A declaration of the company duly legalised that the security is to apply only to the liabilities of the company set aside for business in Roumania.

(*f*) A declaration duly legalised as to the amount of the capital specially set aside for business in Roumania.

Further Provisions to be Complied With.

The company has furthermore to comply with the following provisions of Roumanian law :—

(*a*) It must register with the Roumanian courts, so that the rules and by-laws of the company may be published and transcribed.

(*b*) It must appoint a general representative of the company in Roumania and register and publish the names of the managers or persons representing the company in Roumania.

(*c*) It must elect domicile in a town of Roumania.

(*d*) It must publish annually the balance-sheet of its operations in Roumania according to Roumanian law.

(*e*) It must submit to the Roumanian Government all its balance-sheets covering the company abroad.

All these provisions refer only to joint-stock companies. If the principal field of the operations of the company constituted abroad is in Roumania, the company must fulfil all the provisions as mentioned hereinafter for companies formed in Roumania.

If the second method is employed—that is, if a new company is formed in Roumania—the authorisation of the local tribunal where the company intends to have its principal seat is needed. In order to obtain this authorisation, the following documents must be attached to the application therefor :—

(*a*) The rules and by-laws of the company

(*b*) The agreement showing that the entire capital has been subscribed, and that every shareholder has deposited at least 30 per cent. of the subscribed amount.

(*c*) Minutes and other documents setting forth decisions taken by the first regular meeting of the company for the formation of a joint-stock company.

At least seven charter members are required. If there is only one director, he must be a Roumanian citizen. If there is a board of directors, at least one-third of the membership must be Roumanian.

Activities of Foreign Stock Companies.

The attitude of the Roumanian Government toward foreign business houses seems likely to undergo a change in the near future, in the direction of a more detailed and stringent control and supervision. During the war most of the foreign concerns which had theretofore done business in Roumania suspended their activities. Since the cessation of hostilities, however, they are gradually resuming their efforts, and the Roumanian economic leaders recognise the service these firms can render toward the development of the natural resources of the country.

In regard to the range of activities of these organisations and their place in Roumania's development, a pamphlet giving the statistics of stock companies in Roumania for the year 1913 (latest official data obtainable), published by the Ministry of Industry and Commerce, states :—

A part of our industry capable of being developed to a great extent has attracted for a long time foreign capital to our country. This investment of foreign capital in the country has been accomplished either in collaboration with our domestic companies by supplying them with capital, or in the form of shares, limited joint-stock companies, advances on account current, guaranties or securities, or by founding foreign companies having their principal office either in this country or in a foreign country. Most of these companies have their main office in a foreign country and the office of the works in this country. They are obliged to apply for and obtain the authorisation of the Government.

Up to the end of December, 1913, the foreign companies which obtained the authorisation of the Government to operate in Roumania numbered 44, with an initial capital of 251,938,055 francs ($48,624,044), of which only a part is used in this country. Most of these authorised companies are engaged in the working of petroleum. Then there follow different industries, such as mining, forestry, and electricity, which have attracted foreign companies, but in a much smaller proportion than the petroleum industry.

Considering them according to nationality, we find that these companies are for the most part English, followed by French, German, and Dutch companies.

HEAVY ROUMANIAN CROPS.

(From Our Own Correspondent.)

Bucharest, August 26.

The various native and foreign committees who were entrusted with the feeding of Roumania have stopped all further relief work, as the country is now in a position to look after itself in this respect. The wheat harvest is exceptionally abundant, and, in spite of the fact that only 65 per cent. of the pre-war wheat area has been cultivated, it is estimated that there will be an export surplus this year of 300,000 tons in Old Roumania alone.

In Transylvania and Bessarabia the harvest is even better than in Roumania. It is further estimated that there will be an export surplus of about 700,000 tons of maize. There is also an accumulation of about 40,000 tons of colza and 800,000 tons of oil products, and arrangements have been made for the immediate export of 70,000 tons of the latter.

The economic prospects of Roumania can, therefore, be considered as extremely hopeful, and in the course of next year she may be expected to right herself, if not, indeed, to place herself in an important commercial position. Her main difficulty at the moment lies in the lack of internal transport facilities. There are only about 250 locomotives in working order, instead of the 1,200 which were running before the war, and there does not appear to be any immediate hope of improvement in this direction.

GREEK RAILWAY IMPROVEMENTS.

(From Our Own Correspondent.)

Athens, August 22.

The Greek Ministry of Transport is apparently taking into serious consideration the need for putting the Greek railways on an improved basis as regards material and rolling stock. Monsieur Briaud, a French railway engineer, who has been entrusted with the technical reorganisation of these railways, is, it is stated, leaving Athens shortly for a general inspection.

For the purpose of developing trade after the war, the Resident-General of the Regency of Tunis has established an organisation for the supply of commercial information on the products of and the possibilities of production in Tunis.

"MODERN MOROCCO."

Morocco affords an apt illustration of the lack of enterprise too often shown by British traders before the war. The development work so successfully carried on by France had emphasised the potential importance of the Moroccan market, and in the circumstances it might have been expected that British traders would make a special effort to establish themselves in a field of such exceptional promise. So far from this happening, British commerce with Morocco was rapidly declining in the face of German competition, and in 1914 it did not need very much imagination to picture a time when our commerce there would be insignificant. Determined efforts have been made during the war to arouse the interest of British merchants in Morocco, and it is satisfactory to be able to record the fact that they have been attended by no small measure of success. The country's potentialities are now being realised, and the prospects appear most favourable for a great extension of British trade in that direction.

The general outlook as regards Morocco is ably dealt with in "Modern Morocco," a report on trade prospects, with some geographical and historical notes, written by Mr. W. B. Harris and the Hon. W. Cozens-Hardy, K.C., M.P., for the Bank of British West Africa. The wonderful advance of the country in recent years, its immense prospects, and the undoubted scope for enterprise that the country offers in many directions are well brought out in the work, which is a perfect mine of information on the various aspects of the country's trade and industry, and should be invaluable to traders who intend to interest themselves in the Moroccan market.

One of the most interesting chapters in the book is that in which the future development of Morocco is discussed. It is pointed out that the main lines of development will first be found in the direction of agriculture, in the introduction of new crops, and in intensive cultivation. "From fruit trees," it is added, "a great increase is to be looked for. The almonds are the only crop now worth exporting. For stock, sheep, goats, cattle, and particularly pigs, the climate and the pastorage are good. The fisheries can be made most profitable. The forests will be made available. At a later stage the mineral wealth will be developed. . . . Side by side with the agricultural development will proceed the industries directly concerned with its products. Flour mills, oil factories, tanneries, breweries, cold storage establishments, and local manufactories replacing the cottage industries will be started. . . . The rapid growth of the towns and the development of the country will bring with them all the industries which concern and are required for building and construction works of all kinds, private and public."

It naturally follows that as the country develops the natives will have a greatly increased purchasing power, and that there will be a correspondingly wider opportunity for British traders. The opening is undoubted, but if adequate advantage is to be taken of it, the market will have to be catered for much more thoroughly than in the past, and on very different lines. The market has its peculiarities, and they must be studied. One of the most important factors in the successful development of German trade with Morocco was the close attention that was given to the market requirements. In the words of the authors, "The Germans brought to Morocco exactly what the native required, and what he was desirous of purchasing, while the tendency of British merchants—except in the case of Manchester cottons, perhaps—was to send to Morocco what they thought the Moor ought to buy."

AMERICAN BLAST FURNACES FOR INDIA

It is reported in the American Press that two blast furnaces are to be sent from the United States to the Tata Iron and Steel Company, at Jamshedpur, near Bombay, India. A charcoal blast furnace is also being prepared for the state of Mysore, India, and a contract has been accepted to supply a 350-ton blast furnace for the Indian Iron and Steel Company, to be erected 125 miles from Calcutta. The latter company proposes to erect three blast furnaces, by-products coke ovens, benzol plants and a modern open-hearth steel plant and finishing mills.

Engineering Notes.

Motor Ploughs for Egypt.

The representatives of the New Egyptian Company, now on a business visit to this country, who are large agricultural estate owners in Egypt, have mentioned some interesting facts with regard to the soil and mechanical cultivation in Egypt, which have at various times been pointed out in these Notes. In an interview they informed the representatives of a leading technical contemporary that they were desirous of acquiring information as to the manufacture of motor ploughs in this country, for which, they assert, there is a very promising opening in Egypt. A self-contained machine of a light description, and of simple design, is the type which will meet with a big demand. The reasons why this is so are obvious. In the lower regions of Egypt the artificial irrigation schemes which have to be employed make it essential that the whole of the land under cultivation shall be made the most of, and economy in headland is, therefore, a great desideratum. The fellaheen, accustomed to ploughing by oxen, are only likely to take to a machine which will act upon much the same straightforward lines, and they are not the kind of people who would expend the time or trouble to map out a system of cultivating and finish the headland off subsequently. They have one idea, and that is to finish a task, and the area of the headlands would not, to them, be worthy of subsequent notice if at the outset they were instructed temporarily to leave it alone. Under skilled supervision all, of course, would be well; but such a system would raise the cost of any ploughing scheme, and the idea of the New Egyptian Company, which is also the idea of every landowner and farmer throughout the Near East, is to introduce a machine which the native labour could efficiently run without constant oversight after the preliminary working instructions had been given. There is not exaggeration, therefore, in the assertion that British tractor and motor-plough manufacturers have to-day a golden opportunity. The above-mentioned representatives said, in their interview, that, prior to coming here, they have made an extensive tour of the engineering establishments of France and Italy upon a similar quest, but they had had to come to this country owing to the prohibitive cost of Continental products. They stated that an approximate calculation gave the cost of tractors and motor-ploughs in France and Italy at about £40 to £50 per unit of horse-power, so that a machine of any power would soon swallow up a substantial portion of a thousand pounds. To that must be added the *ad valorem* import duty upon goods going into Egypt which will proportionately increase the cost of the article. There is one more—and important—reason, therefore, to urge British engineer-manufacturers in their action to get a good footing in Egypt, as well as in the whole of the Near East, before "the prohibitive cost of Continental products" is ameliorated, and competition becomes keener.

Machinery for Poland.

The value of Poland as an agricultural machinery market has already been pointed out in these columns; and it will be regrettable if the apparent reserve of British manufacturers in entering this market, because of the present political difficulties of the country, should afford better opportunities to their foreign competitors to secure a position there which will not be so easy to alter later on. It is now definitely stated that the urgent needs of Poland for agricultural machinery are as follows: 1,500 tractors, with repair parts and suitable repairing tools; 150,000 ploughs suitable for a light soil; 3,000 harrows, complete, of iron, also iron parts for 15,000 more to be made of wood; 500 rollers with discs; 3,000 complete sowing machines (1,000 for motor, 1,000 for horse, and 1,000 for hand operation); 3,000 cultivators, dusters, rakes, diggers of all systems; 6,000 hay-mowers; 150 motor and 900 hand-driven hay baling machines; 6,000 ordinary harvesters; 3,000 binders; 750 steam-driven threshers, 1,500 gasolene-driven and 3,000 horse-driven; 3,000 separators and blowers with sufficient number of reserve sieves, also metal parts for the construction of 3,000 additional blowers to be made in Poland; 1,000 corn graders of various types; 300,600 scythes, 450,000 sickles, and 300,000 whetstones. Of small tools: 300,000 hoes, 150,000 picks, 300,000 shovels, 300,000 spades, 150,000 axes, 50,000 mattocks. Heavy wagons for oxen and horses, iron tyres, etc., for 300,000 wagons and ready-made wheels for 30,000 wagons; sprays, bellows, sulphur, copper and rafia; sprays 90,000, bellows 15,000, sulphur 700,000 lb., copper sulphate 1,200,000, rafia 1,200,000 lb. Axes 18,000 of various sizes; a large number of handsaws, rasps, spike hammers, hammers, picks, shovels, spades, hoes, chains, etc. These agricultural machinery and implements are urgently needed, and a large number of them will undoubtedly be supplied by American firms, some of which are already on the spot.

Bulgaria After the War.

The war seems to have convinced the Bulgarians that their salvation lies in hard work and the development of their industries. Our own advertisement pages are an indication that they mean to lose no time, and now comes a statement from the British Mission at Sofia that a Philippopolis limited liability company, dealing in agricultural machinery, fertilisers and all farm requisities, requires agricultural implements, tools, machinery, portable farm engines of about 5½ b.h.p., pumps, balata belting, spraying machines, etc. Information concerning the enquiry can be had from the British Department of Overseas Trade, 73, Basinghall Street, E.C. Another proof is the arrival here of a representative of the "Vulcan" Société Bulgare par Actions, Sofia—an agricultural and industrial machinery depot—upon a mission to buy implements and machinery for the Bulgarian market.

The Northern Assurance Company has opened a branch office at St. Mark's Buildings, Alexandria, for Egypt, the Sudan, and the Near East for the transaction of fire, life, and accident business.

THE GREEK CURRANT CROP

(From Our Own Correspondent.)

Athens, August 22.

The prospects for this season's Greek currant crop are exceptionally good; it is anticipated that it will total 280 to 300 million Venetian pounds, or about 140,000 tons. The quality, provided there is no rain before the crop is lifted from the drying grounds, is extremely good. The fruit is thoroughly healthy, and there is no sign of peronosporos or mildew, as is so often the case, so that there should be no loss of fruit owing to vine disease.

The crop is a little late, owing to the late and fairly cool summer, and it is stated that the new season's fruit will not be ready for shipment until about 10 days after the date (August 9-22) fixed by the Government for the first shipments of the new season's crop. There are practically no stocks of last year's fruit left unsold, and the new crop will be well within the limit of the world's demand.

The Patras, Vostizza and Gulf crops are extremely good, but that of the Islands is small. The market here is now awaiting further developments with regard to the rumour that the British Government was considering the monopolisation of currant imports, with a view to combating profiteering.

The Special Commission of the Ministry of Finance has fixed the retention tax at 7½ per cent. in kind, and the balance up to 35 per cent. in cash; this very low rate of retention in kind has been fixed at the instance of the Privileged Company, in view of the smallness of existing stocks, the large demand to be expected, and the hardship involved on the growers when a heavy percentage of the retention tax is fixed in kind.

America has of late purchased considerable quantities of the old crop, and made heavy forward purchases of the new, and a considerable demand is expected from that quarter, owing to the general shortage this year of the world's fruit crop. Germany, which before the war was the world's third largest consumer of currants, will probably shortly re-appear in the market. It is consequently anticipated that the demand will, this year, at least be equal to the supply, and the prices ruling will be correspondingly high. The prices ruling for new fruit at the outset are fluctuating between 80s. to 90s. per 100 Venetian lbs. c.i.f. U.K. for good Patras and Gulf qualities.

A Reuter message from Belgrade to Paris states that in Southern Serbia the first harvest since 1916 is now being reaped. The principal crops are wheat and maize, and it is hoped that the harvest may greatly alleviate the sufferings which the inhabitants of the mountainous regions have endured since the armistice. Last spring the American Red Cross imported into Serbia 10,000 sacks of seed corn, and agricultural machines, including tractors, were placed by the Red Cross at the disposition of specially organised committees.—Reuter.

Dr J. Collis Browne's Chlorodyne

Safeguard your Health with this Reliable Medicine.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.

A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

Trade in the market during the week has been very disappointing, and buyers have continued to adopt a waiting policy. A strong belief in lower values still exists, and there is no probability of more activity until increased confidence in prices shows itself. The American cotton crop is undoubtedly doing very well, with a tendency for estimates of the yield to be increased. Favourable news is also coming to hand relating to the Egyptian growth. Lancashire users are convinced that there will be plenty of raw material during the next twelve months. Yarns made from Egyptian cotton have continued to move off very slowly. Engagements in combed qualities remain extensive, and full rates have to be paid for anything wanted, but there are indications of some loss of ground in the position of carded counts. Only a limited inquiry has been met with in piece goods for Egypt. There are reports that the labour unrest abroad is rather adversely affecting trade. Some business has been offering for the Levant, but in many instances delivery difficulties have prevented transactions being arranged. The demand for India could scarcely be slower than at the moment, and shippers are receiving very few wires of any kind from the other side. China buyers are more disposed than ever to look on. Some small lots have been sold in grey shirtings for Java. Operations for South America have been very restricted. Export trade for all countries abroad is being hampered by the high rates of exchange. American yarns for home use have been sluggish, and prices have favoured buyers. Extra hard yarns continue in request for the Levant, but terms of fresh contracts have not been easily fixed up.

COMPANY RESULTS, Etc.

The directors of the Mysore Gold Mining Company have declared an interim dividend of 1s. per share (less income-tax at 6s. in the £) on account of the year ending December 31 next, payable on October 10 to holders registered on September 4.

The directors of the North Anantapur Gold Mines have declared a preferential dividend (less income-tax at 6s. in the £) on the preference shares for the six months ended June 30 last at the rate of 20 per cent. per annum, also a dividend for the twelve months ended June 30 (less income-tax at 6s. in the £) of 6d. per share and a bonus (less income-tax at 6s. in the £) of 6d. per share on both the preference and ordinary shares, payable on October 1 to holders registered on September 4.

Messrs. Harrisons and Crosfield have declared a dividend on cumulative preference shares at the rate of 6 per cent. per annum (less tax) for the three months ending September 30. Dividend warrants will be posted on September 29 to shareholders registered at that date, including approved transferees whose transfers have been lodged not later than September 15.

The directors of the Wanarajah Tea Company of Ceylon announce an interim dividend of 10 per cent.

The directors of the Chartered Bank of India, Australia and China have declared an interim dividend for the half-year ended June 30 last, at the rate of 14 per cent. per annum, free of income tax, payable on and after the 17th inst.

COMPANY MEETING.

Bengal Iron and Steel.

The ordinary meeting of the Bengal Iron and Steel Co. was held on September 5 at the Cannon Street Hotel, London. Mr. W. T. MacLellan, C.B.E., who presided, said that the profit for the past year was very much in excess of anything they had previously achieved, and they had put aside £167,000 towards the revenue of the country. This year was the first in which the company had derived any material benefit from the existing state of trade, and a part of the good result was due to the profit made in the manufacture of ferro-manganese—a profit which was not likely to recur. On the other hand, the results from their general trade were improving, and they had in hand considerable extensions, both to their blast furnace plant and to their coke oven plant. In about a year's time they hoped to increase the output of pig-iron by about 40 per cent. They had recently taken an interest in a brick-works which had now started operations, and would provide the company with firebrick, much of which they had formerly to import from this country at considerable cost. They also had negotiations in hand for the starting of industries in India which would consume a considerable portion of their output of pig-iron, and in those new industries they were taking a substantial interest.

NEW COMPANIES.

Masterson Roumanian Oil.

The Masterson Roumanian Oil Syndicate, Limited, was registered as a private company on August 9 with a capital of £20,000 in £1 shares. Objects: To carry on the business of extracting, pumping, drawing, transporting, and purifying and dealing in petroleum and other mineral oils, etc., and to adopt an agreement with T. S. Masterson. The subscribers (each with one share) are: T. H. Wagstaff, 23, Tennyson Avenue, Wanstead, secretary; S. J. Lee, "Lynton," Branfill Road, Upminster, accountant. Solicitors:—Lawrence Jones and Company, 4, St. Mary Axe, E.C. Registered office: 29, Great St. Helens, E.C.

Indo-Burma Oilfields.

The Indo-Burma Oilfields, Ltd., was registered as a private company on August 8, with a capital of £100 in £1 shares. Objects: To prospect for, acquire, develop, and deal in oil-bearing lands and properties in India, Burma, the Malay States and elsewhere, etc. The subscribers (each with one share) are:—E. M. Gardner, 96, Lansdowne Road, Holland Park, W., secretary; A. H. Palmer, Melville House, Green Lanes, N., solicitor's clerk. Solicitors: Gnedalla, Jacobson and Spyer, Austin Friars House, E.C.

Adams Peak Tea Estates, Ltd.

Registered September 2. Capital £250,000 in £1 shares. To acquire any grants, concessions, leases and rights in Ceylon and elsewhere, and to carry on the business of planters of tea, coffee, cocoa, sugar, rubber and other produce, etc. The subscribers (each with one share) are:—C. Russell, 22, Hampton Road, Ilford, Essex, solicitor's clerk; B. J. Weaver, 146, Halley Road, Forest Gate, Essex, clerk, and five other clerks. The subscribers are to appoint the first directors. Qualification £250. Remuneration (except any managing director) £75 each per annum and a percentage of the profits. Registered office: Winchester House, E.C.

COMPANY NOTES & REPORTS

Jetinga Valley Tea.

The report of the Jetinga Valley Tea Company for 1918 states that the profit amounted to £9,146, which with £6,417 brought forward, refund excess profits duty, 1917, £697, dividends on investments and interest, £548, and transfer fees, makes £16,818. The directors propose to pay a final dividend on the ordinary shares of 7½ per cent., making 10 per cent. for the year (free of income-tax), together with a bonus of 2½ per cent. (free of tax), and to carry forward £5,231.

Lankapara Tea.

The accounts of the Lankapara Tea Company for 1918 show that the outturn was 1,220,000 lb (against 1,370,800 lb.). There was a profit of £11,866, and an available sum, including £4,507 brought forward, of £16,373. After transferring £1,000 to reserve fund for development, and deducting £5,130 for income-tax, a further dividend of 20 per cent. has been declared, making 25 per cent., less tax, for the year, the same as for 1917, leaving £1,336 to be carried forward.

Banque de Salonique.

The report presented to the shareholders of the Banque de Salonique at the recent meeting held in France shows a loss of 429,769 frs. for 1915 and profits amounting to 147,665 frs. for 1914, 648,767 frs. for 1916, 477,464 frs. for 1917, and 1,785,234 frs. for 1918. With the amount brought forward from 1913 the total profit for the war period amounts therefore to 3,040,377 frs., or £T133,766 these being calculated as usual, at the fixed rate of 4.40 piastres per franc. The report points out in this regard that the bank has been able to follow out this system because its engagements in foreign money appearing in the liabilities found their counter-part in the entries which figure in the assets for the same money. The report also mentions that the £E159,000,000 in paper money created during the war and guaranteed by £T5,000,000 in gold and by five millions of German Treasury bonds, have caused a drop in the trust funds and great difficulties in the foreign trade of Turkey. This fact, coupled with the existence of funds deposited by the Bank of Salonica in the Central Empires necessitated a deduction of £E110,000, or 2,500,000 francs to carry the special reserve to 3,500,000 frs., and to cover the eventual losses on that part of the assets. The branch at Beyrout has been transferred to the Banque Française de Syrie. The meeting authorised the directors to increase the capital from 20,000,000 frs. to 40,000,000 frs., either immediately or at various periods.

East Indian Coal.

The report of the East Indian Coal Company for the half-year ended April 30 last states that, after making the usual allowance for the depreciation of buildings, plant, and machinery, writing £10,000 off development account, and adding £5,000 to general reserve, the profit is £16,804; £698 was brought forward is £3,103. The output was 423,575 tons cent. for the half-year, less income tax, was paid on July 10 last, making 21 per cent. for the year, and the balance to be carried forward is £3,013. The output was 423,575 tons during the half-year, making 736,934 tons for the year. The prospects in the immediate future are considered to be satisfactory. The construction of the Bararee Coke Works, in which this company is largely interested, is making good progress.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put export advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

SHIPPING INTELLIGENCE.

Morocco Cold Storage Transport.

Quite a big programme for increasing cold storage transport is being considered by the French Minister of Public Works. The importation of frozen fish to France is particularly to the fore, especially the project for bringing it from Morocco. M. Kerzonouf, an expert in this industry, in reply to a question put to him, stated that it was much easier to refrigerate fish from Newfoundland than from Morocco, owing to the technical difficulties experienced in treating the fish from the latter country. In view, however, of the excellent results obtained at Fedalah by a French shipowner, M. Boutellier, who carries on an extensive trade in dried fish, M. Kerzonouf admits that it would be well to give the scheme a trial. On the other hand, several other members of the Commission justly remarked that Morocco had also need of cold chambers for the storage of pork and eggs for shipment to France. It has, therefore, been decided by the French Minister to appoint a special mission to examine, without delay, the work to be effected for organising the storage and transport by refrigerators of fish, meat, and eggs from Morocco. It is anticipated that the shipments will be made to Bordeaux.

The Greek steamer Styliani, reported from Arrecife to have been burnt at sea, while bound from Gibraltar for Dakar, was insured in the London market for £50,000. The Styliani was a wooden three-masted steamer, of 1,500 tons, built this year by the Doyen Shipbuilding Co., of Portland, Maine.

According to a telegram from Melbourne, the value of the Huddarm Parker Shipping shares is steadily increasing, and it is rumoured that Lord Inchcape's group has offered the company 60s. per share, with a view to absorption.

The direct shipping facilities offered since the beginning of the year between Aden and the United States have, according to the American Consul at Aden, been "the most mighty factor" making for larger exports to the United States. Another influence of importance, however, has been the high prices bid by American importers for products of this district. The period in question is described as one of great prosperity for Aden shippers.

GREEK SHIPPING.

(From Our Own Correspondent.)

Athens, August 22.

Greek steamship owners have of late been purchasing a considerable number of British steamers, several of which are of 6,000 to 8,000 tons deadweight, and negotiations are going on for the transfer of many others. On the other hand, prospective purchasers of steamers at the Piraeus have received intimation that the Scandinavian, Dutch, and Danish Governments have prohibited the sale of steamers under their respective flags until the end of 1920.

The total approximate gross earnings of the Indian State railway from April 1 to July 19 1919, are more by Rs. 4,28,973 than the figures for the corresponding period of 1918.

Major J. Mackenzie Rogan

(Coldstream Guards) writes:—"Your 'De Reszke' Cigarettes are greatly appreciated. Good flavour and mildness are particularly noticeable."

Miss Peggy Kurton writes:—"The 'De Reszke' Cigarettes are delicious. There is nothing so soothing as a 'De Reszke.'"

Gervase Elwes, Esq. writes:—"I find the 'De Reszke' Cigarettes very soft and mild, and they do not have any injurious effect on the throat."

SELDOM if ever have so many notable people given high praise to one particular cigarette. "De Reszkes" win universal praise because they are worthy of it.

"De Reszke" The Aristocrat of CIGARETTES

Sold at all Tobacconists, Stores and Military Canteens.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated September 3:—

Rain nearly general throughout, except in North-West Frontier, where fall was local. More required Assam and parts Bengal.

All India first forecast of crops: acreage sugarcane, 2,686,000; sesamum, 1,520,000.

Bombay Cotton Market strong. Fully good broach, April-May, quoted 564. Piece-goods market no improvement. Jute market steady. Hessians steady, advanced prices. Sackings firmer, but little doing.

Bagmara-Siju-Jhankeray Railway surveys by Assam-Bengal Railways, 21 miles sanctioned.

Crops are excellent in Punjab, Berar and North Bombay, and good or satisfactory elsewhere, except in small portions of Bombay Deccan. Prices still rising in Bengal and Assam, owing to depletion of stocks, but elsewhere steady or falling slightly. Demand for Burma rice is keen in Bengal and Madras, but slack in Bombay. Fodder situation much easier and condition of cattle improved. No marked change in economic situation, but area of distress caused by famine and scarcity is gradually narrowing.

At the third sale of rupee credits to be made by the New York office of the Bank of Montreal on behalf of the Secretary of State for India, the amount offered will be 40 lakhs. The minimum price will be 41 cents per rupee.

The India Office has issued the following telegram from the Viceroy, Revenue and Agriculture Department, dated September 2:

Rainfall.—Scanty: North-West Frontier Province, Baluchistan, Berar, Hyderabad (north), Mysore, and Madras Deccan. Fair: Bay Islands, United Provinces (east), Gujarat, Bombay Deccan, Hyderabad (south), and Madras (south-east). Normal: Upper Burma, Assam, Bihar, Punjab (east and north), Kashmir, Central India (west), Malabar, and Madras Coast (north). Excess elsewhere. Normal rainfall likely continue during next week.

AMERICAN LOAN TO GREECE

(From Our Own Correspondent.)

Athens, August 22.

Although no official announcement has been made up to the present, the news seems to be public property that the United States' Treasury has lately completed a very clever loan to Greece. According to well-informed circles here, a loan has been, or is about to be concluded, whereby Greece is to be lent Drs. 500,000,000 by the United States. The terms of the loan are stated to provide that Greece will draw this loan in kind, in the shape of American merchandise, to be shipped from America on credit, the value of this merchandise being deposited by the buyers with the National Bank of Greece, to the credit of the Greek Treasury. By this arrangement the loan takes the form rather of an internal loan instead of a foreign one.

No further details are at present available, but if this loan be successfully concluded, it remains to be seen what the effect of such an arrangement will be on the Athens and Piraeus markets.

In this connection the course of the rate of exchange on London during the last ten days has been rather interesting. About a week ago this rate was down as low as 22.70, whence it has gradually recovered, and the exchange on London is now quoted at about 24.70. This sudden decline was attributed to the fact that the greater part of the money now leaving Greece is now going to America, and that the National Bank of Greece had adopted as a standard the New York rate for bills on London.

AMERICAN COAL FOR GREECE.

(From Our Own Correspondent.)

Athens, August 22.

The Ministry of Transport is now publicly calling for tenders for the supply of 30,000 tons of American coal, of which 20,000 tons is to be Pocohontas or New River, and 10,000 tons gas coal. It is stipulated that the coal shall be guaranteed three-quarter large and one-quarter small, and to be delivered at Piraeus within three months. Payment is to be made at Piraeus on the arrival of each cargo, and after verification that the coal fulfils the conditions stipulated. Tenders, in sealed envelopes, were originally to be deposited up to August 12/25, but this date has now been extended until September 2 (New Style), from which it would appear that tenders are not forthcoming as freely as might be. It is stipulated that tenders are to be accompanied by a bank certificate, certifying that a sum of 100,000 dollars (about £4,000) has been deposited with a Greek bank as a guarantee of the fulfilment of the conditions, being forfeitable in the event of the non-fulfilment.

The object of the Ministry in calling for tenders for this coal, instead of asking the companies concerned to submit their lowest offers, f.o.b. American seaboard, is not clear.

The estimated traffic receipts of the Ottoman Railway from Smyrna to Aidin for the week ended August 16 were £5,972 (£15 15s. 2d. per mile).

NOTES OF THE WEEK.

The new Anglo-French Agreement in regard to Syria clears up a lot of misunderstandings. It is to be hoped that it will not lead to the creation of others. In the first place, the good faith of the British Government in its negotiations with the French and with the Arabs has been established. The Agreement of 1916 may have been carried through, as far as Great Britain was concerned, with less than the full knowledge of the Cabinet; but the French were aware that the British Government was already in negotiation with the Arabs, and before the Agreement was signed they specifically accepted the exclusion from French jurisdiction of the four cities of Damascus, Hama, Homs, and Aleppo. It is, therefore, not the case that there was any contradiction between the promises made to the Shereef of Mecca and the terms of the Anglo-French Agreement.

The new Agreement supersedes the Sykes-Picot covenant, and does away with the grossly unfair line which separated French and British spheres in that document. By giving the French Mosul and the reaches of the Euphrates above Anah, while extending their zone of influence to the Persian frontier, the 1916 Agreement embodied every possible economic blunder in regard to the British sphere that could be made. It cut off the catchment area on which all irrigation schemes in Lower Mesopotamia depend, it divided the oilfields and it rendered a pipe-line to the Mediterranean out of the question. All that is now changed. It is understood that the British sphere will include Deir-el-Zor and Nisibin. The French will have Urfa, but the four cities excluded from their direct zone in 1916 will not be occupied by their troops.

A special feature of the new Agreement is that British troops are to evacuate from November 1 all the territories situated north of a frontier between Syria and Palestine. There is reason to suppose that General Allenby had no difficulty in persuading the French that it was entirely to their interest that no British troops should be withdrawn until French troops were ready to take their place. No good purpose can be served by misrepresenting the situation. The Arabs have let it be known that they did not wish to be placed under French influence, and to have allowed an interregnum between the withdrawal of the British Army and the arrival of the French troops would have only added to the difficulties of the latter. On the other hand, there is a marked tendency in the East, as we have continually insisted in these pages, to accept an accomplished fact. With tact, therefore, on the part of the French authorities it should be possible for them to inaugurate peacefully their administration or supervisory control.

It will also be very necessary for the French Press to exercise some restraint in its comments on Syria and Arab matters. The majority of the newspapers have shown themselves surprisingly ill-informed on the subject, and the new note struck by the *Liberté* has not been inspired a moment too soon. It writes:—"The French Government must bear in mind that a pretty numerous corps of occupation will be necessary, at any rate during the period of agitation of feeling now existing, and further that we must have a soldier who is at the same time an experienced administrator for the organisation of our new protectorate." If this aspect of the situation had been appreciated sooner, there would have been less excitement over British "intrigues." If the transfer to French jurisdiction takes place smoothly, it will be in no small measure due to British efforts to convert the Arabs to a reasonable frame of mind. In view of the Emir Feisal's impending visit to this country, it may be inferred that this self-imposed task is not yet at an end.

There is no inherent improbability in the report of the resignation of M. Bratianu, although it lacks at present official confirmation. Our Bucharest Correspondent, in a letter dated August 26, pointed out that it was almost certain that M. Bratianu would not sign the Treaty, and that it was to be expected that the Government would resign on this platform. The political situation in Roumania is too complex to enable it to be gauged from a distance. A Government with an eye to its own interests, which had been in a state of unstable equilibrium for some time, would naturally welcome an opportunity of pitching its resignation on a high patriotic note, in the hope that, after the invidious work of signing the Treaty had been performed by others, it might return to power with a fresh lease of life. If the Paris Conference adheres to its contention that Roumania had to signify her adherence to the Treaty by last Saturday or not at all, the question of signing the document no longer concerns the Roumanian Government. In these circumstances M. Bratianu's successor might find his task considerably simplified, and might proceed with the elections for the Constituent Assembly. There cannot be the least doubt that the country is anxious to make the unification of all the Roumanians technically complete by the election of a Parliament representative of Greater Roumania, from which great things are hoped for.

Yugoslavia is again without a Cabinet, Dr. Davidovitch and his colleagues having last Saturday tendered their resignations, which were accepted by the Prince Regent. In view of the unyielding attitude of the Opposition, and the manner in which one group or another constantly put fresh difficulties in the way of a reconstruction of his Cabinet, the position of Dr. Davidovitch was already an extremely difficult one, and it is easy to understand that he and his friends were not eager to sign the Peace Treaty with Austria, only to make it easier for their opponents to assail them with even greater vigour. Had they been able to obtain some modification of the terms to which Yugoslavia objected, they would probably have been willing to remain in office, but as they could not prevail on Paris to alter its decisions in the slightest particular, they preferred to leave others to face the difficulties of the situation. The Prince Regent is reported to have asked Professor Raina Pavlovitch to undertake the formation of a new Cabinet. The fact that M. Pavlovitch, although a politician of experience, has never yet held any Ministerial appointment, would appear, in the present state of Yugoslavian politics, to be a point in his favour, and, as he is reported to be popular with all parties, he may succeed in forming the real "coalition" Cabinet which the country seems so urgently to require.

Our Belgrade Correspondent sends us some interesting notes on the present condition of Montenegro, as observed by an English traveller. From this and other accounts it is clear that the country of the Black Mountain is in a sorry state indeed, and the sooner its fate is settled the better it will be for everybody. At present, reports which endeavour to make up by violence of statement what they lack in other, more desirable, respects are only too numerous. In this connection we may refer to the argument that has been put forward to the effect that the Montenegrin Throne is elective; that King Nikolas was elected over the head of his father, Mirko the Firebrand; and that if to-day the Montenegrins wish to elect Crown Prince Alexander of Serbia that is their concern alone. In reply to this it may be pointed out that the Montenegrins have heretofore usually waited until the King died before electing his successor, and that, if only on the ground of good taste, it would be as well to follow precedent in this respect. As to the third point of the argument, it is not denied that the Montenegrins, as a free people, have the unchallenged right to settle their own affairs. What is earnestly to be desired is that they may be allowed to settle them freely, without the faintest suspicion of any intervention from interested parties.

On Tuesday, first Dover and then London had the opportunity of welcoming Field-Marshal Lord Allenby home for the first time since he took over the command in Palestine. By both the Cinque Port and the Capital he was accorded an enthusiastic reception, and seldom, if ever, has a British general better deserved one from his countrymen; but his achievements are too well-known to need any further reference here. England has often been very fortunate in the men who have served her in the Near East, and General Allenby will surely take rank with the best and greatest of them.

We published a few weeks ago a letter from a correspondent who was anxious that Rahmi Bey, ex-Vali of Smyrna, should be treated favourably, in recognition of the many and constant kindnesses he showed to British and Allied subjects in the Smyrna vilayet during the war. To-day we publish another appeal to the same effect, from a second correspondent, separated by wide seas from the first. It may be remembered also that last December our Cairo Correspondent bore testimony to Rahmi Bey's friendly attitude towards our countrymen throughout the war. The fact that all this evidence is offered quite voluntarily, and that the feeling of gratitude was sufficiently strong in our correspondents to prompt them to take some little trouble to make it known, would certainly seem to show that Rahmi Bey deserves well of Great Britain. In the recently-published official report on the condition of Turkish prisons, he was mentioned as being confined in one of those truly dreadful places. Unless we are mistaken he is now at Malta, and we have no doubt that he is there receiving the same kindness that he showed to British subjects and other Europeans when he had it in his power to do so.

A curious situation has arisen at Fiume, which town has been seized by insurgent Italian troops, either led or, at any rate, egged on, by Gabriele d'Annunzio, who has evidently lost none of his youthful fire yet. The act has been disavowed by the Italian Government, who clearly realise what a false position it places them in; and it is understood that the firebrands are to be brought to order by the institution of a strict blockade. Whether that measure will suffice to achieve the desired end remains to be seen. In the meantime the fact that the suburb of Shushak is reported to have been occupied by Yugoslavs is not without significance. The whole affair is very regrettable, but it is a direct consequence of the long delay in settling the Fiume question, and as such must be laid at the door of the Paris Conference.

The Persian Minister for Foreign Affairs, Prince Firooz Mirza Nosret ed-Dowleh, is at present the honoured guest of the British Government. He left Teheran with the Shah, and has presumably come on to London in advance of his royal master in order to arrange as far as possible such business of State as may call for his Majesty's attention while in this country. The Minister, who is a son of that distinguished statesman Prince Firman Firma, is a welcome visitor for his own sake as well as for his country's, and we trust that the impressions he will gather during his visit will be entirely pleasant and favourable.

An extremely interesting letter from Sir Frederick Lugard on the subject of British Advisers and native officials in Egypt appeared in *The Times* a few days ago. The subject is a very important one; the present system is admittedly far from perfect, and Sir Frederick's suggestions, based on prolonged and successful trial in Nigeria, appear to be eminently practical, and likely, if put into practice, to bring about a marked improvement. Briefly, they amount to this: the Egyptian officials should be responsible to Egyptians—the Sheikh and Wakil to the Mudir, the Mudir to the Minister; and that the Englishman, the Inspector, should be responsible only to the British Adviser to the Minister. Needless to say, Sir Frederick does not propose an entire divorce as between the Mudir and the Inspector; the latter would report to the Mudir such cases as were necessary, would tender friendly advice whenever it was called for, and would watch over the administration of justice in the native Courts and the operations of the tax collector. But the Mudir would be free to ignore the advice, if he were prepared to justify his action to the Minister; and the Minister, in turn, would support him, if prepared to explain his action to the Adviser.

This system, as Sir Frederick Lugard points out, would preserve the dignity of the native officials in their own eyes and in those of the people—"a matter of transcendent importance to native rulers"—and at the same time it would avoid placing British Inspectors under Egyptian Governors, an alternative suggested by an earlier correspondent. From the latter arrangement, we agree with Sir Frederick, "nothing but disharmony and friction could result . . . There is no need to labour the point, the experience of the Empire attests it." On the other hand, the loyalty of Moslem Nigeria throughout the war, with its entire absence of that sympathy with Turkey and the Turks which has been so noticeable in Egypt, goes to show that the system advocated by Sir Frederick Lugard makes for real efficiency and for good relations between governors and governed.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 31.

The Strikes.

We are now entering on the fourth week of the Cairo tramway strike. The Alexandria strikers have compromised, and the service has been resumed; but the Cairo men are as obstinate as ever, and declare that they will oppose by force any attempt to run the trams without them. This declaration seems likely to be put to the test this week, as both the Government and the public are tired of being put to endless inconvenience and expense by the quarrels of the company and its servants. After all, the Tramways is a public service, and the public interests are superior to all else. The employees appear to deny to others the rights they claim for themselves. They refuse to work except under certain conditions, and they are quite free to do so. But they are not free to interfere with other men who have to earn their bread, and who choose to accept the terms the company offers. Neither are they justified in interfering in any manner whatsoever with any measures the Government or military authorities may think fit to take in the interests of the long-suffering public. If they care to try a fall with the powers that be, they will only have themselves to thank for the inevitable result.

Government Action Foreshadowed.

The Government has acted with the greatest prudence and indulgence hitherto. It has formed a competent Conciliation Committee, and done everything in its power to arrive at an arrangement. It now contemplates framing a law to regulate the conditions of syndicates and trades' unions in Egypt. It has foreseen that sooner or later it will be necessary to recognise the claims of labour to organise in self-defence. The situation in Egypt is, however a somewhat peculiar one. There are very few industries here, and consequently very few bodies of labouring men who need to incorporate themselves in a syndicate to protect their common privileges. In order that a syndicate should be required in this sense there must be common and prevailing conditions of labour affecting a whole class or category of the employed.

Government employees are excluded naturally from Syndicalism, as they are working under special contracts and engagements to perform certain duties for certain pay and advantages. This is an axiom that does not admit of discussion. What classes then remain? There are certainly the employees of the tramways, and those of companies like the gas, water, etc. If there is any prospect of prolonged trouble, the Government may be compelled to indemnify the companies and take over, or nationalise these services. This would be a short cut out of the difficulty. As to the other syndicates that are in tentative process of formation, they should be excluded by any law that is to be framed. Waiters at cafés, for instance, have no pretext for syndicating. They work under different conditions in every café, and it is absurd to attempt to fix a general contract of service for all of them. The same may be said of newspaper boys, hairdressers' assistants, lawyers' clerks, and the hundred and one denominations of those who work to live.

The condition that seems naturally essential to the needs of a syndicate is that there should be a certain and large number of men or women working under similar conditions and for one or more masters, who are themselves bound by more or less conditions and standard prices. For example, it is conceivable that workers in the cigarette industry, which is one of the few Egyptian branches of production or manufacture, should yearn to syndicate themselves. They labour under more or less the same disadvantages in general, and they may be considered as justified in forming a syndicate for themselves.

A Zaghloulite "Success."

To-day large meetings were held both in Cairo and Alexandria to celebrate the supposed success of the Zaghloul Delegation in obtaining an opinion (which is called a "decision") from the Committee of the American Senate in favour of Egyptian Independence. This news was first published in an extra edition of the *Misr*, many copies of which were sold for as much as ten piastres (2s.). The translation of the message is as follows:—

A wire has been received from America to the effect that the Committee of Foreign Affairs of the American Senate has decided that politically Egypt should be under the suzerainty neither of England nor of Turkey, and that it should be independent and self-determinating (or governing).

This was brought out at 9 o'clock on Saturday evening, and created a scene of wild excitement in the streets, students and idlers of all sorts rushing about and yelling that the British were to leave Egypt, and that "complete Independence" had been realised.

At the meetings held on Sunday in public streets of Cairo the people began shouting the usual cries of "Long live Zaghloul," "Long live the Fatherland," but as public gatherings are an offence against martial law they were dispersed after half-a-dozen arrests had been made. But the population still firmly believes that America has granted complete independence to Egypt.

The current rumour to-day is that Viscount Allenby's approaching departure on the the 3rd by the Caledonia is a consequence of the "decision" of the Senate. No paper having mentioned the fact that Sir E. Allenby was leaving Egypt for a while before the circulation of the American telegram, it is, of course, futile to make any statement now to the effect that the gallant General's journey was decided upon at least a fortnight ago. He will be temporarily replaced by Sir Milne Cheetham, who arrives, together with the new Adviser designate to the Interior, Sir G. Clayton, by the same steamer Caledonia, which will only stay two or three days before turning her nose westward again.

A MONTENEGRIN PROTEST.

Sir Roper Parkington, Consul-General for Montenegro, has been officially informed that the Montenegrin Government has addressed a protest to the Peace Conference and the Governments of the Great Powers in the following terms:—

"All the Allies and Associated Powers will sign the Peace Treaty with Austria, even those who have not spilt a drop of blood, yet the Peace Conference deprived Montenegro of this right, and has forgotten that she was amongst the first to range herself on the side of the Allies, that she lost over 40 per cent. of her soldiers and a third of her population, and even her liberty, which up to then had never been violated. The Royal Government of Montenegro most emphatically protests against this attitude of the Peace Conference and prays the Governments of the Great Powers to intervene, so that an end may be made to this violation of the honour and hardly won rights of Montenegro."

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, September 4.

The Minority Clause.

Extracts from the clauses of the peace convention to be presented to Roumania for signature have been published in the various papers here. It remains to be seen, when the entire document appears, whether these extracts give the whole case or not. Certainly the provisions for the representation of ethnical minorities and their protection by the League of Nations have had an almost stupefying effect on the people here, who look upon the demands made by the Peace Conference regarding the minorities as simply tyrannical.

It would appear from the extracts that have been published that a minority of, say, Saxons, Swabians, or Jews, who already enjoy, by virtue of the Decree of January, 1919, equal political and social rights with the original Roumanians, would, whenever dissatisfied with any law or administrative regulation, have the right, not only of placing their grievances before a Roumanian tribunal, but also of making a separate appeal to the League of Nations. The effect of this privilege would be to make Roumanian administration very difficult, if not impossible, as the Government would constantly be called upon to postpone the execution of regulations not entirely favoured by the minorities until reference had been made to the League of Nations. It can quite easily be foreseen that such an unprecedented privilege would be open to grave abuse, and, what is more, the difficulties of arriving at an equitable decision on questions concerning purely local affairs would make the task an almost impossible one for any western tribunal that might be set up.

The Peace Conference has proved on more than one occasion that it has not always been well advised concerning conditions in this part of Europe, and the minority clause is a proof to the Roumanians that the Allies do not understand local requirements, nor the character of the people with whom they are dealing. They are quick in their resentment of any suggestion of unfair treatment, and history proves that they are willing to suffer in the effort to preserve their national freedom and independence. Why, they ask, do not the Irish come under the same category as minorities here? Surely what is sauce for the goose is also sauce for the gander, and what is offered as a basis for the solution of the difficulties of the smaller peoples should be equally applicable to the difficulties of the larger Powers.

No one can truthfully deny that Roumania has been loyal to the Allied cause since her entry into the war; nor does the fact that, following a sequence of most unhappy events, she was compelled to come to a temporary arrangement with the Central Powers prove her secession from the principles on behalf of which she commenced fighting in 1916. It is, therefore, very humiliating to a nation which has suffered much in the Allied cause to be dictated to in almost the same tone as would be used to a conquered people, especially in regard to a question with which she has proved herself quite capable of dealing without outside interference. The unhappy reference in the preamble of the Convention to the terms which Bismarck sought to impose on Roumania under the treaty of 1878 is very much resented by the Roumanians, who do not appreciate the logic of excusing a present imposition by reference to a past injustice.

A consideration of the Jewish question alone is humiliating. Whatever may have been the representations made to the Peace Conference, the fact remains that the Jews have not been badly treated in Roumania, as witness the large numbers of influential and wealthy members of that race who lived here quite contentedly and peacefully before the war, and—with the exception of certain civil and political rights—enjoyed equal freedom with any Roumanian. By the Decree of January the Jews in the whole of Roumania and her extended territories—who form, by the way, about one-sixteenth of the entire population—gained equal rights with those enjoyed by that nationality in any part of the world, not excluding Great Britain. Yet the Peace Conference seeks to interfere with the smooth running of the Roumanian administrative machinery by providing for their immunity from judiciary obligations on their Sabbath, and furthermore they are to have the right of appeal to the League of Nations on any question of administrative policy with which they are not in complete agreement. The results arising from the bestowal of such a privilege are likely to be somewhat chaotic!

Requisitions in Hungary.

The text of the most recent note from the Allies protesting against the requisitions made by the Roumanian Army in Hungary has not been published here, but by way of justification of the Roumanian action certain figures have been published of the goods and commodities stated to have been seized by the enemy during the German occupation. They include the following:—2,910,000 tons of wheat, 1,630,000 tons of maize, 770,000 tons of oats, 190,000 tons of vegetables, 600,000 horses, 1,000,000 oxen and cows, 4,400,000 sheep, 400,000 calves, 2,000,000 lambs, 1,000,000 pigs, over 1,000,000 tons of agricultural implements, over 5,000 tons of wool, and large quantities of oil products, railway material, and rolling stock. Furthermore, many of the factories in Roumania were left in a state bordering on ruin.

Elections.

The general elections will take place in the early part of October throughout Roumania proper, Bessarabia, Bukovina, Transylvania, and the portion of the Banat under Roumanian rule. The election of deputies will take place on October 5, 6, and 7, and every citizen who has attained his majority and owns Roumanian rights will be entitled to vote. The basis of representation will be as follows:—One deputy for every 30,000 inhabitants of each district, and one deputy for each supplementary fraction exceeding 20,000 inhabitants. The election of senators has been arranged for October 10 and 11. Every Roumanian citizen of 40 years of age or over throughout the old and new territories will be entitled to a vote; and among the electors will also be included those citizens of Old Roumania who, although under 40 years of age, were registered in the list of voters of January 1, 1916. A senator will be elected for every 70,000 inhabitants of each district, and one senator for each supplementary fraction exceeding 47,000 inhabitants. The Universities of Bucharest, Cluj, Cernowitz, and Jassy have each the right to elect one senator.

Female Suffrage.

I learn that Transylvanian women have started a female suffrage movement in Brassov to work hand in hand with the existing "Association for the civil and political emancipation of Roumanian women," the headquarters of which are in Bucharest. The membership of this association is gradually growing and new branches are being formed in various parts of the country.

The question of female suffrage had already assumed some importance in Transylvania before the advent of Roumania, and presumably sooner or later the womenfolk will be given a voice in the government of the country on the same lines as those on which the right is enjoyed by their western sisters.

Labour Troubles.

As a direct result of the reduction in prices at the restaurants and cafés here, mentioned in my last letter, a general strike of waiters and cooks was declared at the beginning of this week. The basis of their remuneration, as fixed by an arrangement made some months ago, was a fixed percentage added to the total of every bill, and consequently the reduction of prices meant a reduction in their remuneration. This compulsory percentage has now been withdrawn, the waiters are again throwing themselves upon the generosity of the public, and the system of tips rules as before. The most noticeable effect of this changed condition of things is a resumption of the old-time politeness on the part of the waiters.

A strike of road-sweepers and other sanitary employees, which until to-day threatened to cause a serious menace to the public health in Bucharest, has now happily been settled.

Polish-Roumanian Relations.

As an example of the friendly relations existing between this country and Poland, a communication emanating from the Polish Legation in Bucharest may be cited. At the new University of Posen, the communication states, a section of the seminary for the study of Latin languages will deal exclusively with the study of the language, literature, and national development of Roumania in connection with the intellectual relations between the two countries. A large library—for which a credit has been voted by the Posen Supreme Council—will also be founded.

BELGRADE LETTER.

(From Our Own Correspondent.)

Belgrade, September 1.

The State of Montenegro.

As the position of Montenegro has attracted considerable attention recently in England, both in the Press and in Parliament, authentic and recent news from the little country is very welcome. A well-known English resident in Belgrade, who knows the language well, recently returned from Cetinje, and the impression he gained there in every way confirms the various official statements that appear in the Serbian Press. All round those wonderful shores of the Bocche di Cattaro there are swarms of Italian troops, who, we presume, consider that they are occupying "Austrian" territory, although the place is entirely Serbian. On entering Montenegro in the small hours of the morning, the Englishman's party was held up by the militia. This is a body of volunteers organised by the younger generation of Montenegrins, who appear to be almost if not entirely in favour of union with Yugoslavia, to defend the country against the *Zelenashi*, who are the partisans of the *Raskral*, or "ex-King," Nikolas. The latter are often dressed in Italian uniform, and equipped and paid by Italy, and they find their way up from the coast and harry the mountains to exert pressure on the inhabitants. They are so active that an old soldier, whom the Englishman in question had befriended, declined to accompany him on an excursion up the Lovchen, saying that he valued his life too much, and that he had not survived the war to be shot like a dog on the Lovchen by the *Zelenashi*. In Cetinje, which has always been a dainty and cheerful, if rather monotonous, little place, there was a marked atmosphere of gloom; the women were no longer wearing their national costume, but dingy things provided by relief missions; and everybody appeared depressed.

The Serbian Government recently stated that there were only twenty Serbians there, officials all, and that with this exception, the entire civil administration was in the hands of the Montenegrins themselves. What the country wants is not protection from any domination from Belgrade, but the removal of the unjustifiable Italian incubus, which is making life miserable. The younger generations are keen on immediate and complete union with Serbia, and if ex-King Nikolas has many partisans it must be among the older men who have not shaken off the glamour of his long reign with the brilliant episodes of its earlier portion, so unfortunately darkened by the events of the later years.

A Serbian View of Ourselves.

The *Trgovinski Glasnik* (or "Commercial Messenger") is bringing out as a *feuilleton* an article describing the experiences of the Serbian Commercial Mission to England in the early part of the year. So little was our country known in Serbia before the war that stolidity was the only trait in the English character that had become known in Serbia. "As cold as an Englishman" was quite a common expression. But three years under arms together in Macedonia has made a great difference, and all who served in Salonika will have noticed what good friends Serbs and English were, from private to field officer, even if there were at times linguistic difficulties. In this connection there is a good story, that is well known, but still worth repeating. A Serbian soldier and a British Tommy became great friends in a café, although they could not understand a word of each other's language; but they showed each other the photographs of their wives or sweethearts, as the case may be; and when it came to parting the Serb, anxious to give his British friend a substantial souvenir, pressed his watch upon him, and prevailed on the Englishman to accept it. But Tommy had no valuable object to give in exchange, and racked his wits to think of something worth giving. Finally he had an inspiration, and gave the Serb . . . the Government mule that he was riding. The Serb rode the mule home. Perhaps the ride cooled his enthusiasm; at all events, on arrival he reported the incident to his officer, who in turn passed it on through the usual channels until the Serbian Liaison Officer reported to G.H.Q. that an English soldier had presented a Government mule to a Serbian private, and asked what should be done with the animal. The reply from G.H.Q. was satisfactory to all parties concerned. "What an Englishman gives," they wrote, "he does not take back. The mule remains the property of the Serbian soldier."

But to return to our Serbian Mission to London. The visitors were most anxious to see this land of contradictions, where feudal tenure and vast properties "still exist, but yet it is the home of freedom; where immense wealth jostles extreme poverty." They were specially struck with the emptiness of the streets and stillness of this "sea of houses" when it was explained to them that it was a Sunday. On the Monday the things that struck them most were the late hour of beginning work and the short luncheon interval of only an hour, or perhaps half an hour, and that the shops do not shut for lunch. This is certainly a contrast to Belgrade and to all towns of this latitude, where the afternoon siesta is the order of the day, and all shops shut for an hour or two, or even more during the heat of the day. The Serbs considered ours a very practical arrangement, as it allows the workers to live at a distance and to have some time for recreation. They, like all foreigners, were immensely impressed by the Lord Mayor, especially by the ceremonies and uniforms of parade occasions, and by the fact that the King cannot enter the precincts of the City without the Lord Mayor's permission. The gold on the luncheon table at the Mansion House made a great impression on them, and they connected this with the fact that the office is an annual one, so that many members of the Corporation may enjoy the privilege of using it in turn.

The New Provinces.

The provisional regime that obtained in the new provinces of southern Serbia or Serbian Macedonia has now been removed, and these provinces are definitely incorporated in the Kingdom, with the same constitution as other provinces. This is a curious reminder of the wars of 1912-13, which seemed so tremendous at the time, but have dropped out of memory in the welter that so shortly followed. Poor Macedonia may now perhaps begin to look forward to prosperous days. Gripped in mediæval conditions under the blighting influence of Turkish misrule, the prey to *Komitajis* and factions, where even neighbouring villages were at war with one another, with no security of life or property, the inhabitants scarcely had the power or desire to make progress. Now perhaps those wonderfully fertile valleys may be made to yield as they should, with the hope of peace and anticipation of a repose that they have not known in history. The Salonika Army, when they landed in 1915, were already accustomed to devastated districts, and so scarcely noticed the ruins of the picturesque and once prosperous town of Avret Hissar, now inhabited only by lizards and snakes; and similarly they were indifferent to the desolate and blackened portions of Kukus and of Seres and the sight of ruined villages scattered over the country. But to a traveller from peaceful climes the scenery over great areas of Southern Macedonia would have seemed like the blasted heath.

Political Rivalries.

The political situation is still obscure, as the Government is none too strong, and the Opposition appear united in their desire to overthrow it, though they are far from united in constructive policy. When the bi-monthly credits were before the House on Saturday the Opposition pressed for an adjournment, as a move to gain time; and since then there have been renewed negotiations between the Radicals and the Democrats, which are reported to be proceeding satisfactorily. There are various suggestions, but it seems that the Radicals are somewhat less exigent in their demands.

It appears probable that before long there will be another adjustment and a Coalition Government again formed. The Radicals are reported to be pressing for the Ministry of the Interior, or at least determined that Mr. Pribitchevitch resign, and they are taking up a conservative line on the question of Agrarian reform. The attitude of Dr. Koroshets and his group remains enigmatical, but he will probably support a Coalition Cabinet.

The recent incident at Temesvar has produced an unpleasant impression in Belgrade. The rather contemptuous tolerance of the Serb for the Roumanians and their demands is passing into irritation at what is regarded as the excessive chauvinism of Bucharest. Nothing very definite is known about the incident, but rumour persistently paints it as a grave affair, and the Serbs are irritated, because they have had enough militarism to last them a long time.

BELGRADE, September 9.

In spite of the pains taken over its formation, the new Democrat-cum-Socialist Government did not feel very firm in the saddle, and when it introduced the monthly credits it ran up against a sharp opposition. Dr. Davidovitch saw that an understanding with the Radicals was inevitable, as well as highly desirable, and for over a week there have been more goings and comings and conversations and meetings of the political clubs, while a whole series of rumours and reports have been going through the town, and most business has been at a standstill. Now, at last, it is reported in the Press that an agreement has been reached by which the Government will give up five portfolios to the Radicals; but at the eleventh hour a difficulty has been raised by M. Protitch asking for representation of the small parties, or, rather, cliques, of Dissidents. Dr. Koroshets is apparently staying out; the Socialists, who are retaining their three portfolios, object to the Slovene clericals, whose attitude has been enigmatical through the whole crisis. It seems certain that M. Vulovitch and Dr. Kramer will retire and that Dr. Ninchitch will return, but to the Ministry of Trade instead of Finance. It has been persistently rumoured, too, that M. Pribitchevitch, who is a strong man, will retire from the Cabinet, as a Jonah, to appease the Radicals; it is certain that he will leave the Ministry of the Interior; but in all probability he will take some other portfolio.

Two fresh names appear among the Radical candidates for Ministerial posts. These are Dr. Srshkitch, a well-known Bosnian patriot and politician, connected by marriage with the leading Radical families, and Dr. Slavka Miletitch, a lawyer from Vrshitsa in the Voivodina, where he is well known as a prominent lawyer and politician. His father was a well-known patriot, who died in prison some fifteen years ago, a victim of the Hapsburg methods.

Meanwhile, while the crisis has been dragging on its weary way, everything but routine business has stood still. The reputation of Serbia has suffered in Paris and London; reconstruction, development, and important negotiations have been at a standstill, while the enemies of Serbia are rubbing their hands at the pleasing anticipation of internal dissensions. But the country will largely throw the blame upon the Radicals, who are losing strength, while the Democrats are growing stronger every day. A few days ago at Sombor, the Radical stronghold in the Voivodina, a meeting was held at which some three thousand people attended. The Democrats cleared the day easily, with a sweeping majority in favour of the immediate execution of the Democratic programme of land reform.

The Serbians in England.

The *Trgovinski Glasnik* continues its account of the visit of the Serbian Commercial Mission to England. This week it gave an account of Birmingham and Coventry; the members took a special interest in the latter town, which has raised 80,000 francs in aid of the Serbian Relief Fund. They were particularly interested, too, in the story of Lady Godiva, but omitted the description of her wonderful head of hair, though Peeping Tom got his deserts. They were delighted also with a visit to the Tower of London, where they could not fail to be struck by the continuity of English history and the slow development of our liberty through the centuries. After describing the relics of the execution of Anne Boleyn and other sufferers, they refer to the martyrdom, for her religious opinions, of "*Gospodjitsa* Asquith," an historical incident that will probably be unfamiliar to most readers of THE NEAR EAST. They were also struck by the fact that Englishmen are not such bad linguists as they are popularly supposed to be; for wherever they went they usually found someone who could talk in French to them, though unwillingly, for few could speak it well. But the Serbs are enthusiastic in their appreciation of our good old English hospitality, which they received in full measure, and were pleasantly surprised to find that it rivals their own.

SMYRNA NOTES.

(FROM OUR OWN CORRESPONDENT.)

SMYRNA, September 3.

Despite the vigorous work accomplished in the Smyrna Province by the "Advanced British Headquarters" in separating the Greek and Turkish forces, the situation is aggravated every day by numerous bands fleeing to the mountains and becoming brigands. In a few days the Turks will celebrate their Bairam festival, which corresponds to the Christian Easter; and it is feared that a great effort will be made to drive the Greek still nearer to the coast towns. A few British troops have been sent to occupy the No Man's Land near Pergamus, and it is fervently hoped that another regiment will do likewise at Aidin.

British troops have not yet been used to protect the British Railway, Smyrna to Aidin and Egedir, hence the greater part of the line has for the past two months been in the hands of whatever band of brigands operates near the line. No goods are now carried down to Smyrna, and the only receipts are the payments made by the Greek Government for transport of troops and ammunition to Aidin. The French railway, Smyrna to Afium and to Panderma, has since the Armistice been protected by French troops, and the tricolour floats from the roof of every station on the line.

MALTA NOTES.

(FROM OUR OWN CORRESPONDENT.)

MALTA, September 1.

The Riot Commission.

The inquiry by this Commission is still going on, and constitutes the chief topic of the day in the island. All witnesses are examined on oath, and the evidence forthcoming is putting the matter of the riots in a very different light from what was generally supposed. There is no need to go into full details as far as the readers of THE NEAR EAST are concerned, but a few of the salient points evolved cannot but be of interest. Up to the present they are as follows:—The mob fired the first shot; the British troops were attacked with all kinds of missiles; the Royal Malta Artillery troops (the local regiment) were cheered on their arrival; the police have admitted their inability to cope with the crowd, and that they begged for help from the military. The causes of the riots are put down to a developed anti-English feeling, Italian agitators, the abuses, real or imaginary practised by the local administration, and the profiteering of certain merchants, who, it is stated, received preferential treatment at the hands of the Food Control Committee. The rabid nature of the vernacular Press has had a great deal to do with the past and present discontent. The Commission is proceeding, and on very exact and precise lines, with the result that many facts of the utmost value are being elicited. Good must result from this. It should be added that the population are only conducting their religious *festas* in part, no doubt as a protest—and a futile one—against the action of the troops on the occasion referred to.

The Court Martial.

This is proceeding contemporaneously with the above inquiry, and some of the sentences meted out to the guilty parties are exemplary. The latest are one year with hard labour, two years' hard labour, and fifteen years' hard labour.

"Olla Podrida."

Four German prisoners escaped from the prisoners' camp, taking advantage of the privilege of being allowed to bathe at Marsa Scala. They have all been recaptured. Two new regiments have just arrived in Malta, the 3rd Battalion of the Essex Regiment and the Loyal North Lancashires. Their arrival will mean the demobilisation of the local troops—a serious matter for the island in its poverty, but it is stated that there are to be formed Maltese local corps for work in France. It is also mooted that an infantry regiment is to be raised locally.

TO PHOTOGRAPHERS.

The Editor will be glad to consider photographs of Near Eastern scenery, types, places of interest, etc., etc., suitable for reproduction in THE NEAR EAST. *When desired, payment will be made for the right of reproducing such photographs. Readers should state, when forwarding pictures, whether payment is desired or not.*

Photographs should be sent either packed between stout cards or rolled in a cardboard tube, and should on no account be folded. Titles and notes should be attached to each photo., and should be very clearly written.

CYPRUS NOTES.

(From Our Own Correspondent.)

Outbreak of Smallpox.

There is an unfortunate outbreak of smallpox at Upper Platres, a village situate about 2,000 ft. below the camp and summer quarters at Troodos. About a mile lower down the road lies the village of Lower Platres. Both places have been gazetted as infected with contagious and infectious disease. Precautions for isolation of cases are being taken by the medical department, but alarm keeps many persons from going to and from the areas of danger, which border on the main carriage road, and many plans are upset. The disease is believed to have been introduced from Egypt. Upper Platres has grown from small beginnings into a large place, and is the fashionable resort, especially for Greeks, both of the island and from Egypt. The rising slopes are dotted with numerous houses and bungalows, and there are two hotels of considerable size.

Enemy Aliens.

A draft Bill is to be introduced in the Legislative Council to prevent the entry into the island, without permission, of former enemy aliens for three years. It provides for penalties and orders of deportation.

The Cyprus Deputation.

Letters from the Greek Archbishop and deputation in London continue to be published with monotonous regularity. One of the leading members has been in Paris for some weeks, and his dispatches indicate that there is likely to be considerable delay over negotiations affecting Cyprus; but the people are urged not to be discouraged. The latest London letters state that the Mission considers it advisable in the circumstances to remain there pending developments, and further funds are called for.

CORRESPONDENCE.

THE PASSAGE MUDDLE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The interruption in passenger traffic with India is causing great distress to hundreds of applicants. Amongst them are High Court judges wishing to return to duty after their long vacation, civil officials whose leave has expired, and business men whose presence in India is indispensable. The injury inflicted in the Empire's economic life passes all calculation. Who is to blame for the muddle and want of foresight which is fraught with such disastrous consequence? Applicants are told by the India Office staff that all berths on outward-bound steamers have been commandeered by the War Office in order to take out troops relieving territorials, to whom a pledge has been given that they shall be repatriated before Christmas. But "A Traveller" tells us in to-day's *Times* that, in the course of a journey eastward he found "quite a number of empty berths" on steamers bound for India. There is evidently some lack of co-ordination between Government Departments, and it would be easy for the India Office to furnish shipping companies with lists of controlled berths which are not required for troops. I suggest that the Royal Navy, relieved from the tremendous pressure of war-time, should put a number of vessels in commission for the purpose of conveying reliefs to India.—I am, etc., F. H. S.

September 15.

ZIONISTS AND PALESTINE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I trust you will permit me to call attention to, and correct, two statements which appear in your issue of September 12:—

On page 275, in a communication from a Jerusalem correspondent, appears the sentence:—"The Jews, on the other hand—and more so the Zionists—are still pouring out their money, hoping thereby to gain the votes of the people—a remote prospect." If this means anything at all, it means that the Jews, and especially the Zionists, are bribing the non-Jewish population for political purposes—a suggestion which I must indignantly repudiate as utterly unfounded. If your correspondent intended to mean something else, it is a pity that he did not express himself more clearly.

On page 278, in the course of an article on the "Problem of Turkey," appears the sentence: "The people of Palestine, with the exception of a Zionist minority, favour a British or American protection." As the whole world knows, all Zionists have from the very beginning been in favour of a British Mandate for Palestine, and as you must likewise be acquainted with this fact, it is difficult to understand how you could have permitted the correspondent to make such a statement without at least adding an editorial footnote by way of correction.—I am, etc.,

Israel Cohen.

The Zionist Organisation (Central Office),
77, Great Russell Street, London, W.C.1,
September 17, 1919.

ON BEHALF OF RAHMI BEY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—From The Near East of August 8, 1919, I learned of the arrest in Constantinople of Rahmi Bey, former Governor-General (Vali) at Smyrna, Turkey, in the vilayet of Aidin, and his deportation to Malta, where he is to be tried by the British or Allied Military Courts.

I was in Turkey from December, 1914, to May, 1917, and had the pleasure of the personal acquaintance of Rhami Bey, and, as is known to *all* foreigners living in Turkey during this official's term of office, he was at all times the friend of the belligerents, even of the much-persecuted Armenians. It was within his power and was urgently suggested by certain military generals other than Turks, that the British, French, and other belligerents be deported to the interior towns, but Rahmi Bey absolutely refused to consider this. Records will prove that more than one foreign General, and also Consul-General, was removed from office at Smyrna at the request of Rahmi Bey—or I might more truthfully say, "orders"—simply because they insisted that such deportations be made.

British and French homes in Smyrna, Bournabat, Boudjah, and Cordellio were practically held inviolable, and such belligerent residents were permitted to continue in their homes with the same ease and safety as in pre-war times. Only those homes that were vacant were sequestered for military purposes, and then only in cases where such housing was absolutely necessary.

Everyone who was in Smyrna in 1916 during the air raid made from Mitylene, and who witnessed the air duel between two British planes and one enemy plane, in which both of the British planes were shot down, one having both of the two brave aviators killed in the fall of their plane, will recall the beautiful military funeral given those two brave Britons. The funeral procession was headed by two British ministers, the ceremony was held in the British Church, and from there the caskets draped with the British Union Jack were carried through the streets of Smyrna to the British cemetery for their last resting. Rahmi Bey personally had inserted in the newspapers a notice requesting the British residents of Smyrna to attend the funeral, and permitted them to send floral offerings.

As to his treatment of the Armenians, one only has to recall the horrors practised in every other vilayet in the Turkish Empire, and contrast it with the protection and fair treatment he accorded to those Armenians fortunate enough to reside within his jurisdiction. My information is not hearsay, but my own personal observations, and I could mention many acts of fair treatment by him to belligerents when it would have been much easier, and also to his advantage, to have acted other than he did.

I have no personal interest in writing in behalf of this now exiled Turkish official other than to see justice done; and I hope that what I have written may come to the attention of the court that may try him, and that they will endeavour to have my statements corroborated, which can easily be done by many Britons, Frenchmen, and other foreigners living in Smyrna and personally known to me.

If I were a member of the tribunal that eventually will try Rahmi Bey I would sit out till Doomsday for his dismissal and exoneration of any wilful violation of the usages of civilised warfare, or maltreatment of any kind to the belligerents within his vilayet.—I am, etc., C. A. B.

"THE PROBLEM OF TURKEY."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The author of the article on "The Problem of Turkey" in The Near East (September 12, 1919) seems altogether to ignore the fact that England is pledged, by a public speech of Mr. Lloyd George in January, 1918, to assign "Asia Minor and Thrace, which are predominantly Turkish in race," with Constantinople as the capital, to Turkey. That utterance was accepted by the Moslems of the British Empire, as it was unquestionably intended that it should be accepted, as a solemn undertaking on the part of England. It reassured the Moslems at a crucial moment of the war, and if it is not kept it will diminish England's honour, not only among Moslems, but throughout all Asia. Your correspondent may object that there are parts of Asia Minor which are not predominantly Turkish in race, and the figures which he has given make it seem so. But he obtains his Greek majority, as M. Venizelos has done before him, by reckoning the Greek Islands (already separated from Turkey as regards administration) as part of Asia Minor; and even then the proportion he assigns to the Greek population is much in excess of all accessible estimates except the Greek "official" (*i.e.*, propagandist) estimate.—I am, etc.,

Khalid Sheldrake.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

In glancing through the advertisement pages of the *Egyptian Gazette* the other day, I came across an announcement of a "cinema" show, in which the programme was given as:—

SOPHIA OF KRAVONIA.

From Anthony Hope's "Prisoner of Zinda."

Now I happen to be a warm admirer of "Anthony Hope," and I know his "Prisoner of Zenda" and his "Sophy of Kravonia," and like them both. But I do not believe he ever wrote a "Prisoner of Zinda," and even if he did, I can hardly believe that a play—even a film play!—founded on that work would be called "Sophia of Kravonia." The cinema management appears to have got as muddled over Anthony Hope's books as most cinema frequenters are over most things. What a pity such folk do not draw their "inspiration" solely from transatlantic sources!

***

Mr. Bullitt's sensational statements regarding the Prinkipo conference that did not come off have set people's thoughts running on the pretty island again. I feel, therefore, that the following exquisite verses will be valued by my readers as dealing with "a topic of the moment":—

Said Wilson to Lenin and crew:
"Won't you meet us at fair Prinkipo?"
Said Lenin: "No fear!
I prefer to stay here.
But I don't care a rap what you do."

Mr. Bullitt and David L.-G.
Aren't such friends as they once used to be.
And the nose of young Bullitt
L.-G. 'ld like to pull it.
And, oh, what a twist it would be!

It is all very sad and beautiful—I refer to the incident, not to my "pome," which is beautiful without being sad. I am credibly informed that upon being told of Mr. Bullitt's statement Mr. Lloyd George, who had just been reading the Stock Exchange news, exclaimed: "I can't bear it." And may I suggest that the name of the island might appropriately be changed to Prinkipoobah Island?

***

We are truly a remarkable people—as has been observed a good many times before. On this occasion the platitude is drawn from me by reading a screed which has been issued by a certain young Greek in London in favour of ex-King Constantine's return to Greece. It consists of two long "galleys" of windy declamations, and is accompanied by the picture of its young Greek author; and it is issued, I gather, in the hope that the London Press will feel tempted to reproduce it, or portions of it. At any rate, I observe that it "was on June 24 last sent to the American Press," though I am quite unable to say whether the American Press made any use of it. As to its pleadings on behalf of the ex-King, I have nothing to say, for the subject really does not interest me. But what does interest me is the fact that the young Greek author of these outpourings should have the effrontery to talk of England and France being "the enemies of our [*i.e.*, the Greeks'] freedom," of the "unjust sufferings and humiliations" caused to the Greeks by France and England, and so forth and so on. If this is such a tyrannical country, how comes it that an impudent young foreigner is suffered by the authorities to write and publish abuse of it in this style? And how can his noble soul stand such an atmosphere of oppression? Poor martyr!

NEAR EAST BOOKSHELF.

A MISSIONARY'S VIEW OF THE PEOPLES OF PALESTINE.*

Although written mainly for the supporters of the C.M.S., there is much in this slim volume of interest to the general reader, especially at the present time. The author, who spent some years there as a missionary, writes from intimate knowledge of Palestine and of its people, and shows a sympathetic spirit towards religions other than his own. Many will endorse his view that "the unmistakable welcome accorded to the British in Palestine is in no small degree due to the reputation which has been built up for British Christianity by the self-denying labours of the missionaries."

After a brief sketch of the physical characteristics of Palestine there are chapters on the fellaheen, the Bedouin, and the Jews, which give the outstanding characteristics of the various inhabitants. While showing a sympathetic side towards the present political ambitions of the Zionists, the writer points out some practical difficulties which are often overlooked by those who have no personal knowledge of the Holy Land. How are the indigenous inhabitants of the land, who have held it "longer, indeed, than the period of its occupation by Israel," to be reconciled to Jewish domination? Is it possible to restore the site of the Temple to the Jews without rousing "a storm of indignation throughout the Mahommedan world"? How are the Jews to acquire the necessary lands without crushing the fellaheen out of their communal property? Will any great number of Jews be content to remain peasants upon a land which is certainly not of extraordinary fertility, according to modern ideas? He states that one summer holiday he visited "a number of these Jewish colonies, and was saddened by the evident failure of promising attempts. Places on which huge sums of money had been spent in the first instance were lying desolate and neglected through the apathy and lack of public spirit of the colonists."

On the "Religion of the Land" and "The Creed of the Arab" the writer has recorded many facts of interest. Throughout the book is written with moderation and fairness to other points of view than the author's own, and the chapters on missionary work are rather a statement of facts than a mere appeal to sentiment.

NEW EUROPE.†

A map of the new Europe, although necessarily provisional, is essential to everyone who wishes to follow intelligently the course of contemporary events at the present time. Even with many boundaries not yet finally fixed, it is well to have a general idea of the position of Czecho-Slovakia, Austria, Hungary, Yugoslavia, and Roumania, and of their relative positions to one another. Bartholemew's map meets this requirement in an effective way; different colours show the countries as they were in July, 1914, while the new boundaries are marked in thick red lines. In addition to the countries named, the map traces the approximate frontiers of Poland, Lithuania, the Ukraine, etc.

BOOK NOTES.

Macmillan's Autumn List includes the "Life of Lord Kitchener," in three volumes, by Sir George Arthur; "Deserts and Oases of Central Asia," by Miss Ella Sykes and Sir Percy Sykes; "Europe in the Melting-pot," by Dr. R. W. Seton-Watson, and "Europe in the Nineteenth Century," by Professor F. J. C. Hearnshaw.

There are many war-books in Mr. Edward Arnold's list of forthcoming books, including "With the Persian Expedition," by Major M. H. Donohoe; "Mons, Anzac, and Kut," by "An M.P."; "London Men in Palestine," by Rowlands Caldicott; and "Caught by the Turks," by Francis Yeats-Brown.

Mr. Herbert Jenkins is publishing at once "Sir Stanley Maude and other Memories," by Mrs. Stuart Menzies.

Mr. Alex Devine, the well-known champion of the Montenegrin cause, has issued a small pamphlet on "A New Educational Era." He writes on this subject with knowledge and experience. His points are worth the notice of all educationalists.

The Shah of Persia is staying with his suite at the Hotel Victoria, Interlaken.

The Chief Justice of Bengal (Sir Lancelot Sanderson) is expected to arrive in England to-day.

M. Kyriakos Venizelos, Secretary to the Greek Legation, has left London for Aix-les-Bains.

Colonel Sir Sydney Crookshank, K.C.M.G., C.B., D.S.O., left London for India on September 13.

M. George Mélas has been appointed Secretary to the Greek Legation, and has entered upon his duties.

Colonel L. H. S. Amery, M.P., Under-Secretary of State for the Colonies, left Malta on September 13.

The Emir Faisal arrived at Marseilles on September 17 on a British destroyer. After visiting Paris he will probably proceed to London.

Sahibzada Aftab Ahmed Khan, member of the India Council, has left for India under medical advice. He was in India last winter as a member of Lord Southborough's Franchise Committee.

Sir Roper Parkington, the Consul-General for Montenegro and Hon. Treasurer Montenegrin Red Cross and Relief Fund, and Lady Roper Parkington have arrived at Claridge's Hotel from Harrogate.

Our Belgrade Correspondent writes (September 9) :—
H.R.H. Princess Helena of Serbia has returned to Belgrade from Russia.
General Franchet d'Espérey has returned to Belgrade.

A marriage has been arranged between Captain C. Armine Willis, Assistant Director of Intelligence, Sudan Government, son of the late J. Armine Willis, Esq., Education Department, and the Hon. Clare Hamilton, youngest daughter of Lady Holm-Patrick.

The engagement is announced of Major-General A. E. Wardrop, C.B., C.M.G., only son of the late Major-General A. Wardrop, Bombay Army, and Mrs. Wardrop, and Amy, elder daughter of Mr. Edward Norton, J.P., and Mrs. Norton, of Uplands, Fareham, Hants.

The engagement is announced between Lieutenant H. J. Hartnoll, D.S.O., R.N., eldest son of Sir Henry Hartnoll, I.C.S. (retired), residing at The Old Glebe House, Eggesford, North Devon, and Grace, elder daughter of E. P. Frederick, of The Wells House, Malvern Wells.

Sir Oswald Stoll and Mr. Arthur Croxton have been informed by M. Koyitch, Chargé d'Affaires of the Legation of the Kingdom of Serbs, Croats, and Slovenes, that the Order of the Serbian Red Cross has been conferred upon them for "services and friendship shown to the Serbian people during the war."

At the Church of St. Sophia, in Moscow Road, Bayswater, a special service was held on September 14 in celebration of the name-day of the King of the Hellenes. The Archimandrite, the Rev. Agathangelos Moschovakis, officiated. At the conclusion of the Divine Liturgy of St. John Chrysostom a Te Deum was sung. Among those present were the Greek Minister, the *personnel* of the Legation, and many members of the Greek Colony.

Prince Firooz Mirza Nosret-ed-Dowleh, Persian Minister for Foreign Affairs, who left Teheran with the Shah, has arrived in London as the guest of the British Government. He was met on arrival by Sir Robert Synge on behalf of the Government, by Mr. Oliphant, of the Persian Department of the Foreign Office, and by the Persian Minister. The Prince visited the Foreign Office on September 15. Among the official arrangements made for entertaining his Highness was a dinner last night at the Carlton Hotel.

The Roumanian Chargé d'Affaires, M. Boeresco, was, Reuter says, entertained at luncheon in the Mansion House by the Lord Mayor on Tuesday on the occasion of the presentation to the latter of the insignia of Grand Officer of the Crown of Roumania, conferred upon the Lord Mayor by the King of that country.

The marriage was celebrated on September 3, at St. Stephen's, Ootacamund, by the Right Rev. the Bishop in Tinnevelly and Madura, between Charles Edgar Wood, son of the late Mr. and Mrs. A. J. Harrison Wood, of Bellword, Ripon, and Janet Mary Cardew, younger daughter of Sir Alexander Cardew, K.C.S.I., and Lady Cardew.

A Simla telegram states that the delegates from India to the Washington Labour Congress will be Mr. J. Kershaw, of the India Office; Mr. A. Chatterjee, Indian Civil Service, Government member; Mr. A. Murray, chairman of the Indian Jute Association, member for the employers; and Mr. Narayan Joshi, of Bombay, member for the employed.

A marriage has been arranged, and will take place in London, between Lieut.-Colonel R. W. A. Denne, Indian Army (retired), son of the late Rev. R. H. Denne, of Brimpsfield Rectory, Gloucester, and the late Mrs. Denne, and Anne Mannooch Welch, second daughter of the late Captain Welch, R.N., of Arle House, Cheltenham, and the late Mrs. Welch.

The engagement is announced of Brevet Lieut.-Colonel C. F. Meares, D.S.O., Royal Irish Fusiliers, son of the late Colonel George Brooke Meares, Royal Fusiliers, and Mrs. Meares, to Mary Katharine, widow of Lieut.-Colonel J. C. Russell, D.S.O., 9th Hodgson's Horse, I.A., daughter of the Rev. E. M. and Mrs. Clements, Barkston Rectory, Grantham.

The marriage was celebrated on September 8, at the Registrar's Office, Henrietta Street, Covent Garden, London, between Captain Overton Preston, M.C., R.A.F., second son of the late Martin Inett Preston and Mrs. Preston, The Park, Nottingham, and Victoria Mary, third daughter of the Rev. Peter Donaldson, M.A., B.D., late Pro-Consul at Salonika.

The marriage was celebrated on September 9, at Epping Parish Church, by the Rev. C. Spencer, assisted by Canon Olivier, vicar of the parish, between Edward Backhouse Robinson, B.A., of Alma, Maturata, Ceylon, eldest son of the Rev. E. C. and Mrs. Robinson, of Chadsmore, Malvern, and Isaline Margaret, youngest daughter of Mr. and Mrs. Alexander Horn, of Ivylands, Epping.

The King of the Serbians, Croats, and Slovenes having bestowed the Order of St. Sava, Fourth Class, on Sir Cecil Harcourt Smith, Director of the Victoria and Albert Museum, and the Order of St. Sava, Fifth Class, on Mr. Eric Maclagan, Assistant Keeper of the Department of Architecture and Sculpture, in that museum, King George has granted permission to those gentlemen to wear the decorations.

A gift from the King of five shearling lambs, as well as 600 head of pedigree Shorthorn cattle, 30 Shorthorn bulls, and 2,000 prize chickens, which constitute the fortieth gift of stock made by British farmers to devastated areas, is being sent by the Relief of Allies' Committee of the Royal Agricultural Society to Serbia. His Majesty's is his second gift to the committee. The farmers' gift is the first despatched to Serbia, other consignments having been distributed in France, Belgium, and Poland.

Our Malta Correspondent writes (September 1) :—
The Hon. J. Zammit, L.P., Commendatore J. Howard, O.B.E., and Mr. H. Casolani, M.B.E., have left for Paris in connection with the local emigration question. Emigration is the only matter which can save or ease the economic condition of Malta, but the departure for Paris of the above members of the committee has been severely criticised in some quarters.
The Right Rev. Mgr. Portelli is seriously indisposed.

The marriage was celebrated on September 9, at Christ Church, Ealing, by the Rev. W. Templeton King, B.D., and the Rev. E. J. Cardigan Williams, Bt., between Major E. Leslie Ricketts, the 96th Infantry, Indian Army, and General Staff, only son of Mr. and Mrs. E. W. Ricketts, Fyzabad, India, and Mildred Ethel, second daughter of Mr. and Mrs. Towers, Hanger Hill, Ealing, late of Montevideo, South America.

APPOINTMENTS AND PROMOTIONS.

Our Cyprus correspondent writes :—Mr. J. M. Ellis has been appointed Assistant Secretary in the office of the Chief Secretary to Government.

Mr. C. F. Fenn has been appointed to act as British Delegate of Evkaf, his colleague being the Hon. M. Irfan Bey, M.L.C., M.E.C. Mr. Fenn, who ably acts as Chief Secretary, is likely to proceed to East Africa to take up a new appointment.

Our Belgrade Correspondent reports (September 9) that Lieut.-Colonel Jordan Bell, R.E., has been appointed President for Central Europe of the Inter-Allied Railway Commission of the Supreme Economic Council.

Digitized by Google

Our Malta Correspondent writes:—Professor the Hon. M. Refalo, O.B.E., LL.D., B.A., has been appointed Chief Justice and President of his Majesty's Court of Appeal, and Professor A. Mercieca, LL.D., succeeds him as Crown Advocate.

The Cairo correspondent of *The Times* understands that Sir Paul Harvey will very possibly be appointed to the vacant Financial Adviserships to the Egyptian Government. Sir Paul held the post from 1907 to 1912, when he was appointed Chief Auditor to the National Health Insurance Commission. This reappointment would be very popular in Egypt.

Sir Benjamin Robertson, Chief Commissioner of the Central Provinces, will be the official representative of India upon the Commission of Inquiry into the Indian question now being set up by the Union Government. In all probability the Commission will include a non-official Indian member. It may be recalled that Sir B. Robertson was on special duty in South Africa shortly before the war with the Commission to inquire into the grievances of Indians within the Union.

OBITUARY.

The death occurred on September 8, at the White House, Burton-Bradstock, of William George Mackilligin, late of Mercara, Coorg, India, aged 79.

Mr. David Goodyear, a veteran in possession of the Crimea and Turkish medals, with a clasp for Sebastopol, recently died, aged 82, at St. Mary Bourne, Hampshire.

The death occurred on September 13, at Uckfield Lodge, Crowborough, Sussex, of John James Street Driberg, late Inspector-General of Police, Assam, India, aged seventy-nine.

The death occurred on August 27, at Srinagar, Kashmere, of Lieut.-Colonel James Knighton Condon, I.A. Bombay Political Department, eldest son of the late Brig.-Surgeon J. H. Condon, I.M.S., aged fifty-one.

Captain William Eveleigh Darwall, Royal Navy, died on September 12 at Folkestone at the age of seventy-six. He had been engaged chiefly on the African continent. In the naval and military operations in the Eastern Sudan in 1884 he commanded the Ranger. He was mentioned in despatches and received the Egyptian medal and the Khedive's Star. In the following year he was in command of the Tyne during the operations at Suakin and received the clasp.

Major-General William Rooke, late Royal Artillery, died on September 7 at Ryde, Isle of Wight, at the age of eighty-two. He entered the Army in 1854. In the Crimean campaign he was at the siege and fall of Sevastopol, and received the medal with clasp and the Turkish medal.

Colonel Edward R. J. Presgrave, C.B., D.S.O., late of the Indian Army, died on September 12 in London at the age of sixty-four. He took part in the repression of the Rumpa Rebellion in 1879, and was engaged in the Afghan War in 1879-80. Subsequently he saw service with the Burmese and Manipur Expeditions, and for three years was actively engaged in Burma.

The death is announced from Athens of a distinguished and popular Greek poet, M. Gheorgios Souris. Born at Syra in 1852, M. Souris distinguished himself by writing several volumes of lyrical verse, and later he obtained an extraordinary reputation among his countrymen by his weekly satirical review of topical and world events, published in the form of a small weekly paper, *O Romios* ("The Greek"). Throughout the war M. Souris most strongly supported the Allies, even during the Constantine reign of pro-Germanism.

NEWS IN BRIEF.

An aeroplane piloted by Lieutenant Kennedy left St. Raphael (Var) on September 10 on a flight to India *viâ* Taranto and Egypt.

A telegram from Bucharest announces the abrogation of the state of martial law proclaimed by the Hungarian Government in Transylvania.

A very heavy downpour of rain descended upon Ceuta on Sunday evening as the result of a water-spout. The torrent lasted six hours and caused great damage.

A Reuter message from Vienna, dated September 12, states:—Acting under instructions from Admiral Troubridge, in command on the Danube, Captain Dutton has informed the Minister, M. Zerdik, that the Danube is now open for mercantile traffic.

With reference to the report from Constantinople that 12,000 British troops have landed at Scutari, Reuter's Agency learns, the fact is that 1,200 troops landed there. It is merely an ordinary movement of British troops from Batoum.

According to a telegram from Constantinople, Captain Leune, accompanied by a Greek aviator, arrived there September 15, thus concluding his Paris-Rome-Constantinople flight. The aviators report that they passed through a violent thunderstorm while crossing the Albanian mountains.

Reuter's Simla correspondent reports (September 13):—News has been received that an aeroplane, while trying to land in the Residency at Quetta, crashed to the ground and burst into flames. A passenger, Captain Steele, and two Brahmins were killed. The pilot, an officer of the Air Force, was severely shaken.

About half of the Indian troops who came to England to take part in the Peace Celebrations left their camp at Hampton Court at the end of last week. The remaining troops left this week. Brigadier-General E. W. Costello, V.C., commanding the contingent, and a number of British officers went to Tilbury to see them off.

A Reuter message from Colombo, dated September 13, states:—Diamonds, valued at £65,000, have mysteriously disappeared between London and Ceylon. On August 7 a London firm despatched to Colombo four packages of diamonds. When the vessel arrived in Bombay the parcels were found to be missing. This is believed to be the largest consignment of diamonds ever lost between London and the East.

With reference to the telegram from the Madras Dravidian Association, which appeared in *The Times* of August 29, protesting against the alleged refusal of the Joint Committee of both Houses of Parliament on the Government of India Bill to hear further evidence from non-Brahmins, the India Office point out that the Committee heard Rai Bahadur K. V. Reddi for the South Indian Liberal Federation on August 12, and on August 25 Mr. L. K. Tulasiram, Mr. K. Appa Rao Naidu, of the same federation, and Mr. A. Ramaswami Mudaliar, of the Madras Dravidian Association.

Sir Roper Parkington, Consul-General for Montenegro, has received the following telegram from the Montenegrin Government:—The rising of the Montenegrins against the Serbian troops now in occupation of their country is daily assuming greater proportions. The Montenegrins have just occupied the district of Lievarieka, thus cutting off the Serbian communications between the centre of Montenegro and the northern territory. The rising has also commenced to spread in the Cattaro region, where the Montenegrins have, in course of a fierce encounter near Zelenika, killed some sixty Serbian soldiers.

FRIDAY, SEPTEMBER 19, 1919.

TURKISH SOVEREIGNTY AND MOSLEM SENTIMENT.

Much has been written on the vexed question of the future of Turkish sovereignty, but we have seen no more important contribution to the discussion than the Address presented last week to Mr. Lloyd George, in which the signatories described the state of Moslem sentiment and urged the dangers which must follow if that sentiment is ignored. The Address stands on an entirely different footing from the shrill outpourings of interested agitators, of which we have heard so much; the men whose names are appended to it are not agitators, but statesmen and administrators, soldiers and students, united only by their knowledge of some portion of the Moslem world and by their sympathy for the feelings of its inhabitants; and while some of them may be scarcely known to the man in the street, the great majority speak with an authority which commands respect. Men like Sir William Garstin and Sir John Hewett, Sir Theodore Morrison and Sir Francis Younghusband, to take only a few instances, cannot be suspected of courting publicity or giving way to the desire for sensationalism, and when they are moved to come forward by their sense of the momentous interests at stake, the public may rest assured that their solicitude is real, and that their message is too serious to be lightly set aside. In substance that message is not new. The signatories lay stress on the indignation and resentment with which Moslems hear of proposals to drive the Turk out of Europe, to deprive him of his capital, and to divide Asia Minor among the Allies; they insist that, while this consideration affects the whole world, it is of special importance to the British Empire; and they call upon the Prime Minister to give the world a lead in the sense of the declaration which he made in January, 1918, when the fortune of war was not yet declared. The words of that declaration may be recalled: "We are not," said Mr. Lloyd George, "fighting to deprive Turkey of its capital, or of the rich and renowned lands of Asia Minor and Thrace, which are predominantly Turkish in race." Those words struck home in India and throughout the Moslem world, and the plea now put forward is that they should receive effect in the settlement which has for so long been under discussion by the victorious Allies.

It is well to make clear that this plea is based on the existence of a sentiment, and not on any historical or actual justification which that sentiment can claim. Students of history may question the validity of the Sultan's title as Khalif, or spiritual head of Islam, and plain men may maintain that recent Turkish administrations can be regarded as representing no religion except the faith of force and fraud, but Moslem sentiment is independent of such considerations as these. The sympathy of Mohammedans throughout the world has been concentrated on the Turkish Empire as the last temporal representative of a common civilisation and common ideals, and if Turkey should disappear from the map, they would regard its downfall as symbolic of the downfall of Islam as a whole. To insist on this attitude, as the Address insists, is no mere flabby sentimentality: in statecraft sentiments are things, and often the things that matter most, and disregard of Moslem feelings in this instance may constitute a great political blunder, pregnant with danger to the world's future peace. If countries with a predominantly Turkish population are placed under alien rule, they are certain to become centres of disturbances which will spread through Asia and Africa, and as the world now stands no Western nation can contemplate that risk with equanimity. Nor is it possible to hope that the present solidarity of sentiment will quickly disappear. Islam is broken into sects, less numerous indeed but not less bitter than those of Christendom, but feeling on this matter transcends the boundaries of sectarian opinion, and communities which would brand one another as heretics have here a common meeting-ground. The progress of knowledge and alterations in the environment may in process of time bring about a change, and new national ideals may come to fill the place now occupied by the ghosts of a historic past, but knowledge spreads slowly in the East, and before such a change is complete the nations may be at each other's throats once and yet again.

Such is the case presented in this Address, and it is not a case which can be lightly brushed aside. It must, in our opinion, be admitted that British interests point in the same direction as Moslem sentiment, that is to say, to the preservation of the Turkish nation, shorn indeed of its unassimilated conquests in Arabia and elsewhere, but remaining as a definite political entity in possession of those regions to which the name properly applies. Unfortunately, however, British interests and Moslem sentiments are not the only forces in operation. Asia and Africa have no monopoly of unreasoned sentiment, while interests of other nations than our own are also deeply involved. The strains of European sentiment vary in importance, and we are not disposed to attach very much weight to the contentions urged so forcibly by some representatives of militant Anglo-Saxon Christianity; the advocates are undoubtedly sincere, but we find some difficulty in harmonising their position on this question with the great ideals of their creed, while those who best know the story of Constantinople as a Christian city are least anxious to do anything which might recall that story to a not too charitable world. Of the interests and the feelings of other European nations, it behoves us to speak with caution as well as respect. Englishmen sometimes fail to realise that the narrow waters of the Eastern Mediterranean have for many centuries united rather than divided the opposing coasts, and that the resulting relations are very different from those which prevail in northerly seas. We forget, too, that other nations have not our experience of Imperial rule; accustomed as we are to balance resources against responsibilities, we are apt to underrate the strength of the call to great ventures in the ears of those who see the achievement of England and ignore the not less instructive examples furnished by Spain and Portugal. For the moment it must suffice to say that these European interests and sentiments are important factors of the problem which the Allied and associated statesmen have to face; Europe cannot afford to disregard the feelings of Asia and Africa, but neither can Islam neglect the forces at work in Europe. In its essence the problem is to satisfy, so far as may be, these European claims, while preserving a Turkish State with so much of continuity as shall appeal to the bulk of moderate Moslem sentiment. There is no possibility of satisfying the extremists on both sides, but we think it may fairly be said that a settlement is possible which shall not cause undue disappointment to the saner elements of the various nations concerned; and we may be permitted to express the hope that such a settlement may be formulated with the least possible delay. The data of the problem must by this time be familiar to the statesmen in Paris, and when the data have once been grasped the decision should follow swiftly, for every week's postponement means the growth of hopes which cannot be realised, and the spread of fears which experience may show to have been unnecessary. Meanwhile an obvious duty rests upon the public in this country and abroad, to face the facts squarely, to realise the opposing points of view, to impute no unworthy motives, to abandon hopes of any ideally perfect settlement, and to prepare to accept with as good a grace as possible arrangements which must almost inevitably be something of a disappointment to every ardent partisan.

CYPRIOTE SHRINES.

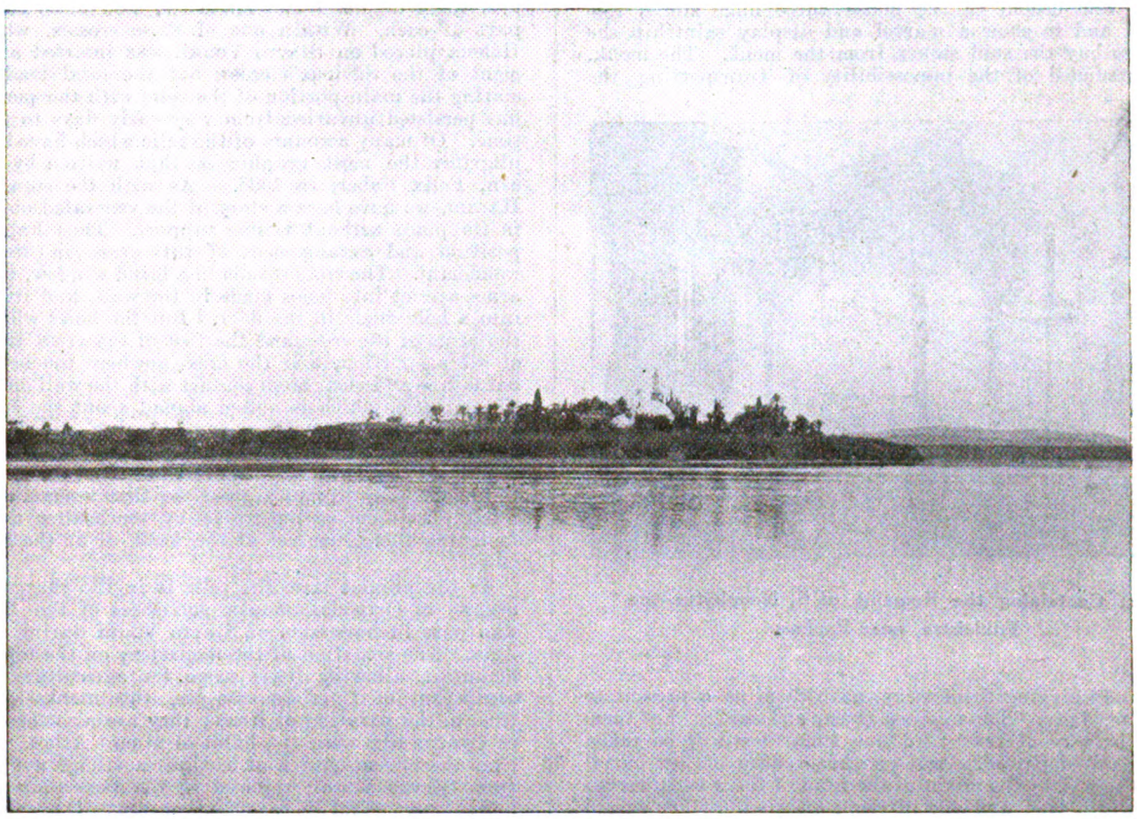
By Lieut.-Comdr. H. C. LUKE, R.N.V.R.

Those who know the East in general and the Levant in particular will have observed how often the outstanding features of the landscape, be they mountain or valley or spring or grove, are the objects of religious tradition. They will also have observed the tenacity with which such tradition is maintained despite the passage of peoples and the changes of faiths. A sacred spring that is under the protection of a classical divinity in pagan times does not lose its attributes because paganism happens to have been supplanted. Very quickly a Christian saint comes forward to take the place of the dispossessed Olympian as its patron and familiar; and, if the district is also inhabited by Moslems, some Pir or Peyghamber collaborates no less readily in preserving the sanctity of the place in the eyes of all men.

Such shrines have existed from the time when "the memory of man runneth not to the contrary," with no difference beyond a change of name on the part of the tutelary deity. Aphrodite is perpetuated as the Panagia; Poseidon becomes S. Nicholas; S. George, himself the successor of a pagan god, preserves his identity among Moslems under the alias of Sheikh Khidr. But successive faiths have also added their quota of holy places to those already in existence. Each fragment of the True Cross, each icon painted by S. Luke, becomes the nucleus of a monastery; the bones of wonder-working Sheikhs lead to the construction of white-domed *türbés* adjoined by a *tekyé*, or convent of Dervishes. So we find the countryside in the Levant thickly dotted with churches and chapels, many of them partly or utterly in ruins. Nevertheless, if no more than a heap of stones marks their site, they are visited once a year, at least, on the day of the patron saint, for the reading of the liturgy and the celebration of a *panegyris*, or fair. Not infrequently, in these dry lands, a spring of water was originally responsible for the shrine. If so, you will find the well, now called the *ayasma* (ἁγίασμα, holy and beneficial spring), in the nave or apse of the church, and will be told of its efficacy in healing. Similarly, you will find a host of little Moslem shrines scattered through towns, villages, and open country, sharing with their Christian counterparts the wisps of hair or clothing left by those who wish thereby to place themselves in contact with the shrine's presiding spirit.

It is but natural that Cyprus, exposed as she has been to the influence of numerous civilizations, should be fully as prolific in religious sites as other parts of the Levant. Of monasteries alone she has eighty-two, while the number of her churches, chapels, *zaviehs*, *türbés*, and lesser shrines is beyond computation. In age they range from relatively recent times to the most hoary antiquity; and three in particular have preserved a continuity of religious association for as long, perhaps, as the most venerable of all shrines, the Dome of the Rock in Jerusalem.

The largest of these three prehistoric buildings lies five miles north of Famagusta, midway between the ruins of Salamis and the great Byzantine church of S. Barnabas, a well-known landmark in the eastern Mesaoria. For reasons which are not clear, it is known to the Orthodox population of modern Cyprus as "Saint Katharine's Prison," and the liturgy is celebrated there once a year, on Saint Katharine's day. The level of the soil around it has risen considerably since its foundation, and from without little more than the barrel-shaped roof is visible. The cyclopean construction of the building is best seen from within, where the vast size and weight of the stones employed recall the substructures of the temple of Jupiter Heliopolitanus at Ba'albek. Adjoining the temple—if such was its purpose—is a little grove of *prosopis* trees, to which a curious belief is attached. It is held throughout Cyprus that disease will inevitably overtake him who cuts down or injures any one of these trees; and to this circumstance the grove owes its immunity from the villagers' depredations.[1] The second building of this class, a little west of Larnaca, is known as the Hagia Phaneromene, and is likewise the scene of an occasional Orthodox service; the third, beautifully situated on the edge of the Larnaca Salt Lake, four miles from the town, has become in a very curious manner one of the most revered shrines of the Moslem world.



Khalat -Sultan Tekye and Larnaca Salt Lake.

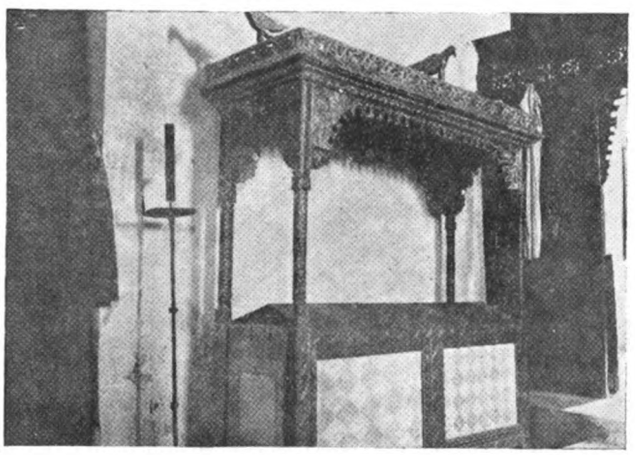
In the year 649 A.D. there took place one of the first of the Arab invasions of Cyprus, which continued to ravage the island for the ensuing three centuries. In command of the expedition was Mu'awiya, then Governor of Syria, and subsequently the first Khalif of the Omayyad dynasty, and in his train there followed one 'Ubada ibn-as-Samit, a Companion of the Prophet, with his wife Umm Haram, daughter of Milhan the Ansari. This worshipful lady was of the kin of Mohammed, and according to some authorities was also his

1 This the only example I know of in Cyprus of the belief, so common in Asia Minor, which forbids groves or thickets in the neighbourhood of shrines to be touched. The one exception generally made is that it is permissible to cut wood from such groves for the purpose of making a coffin.

Digitized by Google

foster-mother. Moreover, to quote the Turkish manuscript preserved at the shrine,[2] "our Prophet (may the favour and blessing of God be upon him!) gave leave to the honoured mother to search on his holy head for lice, for being his maternal aunt he might be intimate with her, for her ancestors were of his tribe." Umm Haram, then, landed with the expedition at a spot in the neighbourhood of the port of Larnaca, where "the holy woman (may God be pleased with her!) was set with all honour on a mule; and on arriving at the place where now her luminous tomb is seen, they were attacked by Genoese infidels, and falling from her beast she broke her pellucid neck, and yielded up her victorious soul, and in that fragrant spot was at once buried."

Now the tomb in which the body of Umm Haram was laid is a prehistoric monolithic structure consisting of three enormous stones, two of which are upright and support the third, which lies horizontally across them. And since it was evident to those of Umm Haram's days that no human agency could have manipulated stones of such vast dimensions, a more credible explanation of their presence we sought and found. *Pace* the manuscript, it is as follows: "On her journey from Jerusalem to Ramleh the exalted lady alighted on her way as a guest at the house of a Christian monk. She beheld in the house three huge stones like columns, and to show a marvel and display saintship she desired to buy the said stones from the monk. The monk, fully persuaded of the impossibility of transporting the



Chest Containing the Remains of S. Neophytus, the Enkleistra, near Paphos.

stones and carrying them away, gave them as a present to the exalted lady. She accepted them, and said: 'Let them remain by way of trust; in due time they will be taken away,' and departed. And on the evening of her burial the said stones, by the might of the Lord of the worlds, moved from their place; and one of them set itself at her sacred head, one at her holy feet, and the other stone, as though suspended over them, rested there by the power of God. And now, if we look to be instructed, the elevation and juxtaposition with other stones of a stone so huge must be deemed an impossibility. It is therefore clear and manifest that the stone is suspended."

When in the course of time the tomb was enclosed within a domed building suitable to its importance, and there were added mosque, minarets, and all the appurtenances of a well-endowed *tekyé*, the two upright stones were swathed in black velvet hangings, leaving only the horizontal stone visible. Thus, dimly lighted and shrouded in mystery, the tomb appears at the present day. Contact with the upright stones is prevented by a bronze balustrade; and the illusion of the monolith floating in mid-air over the aunt of the Prophet is sufficiently maintained, even now, to convince the devout and none too critical pilgrim.

[2] Published and translated by the late C. D. Cobham, C.M.G., Commissioner of Larnaca, in the J.R.A.S., January, 1897.

The Khalat-i-Sultan *tekyé*, to give the shrine its official name, owes much to the charm of its situation. Standing within sight of the sea, it is thus able to receive the salute due to it from all vessels flying the Ottoman flag. In the evening its domes and minaret, embowered in verdure, are reflected in the waters of the lake, that are unruffled save by flocks of stately flamingoes. And immediately to the west there rises, a worthy background, the isolated peak of Santa Croce, or Stavro Vouni, to which we will now turn our attention.

It is to a lady, also, that Stavro Vouni owes its repute as a holy place. In 327 Saint Helena, the mother of the Emperor Constantine the Great, landed in Cyprus on her return journey to Constantinople after her successful quest for the True Cross. By way of encouraging the spread of Christianity in Cyprus, she endowed the island with fragments of some of the relics which she had recovered in the Holy Land, the most prominent of these being that which she deposited on the peak consequently known as Stavro Vouni, the Mountain of the Holy Cross. The early traditions regarding this relic represent it as a blend of the crosses of the penitent and the impenitent thief, for the Empress, on discovering the three crosses, and being unable to distinguish which of the lesser crosses had belonged to the penitent thief, took them to pieces and made two new ones, containing a part of each. Within one of these crosses, which Saint Helena placed on Stavro Vouni, was inserted a tiny fragment of the Saviour's cross, but the local tradition associating the main portion of the relic with the penitent thief has persisted unvaried from very early days to the present time. Of many accounts of the relic which have been left by pilgrims the most graphic is that written by a Dominican, Felix Faber, in 1483. As with the stone of Umm Haram, we have here a story of the venerated object resting in its place without visible support. Thus Faber:—"The position and arrangement of this cross in its place is wonderful. The cross stands in a blind window, and both its arms are let into holes made in the wall, and its foot is let into a hole made in the floor. But the holes which contain the arms of the cross and the foot of the cross are large out of all proportion, and the cross nowhere touches the wall, but is free and clear from contact with the wall on every side. The miracle, which is noised abroad about the cross is that it hangs in the air without any fastening, and withal stands as firm as though it were fixed with the strongest nails, or built into the wall, which nevertheless it is not, because all the three holes are very great, so that a man can put his hand into them and perceive by touch that there is no fastening there, nor yet at the back, or at the head of the cross."

At the present time the relic is in the charge of a community of Orthodox monks, successors of the Benedictines who were in possession of Stavro Vouni during the Middle Ages. The situation of the monastery on the top of a steep mountain allowing little scope for agriculture, the usual occupation of Cypriote καλόγεροι, the monks devote their time to the painting of icons; they are also the only monks in Cyprus who wear the habit of Mount Athos. For a long time the parish church of Tokhni, a village not far distant from Stavro Vouni, rejoiced in the possession of an even holier relic—namely, a cross constructed by the Empress Helena from the *suppedaneum*, or footrest, of the Saviour's Cross. But this treasure, after undergoing during the Middle Ages many startling adventures and vicissitudes too long to be related here, was finally lost sight of, and its present whereabouts, if indeed it still exists, is unknown. There is, however, a delightful superstition connected with the building of Tokhni church, which deserves to be mentioned. It appears that at one time the village was infested by forty devils, to the mortification of the inhabitants, who were mocked at by the people of the vicinity as being unwholesome and undesirable neighbours. After much thought, therefore, they hit upon an ingenious device to render the devils harmless. At some expense they secured the services of a priest of great holiness, who with exorcisms and incantations enticed the devils into a well. No sooner had the devils entered the well than the villagers, who had masons waiting in readiness, built their church upon it; so the devils are still bottled up in the well, and, while the church stands, are unable to get out.

PRESS ON THE NEAR EAST.

England and the East.

In the *Morning Post* of September 8, Lieut.-Col. Repington, in characteristic and refreshing fashion, hits on the head what he considers the nails of the situation. Our policy, he says, has been incredibly stupid:—

Apart from the original error of undertaking all these adventures, policy has bungled things badly in our Eastern war theatres. Policy made a written agreement with the King of the Hedjaz in 1914, promising the Arabs certain things not yet publicly confessed, and the Arabs fought for us, not because they loved us, but for the sake of their independence and because they trusted us to keep our word to them. Then policy trotted off again with naïve insouciance in 1916, and made another written agreement with the French, already disclosed by those chasteners of diplomatic secretiveness, the Bolsheviks, and it is supposed, rightly or wrongly, that we promised certain similar things and places both to the Arabs and the French. Not having yet done enough for fame, policy took the Zionists to its thoughtless if palpitating bosom, and promised them Jerusalem, that happy home, where 10 per cent. of Jews are surrounded by 90 per cent. of other people, who would very gladly cut all their throats. Three million Arabs, besides, with at least a quarter of a million rifles, hate all comers into their land impartially, including the French, who entertain the pleasing illusion that everybody loves them as we do, and so policy has amassed in the Middle East all the elements of first-class chaos.

He says that the criticism of the French policy is quite comprehensible and justified, but that for the French to understand our position is difficult:—

How can the clear, logical French minds think it possible that we should promise things to them which we had already promised to the Arabs? How can they credit for an instant that our governmental political right hand has done what its left hand knew not? How can they be expected to understand that to honour our Zionist Bill means to bring trouble and disorder without end into Palestine? Cannot at least our quick-witted neighbours see the immense and, indeed, lawful humour of the last and greatest of the Crusades ending with a Jewish guard over the Holy Sepulchre? Can we place such a strain upon the credulity of the French as to assure them that we ask nothing better than to clear out of Syria and Palestine too, and to leave anyone else who likes the job to protect the Zionists from extinction, and to take on another twenty years of war with another Abdel Kader in Arabia? Nothing can make us take umbrage at French criticisms, because, on the apparent face of things, we have deserved them. We are certainly not going to say one word to resurrect the old Anglo-French colonial rivalry which brought our two countries twice to the verge of war in recent years and served no interests but those of Germany. If our honesty of purpose towards our neighbours has not been proved to the meanest mind in France by the events of the last few years, then it will not be proved if Christ rises again among the Yiddish guards. We do not envy Lyons and Marseilles any of their expected commercial profits in Syria. . . . So little do we want Syria and Palestine that we have given them already to everyone who wanted them, and have kept on giving them when they were already given.

Cairo and Cairo.

That there are two Cairos is common knowledge. In the *New Witness* of September 5, "B. M." describes the old and the modern cities with, apparently, the impatient vigour of youth. He says (and we are in sympathy, though not in vehement agreement, with him):—

A glance will tell you there are two cities here, not segregated and juxtaposed, but intermingled—the one preying on the other like a graft on a rose tree. One is of great charm, the other blatantly ugly like its life. The one has secrets that only the initiated may ever hope to know; the other flaunts itself to the world. For is not the one Arab and of the East Eastern, the City of the Faithful, while the other is odiously Levantine, the home of Greeks, Jews, and Armenians and Oriental French and bastard Italians? Its prosperity is an offence to the Mosques of Allah. Its ugly rococco architecture screams to heaven. It is the tourists' paradise. Here absurd people come to Cairo to winter. At those enormous stucco hotels their bills run into hundreds of piastres, while the guides at the distant Ghizeh pyramids thrive on their folly. At Baroque cafés, eupeptic or hypochondriac, they sip their aperitifs. And though they help to feed Cairo, they are not of Cairo, and the call to prayer from those three thousand minarets is not for such as them. While Cairo, the real Cairo, ever adaptable, smiles with Oriental charm, creating for them some specialities at a tourist price, some extraordinarily bad cigarettes and vast caravanserais like Shepheards. Around these strangers batten fat Levantines and multinational strumpets, while these birds of passage of society have only served to send up the cost of living, create a fictitious winter season, make honest Arabs rascals, and become themselves the prey of Levantine rogues and harpies. But away from the Continental, away from Shepheards, out of the Place Ezbekieh, far from Levantines fattened on olive oil, into the maze of the narrow little Arab streets full of dark corners and quaint turnings and strange smells and perpetual hubbub, let us go if we would seek the soul of Cairo, find the City of the Arabian Nights.

Bulgaria, Albania, and the Balkans.

In the *New Europe* of August 28, Dr. R. W. Seton-Watson examines, in an article called "Bulgaria Before the Conference," the whole Balkan problem. In the hopes of a lasting settlement, he seeks for a permanent principle on which to build:—

"The Balkans for the Balkan peoples" is the only basis upon which sound results can be obtained. The first step towards its realisation is that our three Balkan Allies should no longer be treated as mere suitors in a case which concerns them even more intimately and directly than the fate of Belgium concerns France and Britain, but should be duly represented on whatever body ultimately decides the fate of the peninsula, and, therefore, their own fate. It seems strange that public opinion should still need to be reminded that such a step, which is so consonant with the elements of justice and common sense, should none the less be the exact opposite of the method hitherto adopted in Paris by the autocrats who claim to represent democracy. It is not suggested for a moment that the Great Powers have not great and legitimate interests to defend, or that the Balkan States have yet learned the necessary lesson of "give and take"; but this, while entitling the former to lead and even control the negotiations, does not entitle them to restrict the latter to a merely consultative *rôle*.

But, Dr. Seton-Watson says, before any discussion between all the Balkan States is possible, a treaty of peace must be concluded with Bulgaria, and this treaty must be based upon loyalty and justice:—

Members of the Bulgarophile school are far too fond of arguing that there can be no settlement unless Bulgaria's territorial aspirations be satisfied at the expense of her neighbours. Those

who hold other views will reply that conversely there can be no settlement if our Allies are forcibly deprived of territory which they regard as theirs for the benefit of an enemy who has twice treacherously attacked them in the back; that it is unthinkable that we should ever employ the force necessary to eject them; and that the war has swept away the treaties of 1912 and 1913 as effectually as those of Brest or of Frankfurt, but that, if we had to select one of these now obsolete documents for our adherence, there is at least as much to be said for that which favours our three friends as for that which it suits our common enemy to revive. Knowledge of the various agreements of 1878, 1912, 1913, and so on is essential to an understanding of Balkan politics, but it will not suffice to help us out of the present dilemma. The root-fact in the whole situation, too often obscured by mutually conflicting *ex parte* statements, is simply this: that no human ingenuity can establish the line of racial cleavage in Macedonia, still less devise a frontier such as the rival nations would ever accept as just. No matter what line of frontier is adopted by the Conference, there will be keen discontent and heartburnings in many quarters. The aim of all those who desire a permanent settlement must be to render territorial and frontier questions, so far as possible, of secondary importance.

He then examines the thorny Albanian question, and suggests renunciations both by Albania and her enemies. His conclusions are:—

When these modifications have been made it should prove possible to establish Albania as a virtually independent State, organised on a loose tribal and cantonal basis, with absolute equality of the three religions. It is assumed that Valona will be left in the possession of Italy, and that if such an institution as the pre-war Dutch gendarmerie or its successors should prove inadequate, and if an Albanian mandate is to be created, Italy is the only serious candidate, and could not be expected to accept the claims of any other State. But it must be obvious to all thoughtful Italians that the acquisition of Balkan territory by any of the Great Powers—or, indeed, by any alien State whatever—would be viewed with extreme aversion by all its neighbours, and would tend either to promote a coalition of forces against it or to maintain those conditions of unrest and intrigue from which Europe has so long suffered in the past. It will be one of the first tasks of the still non-existent League of Nations to find a common factor between the impotence of Albania, the interests of Italy, and the suspicions of the Balkan States.

Central Asia.

In the *Glasgow Herald* recently Miss Louise Peralta examined the possible effects of the disintegration of Russia and of Turkey. Though the potentialities of Mid-Asia are little known, she says, Germany at least recognises the value of the Caucasus.

It will be remembered that the railways of Caucasia and Western Turkestan were linked with the railway system of European Russia by two long single lines—that from Rostoff on the Don to Baku, and that from Orenburg to Tashkent. These railways were laid with a view to political and military eventualities, a secondary object being the opening up to the best advantage of the regions through which they ran. Tracts which no caravan route had connected were linked together, certainly, but many regions were separated which, by the medium of the kalifas, had been associated both by trade and by tradition. When Russia ceased to hold together, the Caucasus-Turkestan Railway system also broke down, for where it crossed the steppe the Orenburg-Tashkent Railway was at once cut by the Kirghiz, just as the Arabs cut Abdul Hamid's Hedjaz Railway. The mountain tribes of Daghestan likewise quickly made a thing of the past of that portion of the Rostoff-Baku line which skirts the Caspian shore. These trunk lines having been severed, the local railway systems of Caucasia and Transcaspia were left in the air. Turko-German expansionists have been making unwearied efforts to switch these latter lines on to their own trunk line in Anatolia. But before this project can be accomplished Turkey must have brought the Caucasus under military control. Tiflis, normally in railway communication with Bukhara by Baku and the Trans-Caspian line, is the crux of the situation. To capture Tiflis the expansionists will spare no cost.

The political consequences of a Tiflis achieved by the expansionists would be disastrous in the extreme. The world would find itself faced with a new Balkan problem in the Caucasus; with various new Armenias in the shape of Christian nationalities subjected to a dominant Muslim element; with independent Musalman Khanates in Mawara-en-Nahr harbouring hordes of restless fanatical reactionaries inspired from Bukhara and ever thirsting for the Jihad; with a so-called "settled" Persia constantly subjected to the pressure of the Othmanli Turk on the one side, and of the Chagatai Turk on the other. There are certain other very weak "links," which, however, may ultimately be strengthened: the Anglo-Musalman Khalifate, which at present relies upon eventualities; the establishment, on as yet insecure bases of an Arab Empire extending from Mekka to Damascus. The recent surprise of Amadia, in Central Kurdistan, by a British punitive expedition directs attention upon another weak part of the British Damascus-to-Tehran Kafila. Turkish intrigue is still very active throughout the whole of Irak, as various Kurd risings, at Suleimaniya and elsewhere, testify.

Kurdistan must remain peculiarly a danger zone, for Irak Arabi—where Ishmaels still live their hard-bitten lives—seems to have been chosen by Nature as the terrain of her interminable blind struggle to dissolve in other forms and forces.

PERSIA'S "CRYING NEEDS."

The following are extracts from an interesting paper on Persia, which was read by Lieut.-Colonel G. F. Napier before the British Association at Bournemouth on September 12. Further extracts, dealing with trade and transport in Persia, will be found on another page:—

"The crying needs of Persia at the present time are order and security in the provinces and cheap and efficient transport. In the past local governors have too often failed to see that they would gain far more by maintaining order and ensuring prosperity in their districts than by accepting bribes to wink at the depredations of robber chiefs. Owing to German intrigues, the Gendarmerie under Swedish officers never was a complete success, while the Persian cossacks, under Russian officers, in the north also never fully justified their creation. During the war Sir Percy Sykes raised a force, under British officers, known as the South Persian Rifles. This latter force, though struggling since its inception against untold difficulties, has performed much useful work, and should furnish a valuable nucleus for the uniform Persian Army which is now to be raised.

"This summer some 300 of the South Persian Rifles moved up from Shiraz to Ispahan at the request of Sardar-i-Jang, the Governor, and successfully co-operated with the latter's force of Bakhtiari against the powerful robber combine under Reza Khan and Jafa'ar Quli. The robbers were decisively beaten, and the leaders either killed or captured and subsequently executed. This baneful influence, which has for so long lain over Ispahan and stifled its trade and enterprise, is now a thing of the past, and its elimination, together with that of the Jangalis under Kuchik Khan, on the shores of the Caspian, should go far towards restoring tranquillity and giving confidence to traders."

CHESS.

Senor Capablanca paid a brief visit to London following the conclusion of the Hastings Tournament, and gave a simultaneous exhibition at the Gambit Café, where he met thirty-nine opponents and won all but one of the games. The opposition was not so strong as on the occasion of his two previous displays, but the performance was, all the same, most meritorious. Senor Capablanca is now in France, but will return next week, and if a sufficient number of clubs desire simultaneous exhibitions he will then undertake a short series of games.

Cambridge is suggested as the venue for next year's congress of the British Chess Federation.

By a printer's error the last move of black in the game between Senor Capablanca and Sir George Thomas was given as Kt x Kt instead of R—K. Fortunately the course of the play made the correct move obvious.

The following game was played in the Hastings Tournament between Mr. R. H. V. Scott and Mr. R. P. Michell, the former having the move:—1, P—Q4, P—Q4; 2, Kt—KB3, Kt—KB3; 3, P—B4, P—K3; 4, P—K3, P—B4; 5, QKt—Q2, Kt—B3; 6, P—QR3, BP x QP; 7, KP x P, P x P; 8, Kt x P, B—K2; 9, P—QKt4, 0 0 ;10, B—Q3, P—QKt3; 11, 0 0, B—Kt2; 12, B—Kt2, B—Q3; 13, KKt—K5, Kt—K2; 14, Q—K2, R—B; 15, P—B4, B—Kt; 16, R—B2, Kt K2)—Q4; 17, P—B5, P—QKt4; 18, Kt x P(1), R x Kt; 19, P x P, R—B; 20, Kt—K5, P—QR3; 21, QR—KB, Kt—B6; 22, Q—K3, B—R2; 23, Kt—Q7, Kt (B6)—Q4; 24, Q—R3, P—R3; 25, Q—B5, R—QB2; 26, Kt x R, Q x Kt; 27, Q—Kt6, B—B3; 28, K—R, B—K; 29, Q—Kt3, B—Kt; 30, Q—K5, R—B; 31, Q x Kt (Q4) and wins.

(1) Enterprise which succeeded.

In "Charousek's Games of Chess" (G. Bell and Sons, 7s. 6d. net) Mr. P. W. Sergeant has made a notable addition to English chess literature. Charousek, who was born in 1873 at Lometz, Bohemia, learnt to play chess in 1889, and a few years later stood in the front rank of the masters. In his all-too-brief career—he died in 1900, and his last tournament was in 1898—he showed rare genius, and it is well that there should be some permanent record of one who has been ranked with Morphy. Mr. Sergeant gives a collection of 146 games played by Charousek in tournaments, matches, and on other occasions, the interest of which is immensely increased by the admirable annotations. The book is one which should be in every chess-player's library.

INDIAN ADMINISTRATION

A Committee has been appointed by the Government of India to inquire into the organisation and procedure of the Civil Secretariats of that Government. The Committee, which is expected to begin its work in India towards the end of this month, will consist of Sir Hubert Llewellyn Smith, G.C.B., Joint Permanent Secretary to the Board of Trade (Chairman); Mr. W. M. Hailey, C.S.I., C.I.E., Indian Civil Service; Mr. R. J. Watson, Inspector of Judicial Offices, Bengal; Mr. R. L. B. Gall, of Calcutta. Mr. A. C. MacWatters, C.I.E., Indian Civil Service, will act as Secretary to the Committee. Mr. W. Carter, Principal Clerk, Board of Trade, accompanies the Chairman as Confidential Assistant. The terms of reference are as follows:—"(*a*) To examine the system under which business is allocated among departments and conducted in civil secretariats and attached offices; (*b*) to report in what respects the system can be made more efficient and expeditious; (*c*) to make detailed recommendations where changes are required; and (*d*) to examine, so far as may be necessary for the above, the system of recruitment and organisation of the office staff."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The rise in Rupee exchange which was forecasted by our correspondent in last week's article took very little time to materialise, and the announcement which appeared in the Press on Tuesday morning that Indian exchange had been advanced to 2s. created no surprise. It has already been said that merchants were prepared for this move, and it now remains to be seen whether those with rupees to send home will take advantage of the rate, or whether the cut-throat competition for cover will compel importers to seek an even higher exchange from those exporters with homeward shipments to finance.

***

In some quarters it was hoped that the rise to 2s. would be followed by an intimation from the Government that they would be prepared to release more gold, or that additional Council bills would be provided; but it is probable that the Government will elect to wait and see what effect the even money exchange may have upon remittances from India, because it has been predicted with some confidence that large amounts of money have been held back for the present level of exchange. Be that as it may, the situation is still surrounded with uncertainty.

***

No indication has yet been given of the official attitude towards unrestricted imports of gold, and rumours are rife about recent purchases of silver by the India Government at the present inflated price which are not calculated to inspire confidence. It seems useless to make any attempt to dissipate the mists of official reticence, but until the India Government come out with a plain statement of their policy regarding the currency question, operations between this country and our great dependency will be hedged round with difficulties, which are causing an increasing feeling of uneasiness.

***

One effect of these advances in the rupee must not be lost sight of, and that is the handicap placed on exports. In pre-war days, for every pound sterling the exporter received round about 15 rupees. At present he has to accept ten rupees, and it may be reasonably assumed that a goodly portion of the shrinkage must come off the price of Indian produce. The cultivator will thereby suffer, and may not unnaturally refuse to part with the fruits of his toil if prices are still further reduced. In that case the volume of exports will decrease, less shipping space will be required, and the whole trade of the country will be seriously affected. For it stands to reason that, if the cultivator cannot sell his produce, he will not have the wherewithal to buy piece goods.

The preliminary statement of India's overseas trade for the past financial year, issued by the Director of Statistics, provides a fresh reminder of the increasing hold which Japan is obtaining upon Indian markets. It is, of course, an old story now, but it calls for continual attention none the less. The Japanese now come second to the British in the list of countries exporting to India, with a percentage of 20 compared with our 46 per cent. They are thus, no doubt, a long way behind, but the tendency to creep up is unmistakable. Behind it lie primarily an infinite capacity for taking pains and the policy of shipping subsidies and rebates. The ground has been most carefully prepared for a number of years, for India has been investigated by the ubiquitous Japanese agent almost as systematically as China. Little or no exception can be taken to this practice, but the question of the support given to Japanese traders and manufacturers by their Government merits close scrutiny.

***

As things are, Japan, it is stated, can buy cotton in India, take it to Japan, spin it, and deliver it in China at transport charges that are no heavier than those which the Bombay mills would pay for sending the finished product to China. Further, she can bring back to Bombay from Japan cloth woven from Indian cotton and compete for the local trade for it. All this is only possible on the strength of the special facilities afforded by Japan's commercial policy. One effect is to damage India's export trade, for the China market is gradually being lost to her. The remedy that is being pressed for in India is the securing of cheaper transport and the levy of an export duty on cotton consigned to non-British countries. In the ideal commonwealth care would be taken that shipping rates did not handicap manufacturers to an extent that brought within the bounds of possibility the crippling of an industry which feeds the shipping.

***

The Government of India has introduced a Bill imposing an export duty of 15 per cent. on raw hides and skins, with a rebate of 10 per cent. on those that are to be tanned within the Empire. This measure, it will be remembered, has for some time been advocated by the United Tanners' Federation of Great Britain and Ireland, which has declared its ability to handle increasing quantities of kips up to four millions in the third year after the conclusion of the war. Primarily the tax is intended to meet the situation existing in India at the outbreak of the war, when the trade was almost exclusively in Austro-German hands and three-fourths of the hides and skins were shipped to foreign countries. At the same time it is intended to help the tanneries which have sprung up in India during the last few years, and which will now be for the most part without the large Government orders that so materially assisted them in their early days. Incidentally it may be mentioned that an *ad valorem* duty is preferable to a tax, which was at one time contemplated, based on the weight of the hides exported to countries outside the British Empire. The effect of such a tax would have been to have sent the lightest and best hides to the countries with which we have lately been at war.

***

Next week will witness the departure from Cardiff of a notable shipload. The Theseus is due to sail for Fiume with from six hundred to seven hundred head of cattle and several thousands of poultry—the largest consignment of live stock for breeding purposes that has so far been sent from this country to Serbia. The animals are a gift from British farmers to Serbian farmers; they have been collected by the Royal Agricultural Society's Agricultural Relief of Allies Committee, and their transport has been facilitated by the British Government. As an indication of the thoroughness with which the scheme has been planned and carried out, it may be mentioned that the Theseus also carries coal for the train journey from Fiume to Serbia, to say nothing of some three hundred tons of provender for the chief "passengers." A very practical token of British esteem for our Serbian Allies, which goes under the auspices of a single organisation, but is accompanied by the greetings and good wishes of the whole nation.

reference is made to a "big British firm" which quotes as its terms, "Goods despatched only when net cash credit is opened in England for full amount of the order." No objection will be raised to a firm making such terms its rule of business, but a strong point can be made against a firm attempting to do business on such lines in the Balkans at the present moment. It is apt to cause the potential purchaser to blaspheme and to transfer his order to another country. A firm which is not prepared to do business on more generous terms had much better not turn its attention overseas at all, certainly not to the countries now suffering from a depreciated currency. On the other hand, if it is recognised that sooner or later the home market demands will be slowing down and that it will be necessary to have an overseas connection, then some readiness must be displayed to adapt terms to the exigencies of the situation.

***

In a country where exchange is practically four times its pre-war figure and fluctuating daily, it is useless to expect any large orders when goods have to be paid for in advance. The more so as the goods may take months to reach their destination. If care is taken in the selection of an agent and normal precautions are observed, there need be no risk attaching to any transaction. In most cases full cover will be deposited in a local bank; but the purchaser not unreasonably objects to buying pounds sterling at, say, 400 piastres to pay for goods which will reach him when the rate of exchange has fallen 10 per cent. or more. On the other hand, he will show little hesitation on account of the exchange in paying for goods delivered. Hence the advantage of goods on consignment—again to, and in consultation with, a reliable agent—if a large turn-over is sought.

***

The state of the drachma exchange is attracting attention in France, where it now stands at a premium of between 40 and 45 per cent. in relation to the franc. It seems to be felt that, in spite of the fall of the French franc in regard to the English pound and American dollar, certain conditions existing in regard to Greece should have a steadying effect on the relations between the franc and the drachma. For instance, France advanced money to the Greek Government during the war, and the French military authorities have been selling large quantities of war stores accumulated at Salonika. An attempt is being made to prove unfair manipulation, into which there is no need to enter here. It is a fact that a general impression obtained long ago in business circles in Athens that there was something artificial in the movement of Greek exchange, but I have not heard of anyone who had any definite statement to make on the subject.

***

The necessity of increasing the supply of capital in India was emphasised by Mr. E. H. Ashworth, I.C.S., in his speech at the opening of the Lucknow branch of the Tata Industrial Bank, Limited. Capital, he pointed out, was the life-blood of industrial enterprise, and the industrial system in India was sluggish because the arteries that circulated this life-blood were choked. A new industry, sponsored by an established firm of repute, might find no difficulty in attracting capital, but for the industrial regeneration of India it was necessary, he stated, that small industries should be started by obscure persons.

COMMENTATOR.

Constantinople Business Letter

(FROM OUR OWN CORRESPONDENT.)

CONSTANTINOPLE, August 29.

Our Commercial Competitors.

In a previous letter I laid stress upon the severity of the coming struggle for the capture of the Near Eastern market, and events have fully justified the warning. The Americans and the French are leaving no stone unturned in their efforts to establish themselves in the Near East. An American company, which evidently has plenty of money behind it, is doing big business, and a French Levant Company has just been formed with active assistance of Schneider and other big French capitalists.

In both cases the methods are similar. The market is first carefully studied by men sent out specially for the purpose, men who are specially fitted for that particular job, not men who are pitchforked into it for some other reason. The Americans and the French are employing experts. Once the situation has been thoroughly grasped and the needs of the market ascertained, large quantities of goods are sent here ON CONSIGNMENT. The policy is paying hand over fist.

Over Caution.

In contrast with the above tactics there are still many British firms who have not yet realised apparently that they are losing an unequalled opportunity by sticking to early Victorian methods of business. For instance, there is the case of a certain big British firm which quotes the following terms:—F.O.B. Hull, nett cash against documents; goods despatched only when nett cash credit is opened in England for full amount of the order—and the agent is offered 1 per cent. commission. These terms are explained as being due "to existing conditions."

Whatever the existing conditions may be there is no reason why British merchants should not be satisfied with cash against documents here in Constantinople and a 20 per cent. deposit with the order. What risk is there in such conditions?

Even if the exchange were not fluctuating, the nett cash in advance system would be a severe drawback; but under the "existing conditions" the buyer here is taking a heavy risk in paying in advance for goods which may not be delivered for two or three months or more. The £ sterling to-day is 370 piastres, whereas two months ago it was nearly 400 piastres, which would mean a loss of 7½ per cent. on the exchange alone, if payments in advance had been made in June for goods to be delivered this month. Is it likely that any man of business is going to give orders on such terms?

Unless our manufacturers really make up their minds to take the Near Eastern market seriously, within two years the Germans will most certainly be back in their old position here. The rate of exchange is very much in their favour, and the Italians are acting as their carriers, so that they have already begun to do business here, in spite of heavy handicaps. Those handicaps must be removed sooner or later in the natural course of things, and if that is all we have in our favour we shall once again lag behind.

Motor Bicycles.

During the war the roads around Constantinople were very much improved, and it is now possible to get about a considerable part of the country in comfort. Good roads create a demand for cars and motor bicycles, and although no doubt when the Army sells out there will be a good many second-hand machines on the market, yet there will surely be a demand for new ones. British motors and motor-cycles have an excellent reputation out here. During the war I met a Turkish transport officer who told me that he had twenty lorries in his section, and of the lot there were only two that he could constantly rely upon. These were a couple of ancient 'buses that had roughed it, and had racketed over the cruel roads of Constantinople for years before the war, and had been requisitioned for the Turkish army. They were made by a certain very famous British firm, and were never laid up except for trifling matters, although they were worked twice as hard as the German and Austrian lorries, which were brand new.

There have been many similar instances brought to my notice, and I am sure that certain types of British cars will sell out here very readily. Of course, the Fords or "Tin Lizzies" at present hold the market for cheapness, and the ultra-luxurious cars would not do out here, because, although there has been a big improvement in the roads, in comparison with English or French roads there is still much to be desired both as to quality and quantity.

Motor cycles, however, are increasingly popular, especially as the present means of communication with the surrounding districts by tram and steamboat are most inadequate. I am told that a light 2½ horse-power cycle is best suited to this country, as the roads are not good enough for a heavier machine.

The General Situation.

Business has been very quiet for the last few weeks, but the progress made by the Volunteer Army in opening up South Russia is reviving hopes of some improvement in the near future. All the same, things will not be straightened out until the country has settled down and the Anatolian farmers can get back to regular work.

The rate of exchange is still the chief hindrance to trade, and, so far as can be seen, the only thing that is likely to bring it down is exportation. Agricultural produce being the principal export of the country, there can be no improvement in the situation until Anatolia is at peace again.

BELGRADE NOTES.

BELGRADE, September 9.

Great interest is naturally provoked in Belgrade by Mr. Lloyd George's announcement that the British Government has earmarked twenty-six million pounds as a guarantee fund for the encouragement of trade with the three new Slavonic states, Yugoslavia, Czecho-Slovakia and Poland, and now they look forward to a real beginning of business relations on a large scale. There is no doubt that British enterprise and determination will overcome the undoubted difficulties, and take full advantage of this occasion to make good headway in new markets, but the first thing to do is to make up their own mind whether they seriously intend to or not. If they do, most British houses must mend their methods, and learn to send out goods on consignment, to make use of the metric system, and to quote prices delivered at Fiume or Salonika as the case may be. It is sheer waste of time offering Serbs prices f.o.b. at an English port, and quoting with British weights and measures is mere laziness, though, of course, until the exchange assumes some steadiness, the use of English currency is unavoidable.

NEWS FROM ALL SOURCES.

Our Malta Correspondent writes, September 1:—Mr. Henry Twelves has been elected a member of the Chamber of Commerce.

A telegram from Burma reports that the total production of crude oil by the British Burma Petroleum Company and the Rangoon Oil Company amounted to 84,782 barrels for the month of August.

The traffic returns of the Egyptian Delta Light Railways for the period ended August 20 amounted to £E10,219, making the total for the year £E89,070. The corresponding figures for 1918 were £E10,337 and £E113,208.

Mr. Theophilus Henry Beavan Long, of 11, George Row, Northampton, senior representative in India of Burroughs, Wellcome and Company, who died on March 25 last at Agra, left estate valued at £1,356 gross, with net personalty £1,146.

Mr. Robert Stewart Menzies, of 59, London Lane, Bromley, Kent, formerly of 13, Fenchurch Avenue, E.C., of Messrs. Bullock Brothers and Company, Ltd., Burma and London, who died on July 19 last, aged 51 years, left estate valued at £12,811 gross, with net personalty £12,512.

The receipts of the Egyptian Markets, Limited, for the week ending September 11 were:—Cattle markets, £188; general markets, £274; total, £462 (Bairam holidays). Total to date £39,686. Figures for the corresponding week in 1918 ending September 12 were:—Cattle markets, £545; general markets, £493; total, £1,038. Total to date, £36,318.

Anglo-Baltic and Mediterranean Bank.—In connection with the formation of the Anglo-Baltic and Mediterranean Bank (Limited) it is announced that Bergens Handelsbank, Bergen, Nordisk Bankinstitut A/S, and Skogeirbanken A/S, Christiania, are taking a financial interest in that institution, and that Mr. Henrik Ameln, chairman of Bergens Handelsbank, has accepted nomination as a local director. It is understood that the Anglo-Baltic and Mediterranean Bank (Limited) will act as London agents of the above-named banks.

A British Trade Mission has been despatched to Roumania in order to study the possibility of further trade between Great Britain and that country. The head of the mission, Reuter's Agency states, is the Hon. W. H. Cozens-Hardy, who left earlier for Roumania. The mission includes legal and financial advisers as well as manufacturers. Before its departure the members were entertained to luncheon by Colonel Walton, a member of the British Military Mission in Roumania, among the guests being the Roumanian Chargé d'Affaires.

The traffic receipts of the Smyrna-Aidin Railway for the week ended August 23 were £5,252.

The Council of Administration have elected Lord St. Davids as a director of the company, in the place of Lord Rathmore, deceased, and to act as President of the Council.

Numbers are announced of Four-and-a-Half per cent. Bonds of the Piraeus, Athens, and Peloponnesus Railway, drawn for repayment at par on October 15, at R. Raphael and Sons, Austin Friars House, E.C.2.

Sir Boverton Redwood, Bart., the well-known petroleum expert, of 4, Bishopsgate, E.C., and the Cloisters, 18, Avenue Road, Hampstead, who died on June 4, left estate of the value of £165,013.

Owing to extensive developments taking place in Whitehead, Morris and Co., Ltd., of 9, Fenchurch Street, E.C., Westminster and Egypt, a new company has been registered under the title of Whitehead, Morris, Ltd. The directors and staff remain unchanged.

The traffic receipts of the South Indian Railway Company, Ltd., for the week ended August 9, amounted to Rs. 7,62,224; total from April 1, Rs. 1,33,36,425. The figures for the corresponding periods last year were Rs. 7,26,867 and Rs. 1,33,36,425.

The *Algemeen Handelsblad* learns that, contrary to previous reports, Roumania is now in a position to export 600,000 tons of wheat at the comparatively high figure of 1,000 francs per ton. Traffic is held up owing to the utter absence of transport organisation, which is also affecting the petrol industries. Official papers point out that over 300,000 tons of oil are being held up at the ports.

Part of the loan of 6,000,000 drachmae to be floated by the municipality of Athens is to be expended in providing for the transportation of sea water for use in street watering. Pumps, piping, and machinery for this project have already been ordered from the Continent. The water will be pumped from a station to be erected at Phaleron, near Syngros Avenue, and will be stored in a reservoir on the summit of the Hill of Philopappos. Eight months, it is reported by the American Consul, are judged to be necessary for this construction work. The remainder of the fund raised by this loan will be spent in repairing the walls of the city cemetery and in completing certain waterworks extensions and city paving. The paving will be of a substance similar to the bitulithic paving employed in America; machinery for its laying has been already ordered in England.

AGRICULTURAL BANK OF EGYPT £3½% GUARANTEED BONDS.

The COUPONS falling due on the 1st October, 1919, on these Bonds should be PRESENTED for PAYMENT between the hours of 10 and 2.30 (Saturdays 10-12), at the Bank of England Dividend Pay Office, Lombard Street, E.C.3, where lists may be obtained. Coupons must be left three clear days for examination.

DISTRESS IN INDIA.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agriculture Department, dated September 12:—

Prospects of crops good or satisfactory, but damage by excessive rain and floods again reported in parts of Bihar and Orissa, United Provinces, Central India, and Bombay. Much needed break has set in in Central Provinces. Light rain has fallen in Deccan, where it was much needed. Relief works in Poona District and relief in Panch Mahals, Kaira, and Rewa Kantha Districts of Bombay Presidency have been closed.

Numbers relieved:—Bengal: relief works, 8,923; test works, 32; gratuitous relief, 14,724. Bihar and Orissa: relief works, 2,571; test works, 3,307; gratuitous relief, 58,603. Feudatory States of Orissa: test works, 5,997; gratuitous relief, 29,517. United Provinces: test works, 166; gratuitous relief, 4,963. Ajmer-Merwara: gratuitous relief, 169. Central India: relief works, 5,500; gratuitous relief, 4,400. Central Provinces: relief works, 10,752; test works, 5,454; gratuitous relief, 28,676. Bombay: relief works, 11,641; dependants, 5,889; village works, 1,121; gratuitous relief, 37,167. Hyderabad report not received. Madras: relief works, 49,640; test works, 188; gratuitous relief (incomplete figures), 93,608.

Foodstuffs' position improving, except in Bengal. Demands for Burma rice practically ceased, except in south of the Peninsula and Bengal. Prices in Bengal have risen rapidly, and large supplies of Burma rice are being imported. Elsewhere prices show a tendency to fall.

FRENCH CHAMBER OF COMMERCE IN BUCHAREST.

According to the *Exportateur Français* the new French Chamber of Commerce in Bucharest will be a comprehensive affair. There is a large economic library, a special hall for catalogues and samples, numerous writing-rooms and others designed for interviews between Roumanian merchants and French representatives. Part of the duties of the Chamber will be the erection of sample bureaus in all the principal Roumanian commercial centres; it aims, too, at the suppression of the flooding of the market with cheap Austrian and German goods.

Suez Canal Receipts.—The receipts from the 4th inst. to the 9th inst., inclusive, amounted to 2,910,000fr., compared with 1,290,000fr. for the same days last year.

A Proclamation appears in the *Journal Officiel* of Egypt of August 25, 1919, signed by Field-Marshal Allenby, the General Officer Commanding H.M. Forces in Egypt, followed by a notice under the proclamation signed by Mr. Clive Preen, F.C.A., Deputy-Controller of Enemy Property in Egypt and the Sudan, and War Trade and Licensing Officer, permitting free and unrestricted Egyptian trade (with minor formalities) with Germany, Hungary, and German Austria. Mr. Clive Preen, F.C.A., a member of the firm of Messrs. Harvey, Preen and Co., was sent to Egypt after serving in the war (1914 to 1916) to assist in the financial department of the Government.

Persian Trade and Transport.

Lecturing on Persia, at a meeting of the British Association at Bournemouth, on September 12, Colonel G. F. Napier said that in addition to strategic and political reasons, there were commercial reasons that we should desire Persia to be prosperous and independent. Persia, even in her present undeveloped state, could absorb a considerable amount of British and Indian cotton and other goods, which she could pay for with her exports of carpets, wool, hides, seeds, nuts, etc. In the past she also took from her northern neighbour considerable quantities of crockery, glass, cheap lamps, matches, sugar, etc., all of which we could equally well supply.

The following are extracts from Colonel Napier's paper:—

The commandeering of transport animals during the war, combined with a succession of bad harvests, has caused a very grave shortage of transport in Persia. The consequent heavy cost to transport is bound to delay the active resumption of import and export trade which the friends of Persia would like to see. Under paragraph 5 of the New Agreement we undertake to co-operate with the Persian Government in railway construction and other forms of transport, and it is to be hoped that immediate steps will be taken to ameliorate transport difficulties.

At the present time two railways have actually reached the Persian frontier: that from Quetta via Nushki to Duzdab in the east, and that from Baghdad to the foot of the Zagros range on the west. In addition a small military railway of about 52 miles in length has been constructed from Bushire to Borazjun on the road to Shiraz. This line was built to facilitate the operations against the disaffected elements in the mountainous region between Shiraz and the coast. I hear that since order has been restored the line already shows signs of paying its way.

In addition a practicable motor route, which avoids the terrible Kotal-i-Dukhtar and Pir-i-Zan passes, has been discovered, and already a motor lorry has driven from Shiraz to Bushire. This route avoids the Pir-i-Zan and Kotal-i-Dukhtar by passing to the north of them. Eventually the Baghdad-Khanikin and Nushki-Duzdab railways will be continued into Persia, but for some years to come it is doubtful whether railways will pay commercially in Persia, owing to the number of passes which have to be negotiated in every direction.

The immediate requirement of Persia is fleets of motor lorries operating on existing roads. The motor-car is the true pioneer to the railway, and owing to the proximity of the Persian and Baku oilfields cheap petrol will be available in unlimited quantities, and, given cheap and rapid transport, the trade and resources of Persia will increase by leaps and bounds. The first motor-route which should be developed is that from Khanikin on the western frontier, at railhead from Baghdad via Kermanshah, Hamadan and Kazvin to Teheran.

Sir Percy Sykes realised the paramount importance of improving the roads in Southern Persia, and owing to his initiative active work was in progress to improve the important system of roads radiating from Bandar Abbas to the north-east and north-west. Work, however, slackened as a result of the armistice, and the Tang-i-Zagh section, where the road rises from the coast to the Persian Plateau, still requires two or three months' work on it. With this exception, however, the roads between Bandar Abbas and Kerman and Bandar Abbas and Shiraz, from Kerman via Yzed to Ispahan, and from Shiraz via Ispahan, Kashan and Kum to Teheran are all available for motor traffic. The necessary road maintenance and repair could be defrayed by a system of tolls, as is now done on the so-called Lynch road from Teheran to Ispahan.

The Baghdad-Khanikin line, constructed as a military railway, should serve a very useful purpose in developing the country and stimulating trade from England and India. As it runs over the delta with practically a level gradient all the way, its operating expenses would not be high, and now that its military necessity has disappeared it is to be hoped that the Government will sell or leave it to a private company who will build the necessary stations and sidings and supply the rolling stock required to make it a real asset to the country.

As, from Bandar Abbas, the Persian Plateau has to be reached by climbing the Tang-i-Zagh, so from Khanikin the Plateau is reached by ascending the Zagros range by the Tak-i-Girreh. It is a stiff climb, but the worst gradients have been improved, and it is practicable for light motor lorries.

In Persia the rivers generally run in spot for two or three months and are drybeds for the remaining nine or ten months in the year.

Near Karej, about thirty miles west of Teheran, it would be possible to construct a barrage which would supply sufficient water to irrigate the whole of this plain, and as the soil is good, the whole plain from Teheran to Kazvin might be turned into a waving cornfield at an expenditure which has been estimated at a quarter of a million. A small beginning in this direction has been made by Vali Khan, the Sepahsalar-i-Azam near Kazvin. He is the big landowner of those parts and has constructed a dam which it was estimated would supply 70 new villages with water besides securing Kazvin against famine.

The returns of the Egyptian Markets, Ltd., for the week ended September 4 were:—Cattle Markets, £352; General Markets, £469; Total for Week, £821; Total for Year, £39,224. The figures for the corresponding week in 1918 were:—Cattle Markets, £530; General Markets, £507; Total, £1,037; Total for Year, £35,280.

BUSINESS AGENTS IN THE BALKANS.

(From Our Own Correspondent.)

Belgrade, September 6.

English manufacturers are not all proceeding on the right lines in developing British trade in the Balkans.

A representative of a well-known manufacturer of agricultural implements, who before the war did a big business out here through a German agency, recently visited Belgrade to appoint a new agent. It is true that he did not apply for a German, but he appears to have made no effort to find a British representative or even a Serbian one—and there are Serbs here trained in America and England who would make good agents, to say nothing of Englishmen. The gentleman in question, however, appears to have gone straight to the representative of a neutral country.

It is to be hoped that not many houses will follow this policy, especially when there are Englishmen ready and qualified for the work. No little indignation is felt in the English colony here at the incident.

CYPRUS CROPS.

(From Our Correspondent.)

In spite of the discouraging reports on Cyprus tobacco received from London, hopes have been revived in some localities. The Brothers Hadjisangarides, of Agia Phyla, a village three miles from Limassol, who have been enterprising growers, have sent a quantity of their crop of 3,500 okes (9,800 lbs.) to England, where 3s. 6d. a pound is offered—i.e., 10s. the oke. Not more than 5s. is offered by manufacturers in Cyprus. Expenses, however, are so great that this price is hardly likely to afford sufficient profit. The growers are nevertheless quite sanguine regarding the outlook, and a great deal more should be done before there should be any thought of abandonment in this new field of enterprise.

New Carobs are being sold at 28s. the Aleppo kantar (180 okes, or 540 lbs.).

INDIAN INTELLIGENCE.

TANNING INDUSTRY.

Reuter's Simla correspondent, in a delayed message dated September 11, writes:—Sir George Stapylton Barnes has introduced a Bill in the Viceroy's Council imposing an export duty of 15 per cent. on hides and skins, with a rebate of 10 per cent. on those exported to other parts of the Empire and tanned there. The object of the Bill is to keep the promising Indian tanning industry on its feet. The Bill is interesting as the first application of the principle of Imperial preference. The measure received a warm welcome from the representatives of the Bombay and Calcutta Chambers of Commerce and from several Indians.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.

Engineering Notes.

Self-Acting Pumps.

Villages or country houses in the Near East are, as a rule, situated on a high level The top of a hill, the slope of a mountain, a rising ground in a plain are the spots selected for building; yet little thought is paid to the water supply. That has to be brought in pitchers or buckets from some distant low-lying stream by water-carriers or the village women—as is often depicted in Oriental landscape. But while this occupation forms part of the villagers' life, they have an unceasing wish that the water was nearer home; and by the application of a hydraulic ram pump their wish could be fulfilled. The water could be brought up to their village, or to the level desired without much trouble, and very cheaply. By means of this simple automatic appliance water can be pumped from low-lying streams where is either a natural or easily arranged fall of a few feet to comparatively long distances without any cost beyond the initial outlay and the cost of repairs, if any become necessary. The hydraulic ram once fixed does not require any attention. It works day and night, and as long as water runs through it. It is a self-acting pump by which water for home use, for cattle, and in dry weather for the ground, can be easily obtained. It is surprising that engineers in the Near East have not introduced this very simple and inexpensive contrivance for the water supply of numerous villages, country-houses, farms, gardens, factories, etc., which suffer from scarcity of water, especially during the dry season, while the water is not far off, but happens to be on a low level.

American Competition.

The systematic energy which American manufacturers have shown since the cessation of hostilities, and the possible effect that this competition may have on British trade, are questions which are occupying the attention of British industrial circles, with, perhaps, a certain amount of uneasiness. This competitive energy, however, was not quite unexpected. From the beginning of the war attention was drawn to American activities by a section of the Press, in particular frequent reference has been made in these columns to the well organised campaign that the United States had inaugurated in the Near East. In the markets of South-Eastern Europe both Americans and Italians are exploiting the existing shortage of almost every thing, by offering cheap goods in order to secure a footing there. Their goods, however, as a rule are only taken *fqute de mieux*. As in the case of engines and machinery, other articles, such as hardware, cutlery, firearms, tools and implements are wanted "real good English"—a common expression in the East—but in the absence of English sellers, or the means of finding them, buyers are often reluctantly compelled to have recourse to what others offer them.

With regard to machinery, hardware, etc., it is said that British manufacturers think that, owing to the coal and labour troubles, cost of materials, etc., it will be difficult to compete with the American manufacturers. But, according to recent reports, American manufacturers appear to be having precisely the same experiences as British manufacturers in the matter of labour and kindred problems. "Some United States manufacturers," says a good authority, "have 'got the wind up' far more than the steady-going Britisher; for according to certain American papers, prices of materials, labour, cost of living, and similar factors show the same tendency as in England." At any rate, a careful study of the situation on the other side indicates broadly that whatever may be the difficulties which British manufacturers have to face, there is reason to believe that the war has not left us with any particular trade handicap which the United States have not to contest also. As a matter of fact, they have recently been at special pains to acquaint themselves with processes and methods of production in which it was thought they were already far ahead. Therefore, in the circumstances, British manufacturers can easily put out of action their American competitors in the markets of the Near and Middle East. But the former must above all come in close contact with the buyers.

Polish Mercantile Marine.

Considerable attention has recently been directed in the Polish Press to shipping matters, and, apparently, an active propaganda is being carried on in favour of Polish shipping. At the beginning of 1918 a Polish Shipping Co., Ltd., was floated in Cracow, and a branch of this company has recently been formed in Warsaw. The company, it is said, is not only to be a propaganda association, but also to carry on industrial undertakings. Each member of the company has to subscribe at least 100 mks. The company is to agitate for the development of the Polish waterways, especially the Vistula, and to promote the creation of a Polish mercantile marine. So far as is known, the company has not started yet any industrial undertakings, owing, it is said, to the lack of capital, but it is closely connected with a Polish import and export company, recently formed in Copenhagen, which intends to buy or hire cargo-space for Poles; but, as the capital is only 50,000 kr., its activities are limited. There is no reason, however, why Poland should not possess a mercantile marine of its own, and recently the Polish Technical Association in Warsaw has started a department for shipping employees formerly in the Vistula fleet of the Russian Navy.

An Anglo-Italian Company.

A new Anglo-Italian metallurgical company has been formed, under the title of La Societa Anonima di Metallurgia e Mechanica Armstrong-Ilva. The parties are the Armstrong Puzzuoli Company and the Ilva concerns, and the capital of 30,000,000 lire (or francs) is being subscribed. The company's office will be in Rome, and its manufacturing activities in the region of Puzzuoli.

British Enterprise in Serbia.

Just when British firms were beginning to take an active interest in Serbian enterprises, and concessions were being granted, the war broke out, and, of course, things changed. One or two of these undertakings may be recalled. There was an agreement between a London firm of contractors and the Serbian Government for the tracing and planning of the Prilep-Shtip-Kotchane railway line, a distance of about 140 kilometres, for which the company would be paid at the rate of 700 francs per kilometre, and would obtain the contract for the entire construction of the line, providing the company's estimate for the construction was approved of. At the same time another enterprising London firm went to Belgrade with the object of submitting to the Serbian Government a project for irrigating valuable tracts of land, while another British group of financiers sent a well-known Serbian of high position to make important financial proposals to the Serbian Government on behalf of the group. All these came to a sudden stop by the declaration of war.

An Iron Industry.

Another important enterprise was the proposed erection of an iron foundry at Belgrade, for which the necessary Government permission was being obtained when the war began. This latter enterprise had great prospects, for, as is known, iron ore has been found in abundance in Serbia, but the difficulty hitherto has been the question of conveyance. Now, however, with the reconstruction of railways, which will traverse Serbia in all directions, this enterprise will benefit not only the iron industry, but will tend greatly to increase the working of antimony and copper mines which were, before the war, in a comparatively flourishing state.

The question now arises: will these concessions, or agreements, or preliminary arrangements in the hands of the British firms be of any value in the forthcoming development of Serbian enterprises?

A Baghdad correspondent telegraphs to *The Times*:—It is understood that owing to the lack of commercial prospects sufficient to justify the great expense, it has been found necessary to postpone the inauguration of the Cairo-Karachi air-mail service. A survey party recently crossed the desert from Damascus in cars to Abu Kemal, on the Euphrates, and thence to Baghdad, and marked landing grounds at intervals of twenty miles in the desert.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, September 1.

Local Enterprise.

For a considerable time past there has been a great outcry against the exorbitant price of fish which has been demanded from the public. Prices have more than trebled, and it has not been an unfounded statement that it is the middlemen who have been profiteering to a great extent. Hence it comes as good news that a local fishing company has been floated, with a capital of £14,000. The directors are men of the keenest business acumen, and the general public should reap the benefit of the venture. What makes it all the more gratifying is that it marks a beginning of the utilisation of local capital for local enterprise. Naturally, the company has received its baptism of criticism—probably from the middlemen.

Difficulties.

Potato growers are in a quandary, as the exportation of seed potatoes from the United Kingdom is still restricted, but every effort is being made by the local Government to obtain export licences for about 2,000 tons of seed required for the spring crop of 1920.

Sugar troubles have not ceased with the signing of peace. The Control Board very wisely keep a reserve stock of 200 tons, and this, owing to the delay in the stock of sugar coming from England, has only just escaped being drawn upon during the past week. There was a general shortage, but in the nick of time 244 tons arrived, which cargo, of course, is put out to traders on definite terms.

Shipping.

The past week has been brisk. The latest news on this subject is as follows:—

Arrivals.

Norwegian s.s. Hermes, from Marseilles, with general cargo.

British s.s. Ashwin, from Port Said, with general cargo.

British s.s. Eden Hall, from Smyrna, with general cargo.

Italian s.s. Libia, from Sfax, with a cargo of phosphate.

British s.s. City of Oxford, from Liverpool, with general cargo.

British s.s. Swainby, from Naples, with ballast.

P. and O. Caledonian, troops and general cargo.

OIL-WORKERS' PAY IN ROUMANIA.

(From Our Own Correspondent.)

Bucharest, September 4.

The minimum wages to which the oilfield and refinery workers are entitled in accordance with the recent settlement of their dispute range from 4 to 23 lei per day in the case of the former, and from 8 to 28 lei per day in the case of the latter. Overtime is to be paid for at the rate of 50 per cent. above ordinary rates, and work during holidays at the rate of 100 per cent. above the normal wage.

The Very Rev. W. R. Inge, D.D. writes:—"My friends say your 'De Reszke' Cigarettes are excellent."

Arthur Wimperis, Esq. writes:—"I am still smoking your 'De Reszke' Cigarettes with great enjoyment. My working day is now divided between Darewski and 'De Reszke.'"

A. E. Matthews, Esq. writes:—"Without doubt the 'De Reszke' American is the one cigarette worth trying to get to-day."

Miss Perceval Allen writes:—"I have pleasure in telling you how much I appreciate the really delicious 'De Reszke' Cigarettes. They surely are the nicest cigarettes!"

A GOOD many people express the opinion that "De Reszkes" are the best cigarettes one can buy. Why not prove it to your own satisfaction by getting a box to-day?

"De Reszke"
The Aristocrat of CIGARETTES
Sold at all Tobacconists, Stores, and Military Canteens.

LANCASHIRE COTTON.

(From Our Own Correspondent.)
Manchester, Wednesday.

The market this week has presented a rather more cheerful appearance. Trade has not developed on free lines, but the outlook is certainly brighter. There is now less anticipation of lower values. Favourable reports continue to be received relating to the prospects for the Egyptian crop. The plants are late but the weather conditions remain satisfactory. Futures in Liverpool have been rather irregular. In yarns made from Egyptian cotton no particular change can be recorded either as regards prices or demand. Most users are well bought, and can afford to wait. Activity in piece goods for Egypt has not been very prominent, but for several Near Eastern outlets a considerable inquiry has been met with. Steady buying has occurred for Constantinople, and more trade has recently come round for Salonika. Goods that can be delivered quickly command a ready sale. Shippers to India have again shown interest in prices, and rather more trade has been done in grey shirtings and light bleaching cloths. A few more lines have also been booked for China, and the minor markets of the Far East in standard makes and fancies. Manufacturers as a body are looking forward to securing more contracts. American yarns have been steadier in quotation with a slightly improved offtake, but transactions of weight have not been numerous. In export yarns an encouraging demand continues to be met with for the Levant. Dyed qualities have also moved off fairly well for India.

OPIUM REPORT.

Messrs. Barker Brothers, Smyrna, report as follows under date September 5:—

We confirm our respects of the 14th ulto., since when our opium market has been kept busy with purchases for the Continent and the States. In all some 135 cases have changed hands at 8s. 6d. to 12s. for low-grade, and 13s. to 17s. for 11 per cent. to 11½ per cent. Our exchange for sterling and dollars has kept on the whole steady, and to-day it is Ps. 365 for bank cheque and Ps. 362 for first-class sight drafts per £ sterling on private firms. The dollar being in better demand, its exchange is slightly better.

A CHANGE OF NAME.

The change of name of the British Westinghouse Electric and Manufacturing Company, Ltd., to that of Metropolitan-Vickers Electrical Company, Ltd., follows as a result of amalgamation with the extensive Vickers interests and the Metropolitan Carriage, Wagon and Finance Co., Ltd. From its inception in 1899 until 1917 the British Westinghouse Electric and Manufacturing Co., Ltd., was controlled by American shareholders, but in the latter year the American holding was taken over by the Metropolitan Carriage, Wagon and Finance Co., Ltd., and later amalgamation with the Vickers interests became effected. The company, therefore, becomes entirely British. The change of name, it is announced, will not affect the general policy of the company, except that a broader field for advancement will be opened up. The Metropolitan-Vickers Electrical Co., Ltd., will carry on just the same, but ultimately and inevitably will proceed to greater development.

NEW COMPANIES.

Balkan Cigarette Company, Ltd.

With the above title a private company was registered on September 8, with a capital of £50,000 in £1 shares. The object is to carry on the business of merchants, tobacco and cigarette manufacturers and dealers, etc. The subscribers (each with one share) are:—T. S. Lyons, 10, Drapers' Gardens, E.C., cigarette manufacturer; W. J. Lyons, 10 Drapers' Gardens, E.C., company director. The permanent directors are:—T. S. Lyons and W. J. Lyons. Qualification: £100. Solicitor: F. Budd, Devonshire Chambers, 146, Bishopsgate, E.C. The registered office of the company is at 10, Drapers' Gardens, E.C.

G. and A. Baker, Limited.

A private company with the above title was registered on September 10, with a capital of £300,000 in £1 shares, to enter into (1) a sale agreement with A. and A. W. Baker; (2) a pooling agreement with Edwards and Sons (Near East), Limited; and (3) a share subscription agreement between F. and A. Swanzy, Limited, this company, Edwards and Sons (Near East), Limited, A. Baker, C.B.E., Captain A. W. Baker, W. G. M. Edwards, and Lieut.-Col. C. E. Binns, and to take over the business of general merchants and universal providers formerly carried on by A. and A. W. Baker as G. and A. Baker at Constantinople and elsewhere. The subscribers (each with one share) are:—W. S. Crocker, Cedar Grange, Caterham Valley, Surrey, company secretary; F. H. Swanzy, 35, Launceston Place, W.8, director. The first directors are:—A. Baker, C.B.E., Capt. A. W. Baker, M.C., W. G. M. Edwards, Lieut.-Col. C. E. Binns, R.M., O.B.E., and five to be nominated by F. and A. Swanzy, Limited. So long as A. and A. W. Baker or one of them shall not hold less than two-thirds of the shares to be allotted to them under above-mentioned agreement, they or he may nominate four of the directors. A director need not hold any share qualification. The solicitors are Messrs. Janson, Cobb, Pearson and Company, 22, College Hill, E.C.4.

Edwards and Sons (Near East), Ltd.

A private company with the above title was registered on September 10, with a capital of £200,000 in £1 shares, for the purpose of entering into: (1) A sale agreement with W. G. M. Edwards and C. E. Binns; (2) a pooling agreement with G. and A. Baker, Limited; and (3) a share subscription agreement between F. and A. Swanzy, Limited, G. and A. Baker, this company, A. Baker, C.B.E., Capt. A. W. Baker, W. G. M. Edwards, and Lieut.-Col. C. E. Binns, and to acquire the business of general merchants and universal providers, formerly carried on by W. G. M. Edwards and C. E. Binns as Edwards and Sons, at Constantinople and elsewhere. The subscribers and directors are as in G. and A. Baker, Limited (see above). F. and A. Swanzy, Limited, may, while holding the majority of the issued shares, nominate five directors, and W. G. M. Edwards and C. E. Binns may nominate four directors while holding two-thirds of the shares to be allotted to them under the sale agreement. The solicitors are Messrs. Janson, Cobb, Pearson and Company, 22, College Hill, E.C.4.

COMPANY NOTES & REPORTS

The final dividend declared by the directors of the Nizam's Guaranteed State Railways in respect of 1918-19 is at the 5 per cent. rate that ruled in the two years preceding, but in this instance a bonus of 1 per cent. is added, making 6 per cent. for the year.

Caucasian (Tchermoeff).

The report of Caucasian (Tchermoeff) Oilfields, Ltd., states that no accounts have been received from Russia. Direct communication with the property has not been possible during the year owing to the Russian revolution. One of the Russian directors, however, General Tchermoeff, reports that, according to his information, no actual destruction took place at Tchir-Urt. A claim for damages suffered by the company has been lodged with the Foreign Claims Department of the British Foreign Office. The depths of the wells when closed down on the Tchermoeff property were 2,098 and 2,877 ft. respectively, and of the well on the Tchir-Urt property 882 ft.

New Caucasian.

The report of New Caucasian Oilfields, Ltd., states that no accounts from Russia have been received. The directors have not been in direct communication with the property during the past year owing to the interruption caused by the war and the Russian revolution. One of the Russian directors, however, General Tchermoeff, reports as follows:—"In November, 1917, during the Bolshevist revolution, and following serious riots in Grozny, the Grozny new oilfields were destroyed, the derricks burnt down and the machinery and stores stolen. The casings and the underground apparatus were, of course, untouched. But I particularly want to draw your attention to the fact that all the companies working there suffered equally from these riots, and are in just the same position as we are." A claim for damages suffered by the company has been lodged with the Foreign Claims Department of the British Foreign Office. Grozny was evacuated by the Bolshevists in February last, and all their decrees of nationalisation were rescinded. The depths of the wells when closed down were 2,422 and 2,502 ft. respectively.

COMPANY RESULTS, Etc.

Associated Tea Estates of Ceylon.—Profit for the year, including £5,288 brought in, £14,223. Dividend of 15 per cent., less tax, on the ordinary shares; to reserve, £1,500; balance forward, £5,223. Yield of tea for the year, 654,065 lb.

The directors of the Khedivial Mail Steamship and Graving Dock Company announce a dividend at the rate of 5½ per cent. per annum on the cumulative preference shares, less income-tax at the rate of 6s. in the £, for the six months to June 30 last, payable September 30.

The directors of Burma Ruby Mines have declared an interim dividend of 6d. per share, free of tax, on account of the current year, payable about the end of October.

The directors of the National Bank of India have declared an ad interim dividend at the rate of 20 per cent. per annum, payable on and after September 25.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ECONOMIC CONDITIONS IN TURKEY.

The following are extracts from recent reports received by the Imperial Ottoman Bank:—

BILEDJIK, July 31.

Cereals.

The crop of cereals which was stated to be very good in May and June has not come up to expectations, and is 30 per cent. below what it formerly was. This falling-off is largely owing to the bad quality of the cereals—the deterioration being due to the heavy rains in May and June. The price of a kilo (i.e., 25 okes) of corn is between 280 and 320 piastres, as against 450 to 470 piastres last year.

Opium.

The yield of opium has suffered, in consequence of the rains of May and June, a decrease of 50 per cent., namely, about 2,000 kilos as against 4,000 kilos in 1918.

Cocoons.

The crop of the new season's cocoons is about 50,000 kilos as against 80,000 kilos last year. Prices for opium and for cocoons have been nearly the same as during the preceding year.

Silk.

The great activity in the last two weeks of July enabled our spinners to sell a part of their stocks at the price of Ltq. 1,200 to 1,300 the ball of 100 kilos.

Corn-Mills.

The production for this month has increased by about 400 sacks. 1,000 sacks are for local consumption (Biledjik and Kuplu), 400 sacks have been sent to Yeni-Cheio, 800 sacks to Ismidt, and 1,800 sacks to Constantinople.

Exports.

Exports for the month of July amounted to Ltq. 52,000 as against Ltq. 23,300 in 1918.

Imports.

Imports for the month of July amounted to Ltq. 34,300 as against Ltq. 7,000 in 1918.

Tithes.

The sale of tithes has increased to the very important figure of about Ltq. 150,000.

Monetary Situation.

The Ltq. is worth between 380 and 370 paper piastres. 20 piastres in Medjidie are worth 46 piastres in Treasury notes.

Adalia, July 31.

The intensification of commercial life is carrying with it as a logical consequence the necessity of establishing certain industries which already have shown themselves capable of, in fact, certain of, producing good results. Such industries are glass, beer, the spinning of silk, the tanning of hides, the extraction of oil from sesame, etc. The movement is actually more important for imports than for exports. So far, certain events in the Ottoman Empire, especially in the vilayet of Aidin, have partially paralysed the commerce of our town, everyone choosing rather to wait than to run risks. The fear of unfavourable events (possibly imaginary), the continual fluctuations in the prices of new goods, and the order of the Minister at Constantinople which prohibits the foreigner to export corn and flour, have all helped to disorder the commerce of our district.

In spite of this state of affairs, the greater part of the goods imported since the armistice have been paid for in ready cash.

What is necessary in our opinion to get British and French goods sold is:—

1. That prices be not competitive at the start, so as to accustom the commercial world as well as the populace to prefer these goods to all others, and so to lose the idea engrained in business men here that the British and French markets are inaccessible.
2. To create depots of all articles that have not actually been imported, such as clothing, lingerie, hosiery, lace, shoes, toys, liqueurs, wines, musical instruments, pianos, pharmaceutical products, etc.
3. To allow a personnel, not too numerous, to accompany these wares.
4. To obtain steamers from the respective Governments to avoid freight expenses from the West.
5. To buy in exchange goods from our district and to sell them in the markets of Britain and France.

NOTES OF THE WEEK.

Last Friday the draft Treaty containing the peace terms offered by the Allies to Bulgaria was presented to the Bulgarian delegates, who are allowed a period of twenty-five days in which to make observations. M. Theodoroff, who received the draft from M. Clemenceau, made a speech, in which he protested that the Bulgarian people were innocent, though their Government had been guilty; and the ceremony, which had been very brief, then closed. The terms of the Treaty are discussed in our leading article.

Direct news from Roumania is so scarce as to give rise to a doubt whether the blockade imposed on that country affects the news service. If, however, the *Echo de Paris* is correctly informed, the Roumanian Government, which is "carrying on" until its successor is ready to take up the burden, will give all possible satisfaction to the demands of the Allies. Roumania is prepared to recall her troops from Budapest, to help the Powers in maintaining order in Hungary, and to submit an inventory of the war material and rolling stock seized by her in Hungary, and regarding the fate of which Paris has shown so much solicitude. This surely is a frame of mind of which the Olympians must approve; and if it has been produced by Sir George Clerk's handling of affairs—as seems to be the case— it would seem that the messenger was more tactful than those who sent him to Bucharest.

At the time of writing Yugoslavia is still in the unfortunate position of having no Cabinet, though it is hoped that the return from Paris of M. Pashitch and Dr. Trumbitch may result in the negotiations which are now in progress being brought to a successful conclusion very shortly. Clearly, the people are tired of all the manœuvring for party advantages that has been going on; they feel that they have done everything in their power for their country, and that it is high time the politicians followed their example. What they desire is to see the early election of the Constituent Assembly, followed by the General Election. It is a thousand pities that the Davidovitch Cabinet was unable to pass the Bill which must be the first step towards the fulfilment of this programme.

Possibly the extraordinary developments at Fiume may serve to make the Yugoslav politicians realise that indulging in the game of ins and outs at the present time is not unlike playing with fire in a powder magazine. Signor d'Annunzio has been describing himself as the "master of Fiume," and declaring that his "daring knows no bounds," and we must, therefore, conclude that he is entirely satisfied with himself and his exploit. Outsiders can hardly bring themselves to regard either quite seriously yet; but he has caused the Italian Government very real embarrassment, and it is obvious that the situation is fraught with danger. The Allied Powers appear to be withdrawing their troops from the town in all haste, evidently with a view to minimising the risk of an explosion. Fortunately, the Italian public is taking a fairly level-headed view of the situation, but there are indications that Signor Nitti's political rivals intend to turn it to their own advantage by hook or by crook. Meanwhile President Wilson is reported to be unwilling to say anything definite regarding the proposed settlement of the Fiume dispute so long as Signor d'Annunzio continues to "occupy" the town with his following of mutineers.

Presiding at the dinner given last week by the Government to H.H. Firooz Mirza, the Persian Foreign Minister, Lord Curzon made a notable speech upon Anglo-Persian relations, with especial regard to the recent Agreement. He reminded his hearers that during the past 120 years Persia's relations with Great Britain had been closer than with any other Power, and that they had grown still more intimate during the war. He then went on to say that he regarded the Anglo-Russian Agreement—of which he had never been an admirer—as dead; he emphasised this country's sincere desire to see a strong and independent Persia; and he concluded by declaring that Great Britain and Persia were jointly prepared to defend the Anglo-Persian Agreement, and looked forward to the vindication of its real character by its success. In responding, the Persian Foreign Minister paid a high compliment to the constancy with which the British Government had supported the Persian nation in its struggle for freedom and progress, and expressed his confidence that England would continue to follow the same policy. He also referred pointedly to certain "inaccurate interpretations" that had been given to the recent Agreement, and repeated what Lord Curzon had already said—that the text of the Agreement will eventually be laid before the League of Nations. It is to be hoped that these declarations will be noted by self-appointed critics of the Agreement.

A semi-official statement issued in the latter part of last week announced that a British Mission which had been dispatched to the Imam of Yemen had fallen into the hands of some independent Arabs at Bajil, a little town some thirty-two miles from Hodeida, on the road to Sanaa. The announcement also referred to fighting that had taken place at Hodeida, but only for the

Digitized by Google

purpose of adding that "the reinforcements which were sent immediately must by now have reached the port and should have made everything secure." In the same optimistic vein it was announced that the release of the British Mission was probable. The capture appears to have been effected by some of the ever-restless maritime tribes, with a view to being in a position to put pressure on the Imam, with whom the captors are at feud; and though they have threatened to kill their captives, they are most unlikely to carry their threat into execution; for the Arab, though he may kill in hot blood, is averse from taking life under other conditions. It is, however, not a little remarkable that in view of the recent trouble at Hodeida and the notoriously unsettled character of this particular region, a British Mission should have been sent through notoriously lawless country without an adequate escort.

The composition of the Special Mission which, under the presidency of Lord Milner, is to go out to Egypt for the purpose of inquiring into the causes of the late disturbances, and to report on the present situation and the form of constitution best suited to the country, is now announced. Besides the Chairman, the Commission will consist of General Sir J. G. Maxwell, Sir Rennell Rodd, Brigadier-General Sir Owen Thomas, M.P., Mr. J. A. Spender, and Mr. C. J. B. Hurst, while Mr. A. T. Loyd will act as secretary and Mr. E. M. B. Ingram as assistant secretary. Lord Milner could wish for no better man at his right hand than General Maxwell, who is assured, also, of a good reception in Egypt from natives no less than from Europeans. Perhaps the inclusion of one member with Indian experience would have strengthened the Commission. The situation in India has many similarities in essentials to that in Egypt, and it is possible to argue that a first-hand knowledge of recent successes—and mistakes—in handling Indian problems would have been as valuable to the Commission as other qualifications.

The breach between Zaghloul Pasha and a very considerable number of his followers appears to be widening steadily. The Cairo correspondent of *The Times* reports that Sidky Pasha and another prominent member, who have returned to Egypt, have been, in effect, officially disowned at the Zaghloulite headquarters. At all events, it is announced that they "no longer form part of the delegation" to Paris; and the defection of sixty others, we are told definitely, will shortly be announced. The most interesting point about these quarrels is that they should have arisen, as seems to be the case, over the question of the delegation coming on to London or continuing its present tactics in Paris. The dissidents favoured the former course, but Zaghloul, with an obstinacy that is no new feature of his character, refused his consent. While it is unlikely that the "delegation" would have been afforded any official recognition in London, it is at least possible that unofficially it might have accomplished some good, if only in the way of enabling its members to grasp the realities of the situation. Indeed, the recognition that it is to London rather than to any other point outside Egypt that the Egyptians must look for help and genuine sympathy argues that some members of the delegation are slowly awaking to the true facts.

To the more reasonable of the "Nationalists" and the Zaghloulites we would recommend the careful consideration of a letter on the subject of British rule in Egypt, written to *The Times* by Mr. William D. McCrackan, Vice-President of the Anglo-American Society of America. Since the extremists have been, and to a certain extent still are, pinning their hopes of "independence" upon America, the fact that Mr. McCrackan is an American should lend his letter particular value in their eyes, and to this may be added the fact that his acquaintance with Egypt dates back ten years. His object, he says frankly, is "to pay a tribute to the good accomplished by British rule" in Egypt, which rule "is occupied in preserving order for the benefit of all concerned." His remark that "a garbled report of the Committee of Foreign Relations of the American Senate has been going the rounds of the Press here [Egypt], and has been used by Nationalist agitators to misrepresent American sentiment," should be carefully considered by those who are likely to be misled by such doctored reports. His opinion that "the sentiment of gratitude seems to be entirely absent from the native mind" may also be worth pondering by the Zaghloulites, as coming from one who cannot well be charged with having any ulterior motive in putting forward such views.

The Indian politicians now in this country appear to be able to do without a holiday, and they have been spending the period of the recess taken by the members of the Joint Committee in a carefully planned propaganda directed to the widening of the official proposals for reform. A clear statement of the Moderates' wishes in this matter was given last week by Mr. Chintamani in a long letter to *The Times*, the contents of which adhered closely to the accepted formula—Take all that is offered and ask for a good deal more. Its practical interest lies for the moment in the reply which it elicited from Sir Archdale Earle, urging two further concessions, the immediate introduction of a measure of "responsibility" into the central government, and increased influence in the determination of the fiscal policy of the country. Sir Archdale, of course, speaks only for himself, but we gather that there is a certain drift of opinion in the direction indicated by him. Sir James Brunyate, in his minute on the reform of the India Office, has already indicated the lines of a possible dyarchy at headquarters, while it is widely recognised that increased powers in the matter of tariffs would do more than anything else to "grease the wheels" of the new machine, which will certainly need all the grease that can be got.

Whether this drift of opinion will affect the conclusions of the Joint Committee is, of course, an entirely different question. It was mainly in regard to the Central Government that Lord Chelmsford and Mr. Montagu stiffened their backs. "We have carried," they wrote, "the advance right up to the line beyond which our principles forbid us to go," and they even went so far as to counter the impatience of the politicians by quoting a somewhat hackneyed Persian proverb. Mr. Montagu may, of course, change his mind, and he may carry the Committee with him, but the words we have quoted show that with him it is a matter of principle rather than expediency, and it is not always easy to adapt principles to the changing facts of politics. The situation is, at any rate, interesting, and we shall not attempt to forecast its development; but it is only fair to say that the "Moderates" appear to be playing their hand with considerable skill, and that the existing atmosphere is of the kind where principles look rather fluid, and sharp edges tend to disappear.

The official announcement of the appointment of the Committee to examine the procedure of the Indian secretariats will have served to disillusion some of our contemporaries, who had previously described Sir Hubert Llewellyn Smith's mission as directed to the reform of the Government of India. The Committee have not to face that particular task, but their work is nevertheless important The technique of the Indian secretariats is far ahead of anything that can be seen in this country, in the sense that it ensures the presence of all relevant information before any question is decided: its weakness lies partly in the time which it consumes and partly in the fact that newly arrived Viceroys and other inexperienced persons are rather apt to be overwhelmed by the mass of data which it produces on any given topic. It needs to be speeded up, and possibly simplified—particularly for the benefit of Indian Ministers, who will usually assume office with little knowledge of its working, and we hope the Committee will be able to secure this result, though we confess to a certain sentimental admiration for a system which is so distinctively Indian, and which has been aptly compared to the elephant of the country—capable of any task but absolutely refusing to be hurried.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 11.

The two important events of the week are the departure of the Special High Commissioner and the attempt on the life of the Prime Minister, Mohammed Pasha Said. Viscount Allenby is expected back in Egypt early in October, in which month the Milner Commisson is due to arrive here.

With regard to the latter I find in Egyptian circles, among the more instructed members thereof, the feeling that as that Commission is not only to inquire into the causes of the recent disturbances, but also to formulate proposals for the form which the British Protectorate is to take and the Constitutional reforms which are to be introduced, it would be advisable for it to postpone its arrival in Egypt until after the Peace terms with Turkey have been settled and the Turkish overlordship over Egypt, such as it was, has been definitely done away with. They admit that the Peace Treaty has already settled that Egypt is a British Protectorate; but they say that it will be easier for them to discuss matters with the Commission, and that more Egyptians will be prepared to come forward with evidence, etc., if what appears to them to be an obstacle to their collaboration in the matter has previously been removed. This is a point of view which is interesting; it serves, moreover, to emphasise the mistake made in not settling the Peace terms with Turkey before the dividing up of the Ottoman Empire was embarked on.

The Attempt on the Prime Minister.

The attempt on the life of Mohammed Pasha Said took place on the morning of the 2nd instant. As the Prime Minister, who was driving as usual from his house to the Government Offices, passed the Gianaclis Station on the Ramleh tram line, a man suddenly threw a package at the car. The missile hit the window and fell to the ground, when a terrific explosion was heard. The Prime Minister continued on his way, and the man was arrested. Examination of the ground showed that the bomb had been concealed in a basket of grapes, and there is no doubt that the fortunate circumstance of the window of the car being shut saved the Prime Minister from certain death; for otherwise the bomb, which was very well aimed, would have fallen inside the car and would have exploded there.

The news of the attempt was quickly known in town —the explosion was distinctly heard at the Residency, three stations further on—and notables immediately flocked to the Government offices to offer their congratulations to the Prime Minister, who proceeded to transact the business of the day just as if nothing had happened. (When I saw Said Pasha an hour afterwards one would never have known from his behaviour that he had just narrowly escaped a terrible death.) The Sultan and Viscount Allenby were amongst the first to convey their congratulations to the Prime Minister, and in the afternoon the Sultan drove out from Ras el-Tin to call on him. Throughout the day, and, in fact, during the whole of the feast of Bairam, the road to his house has been thronged with motor-cars and carriages, and deputations have come up from all parts of the country to assure the Prime Minister of the public sympathy.

The assailant is a young student of the "Maahad," one of the religious institutions in Alexandria, and is of the same *exalté* type as Ibrahim Wardani, the assassin of Boutros Pasha Ghali. At first he refused to give any information, but later on he gave the names of several persons, who have all been brought to the Parquet, and three of whom have been kept under arrest (at the house of one of these people two other bombs were found) Exactly what the ramifications of this attempt are it is not possible to say at the present juncture, especially as the inquiry is being conducted very secretly: but it seems clear that it was not the sole work of this man, and that he was assisted, if not actually inspired, by others. Whether the Extremist party has had a direct hand in this attempt remains to be seen, but that it is morally responsible for it there can be no doubt.

The Removal of the Censorship.

Indeed, in this respect the removal of the censorship has been no unmixed blessing. For us foreign correspondents the disappearance of these restrictions has, of course, been a tremendous relief; but there is no doubt that the licence allowed to the local, particularly to a section of the vernacular, Press has been taken advantage of to an extent which, far from bringing about that calming of public feeling which is so necessary at the present moment, in view of the grave political, industrial, and economic problems confronting Egypt, is inciting the general public in a manner that has rarely been seen in this country. Had the censorship been in existence we should not, amongst other things, have had the stupid incident connected with Zaghlul Pasha's telegram on the subject of the declaration of the Committee of Foreign Affairs of the American Senate. Three months ago his telegram would have been held up, and quite rightly too, until official confirmation had been obtained; and in this case, since inquiry would have proved its complete inaccuracy, it would never have got outside the Censor's room. As it is, the publication of the telegram gave rise to tremendous excitement, as reported in last week's letter, and the American Agent had to issue an official *dementi*. The mischief had, however, been done already. The official contradiction has, indeed, had no effect except to make the *Intellicentsia* believe that the news was true after all, but that Great Britain persuaded the American Government to over-rule the decision. It does not appear to have discredited Zaghlul Pasha, to whom funds are still being sent, though it is to be hoped that the publication in Europe of the details of this incident will make those who have so far been inclined to sympathise with his cause less ready to credit all his statements as to British misrule in Egypt and the conditions and desires of his compatriots.

The Strikes.

There is no improvement in the industrial position. The strike of the Cairo Trams and Metropolitan Railway continues, and the men of the Alexandria Tramways have also gone out on strike. All efforts at compromise have proved unavailing, and the men, encouraged by the foreign element which has fostered the strikes and introduced Trade Unionism into Egypt, are becoming more exacting in their demands. The situation requires very firm handling, and action should certainly be taken in regard to this foreign element, which has used the present economic situation for its own ends. There are rumours of impending strikes amongst the artisans and labourers employed by the Government Departments. Every effort is being made to provide these men with the extra pay required to meet the increased cost of living; but these efforts will be unavailing in bringing about a cessation of the troubles unless very energetic action is taken in regard to those who are encouraging the men in persisting in impossible demands.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, September 11.

The Political Situation.

Amidst the rumours which surround and becloud the political situation to-day, two facts stand out clearly. They are: first, that the Roumanian delegates at St. Germain, in company with the Yugoslavs, have refused to sign the treaty with Austria, and second, that M. Bratiano has definitely communicated to the King his intention of resigning. The fact that the Roumanian delegates have not signed the treaty is a surprise to nobody, and it was fully expected, after their formal request to be allowed to sign "with reservations" met with the refusal of the Supreme Council, that they would absent themselves from the ceremony.

The resignation of the Government coincides, as was foreseen, with the signing of the Austrian treaty, and will probably be accepted by King Ferdinand. No doubt by the time this letter reaches London a new Government will have been formed, but the situation at the time of writing is chaotic. The inevitable mud-slinging campaign is being carried on by the Press, the Opposition accusing M. Bratiano of having brought the country to its present difficult and somewhat humiliating position by neglecting to look after Roumania's interests at the Peace table. The Liberals, on the other hand, deploring the unreasonable and unbending attitude taken by the Allies on the questions of the protection of minorities and free transport, point out the impossibility of the treaty being signed in its present form; and accuse the Opposition of fanning an anti-patriotic spark and aiding those who wish to thwart Roumania's rights, and leave the matter there, without suggesting a solution of the difficulty. The Government, having no further policy, resigns on a platform of which it obviously intends to make good future use.

The Opposition—under the leadership of M. Take Jonescu and General Averescu—faced with the possibility of having to find a way out of the present deadlock by adopting a more compromising and less chauvinistic attitude, are naturally averse to the Liberal Party making political capital out of the present position, and therefore label the Government as incompetent and responsible for the existing *impasse* through lack of statesmanship and diplomacy, and dilate upon the difficulties confronting the next Government in smoothing the way to an acceptable settlement of the present grave differences with the Allies. The name of M. Maniu, President of the Directing Committee of Transylvania, is being mentioned in connection with the change of Government, and he is said to have been requested to try to form a new Cabinet, which would probably be a temporary one, existing merely for the purpose of signing the treaty. It is hardly likely that he will do so, in view of the possible loss of prestige which he would suffer in Transylvania if he, of all men, should affix his signature to a treaty renouncing the Torontal district of the Banat. In a national Government his responsibility would be much lessened. In the circumstances a transitory Government may be formed—possibly under the leadership of a non-politician recommended by the Liberals—a solution which would enable the Liberals to retain control of the Governmental strings.

The U.S. and Roumania.

The proposal of the United States' delegate at the Peace Conference that a naval demonstration in the Black Sea would persuade Roumania to make up her mind to sign the treaty was caustically commented upon by the Press here. *L'Indépendence Roumaine*, the inspired Government organ, says:—"The American proposition constitutes a curious innovation in the contemporary policy of the United States. It lays bare the weakness of the arguments used by Mr. Wilson's representative with regard to Roumania, and demonstrates the lack of justice which is the basis of the conditions that are being imposed upon her. For the American diplomatist to have dreamt of the employment of force it must have been obvious to him that he no longer had right on his side. This is a method which the Allies have, up to the present, condemned, because it was practised by their enemies to the detriment of the rights of the peoples of Europe."

CYPRUS NOTES.

(From a Correspondent.)

Forest Fire.

A disastrous forest fire broke out on the night of August 18 in the Tylliria district, north of Troodos. Numbers of visitors at the summer-quarters went to various points to watch the conflagration, the glare being visible over a wide area. The Principal Forest Officer, Mr. A. K. Bovill, at once proceeded to the spot, and took all possible measures. About 1,500 men were engaged in fighting the flames. This is one of the most serious and extensive forest fires that has occurred for many years in Cyprus, and the loss will be very considerable. There is reason to believe that it was caused maliciously, as is only too often the case. Several days passed before it was extinguished.

Small-pox Epidemic.

The small-pox epidemic has caused widespread panic. Two more villages have been declared infected, fresh cases occurring at Mandria, also on the main road to Limassol. All cases have to be removed to an infectious disease hospital. Many persons are hastening to be vaccinated. The papers call upon the Government to send lay-vaccinators to the localities. Great inconvenience is caused, as Platres is now the rendezvous for many meetings, not only of pleasure but of business. Directions have been given that the annual summer fair at the Trooditissa Monastery, which attracts many persons, cannot be held.

Aliens' Bill.

The Acting High Commissioner summoned a special meeting of the Legislative Council on August 30, the chief matter for discussion being the draft Aliens Law, which provides that no person from the four late enemy countries may land in Cyprus for three years without authority from the Government, under penalty of £50 fine, or imprisonment, or both.

The Future of the Island.

The Greek papers, discussing "the exact political position," state that the critical moment has now arrived, since the Cyprus question will soon be placed before the British House of Commons. Admitting that many politicians are strongly opposed to cession, they nevertheless believe in a sympathetic solution, as otherwise the matter would not be brought before the House. A leading local paper in a long article says that as regards the strategic value of Cyprus, Britain can be satisfied by the possession of a harbour and aerodrome, and it offers advice to the Premier. "What Mr. Lloyd George has to say to the House of Commons is very simple. It is this: The cession of Cyprus to Greece strengthens and increases the honour and greatness of England, whereas the retention of the island would lower English reputation, would tarnish her liberal traditions, and would be a reproach and disgrace to Great Britain." The Turkish community feel quite confident that their cause is in safe keeping, and have moreover been encouraged by strong assurances to that effect from England.

Press Restrictions.

The Press is protesting very naturally against the order which still prohibits the despatch of newspapers from the island. This muzzling is really no longer justifiable, Cyprus being probably the only place in the world where such a restriction is deemed necessary so long after war has ceased. Even during the war the regulation seemed hardly called for, seeing that a strict censorship was exercised; but it is now preposterous that the interests of responsible proprietors and editors should suffer, as they undoubtedly do. They will probably combine in presenting a strong remonstrance to the Government.

Miscellaneous.

An Order in Council appropriates the sum of £950 from the Locust Fund, the half to be applied to the Famagusta harbour and half to the Government railway. The latter is a great boon to travellers landing in the east of the island and proceeding to Mt. Troodos. It runs from Famagusta and Nicosia through the central plain to the village of Evrikou, the present terminus.

Quarantine regulations (medical inspection and disinfection of third-class passengers' effects) are still imposed against Egypt on account of plague, and against Syria and Asia Minor on account of plague and cholera.

The Kurban Bairam is being quietly celebrated in Nicosia and the Moslem centres.

The Nicosia Winter Race Meeting has been fixed for November 22 and 24.

BELGRADE LETTER.

(From Our Own Correspondent.)

Belgrade, September 1.

Serbia and the Treaty.

In the midst of the throes of domestic political squabbles, when people were preparing themselves for a general election as the only possible escape from the present *impasse* of two evenly-balanced political groups, the country was suddenly brought to its senses by a severe shock. The peace treaty with Austria was put before its delegates in Paris, with the request for immediate signature. The delegates protested that they had not been consulted in the drafting of the treaty, in which they were so deeply interested, and declared that they could not accept the responsibility, especially as there is an objectionable clause, No. 51, dealing with the protection of minorities. The Serbs at once saw in this a direct attack upon their sovereign rights as a nation, and felt deeply hurt. It will doubtless be remembered that when Austria sent in that terrible ultimatum five years ago, in order to force war upon the country, Serbia gave way to all the unprecedented demands, in her desire for peace, but could not abrogate her sovereign rights and allow a foreign power to dismiss her judges and officers, nor interfere in such purely domestic matters, in which the Serbian Government alone has voice. Rather than yield she faced the trial of war, exhausted as she was by the two Balkan wars, and in spite of the terrible odds. So much does this high-spirited people value its own tradition of complete independence. That a demand for interference in her purely domestic and interior matters should come from her great Allies, who have shown their good disposition towards them, the Serbs cannot understand. They think it must be due to that ignorance of Balkan affairs for which the west of Europe is notorious, and not to any ill-disposition towards them.

Directly the news was received the Government consulted with the leaders of the other parties, putting aside their differences for a moment in the face of the external trouble, and they decided that to sign would mean the abrogation of the sovereign rights over their own subjects, rights which they had won from the Turks on the field of battle over a hundred years ago, and the surrender of the freedom for which they had fought so hard and so long, to some international tribunal, of which Italy, admittedly hostile, would be one of the judges. No Serb would dare put his signature to such a treaty; if he did, he would be hounded from the country amid the execration of his people, and branded a traitor, if worse did not befall him. There was no alternative for the Government, and on September 12 Dr. Davidovitch tendered his resignation to the Regent on the grounds that the treaty contained clauses damaging their national sovereignty as a State without reciprocity, and threatening their peaceful development in the future. The Prince accepted his resignation.

In conversation all Serbs take the matter very seriously. They cannot understand why the Olympians did not take their delegates into their confidence, or at least consult them, in the drafting of clauses which are so vital to them, and they can hardly be blamed if in this they see the hand of Italy. They admit that such clauses, which are destined to afford protection to minorities, are justifiable in the cases of new States, such as Poland and Czecho-Slovakia, for whom the treaty is a birth certificate, and, too, even in the case of their new provinces: but surely, they argue, the Powers forget that Serbia is a free and independent State, that won her own freedom with the sword a century ago, not only without any help from the Powers, but in the teeth of every discouragement from them--for in those days even England supported the Turk in her old Russophobe policy—they forget that Serbia is an ally, and a true and loyal one, who has never listened to the repeated cajolery of the enemy who tried to seduce her from her allegiance in the darkest days of their exile.

Besides, even her enemies have never been able to reproach Serbia with her treatment of minorities. When Roumania invited the numerous Vlachs living in the eastern provinces to migrate to their motherland, few or none went, for they were happy and prosperous, enjoying full rights of citizenship, and they preferred remaining free Serbians, if not Serb in blood, to crossing the Danube. Neither Turks, Albanians, nor Jews have ever had any cause of complaint, and the great majority of Jews in Belgrade to-day call themselves Serbs first and Jews afterwards. Otherwise, why did so many flee to Salonika? Besides, they ask pertinently, among the Powers that will "protect" the minorities in Serbia will be Italy; but who will protect the half million or thereabouts of Yugoslavs who are allotted to Italy?

Why Serbia Objects.

It must not be thought that the Serbs are objecting on merely theoretical grounds, or that they are hypersensitive; it must be remembered that they are surrounded by jealous or hostile neighbours on every side. As the populations around them are mixed, it is inevitable that there shall be some minorities on each side of the line; by all means let there be protection of these minorities, but let it be reciprocal.

The demand for signature was put before the Serbian delegates almost in the form of an ultimatum; a telegram was received at Belgrade at 6 p.m., demanding a reply by midnight, which is physically impossible. The Government are not intransigent; they said they would sign and trust to the sense of justice and fairplay of the Allies for a modification of the obnoxious terms, such as the insertion of a reciprocity clause, or the specific elimination of the territories within the old frontiers, if that was indispensable to the vast interests involved in this very comprehensive peace. But the Government included only two parties, the Democrats and the Socialists, and for such a self-denying ordinance all parties must be associated together, otherwise those who signed would be for ever damned in the eyes of their countrymen. So a new Cabinet is being formed as rapidly as possible, to include every shade of opinion, to deal with this crisis, and then to carry out a general election. On Saturday the Regent sent for Dr. Pavlovitch, Speaker of the Skupshtina, and it is anticipated that a provisional coalition Cabinet will be formed as soon as Mr. Pashitch, Dr. Trumbitch, Minister for Foreign Affairs, and Dr. Smodlaka arrive from Paris for consultation. They have been summoned by telegram.

It is earnestly to be hoped that the Great Powers will realise what this means to Serbia and show a little flexibility; their treatment of our loyal and long-suffering ally is more like that meted out to a conquered country, and, after all, a very slight modification would meet the Serbs' very natural demands, either reciprocity, so that the kingdom of the S.H.S. has a voice in the protection of the half million Yugoslavs who are allotted to Italy, or the omission of the pre-war territories of Serbia from the operation of the clause.

Prolific Serbia.

The women of Serbia are doing their duty indeed, if many follow the example of a mother in southern Serbia who, a few days ago, gave birth to quadruplets, three boys and one girl, all of whom are normal and healthy children. This is just the right proportion of sexes for the needs of the country. It is interesting to note, as statistics have shown, that before the war Serbia was one of the few countries, if not the only country, in Europe where the proportion of males born exceeded that of the females.

A Montenegrin Incident.

The *Zelenshi* of Montenegro are reported to have recently murdered a fine old veteran, Serdar Jagosh Radovitch, a former member of the Montenegrin Senate, father of Andrija Radovitch, late President of Council at Cetinje and President of the Montenegrin Committee for National Union. The criminals attacked the old man in his own

home. He at once drew his sword, and rushed out to defend himself, when he fell mortally wounded under a perfect hail of bullets.

The Question of Communications.

The new Minister of Communications, Mr. Drashkovitch, has put energy into his task, the results of which are already visible. Train services are becoming more regular, in spite of the shortage of locomotives and great dearth of coal. The Save bridge has been almost complete for a long time, and should have been finished in July; but a strike at the Reshitsa Steelworks held things up, and then difficulties were involved when the demarcation line was drawn through the works. Now that district has been definitely allotted to Roumania, who will not allow the few steel structures remaining to be forwarded to Serbia. Through communication to Constantinople is paralysed by this action, and traffic in Serbia suffers for want of rolling stock, and above all, of locomotives, for there is a good quality available north of the river. If the remaining steel structures required to complete the bridge were delivered, the work could be finished in a week or two, and the country would at once feel an immense benefit, and it is thought that there would be a reduction in the high cost of living, which is at present crushing in Belgrade, and indeed throughout Serbia, which before the war was the cheapest country in Europe. It is to be hoped that success will reward Mr. Drashkovitch's efforts. His name is suggested as the new leader of the Democratic party, and possible President of Council, as Dr. Davidovitch is retiring from that onerous post.

The Regent has signed a decree authorising an eight-hour working day.

SERBIA AND MONTENEGRO.

The conception of a League of Nations has deserved to have more practical sponsors than the people who have fiddled with its constitution while Europe was burning. It savours of hypocrisy or muddleheadedness that the loudest supporters of the scheme should be devoting their efforts to proselytising on its behalf, when the real work of the Paris Conference is still unfinished, and in certain spheres shows no sign of having been begun. During the week two communications have been issued to the Press regarding Montenegro. One is from the Montenegrin Government, and runs:—"The rising of the Montenegrins against the Serbian troops, now in occupation of their country, is daily assuming greater proportions. . . . The rising has also commenced to spread in the Cattaro region, where the Montenegrins have in the course of a fierce encounter near Zelenika, killed some sixty Serbian soldiers." The Serbian *communiqué* begins: "All the statements and all the reports published on the so-called revolution in Montenegro are false. It is true there is in Montenegro a certain number of rebels who from time to time leave their refuges in the mountainous parts of the country in order to carry out raids. . . . The number of troops in Montenegrin territory is not more than 6,600, of whom three battalions have been recruited exclusively from the Montenegrins."

Quite apart from the question whether either or neither of these communications is correct, it is a disgrace to the Paris Conference that they should have been issued. Both Montenegro and Serbia have been our Allies in the war, and only ignorance and supineness on the part of the Supreme Council could have brought about the state of affairs now existing in Montenegro. Whichever version is accepted—Serbian or Montenegrin—it is obvious that things are not as they should be. Far too late in the day the Conference or the British Government sent Count de Salis to investigate conditions in Montenegro. His report, there is reason to believe, has already reached this country. It would be of interest to know whether any action has been taken upon it by the Allied Powers. Every day's delay means more lives lost in Montenegro, and yet President Wilson can complacently discuss the merits of the League of Nations when the whole spirit of the scheme is being outraged through the delay of the Supreme Council to do the work for which it was convened. What is happening to-day in Montenegro—whether Montenegrin or Serbian soldiers are being killed—will retard the settlement of the Balkans, for until the position is cleared up it must continue to grow worse. At least let Count de Salis's report be published. It is the work of someone who knows the country and is neither Montenegrin nor Serbian.

The Secretary of State for India announces that a grant of 60 days' after war leave has been sanctioned for officers on the Indian Establishment holding appointments in India or with Indian Expeditionary Forces, on vacation of which they would normally revert to unemployed pay or half-pay on ceasing to be employed. Full pay of the last appointment held will be admissible when it is available; otherwise the pay of the last substantive appointment which the officer has held. This decision has retrospective effect from January 1, 1909.

LETTER FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, August 18.

After-War Effects.

The calumnies spread by Bulgaria's neighbours regarding revolts, military concentrations, and so forth, and the false rumours spread by their agents about the intention of Paris to strip Bulgaria of her present territories, have resulted in the rapid depreciation of the Bulgarian *leva*, and an enormous rise in the price of articles of first necessity, which are being bought up by speculators who hope to make exorbitant profits. The cost of living has consequently become so high that both in Sofia and in various towns throughout the country national committees have been organised for the purpose of counteracting these evils. On August 11, Sofia's National Committee elected three members as delegates to petition the Cabinet to take temporary measures, in accordance with Article 47 of the Constitution, for the restriction of speculation and contraband, and to counteract the dearth. The institution of a special and exclusive tribunal is demanded, to impose heavy fines, to confiscate all contraband goods, and, in extreme cases, to impose the penalty of hanging. There is also some talk of lynching.

Socialists and Communists.

Last Thursday, M. Pastouchoff, the leader of the Moderate Socialists, and present Minister of the Interior, gave his last pre-electoral address in the large hall of the Municipal Casino, which was filled to overflowing. In the course of his long speech, he declared: "Our policy rests upon the Monroe Doctrine: the Balkans for the Balkan people. It rests upon a harmonious understanding in the Balkans." He then turned to criticism of the Extreme Socialists, or Communists, and Anarchists. These folk were, he said, eternally talking of revolution, and of wading to power through blood, and taking over the government of the country; but he would sooner believe that the moon would come down to the earth than that they could succeed in such a way. The Extreme Socialists, he said, were constantly talking of the rolling in the dust of heads, especially of that of the Minister of the Interior. "I do not fear for my head," he added, "but I shall not surrender it voluntarily; and I tell these people that every attempt at anarchy and disorder will be dealt with with the utmost severity."

A Short-Lived Soviet.

In the town of Yamboli the Communists, who make up a considerable group, dispose of large funds, which are undoubtedly supplied by Bolshevist agents; and lately they felt that they must do something to justify the payment of these sums. Accordingly, by the distribution of a good deal of money and quantities of alcoholic drink, they succeeded in debauching the soldiers of the local garrison. When the drink had done its work, the latter arrested their Commanding Officer, and in the evening allowed the Communists to take possession of the post and telegraph offices, and some other Government offices, and to turn out the officials. During the night, however, when their drunkenness had passed away, they returned to their barracks, released their officers, and, professing sincere repentance of their disgraceful behaviour, implored forgiveness for what they had done. Immediately afterwards they went to the residences of the evicted State officials, and, conducting them back to their offices, asked them to resume their duties. Meanwhile the Communist rioters had been arrested, for trial by the military tribunals. And thus, after two brief hours of more or less glorious life, the first Soviet Republic in Bulgaria came to an end.

Communist Efforts.

The Extreme Socialists had made preparations for a grand Field Day on July 27, when they had planned to pour out an ocean of electoral eloquence, which was to be accompanied by riotous manifestations throughout the

city. The disorderly elements of the poorer districts were stirred up, and instigated to make preparations—in the form of sacks for loot, and so forth—in order to be ready at a given signal to pillage the houses of the hated *bourgeoisie*. The police authorities and General Nedelkoff were, however, not to be caught napping. They took precautionary measures, and the General summoned the Extreme Socialists' leaders and told them bluntly that he would not tolerate any disorders of any kind. He also pointed out to them that his troops were so placed as to be ready for all emergencies, and that their club building, by the Lions' Bridge, could in a very few minutes be reduced to ruins. As a result of these measures, the fateful day passed away peacefully.

Last Saturday morning 500 labourers of the Pernik Coalfields, all of them Communists, struck. Being supplied with hand grenades, they seized a railway train and travelled to the railhead at Sofia. The military authorities were forewarned of this act, and early in the morning they despatched to the station a cavalry regiment, which stopped the train, disarmed the rioters, and immediately sent them back to Pernik. They were there arrested, and in due course will be delivered up for court-martial. In the provinces most of the Communists' attempts at rioting have been spontaneously suppressed by the population, and the rioters have been lynched.

The Parliamentary Elections.

Yesterday the Parliamentary elections were held throughout the kingdom of Bulgaria. Thanks to the efficacious measures taken by the civil and military authorities, the day passed, as was anticipated, quietly and without incident. Owing to the harvest time, most of the peasants were engaged on their fields, so that whereas 60 is the usual percentage of this class of voter, only 40 per cent. voted yesterday. The final results are as yet unknown. Here at Sofia the results are as follows:—The National Party, whose leader is M. Theodor Theodroff, 6,370 votes; the Extreme Socialists, 4,380 votes; the Democrats, 3,350 votes; the Moderate Socialists, 3,380 votes; the Stambolovists, M. Dobri Petroff's and Dr. Gateff's group, 900 votes; and the Radicals, 500 votes. Dr. N. Genadieff, M. Radoslavoff, and M. Toncheff's party obtained very few votes. The Agrarians had no candidates here, but in the provinces they have an overwhelming majority. The *bourgeois*, the Narodniaks, and the Democrats will be fairly represented in the Chamber. The future Cabinet will again be a Coalition one, composed of the Left and the *bourgeois* parties.

SNAPSHOTS FROM SYRIA.—II.*

"AN ILL WIND."

By "Cactus."

The visitor to the Jordan Valley, as he emerges from the last steep winding descent from Talaat-ed-Dum, on the Jerusalem-Jericho road, into the valley, cannot fail to be impressed by the panorama which bursts upon him as he turns the last corner from the sun-baked rocky defile that the road has followed for the past ten miles. To his right and below him—for there are still some hundred feet of descent to be made—lies the silver sheet of the Dead Sea, surrounded by black forbidding mountains which open out at its northern end and enclose a natural amphitheatre some fifteen miles across. To the right front the Jordan threads its tortuous way across this amphitheatre to empty itself into the Dead Sea. Its course is traced by the green scrub which borders its banks and those of the wadis which feed it. Beyond are the hills at the summit of which lies Es Salt. In the immediate foreground lies modern Jericho, a veritable oasis surrounded by its gardens and trees, fed by the spring which tradition states King Solomon presented to the Queen of Sheba. At the west of the town lies a mound, the ancient site of the city, and as the gaze travels round it meets the mountain range which forms the western bastion of the amphitheatre.

The highest and most forbidding pinnacle of this range is the "Mount of Temptation," and clinging to its sheer face is a monastery. From this distance it appears to the traveller more like a child's toy castle pasted on to the bluff than a human habitation. If the visitor is in a car, and follows the road into Jericho, out by the western exit past the ancient site, and over the foothills by a newly-made road, he will find himself in a garden belonging to the monks of this monastery, a terraced orange grove situated at the very foot of the mount and irrigated by water brought by a cut from a spring some two miles distant. Leaving with regret the cool shade of the garden and his car, he must now walk up the zigzag track leading to the monastery; and a hot climb it is at any time of the day.

Arrived at last at a level stretch some three parts of the way up, he will find himself at a massive stone gateway, and upon being admitted, will be ushered by a monk up a broad stone stairway on to a terrace open to the sky. On the left is a row of cells built on the very edge of the bluff, with balconies overhanging the ravine below; and it is this row of cells that has given the traveller the idea of a child's castle from the valley below. On the right are the storerooms, the refectory, and last of all, the chapel, all hewn out of the solid rock. Passing out by a gate at the far end of the terrace, the visitor is conducted up a further zigzag path on to the summit, where the monks are building a new chapel. It is part of the penance of these monks that each should carry up one big stone each day, and it must have been a sad blow to them when a misdirected shell from the Turkish "Long Jane," aimed at some encampment in the valley below, played havoc with their growing walls.

If the visitor climbs on to the flat roof of the one completed building he will be rewarded with a view well worth his climb. From an aeroplane only could one get a better panorama of the Jericho Valley and the surrounding country: to the south the Mount of Olives, marked by the German and Russian Hospices; to the east the Es Salt range; to the north the mountains of Samaria; and far to the north-west can be discerned Mount Carmel, ninety miles away. The Jericho Valley during the day lies under a pall of dust and heat haze, but towards evening the observation of the Jordan and the country to the east of it becomes perfect.

During the period of stationary warfare following the capture of Jerusalem and Jericho the British line, with the exception of bridgeheads at Hajla and the Aujah, followed the west bank of the Jordan from the Dead Sea to the Aujah Wadi, thence turned westwards to the sea just north of Jaffa. Naturally, with the possibilities for observation from the Mount of Temptation arose also the possibilities of enemy agents signalling across the valley to the Turks on the opposite hills; and the occupants of the monastery did not escape suspicion. Many were the reports from the front line of signalling at night from the monastery; but surprise raids effected no result. Indeed it was more than likely that the signalling, if any, came from the mountain top, whence escape was easy by way of the many mountain tracks. For the last few months previous to Allenby's attack it was most urgent that no inkling of the movement of our troops should leak through to the enemy. All movements of troops into the valley were carried out by day, those out of the valley by night. Dummy camps and horse lines were erected and everything that was possible was done to persuade the Turk that the attack was coming towards Es Salt; while in reality Allenby at the last moment moved his cavalry across to the coast. The presence of Bedouin encampments (practically in the front line) and the broken nature of the ground increased the danger of spies passing through our lines. This, coupled with persistent reports of signalling, determined the G.O.C. of that sector to apply for permission to evacuate all civilians, including the inhabitants of the monastery, to Jerusalem. Permission having been accorded, plans were made for a sudden raid at 3 a.m. on a fixed date. Wagons were ordered, and all the civilians were to be taken to Jericho, put on lorries, and sent up the hill to a concentration camp at Jerusalem.

The day arrived, and everything worked out "according to plan." The headquarters of a certain division had taken up its abode in the gardens of the monastery, and many of the officers were in the habit of paying visits to the monks, who had always been most hospitable. It was with certain misgivings, therefore, that the A.P.M. climbed up to the monastery that early morning armed with his order of eviction. However, it had to be done, and really in his heart of hearts he was glad to be rid of them, as he was sick to death of weary night journeyings after imaginary signalling parties and the resultant leg-pulls of his mess-mates. That evening in mess a brother officer asked if the Reverend Fathers had expressed any resentment at being evicted. "Resentment!" said he. "Good Lord, no! They were as happy as schoolboys. Why, they'd been sent here as punishment, and some of the old boys hadn't seen Jerusalem for over twenty years!"

NEAR EAST BOOKSHELF.

THE JEWISH NATIONAL MOVEMENT.†

In this essay we have an attempt by a very competent authority to justify the very peculiar position of Jews in this world as compared with various nationalities. "Jewry is regarded almost universally as a *tertium quid* between nationality and creed—and that particular *tertium quid* is not satisfactorily disposed of by the term race." The author observes that "the external world has never completely subscribed to the view that the Jewish people constitute merely an ecclesiastical denomination"—they are a "potential nationality." Zionism is an attempt to justify the position of "Jewish nationhood." The progressive growth of the Jewish national movement during the nineteenth century is sketched out, and Palestine is referred to as "a land of comfort for the storm-tossed of Jewry." The case is ably and persuasively put, but the difficulties of realising the ideal of a "Jewish state" are very great, especially in view of Mr. Balfour's reservation that "His Majesty's Government view with favour the establishment of a national home for the Jewish people, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of the existing non-Jewish communities in Palestine." It is extremely difficult to see how these ideas of a Jewish state can be consistent with this notable exception, "nothing which may prejudice the *civil* rights of non-Jews." The appendices are of considerable interest. One deals with the Jewish Commission which, under the able leadership of Professor Weizmann, visited the Holy Land in 1918; others with the Jewish University and kindred subjects. The whole pamphlet is well worth careful study.

THE FIGHTING FEMINIST.*

Early in 1917, when the misguided Russian soldier began to prefer fraternising to fighting, the world was startled to hear that a Woman's Battalion of Death had stepped into the breach in the attempt to shame the men. The gallant effort failed in the end, and many of the women volunteers narrowly escaped death from their own side; but few details of the formation of this legion have hitherto been made public. That is briefly the theme of this book. Yashka was a peasant woman, whose life both as daughter and wife was sufficiently miserable; in reading this autobiography the chief character seems to have stepped straight out of the pages of Dostoieffsky. The war, however, liberated her fiery patriotism; she enlisted as a man, by special permission of the Tsar, and later formed her own corps of women. From that time Yashka met almost incredible adventures, but the most interesting pages are those in which she recounts her persecution by the Bolsheviks, her hairbreadth escapes from the very jaws of death, even when condemned and carried out to execution in a field where were already hundreds of rotting corpses, some with their eyes torn out while still alive, mute witnesses of the barbarism which the defenders of Soviet rule attempt to palliate. This will be an uncomfortable book for the admirers of the Bolsheviks in this country to read; they can hardly impugn its witness. Nor will it do anything to raise Kerensky, that futile *poseur* who failed to follow Garibaldi, in public esteem. Kerensky could speak magnificently, but he never was able to act; Lenin, whatever else may be said about him, was no orator, but his actions left no room for doubt. Madame Yashka has produced one of the most remarkable autobiographies of modern times, instinct with life and action. It deserves, and will assuredly obtain, a wide measure of attention.

CORRESPONDENCE.

EX-KING CONSTANTINE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your impartiality, so well known to me as one of the oldest friends and readers of THE NEAR EAST, and the fact that a "non-Greek"—I mean the author of the article "Ex-King Constantine" in the issue of August 8—is desirous of solving "a so Greek a question" as the "return of the ex-King Constantine to Greece" encourages me to write a few words on the subject.

The question under discussion is a most interesting one, and I dare say many would like to get to the root of the matter. But don't you think that in order to do so more light should be thrown by the writer of the article on the question as to the true reason of the King's removal and what were the circumstances?—I am, etc.,

E. E.

August 30.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—There has been lengthy discussion on this subject, and it seems doubtful whether any new argument can be advanced by either side. But the Prime Minister, speaking in the House of Commons in July last on the Irish question, certainly hit the nail on the head. If in his speech, Cyprus be substituted for Ireland, it at once becomes apparent where the stumbling-block lies. The Prime Minister said, "The mere fact that it is one island is no proof that it is one nation." That is the reason why the Irish Convention failed. That is the reason why President Wilson's principles cannot be applied to Cyprus. The Greek Cypriotes desire self-determination for themselves, but have no scruples as regards depriving the Moslems of their say in the matter. —I am, etc.,

G. L. H.

Cyprus, September 5, 1919.

According to a Swedish report the Turkish Embassy in Stockholm is to be dissolved. If the report is correct Turkey is to be represented in future in Sweden by a Consul-General.

After visiting Paris and London, the Shah of Persia will proceed to Brussels.

M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, has left London for Brighton.

M. Beza, Secretary to the Roumanian Legation, left London on September 23 for Bucharest.

The Gaekwar and Maharani of Baroda left Bombay on September 20 on a visit to this country.

General Storrs, Military Governor of Jerusalem, was received in audience by the Pope on September 21.

M. Alexander Cretziano, Secretary to the Roumanian Legation, arrived in London on September 22 from Paris.

Mr. and Mrs. Rudyard Kipling are the guests of Mrs. Low at Dalclathick Lodge, in the Royal Forest of Glenartney.

M. Pashitch, the President of the Yugoslav Delegation, and M. Trumbitch, the Yugoslav Foreign Minister, have left Paris for Belgrade.

The Persian Minister gave a luncheon party at the Legation on September 19 in honour of the Persian Minister for Foreign Affairs. Earl Curzon of Kedleston was present.

M. Eruslus Pilz, the newly-appointed Envoy Extraordinary and Minister Plenipotentiary of the Polish Republic, was received in audience by the Prince Regent at Belgrade on September 14.

The King received Field-Marshal Sir Edmund Allenby in audience on September 24, and handed to him a Field-Marshal's baton and invested him with the Insignia of a Knight Grand Cross of the Most Honourable Order of the Bath, Military Division.

The engagement is announced between Captain P. S. Clarke, M.C., second son of Mr. E. H. S. Clarke, C.S.I., C.I.E., and Mrs. Clarke, Kabul House, Bexhill-on-Sea, and Violet, elder daughter of Mr. and Mrs. Gresham Nicholson, The Links House, Bexhill-on-Sea.

A marriage has been arranged, and will shortly take place, between Ian St. Clare Stuart, only son of Mr. and Mrs. D. A. Stuart, of Egmore, Madras, and Nora, daughter of the late Colonel G. D. and Mrs. Stawell, of Hill End Grove, Henbury, Gloucestershire.

An engagement is announced between Captain H. T. W. Bousfield, only son of the late Rev. Stephen Bousfield, of Shelton Rectory, Nottinghamshire, and Mrs. Bousfield, and Veronica, eldest daughter of Mr. and Mrs. L. P. E. Pugh, of Calcutta, and Morgenau, Rhos Hill, Pembrokeshire.

The marriage was celebrated on September 9, at Bahraich, Oudh, India, between William Bensley Cotton, I.C.S., eldest son of the late Major J. W. M. Cotton, J.P., of 2, Chester Terrace, Regent's Park, and Elizabeth Marchant, widow of Major Godfrey Marchant, Indian Army.

The marriage was celebrated on September 17, 1919, at St. Anne's Catholic Church, Vauxhall, by the Very Rev. Canon W. F. Brown, V.G., between Captain John Leslie Despard Howitt, the Essex Regiment, of Clifton (Bristol), and Eunice Edith Lucy O'Reilly, of Tulse Hill, London, and of Cairo, Egypt.

The engagement is announced between F. L. Hadden (late Captain Royal Berkshire Regiment), only son of Mr. and Mrs. Fred Hadden, of Kotiyagalla, Ceylon, and Stonehouse, Brimpton, Berks, and Helen Lucy Wood, elder daughter of Mr. and Mrs. Henry Wood, The Beeches, Astley Bridge, Bolton, Lancashire

The marriage arranged between Lieutenant Douglas M. Horsford, Grenadier Guards, S.R., only surviving son of the late Colonel and Mrs. Horsford, Bosvathick, Penryn, Cornwall, and Cora G. G. Cavendish, widow of Captain Godfrey Cavendish, 97th Infantry, I.A., took place at the Brompton Oratory, S.W., on September 24.

The marriage was celebrated on September 9, at St. Stephen's Church, Bournemouth, by the Rev. G. P. Trevelyan, between Captain G. P. Devenish, G.S. Intelligence, G.H.Q., E.E.F., Cairo, only son of the late W. P. Devenish, of Rushill, Co. Roscommon, Ireland, and Phyllis, only daughter of Mr. and Mrs. C. N. Pavey, of Bournemouth.

Our Bucharest Correspondent writes (September 11) :—
Sir George Russell Clerk, the emissary from the Peace Conference, has arrived in Bucharest, and his arrival has caused a considerable stir in political circles. It is hoped that the information which he will impart to the Government will have the effect of straightening out the present situation.

The marriage was celebrated on August 16 at Christ Church, Simla, by the Right Rev. Eyre Chatterton, D.D., Bishop of Nagpur (brother-in-law of the bridegroom), between Captain Arthur Brodie Haig, 24th Punjabis, youngest son of the late Mr. and Mrs. Henry Alexander Haig, of 43, Kensington Park Gardens, W., and Marguerite Theodora, widow of the Rev. R. M. Kirwan, Chaplain.

The Sultan of Egypt's yacht "Mahroussa" is now being overhauled, refitted and decorated at Portsmouth, under the supervision of Mr. Robert Harley, the engineer, who has been connected with the yacht for several years. It was originally intended that the repairs should be done at Malta, but it was found that they could not be carried out there; and consequently the boat was brought to England. It will take several months to complete the work.

A marriage has been arranged, and will shortly take place, between Lieut.-Colonel George Hudson-Kinahan, Durham Light Infantry, attached to the Egyptian Army, third surviving son of the late Sir Edward Hudson-Kinahan, Bart., and Lady Hudson-Kinahan, of The Manor, Glenville, Co. Cork, and Alexandra (Alec) Hodgson, widow of Captain C. A. R. Hodgson, Royal Warwickshire Regiment, and younger daughter of Mr. and Mrs. Wisdom Hely, of Oakland, Rathgar, County Dublin.

Among wills recently proved is that of Sir Donald Mackenzie Wallace, K.C.I.E., K.C.V.O., LL.D., of Park Mansions, London, W., who died aged seventy-seven, on January 10 last. He was for many years Director of the Foreign Department of *The Times*, and formerly private secretary to Lord Dufferin and Lord Lansdowne when Viceroys of India, private secretary to the King when Prince of Wales during his Colonial tour, and author of standard works on Russia and Egypt. He left personal estate in the United Kingdom valued at £76,445.

Among the diplomatic appointments recently made are :—Sir Milne Cheetham, Counsellor at Cairo, to be Minister to Peru and Ecuador.

The Hon. Ernest S. Scott, Counsellor at the Teheran Legation, to be Minister to the Empress of Ethiopia.

Sir Charles N. E. Eliot, K.C.M.G., High Commissioner and Consul-General in Siberia, whose earlier posts included Tangier, Constantinople, Sofia, and Belgrade, to be Ambassador to the Emperor of Japan.

Mr. D. E. M. Crackenthorpe, C.M.G., Counsellor at Madrid, whose diplomatic appointments included Bucharest and Belgrade, to be Minister to the Republics of Guatemala, Honduras, Nicaragua, and Salvador.

TO LECTURERS AND OTHERS.—For Sale, a number of Photographic Lantern Slides of places and people in the Persian Gulf and Mesopotamia.—For list and full particulars apply, MUHANDIS, Box 141, c/o THE NEAR EAST, 1 Devonshire Saquare London, E.C.2.

The Countess of Meath, who died last November, left estate of the value of £88,632. Among other things, she left £500 shares in the Dublin Artisans' Company to the Hospital for Jews at Jerusalem, and £2,000 shares to the executors for North African missions for the general purpose of the Hospital for Women at Tangier.

It is announced that the decoration of the Order of Michael the Brave, 1st Class, has been conferred by the King of Roumania on Field-Marshal Earl Haig, and the Order of the White Eagle, 1st Class, on Lieutenant-General Sir Henry de Beauvoir De Lisle, Lieutenant-General Sir George M. Harper, and Temporary Major-General Sir R. Hamilton Russell.

Our Cyprus Correspondent writes :—
Dr. A. L. Murison, District Medical Officer, who has returned from leave, is appointed for the present at Famagusta. Mr. Thompson is stationed at Nicosia.
Mr. Fenn, Acting Chief Secretary, leaves at the end of October for East Africa.

A marriage has been arranged, and will shortly take place, between Captain Ernest Wyndham Burdett, M.C., 48th Pioneers, I.A., youngest son of the late Rev. William Jerome Burdett, and of Mrs. Burdett, of Lancehurst, Bovey Tracey, Devon, and Hebe Etheldreda Ellen Curwen, only daughter of Lieutenant-Colonel and Mrs. Gilbert Collis, of 7, Montpelier Square, Knightsbridge, S.W.

Field-Marshal Sir Edmund Allenby, just before leaving Egypt, sent the Salvation Army a message expressing his gratitude for the "great and good work which it has done for the Army under my command." He says :—"The zeal and energy of your workers have overcome all difficulties, and their courage has made light of every danger. Their services have been of incalculable benefit to my troops, and their influence has proved of the highest value."

A Correspondent in Switzerland writes :—
A Committee has been formed in Constantinople under the presidency of the Sultan and the vice-presidency of Tewfik Pasha, ex-Ambassador in London, and ex-Grand Vizier, for the relief of those who have suffered during recent years from the fires.
Turkhan Pasha, President of the Provisional Government of Albania, and Madame Turkhan Pasha, are staying at Vichy.
Ismail Jenani Bey, Grand Master of Ceremonies, has been appointed Turkish Under-Secretary of State for Foreign Affairs.
Osman Nizami Pasha, ex-Turkish High Commissioner in Bucharest, has arrived at Rome. He will shortly join Madame Osman Nizami Pasha in Egypt.
The death of Aly Fouad Bey, director of the *Kara Geuz*, the Turkish *Punch*, took place in Constantinople at the end of August. He was, at the time of his death, the oldest Turkish journalist living.
The death is announced in Naples of Moustapha Jelal-ed-Din Bey, Counsellor of the Turkish Legation at Sofia.
The marriage took place recently in Constantinople of Prince Abdurrahim of Turkey (son of the late Sultan Abdul Hamid) with Princess Eminé Halim of Egypt (daughter of Prince Abbas Halim of Egypt and Princess Abbas Halim of Egypt, *née* Princess Hadijé Tewfik of Egypt). Princess Abdurrahim of Turkey is a grand-daughter of the late Khedive Tewfik of Egypt.

OBITUARY.

The death occurred on September 11, at Murree, India, of Lieut.-Colonel Francis William Burbury, Rifle Brigade, late Royal West Kent Regiment, second son of the late S. Hawksley Burbury, M.A., F.R.S., 15, Melbury Road, Kensington.

Lieut.-Colonel Linley Blathwayt, late Bengal Staff Corps, died on September 10, at Bath, at the age of eighty. He served throughout the Indian Mutiny, taking part in the siege and capture of Lucknow, and many other actions, and afterwards fought in the China War and served with the Bhootan Expedition.

The Cairo correspondent of *The Times* writes (September 21) :—Lieutenant-Colonel Bertram Keeling, who was last May appointed Director-General of the Survey of Egypt and President of the Cotton Research Board, died suddenly yesterday. Great regret is felt everywhere. Much was expected of him in his new posts, and his death is a great loss to the country.

NEWS IN BRIEF.

Marshal von Mackensen and his staff have arrived at Salonika under Allied escort.
The Serbo-Croat-Slovene delegates to the Peace Conference arrived at Belgrade on September 19 from Paris.
An important gift of animals from India is on its way to the Zoological Gardens, and has already reached Aden in a ship of the British India Company.
According to a telegram from Athens the trial of M. Skouloudis has been postponed until January 28. M. Gounaris will be proceeded against *in contumaciam*.

The Indian Legislative Council has appointed a mixed committee to consider the question of the high prices of articles of daily consumption, and to suggest remedies.
In the Indian Legislative Council M. Chanda's resolution that Simla should cease to be the summer home of the Punjab Government was rejected after two hours' discussion.
Rainfall has been normal in Berar, the Central Provinces East, and Hyderabad South, and excessive in Mysore, Madras South, East, and the Madras Deccan. The monsoon is likely to be weak. Agricultural prospects are satisfactory.
Eighty Indian officers and 2,045 other ranks have made the pilgrimage to Mecca this year. They were entertained for four weeks by the King of the Hejaz, and were given a free passage both ways by the British Government.
The P. and O. Company announce facilities for saloon passengers to Malta and Constantinople by the ambulance transport Glengorm Castle, 7,000 tons, which is expected to leave Marseilles on or about October 10. Fares are quoted for berths in cabins or for "cot accommodation," the latter at the lower rate.
Regulations have been published in India for the selection there of natives of India and Burma for appointment to the Indian Civil Service otherwise than by means of the open competitive examination. Copies may be obtained from the Secretary, Judicial and Public Department, India Office, London, S.W. 1.
A message has been sent by the Parliament of the Armenian Republic to the Parliaments of Great Britain, France, America, and nearly all the Powers represented at the Peace Conference, declaring that Armenia is to-day once more left to face her persecutors with an utterly inadequate supply of arms and ammunition.
The fourth report of the Association for Moral and Social Hygiene asks for a sum of £1,500 over and above ordinary annual contributions for the purpose of a campaign in England against "tolerated vice," particularly as regards Indian Cantonments. It is stated that the representative of the association in India, Mrs. Dixon, obtained from the Commander-in-Chief in India last year an order abolishing the system for the duration of the war, but further efforts are necessary to get this order confirmed and included in the Cantonment Code.

FRIDAY, SEPTEMBER 26, 1919.

THE BULGARIAN TREATY.

The terms of peace imposed upon Bulgaria can be regarded from three different points of view—from the Bulgarian, from that of the advocate of the policy of *Væ Victis*, and from the standpoint of those who look beyond the crimes and follies of the past and the bitterness of the moment to a Balkan Peninsula at peace with itself and treading in friendly co-operation a path of steady material and social progress. To the Bulgarians the Treaty will be a tragic disillusionment. Fighting has been too long the business of the Balkan peoples to allow any of them to regard war *per se* otherwise than as the natural method of settling differences of opinion or a clash of aims between neighbouring States. They belong, in other words to the Old Testament dispensation, and a moral aversion from an appeal to arms is as foreign to their nature as it was to the Israelites in their early days in Palestine. A war, therefore, is only to be condemned when the object which a belligerent has in view carries no justification with it. In the present instance, according to the Bulgarian case, Bulgaria entered the war with the wholly justifiable object of liberating her kinsfolk from alien jurisdiction. All other considerations—the manner of their entry into the struggle or their methods of warfare—are devoid of any weight in the eyes of the Bulgarians. They were beaten; but the Allies, before they had gained their victory, announced as one of the foremost of their war aims, the liberation of peoples under alien jurisdiction. The Bulgarians seized upon this declaration, and until they were confronted with the Allies' terms of peace, were not to be persuaded that they would not, after all, secure the objects for which they went to war. Questions of punishment for defeat failed to exercise their minds; humiliation, indemnities, nothing mattered so long as the kinsfolk domiciled in adjacent territories were finally to be united with the mother country. The terms of peace have not only failed to allot them the coveted Macedonia, but have also cut off from their existing territory a substantial portion hitherto recognised as theirs by right of nationality, and the part that gives them access to the Mediterranean. There can be no doubt, therefore, as to the feelings which the Treaty will evoke in Bulgaria. The penalty that the country is called upon to pay is, from its own point of view, a severe one.

The Serbian and Greek points of view have already found expression among the delegates of the two States in Paris. "My country cannot be at all satisfied," M. Vesnitch is reported to have said; and he added: "Except for a few slight rectifications of the frontiers, the necessity of which was obvious, our interests and rights have been obviously sacrificed." Greece had counted upon receiving Thrace at once, whereas by the terms of the Treaty the Principal Allied and Associated Powers assume all rights and titles over the region alienated from Bulgaria, and the latter undertakes to accept whatever settlement may be made by them in regard to these territories. It is evident, therefore, that the Paris Conference has been at pains to effect a compromise between two extreme points of view. When no deep-seated principles are at stake, that is often a safe course to adopt. The war, however, has shown that the principle of nationality is a dangerous thing to run counter to, and the Allied Powers can have no wish to create an Alsace-Lorraine in the Balkans. A literal interpretation of their pledges might have compelled them to give to a beaten Bulgaria precisely what she would have claimed, if she had fought on the side of the Allies and helped them to victory. In what General Smuts has termed "a seething cauldron of human passion and greed," it was not to be expected that anyone could rise to that height of quixotism. The Powers refused to reward Bulgaria for her crime; they have introduced modifications of her western frontier, in deference to Serbian demands, possibly on the principle that these modifications were slight enough almost not to matter; they have fixed reparation at two-and-a-quarter milliards of francs, but allow the Inter-Allied and Reparation Commissions discretion in the matter of reducing the total capital sum to be paid by Bulgaria; and finally they meet the Greek claims to Thrace by taking over the territory themselves with a view to settling its fate subsequently. If they are in no hurry to escape from their responsibility in this matter there are obvious advantages in the expedient adopted. In the first place Great Britain, France, and the United States must retain a military force on the spot, and it can be located in Thrace without wounding any susceptibilities. Such a force will be very necessary until passions kindled by this and previous wars or feuds, as far back as the Serbian "stab in the back" of 1885, have had time to cool and the risk of frontier incidents has diminished. The period of military occupation will afford an opportunity of gauging without bias the wishes of the inhabitants in regard to their own future, and will give time for migration between the various districts with a view to establishing homogeneous communities on their own national soil.

In all the circumstances, therefore, while, with a first-hand knowledge of the Balkans, we cannot believe that the Paris Conference has chosen the shortest path to the settlement of the Near Eastern question, we feel that the ill done is not too great to prevent good from coming ultimately out of it. The Bulgarians will do well to make a virtue of necessity, and, leaving their case as it has already been worded by M. Theodoroff, to sign the Treaty without further pother. They have already decided where the responsibility for their wrongdoing and subsequent misfortunes rests; there is no need to seek fresh scapegoats or to pretend that those who have been to Paris to receive the Treaty are in any way responsible for the conditions imposed. If they find the terms harsh, let them bear in mind that the harshness has been inspired no less by their methods of waging war than by the original act of entering the struggle on the side of the Central Powers. There may be precedent in Balkan history for every outrage committed, but these practices are to be tolerated no more. Bulgaria, with confidence in herself, can yet rise superior to her present troubles—not with misplaced trust in intrigue and violence, but on the strength of the sterling achievements of her people in the arts of peace. For generations she has seen her kinsfolk outside her territories, and has tried by three appeals to war to extend her frontiers so as to incorporate them in herself. She has failed, and failing has caused her neighbours to become aggrandised at her expense. The regions that these kinsfolk inhabit have been largely desolated in the attempts. Let her now change her tactics, and encourage these same people to make their homes within the territory that is hers beyond dispute. A heavy burden has been laid upon her by her own acts—the indemnity is but little more than half the total of the debt that she contracted during the war, and half of it in turn represents the amount, now cancelled by the Allies, of Germany's claim against her—and she can only win her way again by hard work over a long period of peace. If she feels that any cause that she has at heart is just, she is assured of a hearing by the League of Nations. Her sincerity will be gauged largely by the care with which she tries to avoid friction with her neighbours.

THE UNREST IN EGYPT.

By ESTELLE BLYTH.

It is no matter for surprise that a section of the Egyptians should have taken the opportunity of general unrest prevailing everywhere in the world in order to start an agitation of their own. The wonder is, rather, that they did not agitate earlier, for the Egyptian is par excellence an agitator; his mind is always in a state of ferment over something or other, and when his natural slothfulness of body can be overcome this mental excitement will carry him some distance along the way of agitation and excesses. The fact that the disturbances spread as far as they did, and also lasted so long, together with the very practical attempts upon ways and communications, suggest a controlling agency possessing more foresight and grasp of detail than the average Egyptian is gifted with.

We leave it to wiser heads than ours to weigh the actual importance of an outburst which it would be easy to overrate. We will content ourselves with pointing out certain features which, in looking back, strike us as being hopeful. The agitators were almost entirely confined to the student and the labouring classes. The Egyptian students, considered *en masse*, have an unfortunate reputation for headiness and volubility; this is well known throughout Egypt and the Near East. Hence it is not surprising to find their "cause" supported by the ignorant classes, on whom volubility is never without effect. The sober-minded and reflective amongst the Egyptians appear to have kept out of the way, and when persuaded or compelled to parade, they usually did so with a quietness and decency that were positively dull. The soldiers and the police, and those who understand responsibility as well as represent authority, were almost untouched. The appearance of the Bedouin upon the scene was due to the simple fact that the Bedawi cannot keep out of a scrap; little predatory excursions into other people's territory, with the prospect of looting other people's possessions, are the salt of life to him. If the British Government chose to hand over the offending villages to him for punishment, he would rise to the occasion with equal zest. But he is not going to play the Egyptian agitator's game any longer than it suits him personally to do so. Thus the Bedouin factor in the case becomes one of local anxiety rather than of political importance.

Unfortunately, agitators and looters can do a great deal of harm, and are bound to achieve a primary success, which, however temporary in character, is most encouraging to themselves, and exceedingly unpleasant to authority. In this case a good deal of damage has been done to property, both Government and private, and lives have been lost, including lives of British soldiers, officers, and men, for which we hope the Government will exact a most severe penalty. Railway lines and telegraph wires can be compensated for in money, but the Egyptian agitator needs to be taught in the plainest and sternest manner possible that the life of an English soldier is not held lightly by the English peoples. Moreover, as if this were not enough, Egyptians have actually accused British privates of committing atrocities and excesses in Egypt under cover of restoring and maintaining order. No one who knows the English soldier, and his character and bearing towards women, will credit these charges; no Army in the world, and no individual soldiers, bear such a high name as they. Egyptian agitators and propagandists have been extremely ill-advised to utter these slanders. English people the world over will be slow to forget that their soldiers, who have protected Egypt from experiencing the penalties of war, who voluntarily gave up their leave and postponed the date of their demobilisation in order to save Egypt in a sharp crisis, should have had such abominable lies uttered against them. Entirely baseless as the slander is, it sheds a most unpleasant light on the methods and the mentality of the Egyptian agitator.

It is greatly to be regretted that some at home, in their attempt to trace the agitation to its roots, have shown a tendency to blame the official attitude in Egypt for a supposed severity and lack of sympathy which have caused an exasperated people to rise in protest. It is not the way of the British official anywhere to be hard or unsympathetic with Easterns—we cite India, the Sudan, and Palestine as witnesses—and the English officials in Egypt merit the gratitude and admiration of both Egyptians and English. The Egyptian student, however, will welcome the excuse to shift the blame on to British shoulders.

The seriousness of the disturbance appears to lie in the misunderstanding out of which it arose, a misunderstanding which we do not think is yet dissipated. The story is familiar to all who follow the course of Near Eastern affairs. The four deported Ministers were probably far happier in the safe seclusion of Malta than they can be as puppets in the hands of agitators at home, exploited by them for selfish ends. The flame kindled by the deportation, however, was fanned by the refusal of the British Government to allow the Nationalist delegates to proceed to England at a time when the vast issues of the world peace were coming under discussion. Rushdi Pasha and Adli Pasha, with whom the delegates proposed to travel, were requested to delay their visit as the date suggested by them coincided with the opening of the Peace Conference. To delay a journey does not imply its abandonment, but the Egyptian hotheads apparently only wanted a pretext to start their agitation, and this was made to serve their purpose. The agitation ran the usual course of rioting, demonstrations, processions, and speech-making, accompanied by a good deal of material damage and, unfortunately, loss of life. On March 16 General Watson, who was commanding in Egypt until General Allenby's arrival, summoned the Egyptian Independence Committee and told them very plainly that as they were responsible for starting the trouble he expected them to stop it. The Committee naively confessed their own alarm at the present dimensions of the trouble, which they described as being now entirely beyond their control; they promised to do what they could to stop it, but hastened to add, with the frankness of fear, that if they tried to make the wicked cease from troubling the wicked would probably turn on them. In conclusion "they asked, for their own protection, that they might be ordered to return to their villages." (*The Times*, March 25.) The ass having shed the lion's skin in this sorry fashion, we can only hope that it was allowed to return to its stable; for we think that truth-telling should always be rewarded.

There is no doubt that General Allenby has dealt with the difficulty tactfully as well as firmly, and though further sporadic outbursts are neither impossible nor unlikely, the agitators will have learnt a lesson. It is clear, however, that a country of Egypt's size, prominence, and capacity requires more individual attention than it can receive from the already overburdened Foreign Office. An Egypt Office is necessary, which shall give its whole attention to the affairs of Egypt, the Sudan, and Cyprus, and, as we hope and believe, of Palestine also, when that distressful country is definitely placed in the guardianship of England. Our responsibilities in the Near East have immensely increased during the war, and we must have the machinery necessary to deal with them. Possibly some such arrangement as this will come out of Lord Milner's approaching visit to Egypt; it is bound to come sooner or later.

The agitation, in its rise and in its conduct, will most certainly have taught the outside world to estimate at its right value the average Egyptian's capacity for self-government. For he is, in fact, the least capable of any Eastern in this way, largely as he talks about it, and sweetly as the luscious phrases roll off his tongue. The initiators of the trouble confess their powerlessness to control, let alone direct or stop, an agitation which they start, and appeal for protection to the very authority they set about so gaily to overthrow. It need surprise no one if such outbursts occur at intervals in Egypt, at least until the world's unrest is somewhat stilled. The Egyptian agitator shares with the Sinn Feiner a bland propensity to "look before and after, and pine for what is not," which adds immensely to their interest and variety in both cases, but hardly to their value as serious factors in society or politics.

We do not make the mistake of confounding all Egyptians with the frothy agitators who have brought discredit on the Egyptian name. It is the scum that rises to the surface, and it must always be skimmed. But Egyptians generally need to remember how Great Britain has befriended and protected them; that their country is what Britain has made it; that it is British credit behind them that stabilises their trade and commerce; and that Britain is both their guarantee and safeguard. The folly and criminal selfishness of a section of Egyptians have brought a momentary discredit on their country; it rests with those who value her good name and theirs to clear her of the stain. It is right and natural that the Egyptians should desire an increasing share in the government and administration of their country; that is also the British ideal for them. But such ebullitions of temper, vanity, and mischief as we have witnessed can only result in delaying indefinitely the realisation of a mutual ideal.

Reuter's Malta correspondent writes (September 20):—The Essex Regiment, which is now on its way to Malta, and the Worcestershires and the Gordon Highlanders, which had been detailed for duty at Malta, are now not coming here. It is stated that their services are required in Egypt. Instead of the latter two regiments, two battalions of the Malta Militia, which were about to be demobilised, are now to remain on garrison duty.

PRESS ON THE NEAR EAST.

Persia.

The Times of September 20, in commenting on Lord Curzon's speech at the dinner recently given by the Government to His Highness Prince Firuz Mirza, says:—

The continent of Asia is in ferment, and there are indications that it may contain perils even greater than those through which the West has recently passed. The peace of the world requires that somewhere in the Middle East there should be established a region of tranquillity and strength, and nowhere are there greater prospects of success than in Persia. Another important factor in the situation is the imperative necessity of allaying the unrest prevalent throughout Islam. The war has inevitably curtailed the power and influence of Turkey. We cannot allow yet another great Mohammedan State, guiltless of offence, simultaneously to fall to pieces for need of a helping hand. By restoring stability to Persia we shall show the Musulman peoples that our motives are disinterested, and that their own fears are without foundation.

It proceeds to insist that Persia had a free hand in the negotiations.

It cannot be too widely emphasised that, as Lord Curzon pointed out, Persia has been a free agent throughout the negotiations which led to the Agreement. The Nusrat-u-Daula bore similar testimony, in the most categorical manner. The suggestion, slightly spiced with malice, that in concluding the Agreement Great Britain and Persia have gone behind the Covenant of the League of Nations, is without foundation. Both Governments are at one on this point, and the text of the Agreement speaks for itself. When the Council of the League of Nations comes into effective existence, the document will at once be communicated to it, with, said Lord Curzon, "a full explanation." Meanwhile, the Agreement should be regarded as a potent instrument for the strengthening of peace. The allegation that Great Britain has established a veiled protectorate over Persia is a grotesque perversion of our own intentions and an insult to the patriotism and intelligence of Persian statesmen, who have always been jealous guardians of the integrity of the Shah's dominions. No one who knows them, or who is aware of their persistent resentment of former Russian aggression in Northern Persia, could suppose that they would consent to the creation of any sort of protectorate, however shadowy. That they should turn for help and guidance to their most powerful neighbour is natural enough, and the aid they seek will be freely given. Such help is both the beginning and the end of the Persian Agreement. This country has far too many preoccupations to permit any further extension of costly responsibilities in foreign lands. The salvation of Persia rests in the hands of Persians themselves.

Roumania and Serbia.

In the *Sunday Times* of September 14 Mr. Crawfurd Price examines the question of minorities in the Balkans, and suggests that the whole matter lies in the objection to outside interference, similar to that which England and France would prefer were the League of Nations to interfere with the questions of Ireland and of Alsace. He says:—

The boundaries of the new and aggrandised States of South-Eastern Europe will necessarily include alien minorities—this cannot be avoided—and it is held that the welfare of such minorities must be the concern of the League. The wisdom of this thought may be admitted, though it may be submitted that, if the League is to possess any vitality or authority whatsoever, it should be in a position to step in and remedy abuse apart from any convention which may presently be signed in Paris, and which will admittedly act as a direct incentive to disgruntled minorities—who, like the rest of us, will probably find themselves worse off in the future than they have been in the past—to agitate against their rulers.

Take the case of Roumania. In order to unite the Roumanes within her realm she must annex some compact masses of aliens which, in some cases, have been deliberately planted within her ethnological frontiers for a specific purpose. Bunches of Magyars in Transylvania who have hitherto been permitted to exploit their Roumane neighbours without let or hindrance will not readily reconcile themselves even to a régime of strict justice and equality. They will not willingly sacrifice their privileged position. Again, the Roumanians cannot regard with equanimity any system which will conserve a foyer of intrigue within their portals. These thoughts, and the objection to tutelage, are, I take it, at the bottom of the Roumanian Government's disinclination to accept the famous Clause 9 of the St. Germain Treaty.

The Serbian Delegation, on the other hand, must be congratulated on having taken a stand much less determined than that of Roumania. They have signified their willingness to sign the Treaty with slight reservations, the reasonableness of which becomes apparent when one examines the situation and finds that the particular clause to which exception is taken is the result rather of outside political interests than any real concern for the inhabitants. Afflicted with the universal indisposition to sign a blank cheque, the Serbs want to know what their responsibilities will be, and they not unnaturally take exception to the Treaty when it seeks to apply the minority clauses to all territory which lay outside the realms of Serbia on January 1, 1913.

Bulgaria.

In a leading article upon "Bulgaria's Fate," the *Daily News* recently said that the Supreme Council have disregarded ethnical lines, and that the prospect of permanency in the recent peace terms is remote.

Not only are the Macedonians left to Greek and Serbian rule, the Dobrudja to Roumania, and Adrianople to whatever nation succeeds to the rights of the Turks in Europe, but Western Thrace is to be detached from Bulgaria, which is thereby deprived of all direct access to the Ægean. That, it will no doubt be said, matters little, seeing that an economic outlet to the Ægean is guaranteed, while the freedom of the Straits will facilitate communication by way of Varna or Burgas and the Black Sea. These no doubt are mitigations, but economic facilities in a foreign port are not the same thing as possession of a port with full power to adapt and develop it. In any case, moreover, Bulgaria's real grievance will not be economic, but ethnical. Large populations belonging properly to Bulgaria are to remain detached, or to be for the first time detached, from Bulgaria, some of them falling under the rule of the new Jugo-Slav State, some awaiting an unknown destiny at the hands of the major Allies, in whose hands the disposition of Western Thrace still rests. That, it must be repeated, is a settlement that inspires very grave misgivings, not primarily on account of the loss to Bulgaria—Bulgaria has shown us since 1914 singularly little reason for regarding her with tenderness—but because its disregard of all the principles of self-determination constitutes a perpetual menace of further war in the Balkans. And remembering where the European War had its origin, we can only contemplate the prospect of further Balkan unrest with alarm.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

With reference to previous remarks in this column upon rupee exchange, a further advance towards freer dealing was established last week by the announcement that sales of Council Bills would be thrown open. It is well known that for some considerable time sales of Council Bills have been confined to the leading Exchange banks and a few others interested in the control of exchange. The bestowal of this privilege was no doubt an indication of the confidence which the India Office had in the banks concerned, but it also carried responsibilities which, it may be safely assumed, have not been borne lightly. For example, the favoured few who participated in the weekly allotment were obliged to do exchange business in India at rates practically dictated by the Indian Government. They were further put to the necessity of devoting the full amount of the rupee transfers allotted to the purchase of trade bills drawn against exports of national importance, and we understand that the Government rigorously enforced this condition. All this is as it should be, of course, in times of stress, but as we are within sight of the anniversary of the date of the Armistice, the removal of these barriers to trade cannot be said to be premature. Last week we alluded to the uncertainty with which the exchange problem was surrounded, and the open competition for Council Bills which was invited this week only added another element of anxiety.

***

Ample evidence of this is indicated by the result of the tenders. One bid for a small amount of bills was made at 2s. 2d.; needless to say, this was accepted in full. Other tenders ranged from 2s. 1d. down to 2s. 9-16d. The minimum rate which Government fixed was 2s. Pending the result of the allotment, it was almost impossible to obtain a quotation from any bank for business with India, and even now, when a proper working basis has materialised, the future course of exchange is very obscure. It is important to note that for the maximum of 100 lakhs offered the total amount of tenders only came to 112½ lakhs, and as we learn on reliable authority that the accumulation of mercantile bills awaiting negotiation in India has been considerably reduced, it is clear that the pressure has been relieved through other channels. The only other measures available at the moment have been found in shipments of gold, which has recently been flowing freely to India from America and this country. These shipments are taken over by the Government at a fixed price, which gives them a handsome profit, and in these days of tall talk about economy and legislation to curb the profiteer it may well be asked why Government does not begin at home and stop their own profiteering in gold, for which the Indian community have been starved since the outbreak of war.

***

I am still receiving complaints with regard to postal communications between this country and the Near East. The latest is from a correspondent in Greece, who gives an illuminating instance of the irregularity of the mail service. Letters were posted to him by a London firm on July 31 and August 11, and he received the first letter two weeks after the second! As I have pointed out previously, a mail service so unsatisfactory as this evidently is cannot fail to have a most detrimental effect on the development of trade between the United Kingdom and the Near East. The remedy lies with the authorities here, who must be fully aware of the reasons for the irregularities of the service, and ought without delay to make urgent representations in the proper quarter abroad.

***

The report of the Smyrna-Aidin Railway, which has just been issued, is a document of exceptional interest. The company's staff took over the working of the line in April, and it is stated that the whole district was then quiet, and that the traffic receipts were very good, as there were considerable stocks of exportable goods in the interior. The disturbances which followed the occupation by the Greeks in May of Smyrna and the surrounding country led, however, to a serious decrease in traffic. A British mission has arrived at Smyrna, and it is hoped that its work will lead to a restoration of order in the neighbourhood. Given settled conditions, traffic ought to increase rapidly, as it is reported that stocks of produce for which a ready market exists are large, while this season's crops, though very adversely affected by the prevailing conditions, may yet be considerable.

***

Owing to the disorganisation, the accounts for the past half-year could not be completed and they will be included with the accounts for the current period. As regards the company's claim for war damages, it is not anticipated that claims in regard to Turkey will be settled in the near future, and with a view to facilitating a settlement proposals have been drawn up which would enable the company's claims to be satisfied—as to some part, at any rate—in kind. It need scarcely be said that the arrears of maintenance of the line are heavy, and at the present time only one-third of the locomotives are fit for service. The outlook for the railway is in general very favourable, but this factor makes it certain that an appreciable period must elapse before the company again enjoys its former prosperity.

A general meeting of the Constantinople Telephone Company is to be held at Constantinople on November 4. This undertaking, formed in 1911, has hitherto been singularly unfortunate, for its operations have been hindered first by the Italian and Balkan wars, and afterwards by the late war. It is proposed that the receipts and expenditure during the working of the system by the Turkish Government from March, 1915, to April, 1919, should be for the account of that Government, with the obligation on its part to pay to the company an indemnity which will put it in a position to pay interest to the bondholders and shareholders in respect of that period. The funds available in London have been utilised for the supply of materials for the upkeep of the system. The assets at present in London, consisting of cash and investments, amount to £34,200, and against this are liabilities estimated to exceed £60,000, and there is, in addition, the accrued interest, amounting to £60,000, but this sum forms part of the company's claim against the Turkish Government.

***

The grave financial position of Turkey is explained in a statement just issued by the Turkish Minister of Finance, Tewfik Bey. The general annual expenditure of Turkey, he points out, is approximately £T72,000,000, £T45,000,000 of which is required for the payment of salaries and war pensions, etc.; but against this the receipts do not exceed £T42,000,000, so that on these figures there is a deficit of £T30,000,000. I have said "on these figures," for Tewfik Bey goes on to explain that the £T42,000,000 is the sum which he estimates for receipts, and that it "can only be attained if new sources of revenue are created." So that actually the position is much worse than would appear from these figures.

***

The measures which Tewfik Bey advocates are an increase in the Customs duties, the real estate tax, the licence tax, and by the creation of a tax on war profits, certain of which will require the consent of the Entente Powers. But, according to Tewfik Bey's estimate, the result of the increases will merely be to raise the revenue to £T42,000,000, so that there will still remain the deficit of £T30,000,000. Whether or no the proposed taxes give the yield expected must depend entirely upon the state of the country, and assuming that they will, the real problem—how to meet the deficit—will still have to be solved.

ECONOMIC CONDITIONS IN BULGARIA.

The Financial Position.—I.

(From Our Own Correspondent.)

When the Balkan Wars commenced the consolidated and floating debt of Bulgaria amounted to about 650,000,000 levas, and during those wars this was doubled. The effect of the European war has been to raise the debt of Bulgaria to insupportable dimensions. By the end of 1916 the total indebtedness was more than three milliards of levas, of which over half was floating debt, which arose from the expenditure for military purposes. Part of this expenditure was in accordance with the engagements entered into with Germany by a special treaty made at the commencement of the war against Serbia. According to this treaty Germany agreed to advance 50,000,000 marks monthly to Bulgaria for war expenses. Up to the conclusion of the Armistice in September, 1918, Bulgaria received from her former Allies, Germany and Austria-Hungary, 1,350,000,000 levas in the form of credits at the branches of the National Bank of Bulgaria in Berlin and Vienna.

From the following particulars it will be seen that the State debts at December 1, 1918, amounted to 5,264,116,585 levas:—

(1) Consolidated debt:—
(1) Loans 1892—1909, 551,094,760 levas.
(2) Eastern Roumelian Occupation debt, 19,894,276 levas.
(3) 6 per cent. Loan 1914, 75,119,400 levas —total 646,108,436 levas.

(2) Floating debt:—
(1) Deficit on Budgets 1914—16, 80,000,000 levas.
(2) Extraordinary credit for military purposes 1912-13, 349,270,519 levas.
(3) Extraordinary credits for military purposes 1915-18, 3,540,634,873 levas.
(4) Extraordinary credit for extraordinary Budgets, 348,102,757 levas.
(5) Loss on sale of requisitioned foodstuffs, 300,000,000 levas—total 4,618,008,149 levas.

(3) Obligations to Germany and Austria-Hungary, 2,000,000,000 levas.

In addition to these debts, which will doubtless be greatly increased during the current year, there is a liability of 150,000,000 levas annually for war pensions, which amount represents the interest on three milliards of levas, so that the total debt of Bulgaria at the end of 1918 amounted to over ten milliards of levas.

The floating debt includes: 1. an advance of 75,000,000 francs from the Banque de Paris et de Pays Bas at Paris; 2. 27,724,675 francs obtained from the Russo-Asiatic and other banks at Petrograd on current account against the deposit of treasury bonds; 3. Loans of 270,000,000 levas from the Disconto-Gesellschaft and the monthly war advances from Germany and Austria-Hungary amounting to 1,350,000,000 levas; and 4. from the Bulgarian State banks and from various State funds, 1,650,000,000 levas. The remainder of the floating debt consists of obligations to home creditors for requisitions of food products, for various supplies, and for compensation for damage and losses during the war.

A year before the Balkan wars the Budget amounted to about 170,000,000 levas. Since then, as will be seen from the following table, as a result of the wars of 1912-13 and 1915-18 there has been an immense increase, especially in the last two years. It should be noted that contributory factors to the increase have been the expenditure in regard to the districts of Gumuldjina, Struma, and Adrianople, which in 1911 were not included within the boundaries of Bulgaria, and also provision for the maintenance of the occupied territory during the last war, namely the districts of Morava and Drama, Macedonia, and the Dobruja.

During the last eight years the annual revenue and expenditure has been as follows:—

Year.	Revenue.	Expenditure.	Excess or Deficit.
1911	198,795,814	180,124,949	+ 18,670,865
1912	170,038,591	165,160,897	+ 4,877,694
1913	168,724,840	146,188,871	+ 22,535,969
1914	224,251,265	233,231,471	− 8,983,206
1915	194,547,398	228,338,154	− 33,790,756
1916	193,015,364	203,440,877†	− 10,425,513
1917	337,846,968	227,999,103	+ 109,847,865
1918	418,518,175	310,913,237*	+ 107,604,938*

† This sum does not include the expenditure for the whole period.
* Excluding revenue and expenditure during the current year for last year's account.

The last normal Budget was that for 1912; but owing to the war which was begun against Turkey neither the revenue nor the expenditure was in accordance with the estimates. The revenue decreased, and a certain part of the estimated expenditure was not incurred, because the war expenditure was covered by extraordinary credits. For 1913 and 1914 the budgets were on the base of that for 1912; but with certain additions, which were required by the new needs of the State. For 1915 a regular Budget was voted, but this Budget had the same fate as that for 1912. The participation of Bulgaria in the European war causing a new disorganisation of the State revenues and expenditure, owing to the abnormal conditions, the National assembly did not vote a regular Budget for the following year, and the needs of the State were met as in 1913 and 1914. For 1917 and 1918 regular budgets were voted, but supplementary credits were required owing to the disorganisation of the economic life of the country in consequence of the prolonged war.

ROUMANIAN EXCHANGE PROBLEM.

Need for Development of Exports.

(From Our Own Correspondent.)

Bucharest, September 11.

As a result of numerous influences, including, no doubt, the unsettled political situation, the value of the Roumanian leu has been rapidly decreasing, and now stands at an alarmingly low figure in the world's money market. In spite of the activities of a State Department set up for the purpose of controlling the exchange, and the restrictions against the export of Roumanian money, the fact remains that Roumanian currency is constantly depreciating in value. A loan from the larger Allies might have a steadying effect upon the exchange, and an amelioration of the present relations between Roumania and the Entente would probably also tend to that end. The only real solution of the difficulty lies, however, in the export of Roumanian commodities. The question of export at the present moment presents many difficulties, and various bureaux have been instituted to act as channels for the export of Roumania's chief commodities, such as oil, timber and grain. Although perhaps at the present moment this method of conducting business is necessary, it has a hampering effect upon the export trade. Furthermore, a rather curious Government regulation insists upon payment for Roumanian exports in foreign currency, no doubt with a view to benefiting the exchange of Roumanian money. It is probable, however, that this regulation is having an opposite effect from that originally intended, and certain Roumanian economic authorities are of opinion that payment in foreign currency of not more than a quarter of the value of the exports should be insisted upon, as is the case in Bulgaria. In any case, all such restrictions and regulations have no more than an artificial value, and the real remedy for the exchange question lies in the constant and unhampered export of commodities.

Frontier Questions and Currency

For the purposes of Customs formalities, the Roumanian frontiers remain practically the same as before the war, and a council recently held at Sibiu discussed the question of whether or not the customs should be removed to the new frontiers of "Great Roumania" and a free course allowed for the transport of goods between Roumania and Transylvania. It was decided that the time has not yet arrived for the abolition of the old boundaries, in view of the fact that the Transylvanian currency (crowns) has depreciated to a greater extent than that of Old Roumania, and that the free exchange of commodities would have the immediate effect of increasing in Transylvania the prices of certain articles which are now being kept in that country. Until, therefore, an arrangement can be made for the unification of the currency in some form or another, it is not considered advisable to remove the existing boundaries.

LOCOMOTIVE ORDERS FOR INDIA.

"Recent locomotive orders placed on behalf of the Indian State railways," says "Modern Transport," "include contracts for eighty-two 0-6-0 type locomotives awarded to the Vulcan Foundry, Ltd., of Newton-le-Willows, Lancs; for seventy 2-8-0 type locomotives to be built by Kitson and Co., Ltd., of the Airedale Foundry, Leeds; and twenty-six 4-6-0 type engines to be delivered by the Hunslet Engine Company, of Leeds. The North British Locomotive Company, of Glasgow, has the order for thirty broad-gauge and five metre-gauge locomotives, all for the Bengal Nagpur Railway. Sir W. G. Armstrong-Whitworth and Co. is to deliver twenty-five 2-8-0 type broad-gauge locomotives for the Bombay Baroda and Central India Railway, and seventeen 2-8-0 type broad-gauge locomotives for the Madras and Southern Mahratta Railway. Nasmyth, Wilson and Co., Ltd., of Patricroft, Manchester, has orders for the delivery of seventeen locomotives for the Burma railways, twelve locomotives for the Assam-Bengal Railway, ten locomotives for the Eastern Bengal State Railway, ten locomotives for the South Indian Railway and nine locomotives for the Nizam's Guaranteed State Railway. All of these locomotives are to be fitted with the Robinson type super-heater. The Great Indian Peninsula Railway Company has quite recently placed contracts with the North British Locomotive Company, of Glasgow, for 100 locomotives for their broad-gauge (5 ft. 6 in.) lines, comprising 30 2-10-0 type engines, 60 2-8-0 type goods engines and ten 0-8-4 "Chat" tank locomotives, while an order has been placed with the Vulcan Foundry for four standard passenger engines of the 4-6-0 wheel arrangement."

Sir Sydney Olivier, K.C.M.G. writes:—"Sir Sydney Olivier has no hesitation in offering the excellent 'De Reszke' Cigarettes to his friends."

Sir Leo Chiozza Money writes:—"Your 'De Reszke' Cigarettes are one of the nicest things that ever ended in smoke."

Alfred Heather, Esq. writes:—"I find your 'De Reszke' Cigarettes excellent, and quite free from the 'sting' that one so often finds in Virginia cigarettes."

SMOKERS of better-class cigarettes display a marked preference for "De Reszkes." The views expressed above are but a few out of hundreds.

Engineering Notes.

Hydraulic Mining Cartridge.

Owing to the persistent adherence to the old methods in the use of explosives in mining and quarry work in the East, a comparatively large number of fatal accidents occur annually in mines and quarries. The disadvantage and danger of employing explosives to excavate rocks and other material from confined places have long been recognised. The effect of blasting cannot always be confined to the area desired to be dislodged, and the use of explosives must involve either the risk of accident through insufficient charge, or the production of misapplied energy. Many mechanical substitutes for blasting have been devised to avoid these drawbacks, but almost all have proved impracticable, and except in the case of the simple wedges are now practically out of use.

The hydraulic mining cartridge is not worked on the principle of a wedge. It consists of a steel cylinder containing a number of telescopic pistons operating at right angles, which are expanded upon the application of water from a hand hydraulic pump attached to the cylinder by a steel pipe. The cylinder is placed in a suitably drilled hole, and the rock removed gently. As the operation proceeds, the rock can be seen slowly fracturing, and at the conclusion of the operation the debris is left in good round condition suitable for speedy removal. Explosives cannot be made to take advantage of the natural bedding and cleavage of rocks, their violence being expended on "hacking through" to the nearest unsupported edge. With the hydraulic cartridge it is possible to excavate greater areas at one operation, the weight of the detaching strata itself being used to increase the scope of the operation. The hydraulic cartridge is used to a large extent in mines and quarries for commercial reasons, and for safety. It has been found equally applicable to work either in open trenches, or under water, and concrete foundations are particularly well suited to the application of this machine, horizontal and vertical shots being arranged at intervals all round the bed and pumped off in turn. About 3½ tons of material can be excavated per thrust.

Handicapping British Engineering Trade.

The vigorous commercial energy which has recently been displayed in the Near East by the manufacturers of almost every industrial country provides clear proof of the value and importance of the markets in that region. Foremost have been the Americans, who, with remarkable activity during the war, endeavoured to capture not only the German trade in those markets, but also any other trade which for the time being might have been neglected by others engaged in the war. And when hostilities ceased and British, Continental, and other competitors reappeared in the field, and competition became keener, a novel economic policy was added to the American direct canvassing for trade in the form of large loans offered by the United States Treasury to the States or State in which commercial propaganda was in progress on condition that the borrowing State should draw the loan *in kind*, in the shape of American merchandise, the value of which the buyers would deposit with a certain bank to the credit of the borrowing State. A very clever combination, which reminds one of an Eastern proverbial expression—"With one shot bringing down two birds." But in this case there are three birds; the third being the gratuitous services of the borrowing State, which will anxiously be pushing the sale of the American goods in order to realise their value, which is *the loan!*

In view of the fact that all the countries in the Near East are purely agricultural, and, therefore, their wealth comes out of the ground, which, of course, must be cultivated for it, and that for cultivation very large quantities of machinery, implements, and tools of all kinds are annually required, the effect of such a financial combination is obvious. A glance at pre-war trade returns of any country in the Near East will show that with the exception of machinery, and that in a comparatively small compass, trade in other American goods was so limited as not to deserve special mention in the statistical résumé of the returns. Thus it will be the borrowing State's interest to support the sale of the American machinery and implements to farmers and others through the bank for the sake of the loan. Such an apparent preference will be a serious handicap to British engineer-manufacturers in their efforts to establish business, unless they take adequate measures to compete with it. There are at present several banks in every country in the Near East, the majority of them being agricultural rather than commercial banks. They serve and support landowners, smallholders, farmers, etc. Most of them have branches in the rural districts, and thus are in a position to be thoroughly acquainted with the financial position of the individual farmers. The employment of any of these banks will be found a great help and security in all transactions and delivery of goods. They often lent farmers all or part of the money needed for the purchase of machinery, and are always willing to act for or co-operate with British manufacturers. In the absence of any other similar establishment of British origin, an understanding between British manufacturers and these local banks will afford great advantages to the former in their efforts to compete against the novel and well-planned American commercial campaign in the Near East.

Safeguarding Motor-Cars.

Motor-car stealing, which seems to be in vogue at present in this country, is an old Continental complaint which has recently been spreading not only this way, but also in the East, whence a correspondent writes to ask if there is any device to protect a motor car from the modern thief. Why "modern" is not explained. Edison a few years ago told one of his visitors that he was then engaged in the completion of an electric device by which anyone who would push the button of the visitors' electric bell at his (Edison's) studio street door would receive a shock sufficient to enable him to turn a complete somersault, and then fall gently down on his back until the ambulance would arrive. This, probably, with some modification, would prove very suitable for the "modern" motor thieves, but evidently Edison kept it a secret. For the benefit, however, of anxious motor-car owners in the East we may mention that there is a really clever device, of British construction, for defeating the car thief. It is in the guise of an aluminium collecting tube, through which each of the ignition wires is led to its corresponding sparking plug. An insulator surrounds each ignition wire, pointed screws being inserted through the insulator and piercing the cable armouring. When the driver arrives at the spot where he wishes to leave his car he has merely to open the bonnet and give the sleeve of the apparatus a quarter turn, whereupon all the wires become earthed and interconnected in such a way that it is impossible to re-start the engine until the apparatus is unlocked by the owner's key.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, September 11.

Petroleum Commission.

A mixed Inter-Allied commission has been formed for the purpose of advising the Ministry of Industry and Commerce on questions relating to the damage suffered by the petroleum industry through the destruction of properties during the evacuation in November, 1916. The Roumanian Government is represented on the commission by Professor L. Mrazec, director of the Geological Institute, assisted by M. I. Tamasescu. The British Mission is represented by Colonel A. C. Hearn, assisted by Major Fry and Captain Eager. Lieut. L. Wenger has been nominated to the commission as French delegate. The representatives of the respective Governments have elected technical experts to assist in the work of ascertaining and verifying the extent of the damage suffered by the various oil properties, the experts appointed by the British delegates being the following:—Messrs. W. L. Mackenzie, R. van Sickle, A. Campbell, H. M. McCann and L. Johnston, and Captain J. E. Treacy. All petroleum undertakings are being invited to furnish the commission with full particulars of the damage suffered by them as a result of the destruction.

Aerial Post.

Eastern as well as Western Europe has now its aerial postal service, and a bi-weekly postal service between Bucharest and Constantinople was inaugurated on September 7. Official and private correspondence is received for transmission by aeroplane every Thursday and Sunday, the extra postage on letters (which must not exceed 50 grammes in weight) being 1 franc per letter, in the form of a French postage stamp.

The Director of Agriculture in Madras reports that there has been a small but general decrease in the area reported to have been sown with sugar-cane.

Near East Markets.

London Produce Report.

Currants.

The situation remains much as before. A shipment arrived at Liverpool recently, but it would take a number of consignments to satisfy requirements, and the present shipment will scarcely ease the market. So far samples of the new consignment have been scarce, for the process of discharging has been going on very slowly, but it appears that the currants are of a poor quality. But when the market is practically bare such considerations have little effect on prices. Imports of currants during August amounted to 6,489 tons, against clearances of 9,684 tons, and the stocks in hand amounted to 9,750 tons as against 650 tons for the corresponding period of 1918. For the first eight months of the present year imports amounted to 75,492 tons as against 5,167 tons for 1918, and clearances to 67,115½ tons, as against 4,616¾ tons.

Sultanas.

There seems little prospect of any improvement in the position. A few lots of the new crop of Smyrna sultanas have been on offer, but at prices which, in view of the maximum retail values, cannot interest the grocery trade. It is, in short, quite evident that if this country is to attract sufficient quantities of the fruit prices will have to be raised, since at present the higher level of values obtainable in other markets naturally gives them the preference.

Coffee.

There was a somewhat slow demand at auction this week when 4,911 bags were offered and prices ruled easier. Costa Rica good bold brought 158s. for export, and medium 149s. to 149s. 6d. Stocks amount to 878,000 cwt., as against 484,000 cwt. in September, 1914. Imports in August were 60,000 cwt., while clearances were 161,000 cwt. For the eight months ended August imports amounted to 882,000 cwt., as against 721,000 cwt. in 1914.

Sugar.

The demand for export purposes has decreased somewhat, and the market has inclined to dullness. Cane supplies appear to be ample to meet future requirements, despite the extent to which the Continent is now dependent on imported sugar. Stocks in hand amount to 7,732,000 cwt. The imports from January 1 to August 31 were 22,463,000 cwt., and the consumption was 20,078,000 cwt.

Seeds.

The market has been inactive. There have been large arrivals of linseed from India and the Argentine, while 38,000 quarters of rapeseed have arrived from India. Other consignments include 12,000 tons of Soya beans and 11,000 tons of arachis. Linseed with more sellers than buyers is weak, and cotton-seed is inactive. Rapeseed has been done at from 30s. to 44s. according to quality.

Oil Cakes, etc.

Linseed cake has been done at 500s. per ton. Other quotations include Egyptian cottonseed 400s., rapeseed 360s., and fine American linseed 520s. Supplies of olive oil are better, but the price remains high. There has been a fair demand for linseed oil at £95, while Soya bean oil has brought £80, and coconut oil £100.

Sudan Produce.

Gum.

The C.E.B. report for July states that the exports of gum via Port Sudan were 1,394,603 kilos of Hashab, of the value of £E48,654; 86,007 kilos of bleached, of the value of £E3,522; and 147,959 kilos of Talh, of the value of £E3,419; and via Halfa, 61,585 kilos of Hashab, of the value of £E1,765; and 59,650 kilos of Talh, of the value of £E1,434.

Kordofan Province.—3,622 kantars were sold in the El Obeid market during July, as against 15,536 during the same month of 1918. The average price was £1.505 m/ms. per kantar of 100 rottles. 984 kantars arrived from Mahud, compared with 1,724 kantars during July, 1918. In Rahad 6 kantars were sold at an average price of 1.300 m/ms. per kantar; in July, 1918, 16 kantars were sold. In Um Ruaba 180 kantars were sold at an average price of £1.300 m/ms. per kantar, as against 249 kantars last year.

Sennar Province.—The gum trade has finished for the season, The average market price at Karkoj per 100 rottles of Hashab gum was £E1.500, of Talh gum, 700-750 m/ms. No gum was brought to the muradas for sale. 682 kantars of Hashab, and 290 kantars of Talh were exported from stored gum.

Cotton.

Red Sea Province, Tokar.—A small flood watered portions of the Delta on July 18, and continued on the 19th. Later reports show that the flood was flowing more or less regularly during the last few days of the month. The bank built by the cultivators is still standing. Whether due or not to the efficiency of the bank, it appears that the western area of the Delta has been well flooded and also considerable portions of the Central Hods. The land irrigated is estimated at over 40,000 feddans, but it is too early to give any definite pronouncement on this point.

Berber Province.—Cotton planting went on all the month at Timerab; some 250 feddans had been planted at the end of the month. Native cotton at Zeidab is much better than last year, when the introduction of the sharing system discouraged cultivators. This year they have accepted it more readily in view of the adoption of the sharing system on all Resources Board Stations, and have planted a larger area and taken more trouble than last year. The area is not yet known, but is believed to be about 700 feddans. Kitiab cotton is most promising and the plants are full of bolls, but the maize there is poor owing to the stem borer. Cotton planting at Gandetto was going on all through the month, and some 500 feddans have been planted. The difficulty there was to prevent too big a proportion of a man's holding being put under cotton. Planting of maize and ground nuts began at the end of the month. The rains about July 20 caused grass to spring up very freely, and cultivators had some difficulty in dealing with the weeds in the cotton. It is probable that June 1 is better than July 1 as the date for pumping to start at Gandetto, in which case pumping could stop at the end of February. This would give an adequate dry period, and the cotton would be well up before there are likely to be rains, and new grass for animals would be available a month earlier in the dry season.

Cyprus Cereal Shortage.

(From a Correspondent.)

The effects of the shortage in the cereal harvest are already being felt. Villages in the long neck of land which runs out to the north-east already feel the pinch, and difficulties are foreseen in various other parts. The Government has notified a rise in price of its tithe grain which is issued to bakers, the prices being now 81 piastres (9s.) the bushel for wheat, and 3s. 6d. for barley. Bakers by way of compensation are now allowed to sell bread (3 parts wheat to 1 of barley) at 3½ piastres the oke, of 2 4-5 lb.

The Carob Crop.

The gathering of the carob harvest is drawing to a close. Thousands of labourers have flocked from Papho and other districts to Limassol, the principal carob-growing area. The town of Limassol was crowded as if on the occasion of one of the great fairs. The beans are stacked in great heaps on threshing floors and other convenient places near the roads, awaiting transport to the town stores, and other places of shipment. The crop is gathered a week later in the hills than in the lower zones.

SHIPPING INTELLIGENCE.

Passages to India—Facilities for Business Men.

The Secretary of State for India announces that he has arranged with the Shipping Controller that two special ships shall be placed at the disposal of the India Office to relieve the present congestion of passengers wishing to travel to India. It is hoped that these ships will sail before the end of October and that with their accommodation and that available in other steamers a total of approximately 1,000 berths will be available during the month of October. Of these berths, one half will be made over to the Trade Commissioner of the Government of India (60, Winchester House, Old Broad Street, E.C.2.) for allocation to members of business firms having branches in India.

As the position of the India Office in the matter of allotting passages appears to be misunderstood, it may be explained that passenger accommodation in steamers proceeding to India is allocated by the Shipping Controller after providing for military needs, which are at present paramount, and after leaving a certain proportion of berths at the free disposal of the shipping companies. The India Office does not therefore control the whole or even the greater part of the accommodation in such vessels, but only that portion which is allotted to it by the Ministry of Shipping. The allotment at present is very small.

The R.I.M.S. *Dufferin* was to have left Southampton at the beginning of this month, but will not now be able to sail until about the end of it. The accommodation in this ship was allotted early in August, before the present congestion arose. The women to whom passages have been allotted are accompanying or rejoining their husbands, or are proceeding on duty themselves. To deprive them of passages which were allotted to them some time ago, before the present congestion arose or could be foreseen, and after they had made all arrangements for leaving this country, would have been productive of great hardship. The allotments have therefore been allowed to stand. But the present situation being what it is, it has been decided to allot no passages to India during October to the families of officers of the Indian Services, except in a few cases in which passages have already been definitely promised, or in which some very strong reason makes the provision of a passage imperative. Such cases are examined and decided by a special committee of the Council of India at the India Office.

New B. I. Boat.

There was launched on September 11 from the Weir shipyard of Messrs. Wm. Gray and Co. (1918), Ltd., the ss. *Garada* on account of the British India Steam Navigation Co., Ltd. The vessel's gross tonnage is, approximately, 5,300, and her dimensions are: Length, 400 ft.; breadth, 52 feet.; depth, moulded, 31 ft. Her engines, which are by the Central Marine Engine Works, West Hartlepool, are triple-expansion; cylinders, 27 in., 44 in., 73 in. This vessel is of the Standard B type, but has been modified by the owners to suit their particular trade.

The Orient line of steamers to Australia announce a series of fortnightly departures from London, commencing on September 27. These steamers proceed via the Mediterranean, Egypt, and Colombo, calling at Toulon and Naples to embark overland passengers.

The inauguration is announced of two important fast lines of steamers from Trieste to Brindisi, Greece, Constantinople, and Black Sea ports, and from Trieste to Bombay. The Lloyd Trestino—the Italian company which took over the Austrian Lloyd vessels on the capture of Trieste—are the owners responsible for these enterprises.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

This week we have experienced a more active market. Inquiry has been on a larger scale, and an increased business has been done. Owing to the advance in American cotton prices quotations for yarn and cloth have advanced and remain very stiff. The Egyptian crop continues backward, but, on the whole, favourable weather conditions are reported. It is expected that the yield per feddan will be rather better than last season. Many ups and downs have occurred in Egyptian cotton futures in Liverpool, the tone of the market being uncertain. Very high prices have still to be paid for the superior qualities. In Egyptian yarns there has been a slightly improved demand, but big transactions have been isolated. Most of the buying has run on fine combed descriptions. Spinners in this section are in a very strong position, and independent when fresh business is offering. An increased business has been done in piece goods for numerous outlets of the Near East. Encouraging operations have been in evidence for Egypt and the Levant. A considerable business has been done for Constantinople and Greece. India seems to want goods, but is scarcely prepared to pay the prices ruling and give the delivery required by manufacturers, and trading has been restricted. China has given moderate support, and further buying has been mentioned for Java and Singapore. The better demand for Central and South America has been maintained. Producers of printing cloths have added to their engagements. Home trade buyers have been rather slow in coming up in price. American yarns have moved off more freely, and prices, especially in twists, are distinctly dearer on the week. Coarse yarns continue in request for the Levant and fair lines have been booked for India in dyed qualities.

Cotton Cloths in China.

The mail from China received this week gives particulars of the stocks of cotton piece goods in Shanghai on June 30 last, and the figures show that on that date supplies amounted to only 1,232,000 pieces, as compared with 3,583,000 pieces at the same time in 1918. The stocks at the moment consist of British goods, 652,177 pieces; Japanese goods, 539,503 pieces; and American goods, 31,240 pieces. English and American grey shirtings twelve months ago amounted to 400,000 pieces, whereas now there are only about 100,000 pieces. Stocks of Japanese grey shirtings are now 113,000 pieces, against 55,000 pieces last year. Stocks of English and American white shirtings have been reduced during the twelve months from 877,000 pieces to 70,000 pieces. Supplies of Japanese white shirtings show very little change, the stock being 47,000 pieces. English sheetings are now 8,000 pieces, against 14,000 pieces, and American sheetings 12,000, as compared with 67,000 pieces. Printed cottons have fallen from 140,000 pieces to 30,000 pieces. The figures published indicate that Lancashire goods will be wanted in China on a free scale during the next few months. It is of interest to point out that the average offtake in the second half of the last four years in China of English grey sheetings was 985,000 pieces, and of white shirtings 1,058,000 pieces, so that shipments will have to be considerably increased if the turnover in the Far East is to be maintained.

Proposed Cotton Mill Sale.

The buying of Lancashire cotton mills by financial syndicates has not yet come to an end. The directors of the Dawn Spinning Company at Oldham have this week received a tempting offer from one of the financial groups which have recently been very active in Lancashire. The shares are of the nominal value of £5, with £3 paid up. It should be pointed out that £1 10s. of this amount has been added to capital by the payment of bonuses out of profits. The bid made for the mill works out at £20 10s. per share. The concern runs over 90,000 mule spindles and nearly 8,000 ring spindles.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated September 17:—

Rain nearly general, but monsoon currents very weak at present. Thunderstorms in several places. More rain required parts of Bengal.

Bombay cotton market steady. Fully good broach April-May quoted 471 Rs. Piece goods steady with poor demand. Calcutta jute market dull. Hessians quiet. Sackings firm with poor demand.

The Airco express aeroplanes between London and Paris began on September 23 their fifth week of daily flying.

The traffic receipts of the Smyrna-Aidin Railway for the week ended September 6 were £6,432.

The returns of the Egyptian Markets, Ltd., for the week ended September 11 were:—Cattle markets, £188; general markets, £274; total for week, £462; total for year, £39,686. The figures for the corresponding week in 1918, ended September 12, were:—Cattle markets, £545; general markets £493; total for week, £1,038; total for year, £36,318.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are from a recent report received by the Imperial Ottoman Bank.

STAMBOUL, August 30.

The demand for manufactures has been more lively this week. Practically the whole of the arrivals have been sold in transit for the Black Sea ports (Russia, Roumania). The prices are firmer, with a tendency to rise as much in the market as in the centres of production. There are signs of the gradual exhaustion of stocks in England and in Italy. Traders are expecting a more marked demand as soon as the blockade is lifted from certain ports in Southern Russia, and Odessa is relieved from Bolshevist occupation.

The sales of opium of the past week have been: 40 cases of druggist at Ps.770-780 the oke. 30 cases of fine Hadji Keui, Yozgat, at Ps.950-1050 the oke. The prices are showing a declining tendency on account of the low arrivals at Smyrna.

Mohairs.—Arrivals: 868 bales. The sales have been insignificant, 26 bales extra at Ps.92 the oke. Prices are weaker: Ps.85-90 the oke, according to quality.

Silks.—The market has been quiet and inactive, with a falling tendency. Nominal price £T12.25 the kilo, Brussa, £T10.50 the kilo, Syrian.

Cereals.—Corn: arrivals from Anatolia, 105 waggon loads for the week. Sales at prices varying from Ps.13 to Ps.15 the oke.

The reports for the new crop taken from traders near the different centres of Anatolia are very satisfactory. It is true the sowings have only been about a fifth of a normal year, but their yield is finer and has exceeded all expectations.

DISTRESS IN INDIA.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agriculture Department, dated September 19:—My telegram dated September 12. Condition of crops generally satisfactory except where damaged by excessive rain, United Provinces, Central India, and Rajputana; by insufficient moisture in Bombay, Madras and Hyderabad. Relief operations ceased in Ahmedabad. Numbers relieved:—Bengal: works, 11,355; gratuitous, 13,870. Bihar and Orissa: works, 6,069; gratuitous, 53,286. Feudatory States: works, 6,826; gratuitous, 33,323. United Provinces: works, 31; gratuitous, 3,420. Ajmer Merwara not reported. Central India: works, 5,600; gratuitous, 6,200. Central Provinces: works, 19,585; gratuitous, 27,709. Bombay: works, 8,530; gratuitous, 36,712. Hyderabad: works, 35,000; gratuitous, 35,000. Madras: works, 55,036; gratuitous (incomplete) 94,519.

The total subscriptions for the new Indian Loan up to August 23 were Rs.15,87,59,100, inclusive of Rs.1,06,85,375 in War Bonds.

TRADE ENQUIRIES.

TRADE IN GREECE.—A Greek gentleman, speaking English perfectly, good social position, landed proprietor in Athens, would be glad to hear of one or two good firms, preferably for agricultural machinery, windmills for water, etc., etc., whom he could represent in Greece.—Reply Box 143, THE NEAR EAST, 1, Devonshire Square, E.C.2.

PARTNERSHIP.—CIVIL ENGINEER, A.M.I.C.E., Public School, English, desires Junior Partnership in well-established business in which previous training would be an asset, with a view to trading in Asia Minor and Near East. Capital £2,000. At present abroad. Shortly returning home.—Box 140, THE NEAR EAST, 1, Devonshire Square, E.C.2.

COMPANY NOTES & REPORTS

Smyrna-Aidin Railway.

The report of the Ottoman Railway from Smyrna to Aidin for the half-year ended June 30 states that the council have elected the Right Hon. Viscount St. Davids to fill the vacant seat and to act as president of the council. The council have to report that the working of the railway has been carried on by the company's staff under the control of the Inter-Allied Military Commission since April last. The whole district was then quiet, and the receipts from traffic were very good, as there were considerable stocks of exportable goods remaining in the interior. Unfortunately, following upon the landing of the Greek Army in May and their occupation of Smyrna and the country as far as Aidin, disturbances arose and it was not possible for transport to be continued in any volume. A British mission has just arrived at Smyrna and there is every hope that order will now be restored so far as its influence extends. The stocks of produce in the country are still stated to be large and a ready market is available as soon as they can be moved. The coming crops are also reported to be good. Owing to the disorganisation arising out of the disturbances it has not been possible to complete the accounts for the past half-year: it is therefore proposed to include them with those of the current six months. The company's claim for war damages has been revised and brought up to date and will be formally submitted to the Reparation Commission when constituted. It is not anticipated that claims arising in the Ottoman Empire will be heard for some time to come and no payment on account is expected in the near future. In order to facilitate a settlement of the company's claim proposals have been formulated which, if accepted, will enable it to be satisfied, as to some part at any rate, in kind. No decision as to these proposals has yet been taken by the Governments concerned. A considerable amount of useful work, however, has been done towards preparing the ground for future negotiations. The estimated weekly traffic receipts since March last are stated in sterling at an average exchange of 400 piastres to the £ sterling. The rate before the war was about 110 piastres per £, and the tariffs have been increased to make up for the depreciation and to compensate for the heavier expenses.

An extract from the report of the general manager states that he took over the railway on behalf of the company on April 7, from which date the administration has been carried on by the company's staff under the control of the Inter-Allied Military Commission. He spent some time in the inspection of the line and of the districts beyond it and found the country rapidly settling down to a state of tranquillity and work. The town of Smyrna was occupied by Greek forces on May 15, and they now hold the country adjacent to the railway as far as Aidin. Fighting between these troops and Turkish irregulars has led to much loss of life, to some damage to the company's property, to the destruction of about three-quarters of the town of Aidin, and to a great diminution of the company's revenue. The line beyond Aidin is now being worked, as best they may, by the Turks. The permanent way is in fair running order as is also a considerable portion of the rolling stock, but arrears of maintenance are heavy. At present only one-third of the locomotives are in a fit state for service. The company's claim against the Turkish Government for losses and damages sustained during the war has been put forward, but it has not been possible also to complete the accounts for the half-year. All tariffs have been raised to meet the depreciation in the value of money, and only tranquillity is needed to ensure a return of the company's former prosperity. Meeting, Winchester House, E.C., September 30, noon.

The Bank of Bengal.

The report of the Bank of Bengal for the half-year ended June 30 shows a profit of Rs.22,90,989; Rs.5,60,167 was brought forward, making Rs.28,51,065. A dividend at the rate of 14 per cent. per annum and a bonus at the rate of 3 per cent. per annum have been paid, the same as for each of the four preceding half-years, and Rs.5,00,000 transferred to reserve and Rs.1,00,000 to gratuity and pension fund, leaving a surplus of Rs.5,51,065. Balance-sheet at June 30, 1919:—Liabilities—Capital paid up, Rs.2,00,00,000; reserve fund, Rs.1,69,00,000; reserve for depreciation of investments, Rs.25,00,000; deposits, Rs.31,47,71,779; bank post bills, etc., Rs.16,72,633; sundries Rs.39,31,898—total, Rs.35,97,76,310. Assets—Government securities, Rs.5,88,76,137; other investments, Rs.1,38,60,944; bills discounted, loans, etc., Rs.13,82,46,254; balances with other banks Rs.37,52,742; sundry assets, Rs.40,96,181; cash and currency notes, Rs.14,09,44,052—total, Rs.35,97,76,310.

Constantinople Telephone.

A circular just issued to shareholders in the Constantinople Telephone Company states that a meeting of the company will be held in Constantinople on November 4, for the purpose of receiving a report on the condition and prospects of the company. The last report submitted presented the accounts up to December 31, 1913, and no accounts have been published since, owing to the officials of the company being compelled to leave Turkey early in 1915, before the accounts for 1914 could be completed. Shareholders will be asked to appoint two directors in place of the late Sir George Franklin and the late Mr. David Smith. They will also be asked to ratify the acts of the directors since the last annual meeting. The system was taken over by the Turkish Government in 1915, but after the Armistice the general manager and expert staff of the company regained possession on December 2, 1918. The company proposes that the receipts and expenditure during the working of the system by the Turkish Government from March 15, 1915, to April 1, 1919, should be for the account of that Government, with the obligation on its part to pay to the company an indemnity which will put it in a position to pay interest to the bondholders and shareholders in respect of the said period. The necessary claims in this respect have been laid before the competent authorities, and it is hoped that they will receive an equitable settlement. The funds available in London since the period of the last report and accounts have been utilised for the supply of materials for repairs, renewals and additions to the system and other urgent expenditure necessary to conserve the interests of the company. The assets in London at the present time consist of:—Cash at bank and on deposit, £6,421; investments in War Loans, at cost, £27,795; against which there are outstanding liabilities in respect of services rendered or materials supplied and work done by contractors prior to the war, the exact amount of which it has been impossible to ascertain at the date of this report, but which, so far as can be estimated, exceeds £60,000. In addition to these liabilities, the accrued interest on the 6 per cent. Obligations to July 1, 1919, amounts to £60,000, a sum which, as mentioned above, forms part of the claims formulated by the company against the Ottoman Government. The general manager is of opinion that the revenue now being received in Constantinople will be more than sufficient to meet the local expenditure.

Maiseis Petroleum Trust.

The company's manager in Roumania has reported that the title deeds of the company's properties are being held in safe custody in a Government office pending his entering into possession of the properties, which, together with those of the companies of other Allied countries were during the German occupation of Roumania taken over by a German trust. Since the German evacuation these properties have been administered by trustees appointed by the Roumanian Government, from whom the company can without difficulty take them over. The manager has located many of the company's books and documents and has already taken over all those which were in the possession of the German administration. On the company's concessions at Bordeni he states that all the wells have been plugged, with the exception of one, but that sufficient material remains on the property to re-equip two or three wells. He recommends the immediate reconstruction of five of the old wells, viz., Nos. 2, 4, 5, 7, and 8, as these wells should strike a source which was reached by a neighbouring well belonging to the Anglo-Romana Company at a depth of 427 metres in 1916.

NEW COMPANIES.

Foreign Trade Corporation, Ltd.

A private company with the above title was registered on September 13, with a capital of £150,000, in £1 shares. Objects:—To carry on the business of importers and exporters of and dealers in all kinds of goods, wares, commodities, vegetable and animal produce, minerals, chemicals, metals, merchandise and natural and manufactured products of all kinds, merchants, agents, shipping agents, shippers, forwarding agents, warehousemen and shipowners; financiers, stock and share dealers and issuers, bankers, trustees, capitalists, concessionnaires and contractors in Great Britain and Ireland, India, the British Colonies and Dependencies and foreign countries, etc. The subscribers (each with one ordinary share) are: H. T. Holmes, 49, Westbury Road, Wembley, Middlesex, accountant; Florence M. Sydee, 31, Distin Street, Kennington, S.E.1, clerk. The subscribers are to appoint the first directors. Qualification, £500. Secretary: H. T. Holmes. Registered office: 9, Clifford Street, New Bond Street, W.1.

Egyptian Delta Light Railways.—Coupon No. 44, falling due October 1, on the 5 per cent. Debentures should now be lodged at the Bank of England, London, E. C., for payment.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

The weaker tendency reported last week has continued this week for Egyptian Government stocks and bank shares, the cause again being Continental selling.

Egyptian Unifieds are again 1¼ down at 78¾, and the 3½ per cent. loan has dropped 1½ points to 67½.

In Bank shares, on some small selling in an unwilling market, Nationals have sharply receded ⅝ to 20, at which price there has been some good support. Agricultural Banks have declined ¼ to 5½ and the preference shares are ⅛ lower at 7¼. Anglo-Egyptians have remained firm, as also Land Banks.

In Railways, Delta Lights are ⅛ easier at 6⅜.

Amongst Land descriptions Aboukirs are fractionally easier at 27s. 6d., and Allotments have dropped ¼ to 4. Behéras have shed a like fraction at 13¾, and the Preferred are nominally ⅛ down at 4½. In Egyptian Consolidated Lands there has been some business passing, but the market remains rather a nominal one. Delta Lands are fractionally lower at 13s. 9d. On the other hand, New Egyptians have improved 3d. to 23s. Sudan Plantations are ⅛ lower at 8, but Union Foncières have recovered a like fraction to 3½.

In Miscellaneous shares the only change to report is a further decline of ⅛ in Khedivial Mails to 5½.

Amongst the Oils, Anglo-Egyptians, after being a strong market and rising to 5¼, finish unchanged. Roumanians, after being up to 23s., finish 3d. firmer at 22s. 6d., but Tráians have been a weak spot, and have dropped a shilling to 10s.

In Greek securities Monopolies have improved a point to 55½, and Rentes are also 1 point up at 53. The 1914 Loan has been offered from the Continent, and has relapsed a point to 76.

Sir Clement B. Simpson, of the firm of Binny and Co., London and Madras, has joined the board of Mather and Platt, engineers, Manchester and Westminster.

It is announced that the Union and Rhodesian Trust has secured large oil interests in the East, and that before the end of the year a flotation will take place. One half of the working capital for the new company has been underwritten in India.

The Tata Hydro-Electric Company, Bombay, has obtained a concession from the Government of Madras for the construction of the Kurndahs electrical scheme on the Nilgiri Hills for the lighting of Ootacamund, Wellington, Coonoor and Kotagiri.

Messrs. N. M. Rothschild and Sons announce the numbers of 260 bonds, amounting to £78,000, of the Ottoman 4 per cent. loan of 1891, secured by the Egyptian Tribute, which have been drawn for redemption on October 10.

It is announced that Messrs. Gunnar Kassman and Company, Bankiraktiebolag, Stockholm, are taking a financial interest in the formation of the Anglo-Baltic and Mediterranean Bank, Limited.

A Reuter message states that the final forecast of the Indian jute acreage is as follows: Bengal, including Cooch Behar, 2,498,145, an increase of 249,119 acres. Bihar and Orissa.—203,430, an increase of 54,174 acres. Assam.—120,000, an increase of 17,900 acres. It is estimated that the total increase in bales will be 1,467,146.

NOTES OF THE WEEK.

Last Saturday the railwaymen went out on strike in obedience to their leaders' orders. Any discussion of the reasons that brought about their action would be outside the legitimate field of THE NEAR EAST, and we refer to the subject only in order to ask the indulgence of our readers abroad for any shortcomings they may find in our pages during the continuance of the strike. To our readers at home we believe it to be quite unnecessary to address any such appeal: the difficulties of the situation must be well known to all of them; and judging by the spirit thus far displayed by the public everybody is ready to help everybody else, except the comparatively few men who have brought about the trouble.

The news that President Wilson is suffering from a nervous breakdown, which is sufficiently serious to necessitate his taking a real rest, has been received with regret in this country, while in other quarters to the regret is added something like consternation. For, rightly or wrongly, it is argued that the President's breakdown is likely to react unfavourably upon the chance of America becoming willing to accept a mandate for Armenia; and if that view should prove correct, it would be highly unlikely that America would accept any mandate at all in the Near East. As far as it is possible to judge by the American reports, President Wilson's tour, while it might not have had any direct effect in the way of making the Senate more favourable to the idea of accepting such mandates, was certainly winning support for his views wherever he spoke. From the point of view of the Near East it is, therefore, highly unfortunate that it has been cut short.

In this connection it is of interest to note that a deputation of Armenian-born American citizens has appeared before a sub-committee of the Senate Foreign Relations Committee, in order to urge the dispatch of American troops to Armenia. Whether their appeal may have any weight at all in helping the Senate to come to a decision on the question of a mandate for Armenia it is impossible to say, but the Armenians in America and their friends would be most unwise if they omitted to take full advantage of every opportunity offered them to make their views and aspirations known. They have been told by prominent Americans that if America can be made to see the opportunity for unselfish service to humanity that is offered her, she will be sure to take up the burden. Let them, therefore, persevere in pressing their point.

The Ministerial crisis in Roumania has pursued a somewhat leisurely course, in sympathy, probably, with the country's indeterminate state of mind. M. Bratianu's firm attitude on the subject of the Austrian Treaty has been supported by a large number of people, including many of his political opponents, and the clever move by which he made his resignation hinge on this question has added to the complexities of the situation. One attempt to form a "neutral" Cabinet has, according to the latest report failed, partly, no doubt, because there is a tendency for these neutral Governments to be Bratianist in all but name. The people who are opposed to M. Bratianu would withhold their support on principle; his adherents would prefer to see him vested with responsibility as well as with power. But, unfortunately, M. Bratianu has failed to carry the Transylvanians with him, and their abstention would seem to constitute a fatal weakness in any Ministry of his at this time. His return to power without their support would almost inevitably suggest that the bitterness against the Entente Powers over the Austrian Treaty was being crystallised into a permanent policy associated with the name of M. Bratianu. This, we are confident, is neither M. Bratianu's innermost wish nor the considered judgment of the nation as a whole.

We have not disguised our view of the methods of the Paris Conference, which have resulted in the temporary alienation of Roumanian goodwill towards the Allies; but it is difficult to believe that the slight to Roumanian susceptibilities or any concrete wrong done her can in the long run be as injurious to the country's *amour propre* and well-being as the political estrangement of the Transylvanians. On their behalf it has been stated that they can make no common cause with the kingdom until it has purged its politics and political methods. The Opposition suggest the same point of view when they threaten to abstain from the elections unless the state of siege is raised and the censorship abolished. They hold that anything approaching an anti-Entente policy would be suicidal for Roumania, and they are resolved to prevent, if possible, the

Digitized by Google

country from riding off on this issue at the next elections. An appeal to the electorate under the disabilities of martial law would not, they believe, allow the true feeling of the country to be reflected. On this point the Transylvanians are presumably with them; they want to see a Constituent Assembly elected without fear or favour, and in this body they hope to command sufficient strength to lead the new Roumania into a new, clean, and enlightened system of politics.

The state of affairs at Fiume continues to cause much very natural anger in Yugoslavia, much genuine embarrassment to the Italian Government and the more level-headed Italians, and considerable astonishment not unmingled with amusement in most other countries. The amusement, we hasten to add, is for the very serious way in which Signor d'Annunzio continues to take himself and his admittedly remarkable performance. It is almost impossible for others to take quite seriously one who is so obviously impressed with his own heroism and indulges so freely in heroics, and who at the same time refers to the Prime Minister of his own country as "His Indecency of Adipose Degeneracy." But the situation itself is far too serious for Europe to jest over. It has led already to an incident at Trau (Trogir), where what might have developed into a serious conflict between Yugoslavs and Italians was only nipped in the bud by the intervention of an American warship and the landing of American marines and machine-guns. If this incident should induce President Wilson to hasten in making known his views on the proposed solution of the Fiume problem it will have served a good purpose. If that decision is not made known soon we may confidently predict other incidents of a similar character, but possibly not with a similar peaceful ending. Already the fire-eating poet is reported to have declared that he considers himself in a state of war with Yugoslavia.

In a speech made last Saturday Signor Tittoni made it quite clear that the settlement of the Fiume difficulty is for all practical purposes entirely in President Wilson's hands. France and Great Britain, he said, agreed to Italy affirming her sovereignty over Fiume, but Mr. Wilson persisted in formulating objections. France and Great Britain were also willing that Italy should have control of Albania, "which with the neutrality of the Corfu Canal would ensure for her the absolute mastery of the Otranto Canal and consequently of the Adriatic"; while Yugoslavia should receive Dalmatia with the exception of Zara. Unfortunately the report of Signor Tittoni's speech does not make it clear whether this is also the American view. Two points, however, become clearer every time the question is discussed or mentioned: first, that any solution of it that may be suggested is assured of vehement opposition from one side or the other; and second, that in these circumstances a bad solution put forward promptly and firmly imposed would be preferable to the present state of suspense, which is as dangerous as it is aggravating to all parties.

Reports from India shed a little fresh light on those events in the Yemen, to which we referred last week—the fighting at Hodeida and the capture of a British mission at Bajil. From these reports it would seem that the force of Arabs which attacked Hodeida was a considerable one, and that it was able not only to rush the hospital, killing the guards and police, but also to penetrate into the town and gain possession of the greater part of it. There is perhaps little surprising about this, even though Hodeida was garrisoned at the time by Indian troops; for the town would be easy to surprise, and as we have previously pointed out, the coastal Arabs of this region have always been lawless and inclined to act independently. Nor can there be any doubt that steps will already have been taken to restore British prestige. But the incident is disconcerting, inasmuch as it tends to increase the doubts so strongly felt, even by their best friends, whether the Arabs will be able to work together long enough to make possible the reconstruction of a strong Arab nation.

Some progress has been made in regard to passages to India, and widespread satisfaction was caused last week by the announcement that two additional ships are expected to sail this month, and that one-half of the berths on them will be allotted to industrial and commercial needs. The development of this question resembles in essentials the history of the provision of homeward passages last spring. Then as now there was a marked shortage of accommodation; then as now the India Office was abused; then as now a strong expression of public opinion was followed by the provision of extra ships. Eventually the homeward demand was satisfied; and it seems possible that the outward passengers will also in the end be transported, provided that they keep their case prominently before the public. The Shipping Controller is apparently hard to move, but the thing can be done if sufficient pressure be exerted.

Unfortunately, passengers to India, in common with passengers to other countries, are likely to find their difficulties considerably increased by the railway strike, especially if—as seemed likely at one time—it be complicated by "sympathetic" strikes of other trade unions. Though less numerous, would-be passengers to Egypt are no less unfortunate than those who wish to get to India: indeed, since nothing at all appears to have been done for them, they are even more entitled to sympathy. There are many officials and business men now in this country who are most anxious to return to Egypt, and whose presence there is urgently called for, who yet see no chance whatever of returning. There is, of course, no separate Egyptian Office—such as the one suggested by a writer in THE NEAR EAST last week—to which they can appeal for assistance, but if they will take the necessary steps to set the machine in motion they may surely expect the Foreign Office to intervene on their behalf.

Spain has at last made a move against Raisuli, after a long and inexplicable delay. On September 27 a combined movement was begun by Spanish and native troops, and resulted in all the objectives being gained without severe fighting. Unfortunately, however, the day's success was badly marred by treachery on the part of Moorish irregulars, who mutinied, surprised the three Spanish officers and the few Spanish soldiers who were with them, and murdered them all. The village (Beni Salem) at which the incident occurred was promptly bombarded; but it is to be feared that the Spaniards, who have not grasped their nettle firmly, must expect more troubles of the same kind so long as Raisuli is able to keep the field against them.

According to reports which reach us from Palestine, the Christian and Moslem inhabitants of that country are not free from anxiety regarding their future, if, as seems to be taken for granted, the land is placed under Jewish administration. How far such uneasiness may be traced to secular rivalry and racial animosities it would be hard to say, although it is tolerably certain that these causes contribute largely to the feeling. But it is to be feared that the zeal of some of the Zionists and a certain tendency on their part to force the pace have given rise to some of the fears expressed. Thus, it is reported that they have lately issued large cards, intended to be placed in all Jewish shops and stores, with an inscription exhorting all Jews to speak their own language. Their neighbours argue that if they refuse to talk any language but their own it must inevitably render intercourse needlessly difficult; and though the proposal may be perfectly harmless, even admirable, in itself, it must be admitted that to put it forward at the present stage of things is premature, and rather injudicious. The Moslems and Christians, our correspondents inform us, feel that their rights and interests are likely to be overlooked because they have not the influence or the financial resources of the "Zionists"; and many of them fear that the only course left open to them will be to emigrate. Such fears are, we believe, utterly groundless. The rights and interests of all sects and races will surely be safeguarded under British protection—which is almost assured to Palestine.

BELGRADE LETTER.

(From Our Own Correspondent.)

Belgrade, Sept. 20.

The Political Outlook.

The delegates from Paris, M. Pashitch, Dr. Ante Trumbitch, and Dr. Smodlaka, arrived yesterday evening and stopped at the Moskva, that hideous building in the worst Germano-Russian style that is an unfortunate landmark in Belgrade, though it may be very comfortable inside now that it is reopened. Everybody who is not a slave to party passion earnestly hopes that the delegates have brought wiser counsel with them, and that a solution will be rapidly found for the *impasse* which is paralysing life at home and damaging Serbia abroad. With his long experience of domestic politics, widened by the recent five years in the bigger field of the world-war and six months in Paris, Mr. Pashitch should be able to find a solution, though his many bitter enemies will not be able to resist the temptation of throwing obstacles in the way. Serbs, and Englishmen too, may well re-echo the Russian saying that the good work done by the soldier is spoilt by the bungling of the politician.

The question of the obnoxious clause in the Austrian Treaty is the burning one at the moment. Serbia finds herself in an almost identical position with her rival Roumania. If Bucharest could agree with Belgrade on the partition of the Banat, and cease to claim it all, even to Panchevo, where the Serbs outnumber all other nationalities combined, Roumania and the S.H.S. would be partners. Neither could tolerate the interference of foreign States within their sovereign frontiers. By doing so, they would be placing themselves on a level with pre-war Turkey, virtually admitting capitulations and extra-territorial rights. In Serbia, no race distinctions are recognised: all are Serbian citizens, whether Black, Gypsy or Jew, with equal rights and equal duties. So long as a man does his duty as a citizen he is free to live and worship as he likes, and to talk any language he likes. Political exigencies at times may have caused, and would certainly justify, strong action on the Albanian frontier, where turbulent tribes still maintain the mediæval Balkan tradition of "bands" and rapine. All Serbian citizens alike were bound to contribute their share to the defence of the country, and the pay of soldiers is a quite modern innovation. Now that the new frontiers are bound to include a proportion of aliens, Germans, Magyars, and Roumanians, these may object to serving in the Serbian Army. If they do, the Government must have power to deal with them for the sake of its own safety, with no interference from outside Powers, whether League of Nations or not, in which Italy, now an open enemy, will have a voice.

Besides, the minority clause will actually encourage anti-national propaganda, even anti-national schools, which in the Balkans of all places is a fatal obstacle to permanent peace. But the overwhelming objection is the absence of reciprocity. As I have said in my former letter, Italy, as a "Great Power," will have a voice in the "protection" of minorities in Serbia, yet the S.H.S., now a powerful military State more populous than the whole of Scandinavia, will have no voice in the protection of their half-million co-nationals, who now become Italian subjects with no suggestion of self-determination. These long-suffering Slovenes have but exchanged the bureaucratic tyranny of the Hapsburgs for the hysterical Chauvinism of the followers of Gabriele d'Annunzio.

When Count Aehrenthal annexed Bosnia and Herzegovina, there was an exodus of so-called Turks, that is, Moslem Serbs, into Turkey. To-day 150,000 of these exiles are returning to their motherland. Mohammedans though they are, these do not appear to want any "protection" from the League of Nations.

M. Miyatovitch on Gt. Britain.

The *Tigorvinski Glasnik* is now publishing a London Letter, the author of which is well-known in our country, M. Chedomil Miyatovitch, the historian, formerly Serbian Minister at St. James, and our very good friend. M. Miyatovitch refers to Mr. Lloyd George's trumpet-call, but considers the picture painted too black. He cannot see, he writes, this great country dashing down the road to bankruptcy, serious as the economic and political position may be.

Concerning Montenegro.

The *Politika*, a new but very readable Belgrade newspaper, prints a long article on Montenegro, giving the official version of the state of the country, in the form of an interview with M. Pavitchevitch, the Governor. After referring to the poverty-stricken state of the country, and general distress, he discusses the brigandage which is rife among the crags, which afford a refuge to the *Zelenashi* to-day as they did to all Montenegrins during the centuries of the Turkish wars. He states categorically that certain places, the province of Antivari in particular, which has never been Austrian territory, are occupied by Italian troops, who, of course, have no shadow of right to be there, and are an obstacle to the peaceful settlement of the country. They interfere with official telegraphic and other communications, and closed the Virpazar-Antivari railway, the only one in the country. On July 20, the authorities arrested at Dobrota, near Cattaro, a band of armed men near the quarters of the Italian General. They were handed over to the Serbian police authorities by the officer then commanding the Allied troops at Cattaro, General "Taon." Similarly on July 22 and 23 a considerable band of armed men passed through the Italian lines near Antivari, and penetrated into the interior; some have been arrested, and have admitted that they were armed and despatched by the Italians; these parties are organised, equipped and paid in Italy, clothed in Italian uniforms, sent across in Italian vessels, and disembarked at Antivari, and under cover of Italian troops, sent into the interior. They stated that the Italians told them that Montenegro was ready for a general rising, which their presence would provoke. M. Pavitchevitch categorically states that in Montenegro there are to-day exactly twenty Serbian civilian functionaries, and that all other officials are Montenegrins; he denies that the few Serbian troops are in any way in collision with the natives; there are three battalions of regular Montenegrin troops. Now, is Italy at war with Serbia or not? Is her action in Montenegro encouraging self-determination? Let the people decide. Withdraw Serbian influence during a plebiscite by all means, but withdraw Italian interference too. Allow the Montenegrin free choice, but let it be really free, and there is little doubt which way the vote will go.

"English as She is Wrote."

The English language is now a compulsory subject in all middle schools, and the Minister of Education proposes to invite teachers from England.

Serbs, not unnaturally, have some difficulty in mastering our English orthography, which they find the more difficult as they are accustomed to their own logical system, which is purely phonetic. Even making allowance for this, it is a little puzzling to read in the Serbian papers in a telegram from London a reference to "Zi Bund Tobl." Who would recognise in this strange guise, even allowing for misprints, what must be "The Round Table"?

There is room for confusion in their own names, even if they are spelt phonetically, and we must remember that in Serb the letter R is a vowel. But Englishmen, speaking of "Serbia," mean the former kingdom, though often enough the name is used to comprise the new united kingdom of the Serbs, Hrvts, and Slovenes, usually abbreviated as S.H.S. If they wish to discriminate they may speak of Old Serbia, but this is quite incorrect, for "Stara Srbija," or Old Serbia, was not included within the kingdom till after

the Turkish war of 1912; for it is the old province of Rascia and the country round Prizren, the cradle of the old Nemanitch dynasty and of Serbian nationality, though during the long centuries of Turkish dominion the settlement of Albanians was so much encouraged by the Porte that in many districts there the Serbs are in actual minority.

The name Serbs, properly speaking, should be confined to those Southern Slavs who are of the Orthodox faith and celebrate the peculiar family festival of the *Slava*, about which so much has been written. By this definition we include the Serbs of the Voivodina across the Danube and the Save, and the Orthodox Serbs of Bosnia and Herzegovina, and, be it well noted, the Montenegrins, but exclude the Mohammedan Serbs, who are in most cases as good patriots as any, though many were forced by Austria into the Turkish Army, and in the war fought against us in Mesopotamia and Palestine. The Serbs of the old kingdom of Serbia may be discriminated under the name *Serbiantsi*, but this term is generally used only when it is intended to specify those who were subjects of King Peter.

BELGRADE, Sept. 24.

A Council of State was held on Saturday, at which the delegates from Paris attended, as well as Dr. Davidovitch and the Speaker, Dr. Pavlovitch. The matter under discussion was the treaty with Austria and the obnoxious clause 51 in particular. The meeting was adjourned, and is still sitting (Wednesday, 24th). The Fiume problem is being considered. There is a feeling of relief that Greece also objects to the minority clause, which the wiseacres in Paris are endeavouring to thrust down the throats of all their Balkan Allies. M. Venizelos enjoys such prestige in Paris that it is hoped that his protestations will lead to a reconsideration of the whole problem, and it is felt in Serbia that precipitate action would be ill-judged. Meanwhile the country is losing patience with the eternal squabbles of the politicians, and eyes are turned towards the Speaker, Dr. Dragi Pavlovitch, as a respected and independent man, in the hope that he will save the situation.

A CORRECTION.

Owing to a misprint, the date of the Belgrade Letter published in THE NEAR EAST of September 26 was wrongly given as September 1. It should have been September 15.

LETTER FROM BULGARIA.

(FROM OUR OWN CORRESPONDENT.)

SOFIA, Sept. 12.

The Parliamentary Elections.

Owing to the state of excitement resulting from the war, it was difficult for the national will to find expression with normal calmness and that cool reasoning which restrains from going to extremes. The principal aim of the Government in carrying out the elections was to secure that they should be conducted with perfect preservation of public order, and should secure freedom in voting to the electors; and this was satisfactorily attained. The result of the election I have already telegraphed to you,* so you will know that the real opposition to the governing parties is represented by the extreme Socialists or Communists, who have secured 47 seats out of the total of 236. From these figures it is clear that they will not be able to exercise an influence detrimental to the present Cabinet, either in the country or outside it.

The orderly way in which the elections passed off must surely have discredited the tales of Bolshevism being rampant in Bulgaria, as it has given the lie to the prophecies of revolution, and so forth, in which the Press of neighbouring countries has been freely indulging.

The Cabinet decided at a sitting held on the 10th inst. that the new Chamber shall be summoned on the 27th inst., when, it is thought, the majority of the Bulgarian Peace delegates will return. M. Michael Saravoff and Professor Venelin Ganeff will probably remain in Paris to keep open communications. Among other questions the new Chamber will have to consider very early are those of Housing and Victualling, and the voting of the Budgetary expenses from October 1 to April 1, 1920.

* See THE NEAR EAST of September 12.—ED.

The Macedonian Congress.

Last Sunday the delegates of the Macedonian Brotherhood held a meeting, at which a resolution was adopted that the extraordinary congress of the Macedonian Emigration should be held on the 28th inst. A vote was also passed unanimously protesting most energetically against Greek and Serbian attempts to divert attention from the Macedonian Question, to represent it as non-existent when it is more than ever alive, and declaring that without its just settlement the Balkan problem will never be solved. By another unanimously-supported resolution the Congress decided to express warmest thanks to all those large-minded foreigners who untiringly and disinterestedly interceded for Macedonian liberty, and to assure them that to-day, in the hour of indescribable suffering, the Macedonian Bulgarians welcome with deepest gratitude the sympathy accorded to them and their cause.

False Reports Contradicted.

On August 22 one of the leading London newspapers published a telegram from its Belgrade correspondent stating that the railway bridge near Vranya, on the Nish-Uskub line, had been blown up by Bulgarian *komitajis*, in consequence of which the Nish-Uskub-Salonika communications were interrupted. The Bulgarian Press Bureau, on the authority of evidence collected from passengers on this train, officially denies the story thus put forward. Many passengers, including the Roumanian citizen, Jean Averescu, saw that the "outrage" was an accident, the dry wood employed in building the bridge having been set on fire by sparks from the engine, and there was no bomb attempt of any kind.

Another official denial which has been rendered necessary by the false reports so assiduously spread abroad by Bulgaria's enemies refers to the discovery, or reported discovery, in the Ægean Sea, of floating mines which were manufactured at the Sofia military arsenal! The Bulgarian Ministry for War declares that there are in the arsenal no machines either for the manufacture of such mines or for laying them at sea. The Ministry has also requested the military missions of the Entente to conduct an inquiry into the facts of the case in order to establish the truth.

Peace Treaty Expectations.

The report that the handing over of the Peace terms to the Bulgarian delegation is imminent, and that the settlement of the Macedonian and Thracian questions is probably excluded from them, has provided the ringleaders of the Germanophil Party and its Press with an opportunity not to be missed. They are accordingly vigorously sounding a note of alarm for the future of Bulgaria. The remaining, anti-German, journals await the verdict of the Great Powers of the Entente with confidence that a just settlement will be provided, which will ensure lasting peace; and that with the passing of time the sentiments of the Balkan States will so develop that the vexed question of nationalities will be impartially and justly settled.

Death of a Socialist Leader.

Last week there died at the hospital of the Red Cross one of the leaders of the "Narrow" Socialists, M. George Kirkoff. He was a distinguished citizen and exemplary public man, and though only forty-five years old, had worked untiringly for a quarter of a century for the Socialist cause in Bulgaria. In Parliament and at public meetings, M. Kirkoff was always heard with pleasure by friend and foe alike; his satire chastised all faults, without malice, and his speech was always marked by sincerity and love of his fellow men. Of Bolshevism, advocated by some of his followers, he said: "Bulgaria is the last country in the world to offer Bolshevism any chance of success."

BRITISH WORK IN PALESTINE.

(From a Correspondent.)

The visitor who succeeds in reaching Palestine to-day will find that British officers of O.E.T.A. (South) are carrying out the strenuous work of reform with an energy characteristic of their race. Wherever it has fallen to our lot to occupy Ottoman territory it has been pretty much the same story. So it was in Cyprus, and so in Egypt. A very good idea of the change that is being effected may be gained from a perusal of the *Official Gazette*, which is published by authority at Jerusalem fortnightly, and is printed at the office of the Franciscan Monastery. A glance at the proclamations and orders of the Chief Administrator, and the circulars of the heads of departments show the comprehensive nature of the measures that are being promptly taken to meet all the needs of this period of transition.

To begin with difficulties touching the necessaries of life. In order to check the undue raising of prices, the Chief Administrator may fix maximum rates for the whole country; and municipalities may publish tariffs for various foods, etc. The schedule of articles includes all cereals, rice, flour, bread, butter, meat, olives, oil, coffee, sugar, milk, eggs, alcohol, charcoal, firewood, petroleum, and benzine. To prevent the undue withholding of necessaries, every Military Governor may require any person in his district to make declaration as to the quantity and place of his stocks, may issue orders for inspection, and call upon the owner to sell such stocks as may be prescribed. Offences are punishable by fine not exceeding £100, or imprisonment, or both penalties.

Needless to say, rents were being at once extortionately raised. An ordinance now provides that no higher rents shall be charged for any house, shop, or business premises than those paid at the date of the order, without the consent in writing of the Military Governor. But for these rules, profiteering in all spheres would be as flagrant as elsewhere. Agreements for the transfer of land are prohibited pending the re-establishment of Registries; and any promissory notes, or instruments in connection with any such invalid transactions are consequently null and void.

Agricultural interests are being cared for. No olive, carob, or oak tree may be cut down for any purpose except with the consent of the Military Governor or his deputy. Any offence is punishable with a fine not exceeding £100, or imprisonment up to six months, or both. The export of olive oil is forbidden owing to a threatened failure of this year's crop. Stringent measures are being taken to eradicate cattle plague. The slaughter of bovines, and ewes, and female lambs is regulated, while no restrictions are placed on that of goats, those foes of agriculture. Further north, in the Lebanon, Rustem Pasha used to declare that the chief enemies to progress were the goats and the priests. He could not cope with either as he would have desired.

A warning is given regarding hashish. It is an offence to cultivate the dangerous hemp (*Cannabis Indica*), the preparations from which yield such tempting profits and cause such havoc among its devotees, including especially Egyptian towns. No one may cultivate, buy, sell, export, or be in possession of hashish under a penalty of £5 for every kilogram or part thereof; and for a second offence £20, or six months' imprisonment, or both; besides, of course, confiscation of the hashish and everything connected with its preparation.

The protection of game has not been overlooked, a close season being provided. Between February 1 and July 15 no one may shoot or trap partridges, or be in possession of their eggs. Sportsmen must take out a licence to kill game, as well as the general licence to carry firearms. No gazelle may be shot or trapped until further orders.

Cruelty to animals is very properly dealt with. Fines up to £5, or for a second offence £20, or imprisonment may be imposed for overworking animals or working those that are unfit. The difficulty in the East is to obtain evidence, and but few Europeans can report cases.

As regards education, elementary schools managed by the Administration re-open for the season of 1919-20 on September 29, "except where local harvest, olive, grape, etc., make it desirable to postpone the date."

The Public Health Department has decreed that all persons arriving in O.E.T.A. (South) by sea are submitted to five days' medical surveillance, either at home or at the public health office, or, if necessary, at an observation camp.

With reference to the Customs, amongst the articles exempted from import dues are personal effects in baggage, books, and photographs, and, lastly, "coffins containing corpses."

Happily, an Order or Proclamation suffices at this stage. People are accustomed to the *Emir Námch*, or government regulation, which admits of no dispute, and must be obeyed.

This brief summary of some recent regulations may give an idea of the useful work which is being carried out by the small band of officers who are devoting long and weary hours, under constant difficulties, to the work of regeneration, and bearing the burden heat of these pioneer days in the evolution of British order out of Turkish chaos.

CORRESPONDENCE.

"EX-KING CONSTANTINE."

To the Editor of "The Near East."

Sir,—May I trespass upon your space to recommend any who are interested in this matter to obtain a copy of "The Vindication of Greek National Policy, 1912-1917," published by George Allen and Unwin, which contains a report of speeches delivered in the Greek Chamber of Commerce by M. Venizelos and others, and also a very excellent introduction by my friend M. Gennadius, the honorary Greek Minister to the Court of St. James. No one interested in Greece should fail to read this most important and interesting document, after reading which there will be no doubt left in the mind of any intelligent man as to the actual situation.

—I am, etc.,

Alex. Devine.

Northwood Park, Winchester, September 27, 1919.

THE FUTURE OF CYPRUS.

To the Editor of "The Near East."

Sir,—Your correspondent, "G. L. H.," from Cyprus, quotes what Mr. Lloyd George said of Ireland, viz., "The mere fact that it is one island is not proof that it is one nation," in order to maintain that Wilson's principles cannot be applied in Cyprus. We have never on any occasion suggested that we are a nation. Such a suggestion, apart from being historically and ethnologically incorrect, would be senseless. We are simply part of a nation of ten millions; and Cyprus is not "a single island"; it is one of the long chain of Greek islands. As to the Moslems, we do not by any means wish to "deprive them of their say in the matter." We are simply asking for self-determination for the people of Cyprus.

I really agree with your correspondent that no further argument can be advanced by either side, and I honestly think that the only real argument to be found on the other side is this: "We must prove to the Cypriots and to the whole world that might is right." Our opponents should, after all, be sincere. This, moreover, we cannot possibly refute. But we are sure that it will not commend itself to those in whose hands the future of Cyprus lies, or that they will sacrifice the claims of justice to the vested interests of some Englishmen in Cyprus.—I am, etc.,

London, September 30, 1919. "A Cypriot."

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

In commenting upon the recent tempestuous discussion which took place in the French Press upon the question of Syria, some of our English journalists appeared to be surprised to learn that the French song "*Partant pour la Syrie*" is still popular among the peasants. None of them, moreover, seemed to know when or by whom this song was written. Now the connection between France and Syria is, as is well known, very old, but this particular song is comparatively new, being written by Hortense, the mother of Napoleon III. Its correct title is "*Le Beau Dunois,*" the more usual title being taken from the commencement of the first verse. It was once, of course, the French national hymn, and it is not likely, in these days of rather overweening Republicanism, to lose its popularity.

***

While on the subject of songs pertaining to the Near East, I am reminded of the tune which is probably the most popular of all in that region—I mean the song "Marlborough" (which we now sing to "He's a jolly good fellow"), or "*Chanson de Malbrouk,*" as the French call it. A tradition did exist that this melody came from the East, and that the Crusaders brought it to France. But it is commonly accepted now that the Arabs adopted it from the French. It is a very popular tune in several Eastern countries, having been heard in Constantinople, and in many towns of Greece. And in Egypt, too, one can (or could before the war) hear this tune, though its origin there was ascribed to Greek merchants. I myself incline to the view that it originated in the East, because whenever there is a musical composition common to both Asiatic and European peoples, it is a fact that it has been adopted by the West. However, perhaps some of my learned readers will enlighten me.

***

A short time ago a friend with whom I was in London expressed the view that the tree which Londoners love, the plane, could with great benefit be supplanted by another more beautiful tree—for instance, the walnut. Now I have found that the plane is the only tree which will grow in London streets, and that even this is not, so to speak, a pure-bred plane, but the result of an accidental crossing some time ago at Kew between the Occidental and the Oriental plane. Of this Oriental plane I have learned from Gilpin's "Forest Scenery" that it was one of the most celebrated trees, and that it grew in Phrygia. When Xerxes, a great admirer of trees, set out on his Grecian expedition, he, after finding the plane, ordered all the groves to be saved. So much in love did he fall with the tree, in fact, that he stopped his whole campaign for three days to indulge himself in the joy of its luxurious shade. Meanwhile the Greeks were taking measures to defend Thermopylæ. Gilpin concludes his account naively:—"The story may not speak much in favour of the Prince, but it is my business only to say honour to the tree." In revering the plane, therefore, the Londoner is but following a very illustrious example.

***

The Belgrade correspondent of THE NEAR EAST seems to have—if I may say so—patriarchal ideas. That paragraph headed "Prolific Serbia," which appeared in his letter last week, is my warrant for the remark. I gather from it that he regards the truly wonderful woman who presented her husband at one fell swoop with three boys and one girl as the sort of mother to be encouraged. Personally, I reserve my opinion on that head, but I should like to know how the average British Paterfamilias would take the Nurse's announcement: "Three boys and a girl, sir—and all doing well." It is in such sad and soulful moments that the outraged male recalls the Music Hall song which went—

Woman has the best of it, all along the line.
When the baby comes? Well, rather!
In the newspapers you read:
"Mother and child both doing well."
But not a single word of poor old Father!

—or something like that. But perhaps the Serb views these things in a different light from the Briton.

CORSAIR.

"A HUNDRED YEARS AGO."

Our Belgrade Correspondent sends us the following extracts from *The Serbian News* of September 18, 1819:—"The new Gospodar of Moldavia, Prince Michael Souzo, was appointed in Divan on 8/29 August, and received in audience by the Sultan. The next morning he received the customary horse-tails with the usual formalities. He will depart for Jassy at an early date.

"The Turkish Government is still arresting ringleaders of the recent mutiny of the Janissaries; many have hidden themselves in Stamboul, but many have succeeded in escaping from the city."

PALESTINE AND SYRIA.

Under the London County Council scheme of classes for teachers, a course of ten lectures on Palestine and Syria will be given by Mr. Alexander Séfi at the London School of Oriental Studies, Finsbury Circus, E.C.2, on Friday afternoons. The first lecture will be given on October 3, and the others on succeeding Fridays excepting October 24, when there will be no lecture.

We understand that on account of the present discussion regarding the future of these lands the first lecture will deal with their future and government, although Mr. Séfi in preparing the syllabus of the lectures had intended to treat of the subject in the last lecture.

INDIAN CIVIL SERVICE.

The Secretary of State for India has received intimation that Regulations have been published in India for the selection there of natives of India and Burma for appointment to the Indian Civil Service otherwise than by means of the Open Competitive Examination. Copies may be obtained from the Secretary, Judicial and Public Department, India Office, London, S.W. 1. The Government of India have fixed October 31 as the latest date on which applications must be received by the Chief Secretary to the Government of the Province in India to which the candidate belongs.

PRESS ON THE NEAR EAST.

Roumania and the Jews.

The problem of the Jews in Roumania is stated by a writer in the *New Statesman* of September 20 in a light very unfavourable to Roumania. He says:—

One of the serious factors that have brought about the present state of tension between the Peace Conference and Roumania is the refusal of the latter to sign a Treaty, containing clauses for safeguarding the rights of national minorities. The people who are most seriously affected by these clauses are the Jews, of whom there are 250,000 in Roumania; and should Bessarabia and Transylvania be ultimately assigned to that country, another 550,000 Jews would likewise be affected. The Roumanian standpoint is that the signing of such a Treaty would signify the abridgment of the sovereign rights of an independent State, and that what may be right in the case of resurrected or newly created States, like Poland or Czecho-Slovakia, is an insult to an old-established kingdom like Roumania. The second plea is that the objectionable clauses are unnecessary, as there is no Jewish question in Roumania. The Jews, it is alleged, have always enjoyed religious freedom in Roumania, and the country's claim to be considered just and liberal is based upon the contention that it has been free from pogroms. These arguments have been repeatedly advanced by M. Bratiano, but they have failed to move the Supreme Council of the Peace Conference. The reason is that they are utterly fallacious.

He then indulges in a retrospect, and asserts that the Roumanian Government has always treated Jews as foreigners:—

As for the native Jews of Roumania in general, they are simply treated as outlaws. Not only have they been denied their civil rights, but during the last fifty years some 220 special laws have been enacted for the purpose of restricting and cramping their movements in every sphere of human activity. They are not allowed to own land or even to till it as hired labourers. They have been expelled from the rural districts and driven into the towns, where most of the avenues to an honest living are closed to them. They are barred from the Civil Service and from the medical, legal, and teaching professions. They are excluded from the secondary schools and Universities; and Jewish students of medicine who obtain their doctorate diplomas at foreign Universities are not allowed to practise in their native country, which is notoriously short of qualified doctors. Jewish employees may not form more than a fourth of the workmen or staff in any factory applying for the Government benefits, without which industry in Roumania cannot flourish; and Jewish merchants who have to visit a rural district on business are placed under police supervision. But, though denied all rights of citizenship, the Jews must, nevertheless, discharge its duties. They must pay taxes—foreigners as they are declared to be—they must serve in the army, in which they cannot rise above the rank of a corporal.

After a recital of Jewish grievances, he states positively that the Bratiano Decree of December, 1918, has not emancipated the Jews, and that the restrictions on their liberty are still intolerable. In quoting this writer's concluding paragraph it is scarcely necessary to remark that we in no wise associate ourselves with his words.

It is because the Peace Conference is keenly alive to the mockery of this Bratiano Decree, and fully acquainted with the long melancholy history of Jewish persecution in Roumania, that it has resolved that this country must at length be made not only to emancipate its Jewish subjects *en masse*, but also to undertake to respect their rights as a national minority. For though the Jews were even legally enfranchised, they might still be discriminated against in actual practice, and the Constitutional change would remain a dead letter. Such a fear is well founded; it is based upon the whole record of Roumania's treatment of the Jews during the last fifty years, and it has been strikingly reinforced by the recent conduct of the Roumanian authorities towards the Jews in Hungary. That is why clearly specified and absolutely binding safeguards are required. M. Bratiano's proposal that the whole question should be transferred to the League of Nations for settlement is too obvious a manœuvre to have escaped the intelligence of the Peace Conference; for, once this body agrees to such a proposal, not only will Roumania again wriggle out of her moral duty, but the Powers would lose the necessary union and authority to impose their will. If ever there were a just cause which the Paris Conference should uphold and fight for to the end, it is the cause of the 800,000 Jews in the enlarged Roumania. Are these, after the great war of liberation, to remain the last serfs in Europe, or are they to enjoy the full rights of modern citizenship?

Arabia.

In the *Pall Mall Gazette* of September 23 there is an article from H.R.H. the Emir Faisal making a strong plea for a united Arabia and for independence. He exposes the hostility between Arab and Turk, and then says:—

There are certain questions associated with our affairs which have a direct European importance, while there are others which can only be answered by the people of the Mahommedan faith. The question of the Caliphate, for example, must be decided by the Moslems themselves.

A very serious point, which, unlike the choice of the Caliph, is of European concern, has to do with establishing unity among the Arabs. They must not be divided by different influences. I feel confident that my Allies will not revert to a policy of colonisation, but, on the contrary, will maintain a strict regard for the principles for which they fought—namely, the principles of justice and right.

My chief aspiration is to bring about the political unity of the Arab-speaking provinces and to remove all European designs which may be directed at colonisation. It may be pointed out that the Arabs raised the question of their independence some time before the war. The Arab Congress which met in Paris in 1912-13 put forward the proposal of complete autonomy, and Turkey was compelled to promise the Arabian countries this concession. But the Ottoman Government failed to keep faith with the Arabs, who, however, did not allow themselves to be cast down, although exiled and bitterly persecuted. Those whose sentiments were merely suspect suffered the same fate as those who avowed themselves the champions of freedom. The ideal of liberty and independence was firmly implanted in their hearts. On the first occasion which presented itself the Arabs threw themselves upon their oppressors, and, owing to the advance of my troops, the standard of revolt was raised everywhere.

Persia.

The *Pall Mall Gazette* of September 24 contained an article from H.H. Prince Firooz Mirza on "Persia's Future." He says:—

The Government of the Shah aspires to unify the interests of the Persian people. Some promise of solidarity is already visible on the political horizon. No one ignores the importance of Persia or the glorious rôle the country has played in the past. Those who are familiar with the East recognise that the Persians are an intelligent race and that during all time Persia has produced distinguished savants and thinkers. Persia's contribution to literature, art, science, and civilisation, in truth, ranks high among the nations of the world. The system of finance, in a national sense, requires careful revision; the Army is in need of reorganisation, and railway construction is imperative. The repercussions of the war afflicted Persia, in spite of her neutrality. International rivalries brought cruel consequences to our towns and villages. Devastation, famine, and epidemics visited our beloved country.

He concludes by saying that Great Britain and Persia are in perfect accord:—

We are in Persia very anxious concerning the possible spread of Bolshevism, whose dangers are manifest. Nations with large agricultural populations are particularly subject, it seems, to the ravages of this scourge. At one point the small Republic of Azebaijan has sprung up as a buffer between our present territory and Russia (Georgia). A more powerful Persia, the promised fruit of the Agreement with England, would undoubtedly help to balance the situation in the Middle East, thus restraining the too ambitious inclinations of other States. Russia was always in the past eager to control the economic development of Persia and to place her hand upon all our resources. It was the St. Petersburg Government which opposed the building of railways in Persia. This opposition was all the more effective because Persia obviously could not herself undertake an enterprise necessitating co-operation with foreigners in the direction of capital, material, and technical knowledge. Now that Great Britain and Persia are in perfect accord, through the successful work of the two Governments, a new era will inevitably open in the Middle East—an era which will bring benefit to all those nations which are actuated by worthy motives and a love of justice.

NEAR EAST BOOKSHELF.

HISTORIC MONUMENTS OF CYPRUS.*

Although much light has been thrown on the archæology of the Eastern Mediterranean in recent years, its early history is still confused and largely conjectural. In this volume the author, Mr. G. Jeffery, F.S.A., who has been for many years Curator of Ancient Monuments in Cyprus, gives us the results of diligent studies in the archæology and architecture of the island. Taking Lord Kitchener's excellent map as a basis, he describes such relics as have escaped destruction. His wide knowledge of architecture in many lands makes him an interesting as well as trustworthy guide. A useful chronological section enables the reader to follow the narrative from prehistoric times to the present day.

Mr. Jeffery has himself done some valuable work in Cyprus. The Hall of the Cyprus Museum at Nicosia (1907), not yet completed, is a memorial to Queen Victoria. Its marble portico is an adaptation of the Ionic façade of the temple of Niké Apteros at Athens. He arranged a small museum for the preservation of mediæval fragments at Famagusta; has built and improved English chapels; and helped to save various ruins from further destruction or decay. A curator should have been appointed much earlier; but for many years economy, pushed to its extreme limit, vetoed expenditure in that direction, however modest. Under an "Antiquities Law" of 1915 some 38 "ancient" monuments were at last declared to be protected, 16 being in the district of Famagusta.

The primitive Aryan inhabitants of Cyprus left no traces of even rudimentary architecture. The earliest race-type art is classified as belonging to the "Bronze Age," as Mr. Jeffery regards the oldest specimens, chiefly pottery, as "identical in many particulars with that of the Swiss lake dwellers." The early Cypriot or Phœnician temple was a *temenos*, or enclosure, mostly of mud brick, containing many ex-votos, often grotesque. A conical stone represented Aphrodite (Astarté), whose cult spread westward to Cythera. Of ancient towns there are only here and there the barely distinguishable traces of walls and buildings. But while everything above ground has disappeared, abundant remains of sculpture and art have been found, chiefly in tombs. The most early sculpture suggests the art of Assyria and Egypt, often a blend of the two; Greek influence being a later inspiration. Numerous statues of all sizes, from colossal figures to minute statuettes, are found, as well as objects in terra cotta, glass, and metal. Cyprus offers larger collections of such objects than all the other Phœnician colonies in Europe and Africa combined.

The earliest built structures were tombs of carefully squared masonry, of which many good specimens remain in different sites. The necropoleis of Græco-Roman and Byzantine periods have yielded a rich harvest of "antiques," including such gold and other ornaments as escaped early tomb-riflers. The nineteenth century robbed Cyprus of the finest work to enrich the museums of Europe and New York. It is regrettable that much of the excavation was not reserved for later and more scientific investigation. The ruined temples belonging to Ptolemaic and Roman periods have gone. The bull-head capital in the British Museum belongs to the latter period, the classic Roman work being contemporary with that of the great temples of Baalbek and Syria.

The mediæval was the "glorious period," with its feudal aristocracy and pomp. The conquest of Cyprus by Richard I., in the third Crusade, introduced the Lusignan dynasty, and brought to Cyprus the arts and influence of the West. The Kingdom of Cyprus virtually dates from A.D. 1300, when the fortress of Famagusta was founded. In 1291 Acre was taken by the Moslems: the Christians who escaped found a refuge in the island, and the Kingdom of Jerusalem became a meaningless name. The beautiful abbey of Bellapaise (Kyrenia district) is regarded by Mr. Jeffery as the finest monument, worthy of its royal foundation and patronage, and unique in the Levant. The work of M. C. Enlart ("L'Art Gothique en Chypre," 1899) leaves little to be said regarding the superb monuments of French architecture, as Mr. Jeffery acknowledges, but much space is, of course, devoted to the beautiful cathedrals of Nicosia and Famagusta, and the once noble fortresses of Hilarion and Kantara. The period ended with the rivalry between the Republics of Genoa and Venice, Cyprus being occupied by the latter in 1489.

Interesting accounts are given of the transformation of the fortresses of Kyrenia, Nicosia, and Famagusta, which had become obsolete in the new period of artillery, and which almost obliterated their mediæval aspect. These again became out of date in fifty years, and were in turn condemned by the Venetians just before the Turkish invasion in 1570. Under Ottoman rule the cathedrals and some fine churches were converted into mosques, in the floors of which fourteenth century tombstones, whole or in fragments, remain. The modern Greek buildings call for the scantiest notice, being mostly devoid of taste; the village churches being "barn-like" structures, which stand in melancholy contrast with the masterpieces of the past.

Mr. Jeffery's book is no dry treatise. A day's ride in Cyprus may take you through the ruins and battlefields of many ages; and the author conducts you, village by village, to heights in which may be found various survivals in customs and even in dress. He refers to mediæval legends, "miracles," superstitions, and folk-lore, and gives appropriate extracts from many chroniclers. In the jumble of ruins it is well to have a safe guide who can explain the patchwork and the intermixture of architectural styles. The tourist, who must supply the lack of a map from a guide-book, should not fail to include this volume in his equipment.

* "The Historic Monuments of Cyprus." By George Jeffery. (James Archer, Government Printer, Nicosia. 7s. 6d.)

TOWNSHEND—AND AFTER.*

This is, we believe, the first full-length account of the events leading up to the surrender of Kut and the subsequent fortunes, or rather misfortunes, of the unhappy prisoners of war. It is preceded by a very careful military consideration of the factors for and against success in the early part of the Mesopotamia campaign, when it first developed from the relatively small defensive expedition to guard the oil-pipe at the Persian Gulf into a great offensive campaign against Bagdad. On this matter Major Sandes naturally cannot deliver final judgment, nor indeed does he attempt to do so; but what he says does nothing to mitigate the general conclusion which the world has already come to, that the enlargement of the objective was undertaken without due forethought, and that political considerations were allowed to override military ability—a novel interpretation of the superiority of the civil to the military power which will always remain as a warning.

The author, however, throws much new light on the last two months in Kut, and on the very difficult and delicate situation with which General Townshend found himself confronted. Here, again, a final verdict cannot be given, until the War Office publishes—if ever it does—its complete dossier of this part of the campaign; and that we are not likely to see for many years. But Major Sandes does at least enable us to form an interim judgment. If he does not succeed in convincing us that nobody could have done better in an impossible situation than Townshend, his narrative does not at any rate bear out the more extreme criticisms of that General's methods which some indignant soldiers and many amateur strategists have indulged in since 1916.

The general reader will probably take most interest in the narrative of the long captivity which forms the latter portion of the book. It is a very affecting story of hardship bravely borne. The Turk has a reputation of fighting like a gentleman, but he does not appear to have treated his captives like gentlemen. If there is little of the calculated and fiendish cruelty towards prisoners which was the especial prerogative of the Germans, there were neglect, inefficiency, and callousness; tasks and marches were ordered which could not be performed, and which were obviously unnecessary. Losses in battle and siege are one thing, but England will not readily forget the heavy loss of men who were helpless prisoners in Asia Minor in 1916 and 1917. The record of their sufferings lives in Major Sandes's pages, and this portion at least of his very interesting and well-written book is not likely to be superseded.

* "In Kut and Captivity." By Major E. W. C. Sandes. (John Murray. 21s. net.)

BOOK NOTES.

Among Macmillan and Co.'s autumn announcements are "Pan-Islam," by G. Wyman Bury; "Indian Finance and Banking," by G. Findlay Shirras; and "India at the Death of Akbar," by W. H. Moreland, C.S.I., C.I.E., late of the Indian Civil Service. The last book is an economic study of India at the opening of the seventeenth century.

A new tale of Burma, "The Two-stringed Fiddle," by G. E. Mitton, is being published by John Murray.

"Bengal Fairy Tales," by Shelland Bradley, illustrated by Abindranath Tagore, is shortly to appear from John Lane.

BOOKS RECEIVED.

"Constantinople: Ses Cités Franques et Levantines." By Bertrand Bareilles. (Paris: Editions Bossard. 9 fr.)

"Poems in Captivity." By John Still. (London: John Lane, The Bodley Head. 7s. 6d. net.)

"Out of Bondage," by Dr. Shmarya Levin. (London: Hendersons. 2s. 6d. net.)

"Memoirs of Edward, Eighth Earl of Sandwich, 1839-1916." Edited by Mrs. Steuart Erskine. (London: John Murray. 16s. net.)

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Arabic.	Jewish.
1919. October	1919. September		1338. Moharram.	5680. Tishri
3	20	Friday	8	9
4	21	Saturday.....	9	10
5	22	Sunday	10	11
6	23	Monday	11	12
7	24	Tuesday	12	13
8	25	Wednesday	13	14
9	26	Thursday	14	15

Count de Salis has arrived in Rome on his return from Montenegro.

The Crown Prince of Roumania arrived in London on September 25 from Paris.

General Karneteki, the Polish representative in Turkey, has arrived at Constantinople.

Dr. Zupanic, a member of the Yugoslav Committee, left London on September 26 for Slovenia.

General Lyautey, the French Resident-General in Morocco, arrived on September 26 in Paris.

Dr. Lozanic, Chief of the Serbian Food Commission, arrived in London on September 26 from Belgrade.

M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, returned to London on September 25 from Brighton.

M. Gennadius, the honorary Greek Minister, and Mme. Gennadius left London on September 25 for Bournemouth.

The marriage was celebrated on September 25 between Henry Nelson Wright, Indian Civil Service, and Madge, daughter of the late Stephen E. Barnes.

Mr. J. P. Thompson; I.C.S. (Punjab), has been nominated an additional member of the Imperial Legislative Council, in place of Mr. P. J. Fagan, resigned.

Colonel Sir Ronald Ross ceases to be Consultant in Malaria at the War Office on demobilisation, but remains Honorary Consultant in Malaria to the Ministry of Pensions.

Mme. Koyitch, the wife of the Chargé d'Affaires of the Kingdom of Serbs, Croats, and Slovenes, held a reception at the Legation, 195, Queen's Gate, on Wednesday afternoon.

The King of Roumania has appointed Colonel Arion, formerly Military Attaché at the Roumanian Legation, personal Attaché to Prince Nicolas of Roumania, who has returned to Eton.

The King has granted permission to wear the Cross of the Legion of Honour of the Class Cross of Chevalier to Mr. G. F. Story, Armament Supply Officer, Portsmouth, lately of Malta.

In the Consistory at the end of November or the beginning of December the Pope will create several new Cardinals, including probably Archbishop Camassei, Patriarch of Constantinople.

On the occasion of the elevation of General Allenby to the rank of Field-Marshal, Dr. M. D. Eder, deputy-acting chairman of the Zionist Commission in Palestine, sent him a letter of congratulation.

Mr. Sydney Rose has been appointed Acting Consular Agent at Mansourah during the absence of Mr. Fred T. Murdoch on leave. Mr. Murdoch left Mansourah for England viâ Port Said on September 15.

Prince Nicolas of Roumania, with his sister, Princess Marie, attended by Colonel Arion, arrived at the Ritz Hotel last week from Bucharest. Prince and Princess Axel of Denmark have also arrived at the Ritz.

The marriage arranged between Mr. E. F. Rawlins, Indian Police, and Miss Walsh, daughter of Mr. and Mrs. E. H. C. Walsh, Indian Civil Service, will take place on Tuesday, October 14, at St. Paul's Church, Knightsbridge.

The marriage was celebrated on September 20 at St. Mary's Church, Chippenham, by Capt. the Rev. W. E. Toft, C.F., between Gerald Corley Smith, of Simla, India, and Mona Brooks Anderson, of Limes Cottage, Havant, Hants.

Colonel N. Arion, formerly Military Attaché to the Roumanian Legation, who accompanied Prince Nicolas of Roumania from Bucharest to London, has been appointed by the King of Roumania personal Attaché to Prince Nicolas.

Sir Walter Becker, of Turin, has given a donation of 50,000 lira to the British Mission of Relief to Montenegro, which is at present operating in that country under the command of Lieut.-Colonel Cheke. This is the first British Mission of Relief that has entered the country.

The marriage arranged between Captain C. Kenneth Marsh, Guides Cavalry, I.A., eldest son of Mr. and Mrs. Marsh, The Gables, Melton Mowbray, and Eleanor, third daughter of the Rev. D. and Mrs. Vawdrey, of Areley Rings Rectory, Stourport, will take place in India this autumn.

An engagement has been arranged between Phyllis Margaret, younger daughter of Dr. and Mrs. Bath, of Newfields, Marlow-on-Thames, and Wilfred Neville Brown Constable (Indian Army), younger son of the Rev. A. E. and Mrs. Brown Constable, of Riverswood House, Marlow-on-Thames.

A marriage has been arranged, and will shortly take place at Calcutta, between Lieut.-Colonel John Day, D.S.O., Royal Engineers, eldest son of Mr. and Mrs. R. E. Day, of Bromley, Kent, and Kittie, only daughter of Mr. and Mrs. Douetil, of Surbiton Hill, Surrey, and niece of Mr. C. N. Douetil, of Calcutta.

Reuter's Belgrade correspondent writes (September 24):—King Peter of Serbia arrived at Belgrade to-day from Arangjelovatz to take up his residence after an absence of five years. His Majesty will reside in a villa on Mount Topchider. At the special desire of his Majesty no public ceremonies were held to celebrate his return.

The engagement is announced between Captain Frederick George Cavendish, M.C., the Prince of Wales's Leinster Regiment, eldest son of Major Cecil Charles Cavendish, late Highland Light Infantry, and Milla Jean, only daughter of the late William St. Clair Grant, Bhagalpur, India, and Mrs. Grant, 61, Curzon Street, Mayfair.

Sir Charles des Graz left Belgrade on September 29 for England. On Saturday Prince Alexander entertained him at a farewell banquet. Sir Charles has been Minister at the Serbian Court since 1914, and took part in the great retreat through Albania. He is extremely popular in Belgrade, and his departure is sincerely regretted.

The marriage took place on September 24 at St. Paul's, Knightsbridge, of Mr. Ellis Chinnery, late Oxfordshire Hussars, of Fringford Manor, Bicester, and Katharine Marjorie, elder daughter of Mr. James Dixon, late Inspector-General, Burma Police, of 7, St. Albans Road, Kensington. Prebendary Boyd officiated, assisted by the Rev. F. A. O'Brien.

The marriage was celebrated on September 23 at St. George's, Hanover Square, by the Rev. A. J. de D. Denne, between Lieut.-Colonel Richard William Arthur Denne, Indian Army (retired), eldest son of the late Rev. R. H. Denne, Rector of Brimpsfield, Gloucestershire, and Anne Mannooch Welch, second daughter of the late Captain Welch, R.N., J.P., of Arle House, Cheltenham.

The marriage arranged between Mr. Arthur Stuart Harington, son of the late Colonel Arthur Montgomery Harington Bey, and grandson of the late Sir Henry Byng Harington, K.C.S.I., and Gertrude, daughter of Mr. and Mrs. A. H. Marker, of The Gables, Heath Drive, Hampstead, will take place at St. Marylebone Parish Church at 12.30 p.m. on October 14. Friends will be welcome at the church.

The engagement is announced of Mr. G. H. G. Anderson, D.S.O., M.C., 2nd Battalion the Rifle Brigade, third surviving son of J. D. Anderson, Litt.D., I.C.S. (retired), and Mrs. Anderson, Mostyn House, Cambridge, to Pamela, younger daughter of Lieutenant-Colonel W. A. Morris, R.A.M.C. (retired), Deputy Commissioner Pensions Ministry, Wales, and Mrs. Morris, of Caerleon, Monmouthshire.

The marriage arranged between Major H. V. Venables Kyrke, D.S.O., Royal Welsh Fusiliers, attached Egyptian Army, eldest son of Colonel and Mrs. Venables Kyrke, of Chard, Somerset, and Frances Mary Craven, only daughter of Colonel and Mrs. Craven Hoyle, of Leabank Hall, Cloughfold, near Manchester, will take place at St. Nicholas's Parish Church, Newchurch-in-Rossendale, on October 8, at two o'clock

The following is the programme of the Central Asian Society, 22, Albemarle Street, W., for the session 1919-1920:—Ikbal Ali Shah, on "Afghanistan," on October 22, 1919; Sir M. de Bunsen, P.C., G.C.M.G., etc., on "The New Levant Company," November 12; and M. Funduklian, on "Armenia," on December 10. For 1920 the following lectures have been arranged:—"Cyprus," by Mr. Roland Michell, Ex-Commissioner of Limassol, on January 21; "The Proposed New Department for Dealing with British Interests and Responsibilities in the Near and Middle East," by Capt. the Hon. W. Ormsby-Gore, M.P., in February; "Mesopotamia," by Colonel R. Pope-Hennessy, D.S.O., on March 10; and "A Mid-Asian Continuity of Influence," by Miss Louise Peralta, in April.

APPOINTMENTS AND PROMOTIONS.

Mr. W. S. G. Solomon has been appointed principal of the Sir J. J. School of Art, Bombay. He is expected to arrive in Bombay from England this month.

Mr. P. Wyndham, C.I.E., C.B.E., Commissioner of Kumaon, and Mr. F. Leete, Chief Conservator of Forests, are appointed members of the United Provinces Legislative Council.

OBITUARY.

M. Janacopulos, the Greek Consul at Rio de Janeiro, is dead.

Mr. R. C. S. Keith, I.C.S., District Judge, Burma, has died at Aberdeen, aged 43.

Mr. John Paton Davidson, late of the Madras Public Works Department, died on September 21. He was the son of General Wright Westcott Davidson, and joined the Engineering branch of the Service in 1874.

The death is reported of Lieutenant-Colonel J. K. Condon, Political Agent, Zalawar Prant (Kathiawar), at Srinagar. Joining the Service in 1888, the deceased was made Under-Secretary to Government in the General Department in 1898, and was Second-in-Command of the Kolhapur Infantry Corps and ex-officio Assistant Political Agent, Kolhapur, in 1900, a Double Company Officer in the 18th Bengal Infantry in 1902, Acting Assistant Resident of Baroda in 1905, and he afterwards worked in Sawantwadi as Assistant Political Agent, and also in Aden.

Lieut.-Colonel Sir Henry Trotter, K.C.M.G., died on September 25, at Lucas Green Manor, Chobham. He had his first commission in the Royal Engineers in 1860. From 1863 to 1875 Sir Henry served on the great Trigonometrical Survey of India, and he accompanied Sir Douglas Forsyth's mission to Yarkand and Kashgar as geographer during 1873-4. His subsequent explorations in Turkestan earned for him the Victoria medal of the Royal Geographical Society. Appointed additional Military Attaché at the Headquarters of the Turkish Army in Asia in the Russo-Turkish War of 1877-8, he accompanied the Turkish troops throughout the campaign in Asia, and was present at several battles and at the relief of Kars. For that campaign he was awarded the Turkish war medal. After the war Sir Henry served for four years as Consul for Kurdistan, and during that time he did excellent work in superintending the international relief operations at Scio after the great earthquake of 1881. He was subsequently Military Attaché at Constantinople, Consul-General in Syria, British Delegate on the European Commission for the Navigation of the Danube, and Consul-General for Roumania. While in Roumania he frequently acted as Chargé d'Affaires at Bucharest.

NEWS IN BRIEF.

R. Blagojevitch, a Serbian student, has swum the Menai Straits in 20 minutes.

Statistics show a marked decrease of births during the first half of 1919 at Constantinople.

M. Poulet, a French airman, started on October 1 on an attempt to fly to Australia viâ India.

It is proposed further to suspend the powers of the Mixed Tribunals in Egypt until October 31, 1920.

Successful experiments have been made in Algeria recently in the use of flame-throwers against swarms of locusts.

Naib Hussein Kashi, one of the most notorious highway robbers and rebels in Persia, has been tried and executed at Teheran.

It is announced definitely, according to an Exchange telegram from Paris, that the Yugoslavs will sign the Peace Treaty with Austria.

A Smyrna telegram states that a railway bridge near Angora was blown up a few days ago and a train was wrecked, several of the passengers being killed and injured.

On the way from London to Egypt by way of St. Raphael the British aeroplane S.E.246 was obliged to descend about three miles from Sillans-la-Cascade, near Draguignan.

In commenting on the Bulgarian Treaty, the Athens Press remarks that if Thrace be not annexed to Greece, Bulgaria will have signed the Treaty as victor, not vanquished.

Control of the military passports in Greece, which had been exercised for three years, was abolished from September 30, in so far as voyages to Great Britain and Italy were affected.

The Spanish Minister in Tangier has made a complaint to the representative of the Sultan against the smuggling of arms from the international zone of Tangier to the tribes hostile to Spain.

A mission from General Denikin has arrived at Athens, at the head of which is the Greco-Russian Colonel Pantazides, who is accompanied by Count Sergius Tolstoy and Lieutenant Romanovitch.

A Reuter telegram from Constantinople states that the troops of Mustapha Kemel Pasha, the leader of the so-called Nationalist movement, have occupied Konia and expelled the regular authorities.

A telegram from Fez says that the tribesmen who have been menacing the northern front of Fez have left that region in order to reinforce the Mahalla of Raisuli, which is operating in the Spanish zone.

According to the Rome journal *Epoca*, a British aeroplane *en route* for Rome and Cairo, when near Lake Bracciano, crashed and caught fire, Captain C. H. Dahley being burned to death and Lieutenant Curtis injured.

The Lawrence Memorial School, Lovedale, is to be taken over by the Government of Madras with a view to putting it on a more satisfactory basis. Proposals to this end have gone to the Government of India for their sanction.

A delayed Reuter message from Smyrna states that the Allied Commission of Inquiry returned from Manissa on September 19. Their decisions are being kept secret, and no official statement has been issued to the Press.

A weekly journal, entitled *United India*, is to be started to support the Indian Reform Bill. Among the contributions are articles from Sir Sankaran Nair, Sir Krishna Gupta, Mr. Surendranath Bannerji, and Mrs. Annie Besant.

The Cairo Correspondent of *The Times* states that the Holy Carpet Caravan returned to Cairo on September 25, the Prime Minister presiding at the ceremony. The pilgrimage this year is declared to have been free from epidemics.

The qualifying examinations under the Reconstruction Scheme for the Indian Civil Service, Eastern cadetships, etc., commenced yesterday. Candidates who were prevented by the strike from attending will be given an opportunity of qualifying at a later date.

Bombay Moslems have passed a resolution protesting against the contemplated dismemberment of Turkey, the internationalisation of Constantinople, the cession of Thrace to Greece, and the granting of mandates for the Asiatic provinces to the different European Powers.

The Constantinople correspondent of *The Times* reports a marked increase in crime with violence in the neighbourhood, due, according to some, to the escape of a large number of criminals from prison, but, according to others, inspired and paid for by agitators.

A semi-official statement issued on September 25 said:—The evacuation of the Caucasus (i.e., Transcaucasia) by the British is continuing, but it has been decided that a detachment of British troops should be left temporarily in the Batum province until its future has been arranged.

A Reuter's message from Belgrade, dated October 1, reports:—The Prince Regent, after a conference with the President of the Skupshtina, has entrusted M. Protitch with the task of forming a Cabinet.

According to the latest news, about ten days ago the members of the British Mission under Colonel Jacob who have been captured by Arabs in the Yemen were well, but were still detained. The Imam of the Yemen has sent a letter to the tribes warning them of their responsibility.

In the debate in the Indian Legislative Council on September 24 on the introduction of the Martial Law Indemnity Bill, to protect officials from any possible consequences of their action during the recent troubles in the Punjab, Indian members proposed 36 amendments, which were practically all rejected.

Colonel Haskell, High Commissioner in Armenia, representing the Allied and Associated Powers, has gone to Baku to warn the Government of Azerbaijan that if the violation of the frontiers assigned to Armenia does not cease, and if their military operation are not concluded, grave consequences will ensue.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.). ALEXANDRIA.
American Bar and Restaurant, Billiards, and Lift.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant, Bathing Cabins on the Beach. Billiards. Daily Concerts on the Verandah.

FRIDAY, OCTOBER 3, 1919.

THE ARAB REVIVAL.

Many established theories have been shattered by the war, and recent events have shown that we must revise entirely our conception of the Arab world of to-day. It has been the fashion to regard the Arab as so much the counterpart of his own unchanging desert that a reference on his part to the principle of nationality or the right of self-determination seems an anachronism. The war, however, with its wonderful levelling-up of the different stages of constitutional development, has merely intensified a disposition that had long singled out the Arabs as among the most enlightened of subject peoples of the Ottoman Empire. Once away from his desert, the Arab has often shown something of the mettle and pushfulness that helped his forefathers to conquer the world, and which in these latter days have won him position at Constantinople or wealth as a trader in Africa or farther afield. His evolution during the last four or five years, on the other hand, has not been on normal lines. The great upheaval that has brought unsettlement to the individual mind and corporate unrest has left its mark on the Arabs, and in general has considerably narrowed the dividing line between the Western nations and those known to them as peoples less advanced politically. Whatever the explanation of the phenomenon, we are called upon to recognise the fact, and it is their failure to do so that has led the French to a false estimate of the Syrian question. In the negotiations that led up to the 1916 Agreement the French Government was carefully advised of the previous understanding arrived at between Great Britain and the King of the Hejaz; but clearly they ignored its significance and affected to believe that the terms of the Sykes-Picot contract were as valid as though there were no other claimant to the regions concerned. A truer appreciation of the position must have compelled them in their own interests to get into closer touch with the Arabs after the secession of the Hejaz from the Ottoman Empire. They preferred, however, to leave almost exclusively to Great Britain the task of liberating Syria, relying on their ability to hold their own against any Arab *intransigeance* when they finally took over the country from the British. It has been established beyond dispute that the British Government always kept in mind the ultimate withdrawal of its troops from Syria in favour of the French. The same purpose actuated the British Higher Command; but there is no need to suppose that the terms of the Sykes-Picot Agreement were familiar to every officer under General Allenby's command. The fact that the Home Government had realised that some modification of the 1916 compact was inevitable may have caused it to make no special reference to its terms as a guiding principle for the Army of Occupation. One result of such an omission was that subordinate officers, who were brought into closer contact with the Arabs, came to accept the position as they found it, and were liable to presume that the Arab refusal to have anything to do with the French would determine the future status of the country. Only late in the day, when the French had shown that nothing short of *force majeure* would induce them to abandon altogether their claims upon Syria, did the British Government set about adjusting the points at issue between the French and the Arabs.

The outcome is to be regarded as satisfactory, provided that our French Allies have profited by the opportunity to gain a deeper insight into the Arab temperament. They have recognised the special prerogatives of the Arabs in regard to the four cities, Damascus, Hama, Homs, and Aleppo, and undertake not to send French troops to these centres. Their mandate, however, entails a degree of supervision and co-operation which must inevitably prove intolerable, unless it is exercised with consummate tact and forbearance. The experience for the French is likely to prove different from anything else that they have run up against in their colonial history, and in the interests of the Middle East as a whole we hope that they will tread warily from the outset. To urge this does not imply that the Arabs are necessarily justified in all their claims or are able to give effect to all their pretensions. If they were possessed of a frame of mind more receptive of advice, several difficulties in the way of the Syrian question might more easily be removed. The point, however, for both the French and the British to appreciate is that the Arabs now consider themselves to have reached the threshold of political emancipation and are not inclined to look back. This does not mean that they feel able unaided to conduct an administration on Western lines; but it implies that all assistance must take their point of view into consideration. The French, moreover, will have to bear in mind that the Arab will take instruction from a mandatory imposed upon him less readily than from one of his own choice. In the present instance he has made no secret of his dislike for being placed under the French. On the other hand, the East, as a rule, takes the accomplished fact philosophically, and there is no reason why, under statesmanlike direction—France has shown that she can produce ideal colonial governors—the experiment should not prove a success. The Arabs realise that they stand in need of some measure of administrative tutelage, and it will be advisable that Great Britain should use her present influence over them to bring home an appreciation of the extent to which they fall short of practical administrative standards. If they feel that the assistance rendered them is largely altruistic—as it should be if it is to conform with the spirit of the League of Nations—and is conscientiously directed towards their political education, then there should be little trouble hereafter in Syria.

What applies to the French mandate over Syria applies to an almost equal extent to the position of Great Britain in Mesopotamia. To many this is apt to seem a hard saying; but it is now becoming more evident that the British hold on Mesopotamia must always be a light one, if only for the sake of the symmetrical development of the Arab world. This is no reason why the economic development of the country should not be undertaken with all the advantages of war experience and with such of the resources of the British Empire as can be spared. Arab sovereignty, however, will supply the background, and not the least of the British Government's difficulties may be to give practical effect to its well-meaning intentions. For at present Arab sovereignty must remain more theoretical than real. It lacks both a name and a local habitation. The influence of King Hussein of the Hejaz may become widely extended through the medium of his gifted sons, but he is not yet in a position to gather up into his own hands all the reins of the Arab world. Even in Mesopotamia Arab sovereignty will have to be put into commission rather than be associated with any one man's name; for if it were decided that the qualifications of one leader marked him for the headship of the Arab State of Mesopotamia, it is more than probable that he would decline to accept a post that exposed him to the criticisms of his fellows. For all practical purposes a Council in Baghdad may meet the situation, and we must trust to the right man being forthcoming when it becomes necessary to relax the initial hold that Great Britain has been compelled to take. This diffidence in the face of responsibility suggests that the signs of intolerance which the Arabs are inclined to manifest with regard to the French mandate or the Zionist movement can be eliminated by persuasion. With the fullest deference to Arab susceptibilities in the light of the war and its effects on the minds of nations, Great Britain and France should convince the Arabs that the world's peace ranks higher than national prejudices, and that the advantages accruing from the League of Nations must always be shared with its responsibilities or duties.

THE HINDI FOLK SONGS.

By Ikbal Ali Shah.

The mythology of the Hindoos and their sacred language, Sanskrit, have for long been objects of particular research among Oriental scholars. The labours of learned Europeans have succeeded in a very marked degree in drawing aside the veil which for many succeeding generations shrouded the mystic Vedas. By a thorough understanding of Sanskrit language the elucidation of an impenetrable region was accomplished. But while the sacred language of the Hindoos was at once raised on a high pedestal, where before Latin and Greek were alone in classical honours, no adequate efforts have as yet been made to exploit "Bhasha," a tributary of the majestic Sanskrit. The significance of this channel is realised when it is pointed out that "Bhasha" is the language in which popular poetry is sung in India.

At the outset it is of interest to mention that the beginning of Sanskrit dates no earlier than the invasion of Aryan tribes in India. It was the language of the conquerors, who took great precaution to keep themselves aloof in every respect from the contaminating influence of the aborigines. The Indian etymologists assert that the term "Sanskrit" is divisible into two words: Sans meaning complete or perfect, and Krit meaning foundation, the whole standing for a language with a "perfect foundation." This is in strict contrast to the language spoken by the Dravidians, who inhabited the land before the Aryans. But Bhasha, or Hindi, was what the Indians call a "Parakarut," a dialect which has its birth in Nature, by which people could speak unconventionally, yet which must be fluent, refined, and capable of expressing in easy form the inward feelings and emotions of the human mind. Hence its place in the popular songs of the people; for, while pure Sanskrit was set apart as a sacred and occult language, Basha, or Hindi, was nothing but a simpler and commoner version of mother Sanskrit. And it is from the Hindi of the Hindoos, and the Persian and Arabic of the Mussulmans that we have the modern Urdu—the universal language of the India of to-day. Hindi, then, is not radically different from either Sanskrit or Urdu. One is able to gain an excellent analogy when one thinks of the various dialects existing in this country; for it is correct to say that as the broad Scotch compares to the English language, so Hindi compares to Sanskrit and Urdu; indeed, it is somewhat similar in analogy to broad Scotch, for, in spite of the fact that it is to be regarded as a primitive language, it can justly boast of some admirable poetical gems. In a word, it is the romantic medium of thought for the illiterate masses of the Hindoos. It is the Doric muse of the farmers and villagers, which, with all its rusticity, will not tarnish in the poetical glare of the Arabs, or become subdued before the pastoral reeds of Scotland or Greece.

These songs are so commonly sung that, if one takes sufficient pains to see real India, one would not be long in an out-of-the-way village without hearing some youth singing a love-song as he drove the cattle home in the glow of the setting sun. These poems are generally composed in two forms—"Kubits" (most commonly used) and "Dohras." The latter is usually a quatrain of some eight syllables, in which, like Persian and Urdu poetry, only the second and fourth stanzas rhyme. It is written in one line, with a divisional mark in the middle. But though such laws govern the construction of "Dohras," yet a whole ode is written in the form of so many "Dohras"; for instance, four "Dohras" would make the ode usually sung. When the arrangement is effected, then it is the common custom so to make the composition as if the lover and the loved were conversing in "Dohras": or, in other cases, the same person may be a soliloquy carried on between the tongue and the heart, between the body and the soul, as it were. There is yet another kind of poem composed of "Dohras," in which one "Dohra" is an observation and the other a reply. The most popular composer of "Dohras" is Bheparee Lall, author of "Satso-Aya," "Seven Hundred," and, unfortunately, the enthusiasm of his admirers stops short when they make inquiries regarding the biography of the poet. The following is a "Dohra" of his composition (translated), in which he depicts a forlorn and separated woman singing, when she notices the beauties of Basunt (spring) around her, and a girl offers her a bunch of flowers in token of the "Spring Festival":—

The lively drum is heard around;
The tambourine and cymbals sound;
I in flames of absence burn,
And languish for my love's return.

The women all around me sing,
And own th' inspiring joys of spring,
While I, from darts of ruthless love,
Never-ending torments prove.

The amorous Kokal strains his throat
And pours his plaintive, pleasing note:
My breast responsive heaves with grief,
Hopeless and reckless of relief.

When he again shall glad my hours,
Then, girl, I'll take thy blooming flowers;
But now my love is far away,
Where should I place thy Basunt gay?

Another Dohra of impressive nature, coloured with the religious sentiments of the Hindoos, is worth quoting, and is from the same poet:—

Wife, why thus sadly gaze around,
And why thus heave such sighs profound?
And whence these strange alarms?

Husband, because thy locks are grey,
And all thy youth has passed away
In wicked syren's arms.

The Kubits are short poems complete in themselves, and it is difficult to interpret the term in any English synonym. They may be regarded as long stanzas varying in number, but in accordance with rhythm, the syllables ranging from twenty-three to twenty-four. Then, again, there are others, consisting of twenty-two, thirty-two, and thirty-four, called Dhunduks, Julharrun, and Mannoharrun. In all Kubits the rhyme recurs at every second line, often the same word being used. The name of the poet occurs at the end of the poem, as an integral part of the composition, and it is so well worded that the name appears to be the only suitable word for that special place.

In the description of female charms the Hindi poets have taken their inspiration from the natural aspect of things. Their poems abound in allegories and metaphors, but not to that licentious degree which is at once the glory and the real defect of Persian poetry. The Hindoo nymph is lovely, but her charms are not exaggerated to that unimaginable extent which characterises Persian or Urdu style. With the mythological beauty we are carried by the charm of the poem to repose among the shady bowers of lofty deodars, or wander by the side of cooling streams, to weave jessamine petals in her tresses, or in the lover's absence have our heart lacerated in anguish only to melt away as a liquid ruby.

Apart from a poetical discourse, it may be said that the Hindoos of the thatched roof cottages express themselves most eloquently and metaphorically. The favourite poets whose Kubits are on every rustic's tongue are Tulsee Dass and Soor Dass. One of the often recited poems of Soor Dass describes a scene in which Radha, a sweet maiden, and her sisters, with some male friends, were in the midst of revelry on the bank of a river; Kanua, suitor of Radha, who is believed to have been killed in battle, returns home, and on being informed of his sweetheart's whereabouts visits the jungle, hides himself behind a tree, and sees the company make merry. Being unable to witness the scene, and equally unable to restrain his injured feelings, he comes out from his hiding-place and appears before the astonished company, who are soon put to shame. The scene is well depicted:—

A merry group at evening hour,
Kanua spied in shady bower,
Lovely as pearls on a lady's breast;
And Radha shone above the rest.
Sweetly to their chiming bells,
On the glad ears the chorus swells,
And, as so true they stride the ground,
Each heart grows lighter at the sound.
Th' enraptured youth no form concealed:
At once his radiant form revealed:
And how shall I by words convey
Their consternation and dismay?
Their cheeks, till then unknown to shame,
Were reddened now with mant'ling flame;
And their sweet eyes, of lotus hue,
Bent just like lilies filled with dew.

A LEAGUE OF NATIONS.

By Joseph Offord.

Almost midway between Busreh and Baghdad, at about the centre of the loop enclosed by the Euphrates and Tigris, are situated, near the village of Jokha, some mounds marking the site of an ancient city. From this place the Arabs have, for some ten years, been obtaining thousands of clay tablets bearing cuneiform writing. Some hundreds of these texts have been secured for that admirable institution l'Ecole des Hautes Etudes, of Paris, and a selection of one hundred of these has been published for the school by Dr. G. Contenau under the title "Contribution a l'Histoire Economique d'Umma."

In this work, as an introduction, the author, after showing that Umma was the old city's name at the mound near Jokha, and explaining that the tablets he is editing all concern commercial transactions, supplies a short account of what we know of Umma's history, the evidence for which is almost all provided by historical inscriptions derived from the neighbouring city of Lagash, whereat the French Government carried on excavations for many years.

The town and surrounding country of Lagash, like that of Umma, was ruled by princes, whose title was Patesi. This may have been in some way because they had to admit some degree of suzerainty of some other powerful monarch; but more likely the real reason was that in each case the special god of the town and land was deemed to be the actual king. This view also held good for Umma, and for several other of the primitive cities and their environs in old Mesopotamia.

The States of Lagash and Umma had frequent wars with each other, which does not look as if they owned any strict fealty to a more powerful monarchy. These struggles between neighbours and people of similar race were the more lamentable because the political position clearly required perpetual peace between them because of the constant threat of invasion from the powerful kingdom of Elam not far away to the north-east, and the more dire probability of being subdued by a still fiercer and less civilised foe, known as the Guti, who were then dwelling in the mountainous regions on the way to Armenia, and who ultimately did ravage and overwhelm the two nations of Umma and Lagash. The people, fortunate in their fertile plain of Mesopotamia, which they and their predecessors had made into a most prolific land, should have devoted all their efforts to mutual defence by fortifying their cities and the many entrances to the canals from the two great rivers, when with a steadily increasing population they would have been able to offer a formidable defence.

By means of two long inscriptions, which may be termed historical, though really they are annalistic panegyrics of Lagash princes, we can clearly follow how an attempt was made to remedy the situation. After one of the frequent campaigns, which, as usual, was about a boundary dispute, the combatants seem to have seen the folly of the internecine strife, and it was decided to form a League of Nations. The third "Power" admitted, the prince of which was to hold the position of arbitrator, was the neighbouring kingdom of Kish, whose Patesi's (or prince's) name was Mesilim. The resulting deed, or treaty, setting forth the arbitrator's terms, is at present the earliest international record of the kind known.

Although the actual parties were the three rulers and their political advisers, or statesmen, in each case the real personage alleged to be concerned, and so bound by the decision, is the tutelary deity of the city. The god of Kish presided over the composition of the treaty's terms, while those of Lagash and Umma deliminated the perpetual frontier. By assigning divine sanction to the terms of this "League of Nations" the indissolubility of the agreement was emphasised and the pact given a religious character.

It should be borne in mind that, like Mr. Wilson's proposition, this was a league certified by written record to preserve peace, not like the Mesopotamian alliance of Amraphel (Hammusabi) and his fellow-princes, to invade Palestine; that its object was mutually to strengthen the parties concerned by the resources to be acquired during a prolonged period of peace; and that these peoples in the lowlands of Babylonia were liable to invasion from Elam or Armenia, as Western Europe is now from the Teutons and the Slavs.

The terms accepted by the League were adhered to for many years; but we also know that they were ultimately broken, for a later prince of Lagash, who ruled about 2700 B.C., reports, in his historical inscription, that upon the alleged command of the Umma deity that people invaded the border district of Lagash, about which there was renewed dispute, destroyed the boundary-stone which bore the full text of the terms of Mesilim's arbitration treaty—probably as significant of their intention to no longer abide by it—and occupied the debatable territory.

This was more than the protector-deity of Lagash could stand. He accordingly of his superhuman power assisted the Lagashites in their campaign of retribution. That people, having, their prince's record tells us, marched against the Ummaites, defeated them, and then besieged their capital and dictated terms of peace.

The people who broke the agreement forming the basis of the league do not appear to have given the Lagash ones any opportunity to appeal to the then ruler of Kish to interpret the ruling of the arbitration in respect to the foundations for the new dispute, and the idea of the league seems to have broken down utterly. The result of this, it may be surmised, was tragic, for shortly after this last war the dreaded Guti came down from their comparatively sterile home and conquered the whole country, embraced by the league of Kish, Umma, and Lagash.

CHANGE IN TURKEY.

The *Egyptian Gazette* of September 10 states that:—

The Turkish Ministry of War is taking active measures to deal with Turkish officers who neglected their military duties during the war to enrich themselves by means of commercial and speculative transactions. It is said that about three thousand officers are concerned.

The Turkish Ministry of War has also promulgated an Irade ordering the eighty-one generals and other senior officers who were dismissed from the service by Enver Pasha to be put on the active list again.

The exorbitant tariff of the Constantinople Tramway Company was appreciably reduced by order of the Government last month.

CHESS.

Señor Capablanca gave two simultaneous displays last week in the provinces. The first was at Newcastle, where he met forty players, and won thirty-eight of his games, drawing the remaining two. The second exhibition was given at Glasgow, when he won thirty-five games out of thirty-seven, again having two draws. The further fixtures of his provincial tour include visits to Leeds and Bradford, while he has also arranged to meet forty members of the Surrey County Chess Association at Thornton Heath, and to give one or more simultaneous exhibitions in London. The labour trouble has already caused alterations in his programme, and its completion will probably be dependent to some extent on developments.

The principal London clubs are now making their arrangements for the winter season, and all reports agree that there has never been greater enthusiasm among the players, and a record entry for the usual tournaments is expected. The Hastings Congress has undoubtedly done much to increase the popularity of the game, one result being that the leading clubs are experiencing a great influx of new members.

It is announced that M. Kostitch, the Serbian champion, may give a series of simultaneous exhibitions before returning to America.

We give below the game between Mr. V. Wahltuch and Mr. W. Winter in the Victory Tournament at Hastings. It affords an excellent example of the forcible and brilliant style of Mr. Wahltuch. Queen's Gambit Declined. White Mr. Wahltuch, Black Mr. Winter:—

1. P—Q4, P—Q4; 2. P—QB4, P—K3; 3. QKt—B3, K Kt—B3; 4. B—Kt5, QKt—Q2; 5. P—K3 B—K2; 6. Kt—B3 0 0; 7. B—Q3, P—QKt3; 8. P x P, P x P; 9. 0 0 B—Kt2; 10. R—B, R—K; 11. B x Kt Kt x B; 12. Kt—K5 P—QR3; 13. COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

In the Indian newspapers to hand this week some comments appear upon a meeting held in Calcutta by the committee of the Bengal Chamber of Commerce to which the leading merchants and bankers were invited to meet the Finance Member to discuss what remedial measures might be taken to relieve the existing exchange trouble. In the course of the proceedings it was pointed out that the exports from India for the month of July reached a record for any one single month of 28 crores and exceeded the imports by 13 crores. It will thus be seen that surplus exports to this extent had to be financed without cover so that merchants were hard pressed to sell their bills against the shipments. No wonder they paid premiums ranging up to 12 per cent. In order to ease the situation and redress the balance of trade suggestions were made that free imports of gold and silver should be allowed. It was pointed out that the gold paid by America for the recent sales of Council Bills in New York would be shipped to India. With regard to silver, the Finance Member said that the embargo on imports was maintained in order to eliminate competitive purchasers. It would appear from the remarks which were made by the Finance Member that Government have no early intention of revoking the gold ordinance.

***

From other Indian newspapers I note that there is a general feeling of uneasiness in consequence of these repeated rises in rupee exchange, and the *Times of India* reports that the export trade of India is practically at a standstill. It is said that the Calcutta tea sales have been suspended, and the price of cotton in Bombay shows a very heavy fall, and all other markets are adversely affected. I do not think there can be any doubt that the diminution in the supply of mercantile bills has been affected by the handicap placed upon exports by the rise in exchange. Whilst public opinion in India is clamouring for the removal of restrictions on the imports of gold and silver, it need not be assumed that India is asking for more than she is justly entitled to. In some quarters the opinion has been advanced that in previous years India absorbed more than her share of the precious metals, but it may be pointed out that with a population which is equal to about one-fifth of the whole world India is entitled to 20 per cent. of the total amount of gold available instead of the 11 per cent. which she has absorbed in former years.

***

It may be interesting to draw attention to the recent currency figures issued by the Indian Government last week in which the reserves in silver coin show very little fluctuation, being upwards of 50 crores of rupees, while the Note Issue has for the first time for very many months shown a considerable shrinkage. Meanwhile, in addition to the shipments of gold from America, a very large proportion of the gold arrivals from South Africa has been booked for India. It is too early yet to assume that they will have an appreciable effect upon the Indian market, but it may be safely anticipated that they will help to alleviate the pressure which exporters have had to contend with, and the premium on gold already shows signs of falling. Silver has this week established a new record at 64 pence per ounce, owing chiefly to large purchases on account of China, and telegraphic advices to hand from America indicate that heavy shipments of the metal are going forward to the Far East.

***

The indemnity which Bulgaria is to pay by way of reparation has been fixed at two-and-a-half milliards of francs. It is of interest to compare this sum with what is known of Bulgaria's national wealth. In 1911 this was fixed by the Director of Statistics at a little over ten milliards. Since then the public debt has risen as a result of the war to seven milliards, apart from the amounts required for military pensions and certain other expenditure, which, according to one estimate, may bring the total to twelve milliards. On paper, therefore, the war leaves Bulgaria in a far from enviable position. Her future depends on the credit that she can command, and that in turn hinges on the population, the degree of confidence felt abroad in its industry and honesty, and, above all, in its determination to have done with military adventures.

***

The profits of the Assam Railways and Trading Company during the year ended March 31 were slightly below those of the previous year. The profit on the railways, taking the rupee at 1s. 4d., was £32,000, as against £33,700; and on general trading £65,600, as against £69,700. To these totals have to be added the company's dividends on its interests in the River Steam Navigation Company, the Assam Oil Company, and the Makum Tea Company, of £8,900, as against £5,540, making the balance £106,700, as against £109,000. Adding the balance brought forward of £4,100, the available total is £110,800, as against £111,400 for the previous year. Provision for debenture interest and preference dividend leaves £17,500, and out of this it is proposed to make the distribution on the "B" stock 5 per cent. and to carry forward £2,500.

***

India is apparently to be the scene of the latest banking fusion, for negotiations have been on foot for some time past for the amalgamation of the three great Presidency banks—the Bank of Bengal, the Bank of Bombay, and the Bank of Madras. A scheme has been submitted to the Government of India, and it was announced recently in the Imperial Legislative Council that it had been forwarded to the Secretary of State for approval. The object in view is to give India increased banking facilities, of which there is no question that there is a great need, and it is felt that the best means of giving effect to this will be by giving India a banking institution on the lines of the Bank of England. If the scheme goes through—and I do not suppose there is much doubt on the matter—the united banks will be known as the Imperial Bank of India, and it is understood that they are prepared to make arrangements for opening 100 new branches in the course of the next five years.

***

The future of Tangier is bound to come up for settlement in the near future, and I fear that it is likely to form a somewhat thorny problem. There is no doubt that France expects to include Tangier in French Morocco, and, judging by a letter in *The Times* recently, our ally is already preparing the way to an extension of her territory in that direction. The writer says that it is well known to every resident in Tangier "that the French are doing their utmost by every means in their power to create an 'atmosphere' which they hope will eventually result in the zone being controlled by them," and that "their efforts are being ably seconded by their sympathisers by propaganda of all kinds." Now most people would be of the opinion that in French Morocco France has all the scope she requires in the near future without adding to her responsibilities; but that argument is one that is not likely to carry weight with her, nor is it the all-important consideration, which is that British interests are very considerably concerned in the fate of Tangier, and that it is quite essential that our voice should be heard when the time comes to settle the fate of the zone.

***

The importance of Tangier to this country from the commercial point of view is well brought out by the writer in question. "Tangier," he says, "is the only base which the English have in Morocco. At present it is possible from Tangier to direct our commercial efforts and support our trade in Morocco, which, owing to the strong forward policy recently initiated by the merchants and manufacturers in London, Birmingham, Manchester, and Glasgow, is bound to increase in the future at an enormous pace."

ECONOMIC CONDITIONS IN BULGARIA.

The Financial Position.—II.

The regular revenues of the State are (1) direct taxes, (2) indirect taxes, (3) State monopolies, (4) taxes and duties, (5) receipts from railways, ports, posts, telegraphs, and telephones, (6) revenues from State properties and estates, (7) local and district taxation for educational purposes, (8) fines, etc. As will be seen from the table given below the largest sources of revenue are indirect taxes and State monopolies. These constitute the basis of the State's Budget at the present time. Next in importance come the receipts from the railways, ports, posts, telegraphs, and telephones, which constitute nearly one-fifth of the revenues of the State. Direct taxes up to the Balkan wars amounted to about one-sixth of the total receipts. For the years 1911-18 the revenues were as follows (in levas) :—

Year.	Direct taxes.	Indirect taxes and monopolies.	Railways, Ports, Posts, Telegraphs, and Telephones.	Various.	Total.
1911	34,123,728	85,345,735	34,819,651	44,506,696	198,795,814
1912	17,641 346	82,126,183	32.171,396	38.099,662	170,038,591
1913	13,518,477	83,398,568	26,541,454	45,235,337	168,724,840
1914	29,247,924	90.838,333	43,390,818	60,774,185	224,251,264
1915	25,905,950	74,657,701	40,203,506	53,780,236	194,547,397
1916.....	32,622,802	64,495,804	32,227,191	63,669,564	193,015,363
1917.....	38,938,609	111,778,704	65,610,395	121,519,256	337,846,968
1918.....	43,722,746	171,591,580	85,768,675	117,435,170	418,518,175

At the commencement of her free political life Bulgaria was compelled to undertake a series of legislative measures for the improvement of the system of taxation inherited from Turkish days. The country at that time was not allowed to exercise independence in regard to indirect taxes—customs duties, etc.—so as to readjust the bad system of direct taxes due to the Turks, and thus to bring about a more equitable distribution of taxation which would enable the population to secure a livelihood from agriculture, industry, and commerce The system for the taxation of imports was that which existed in Turkey, arising from the commercial treaties made by that country with European States—treaties which were made binding for Bulgaria in conformity with Article 8 of the Treaty of Berlin. The Ministry of Finance had to find means to supply the needs of reconstruction by an equitable distribution of taxation, to conclude new commercial treaties with foreign States to permit the economic development of the country, to consolidate the State finances, and to introduce order in regard to, and to create public control over, revenue and expenditure, and finally to raise the credit of the State, because by so doing Bulgaria would be able to preserve her political and economic independence.

The direct taxes are as follows :—(1) Land tax, (2) tax on buildings, (3) tax on professions, (4) tax on she goats and sheep, (5) road tax, (6) military tax, (7) education tax, (8) tobacco duty, (9) alcoholic liquors duty. The Turkish tax of 10 per cent. in kind of the grain crops was replaced by a money duty called the land tax. This is the most important of the direct taxes, and in normal times yields a yearly revenue of 20,000,000 levas. On the basis of the law for "emliak" of 1885 all holdings, whether subject to other taxes or not, are liable to a tax upon their cost price. Up to 1895, when the present holdings tax was introduced, the revenue from this tax amounted to 2,500,000 levas. The tax on professions comes from Turkey. Both before and after the liberation up to 1885 it was known as "temetuat," but by a law of that year it was renamed "patent." The law made the tax applicable not only to Bulgarians but also to foreign subjects, and at the commencement opposition was encountered from the Powers which benefited by the right of capitulations, and so the tax remained uncollected as far as foreign subjects were concerned. From 1895, however, the tax began to be imposed on foreign subjects. The revenue from this tax in 1911 amounted to roughly 10,100,000 levas.

The "Beglig" tax of 40 centimes on sheep and 60 centimes on she-goats dates from Turkish times. This tax brought in 5,000,000 levas in 1911. The roads tax has existed since 1880. This is a personal tax of 6 levas and 40 per cent. of the amount paid in direct taxes, with the exception of the land tax and the "Beglig" tax, and every male Bulgarian or foreign subject is liable to it between the ages of 21 and 55. Women, too, are liable to it between the same ages provided they are on State, district, or communal service. The revenue from this tax was estimated at 5,264,370 levas in the Budget of 1914, but the actual yield was 4,909,378 levas. The military tax dates from 1891. The normal revenue from this tax is about 3,500,000 levas. With the object of maintaining the schools and establishing new ones a special tax is imposed called the "school duty," which is at the rate of 10 per cent. on the amount of the direct taxes. The revenue from this tax is between four and five million levas.

Among the indirect taxes the most important in normal times are the customs duties on imports. In 1912 the law of the customs duties was modified, and the tariff system was adopted. In 1911 the revenue from the customs was 49,084,374 levas, of which the import duties were responsible for 28,501,282 levas.

The directors of the Ooregum Gold Mining Company of India have declared the following dividends on account of the year 1919, payable on October 28 to holders registered on September 30, namely :—Preference dividend of 1s. per share and an interim dividend of 9d. per share on both the preference and ordinary shares. Dividends will be paid, less income-tax, at the rate of 6s. in the £.

EXTENSION OF TRADING OPPORTUNITIES IN TRIPOLI

The Acting British Consul-General at Tripoli states that since the beginning of May the country for about fifteen miles south of the Tripoli oasis has been opened for commerce—a railway having been constructed to that distance. A quantity of the Manchester goods in stock have thus been disposed of. Trade developments, however, have not yet reached a stage from which a helpful report can be made, as the opening of the interior is so recent, and the new political arrangements are not yet in working order. The whole coast of Tripolitania east of Tripoli has now, since the end of June, also been opened, but trade has not yet commenced in that direction.

Up to 1915 the import trade of Tripoli was very active, but in that year it suffered a very serious check through the withdrawal of the garrisons from the coast and the interior, and the war in Europe. In the case of many articles importation was restricted by prohibition of export from Italy and from abroad, while several foodstuffs were monopolised by the Consorzio Autonomo Tripolino dei Consumi. Therefore statistics, while they would give some idea of the trade of the colony, would not represent its commercial potentialities, inasmuch as they would only show the amount of the import trade of the country since 1915—during which period importation was considerably influenced first by the numerical reduction of the garrisons and then by the sudden influx of strong contingents of troops.

A company of local merchants has been formed into the "Società Tripolina," consisting of about 130 business men of Tripoli, united for the special purpose of selling to the natives of the interior on the interior being re-opened, from the stocks in Tripoli town of foodstuffs, colonial produce, Manchester goods, or any other merchandise.

The Società is to continue operations till 1930. Its capital is 4,000,000 lire, of which 10 per cent. has been paid up. The Società has done as yet comparatively little business. The demand for the Manchester goods has been disappointing. The natives of the interior, while shut off from the coast of Tripolitania, were getting such goods from Cyrenaica.

PROPOSED STATE BANK FOR CEYLON

The Ceylon Legislative Council has decided to appoint a committee to consider and report on the desirability and feasibility of establishing State banks for financing persons engaged in the production of food. During the debate it was stated that the Government at present gave the co-operative credit societies only ten thousand rupees, while their total capital was something like 75,000 rupees, and the amount of Government assistance was thus very small indeed. Large sums of money belonging to various institutions are available for such advances as are contemplated for the State banks. It was pointed out that the Savings Bank had four million rupees on deposit; some two millions were invested in Indian paper money earning only 3½ per cent.; the Widows and Orphans' Fund had nine million rupees to its credit. There were also investments in the Indian War Loan reaching to several millions.

THE HELLENIC COMPANY OF MARITIME ENTERPRISES

(PALIOS LINE.)

Head Office - PIRÆUS.

A. P. PALIOS, Founder. M. P. PALIOS, General Manager.

REGULAR MAIL, PASSENGER, and FREIGHT SERVICES from PIRÆUS to MEDITERRANEAN PORTS, GREECE, SEA OF MARMORA, BLACK SEA, SEA OF AZOF, ASIA MINOR, SYRIA, and EGYPT.

26 PASSENGER and CARGO STEAMERS.

85 AGENCIES in Greece, Sea of Marmora, Black Sea, Sea of Azof, Asia Minor, Egypt, Mediterranean and principal Ports of the World.

Coaling Yards and Repair Shops.

GENERAL AGENTS for the High Commission of Sea Transports; for all Passenger Steamers requisitioned by the Greek Government.

NEW ARABIAN RAILWAY.

Aden to Lahej.

A recent American Consular report gives some interesting particulars of a railway from Aden to Lahej, which was recently opened. The road is about 30 miles in length, and is the development of a short military line built from Aden to Sheik Othman in 1915 to supply British forces operating from the latter place against the Turks. The railroad was built by the Royal Engineers of the British Army, and the first few miles were built under shell-fire from the Turks. After the signing of the Armistice and the surrender of the Turkish forces, the railway was continued to Lahej, and has been recently opened for freight and passenger traffic.

At the present time one train a day each way is operated, and these trains are well patronised. The passenger rates are approximately 1½d. a mile for first-class, ¾d. for second-class, and ¼d. for third-class. Freight rates on coffee and skins average about 2d. per ton-mile, whereas they average 10d. per ton-mile by camel caravan to Aden. The railway is a narrow gauge, and the equipment is largely from the Bombay, Baroda, and Central India Railway. As conditions improve and the amount of traffic increases it is likely that new equipment will be needed to replace the secondhand rolling stock.

All the way from Aden to Lahej the track is laid over fairly even ground, and the elevation increases very gradually. There are no bridges and few culverts. To Sheik Othman the distance is about 9 miles, and Lahej is about 15 miles farther, over fairly level desert of shifting sand. Approaching Lahej the sandy surface becomes harder, and there is extensive cultivation by irrigation through the use of the limited supply of water from the Tiban River, which comes down from the Yemen Mountains and divides 5 miles before it reaches Lahej. Dates, grains, melons, and vegetables are the principal crops in the Lahej delta.

In normal times Aden, where nothing grows, was able to draw some supplies of vegetables and other fresh foodstuffs from Lahej. These supplies then came in by camel caravan, but can now come in more cheaply and more quickly by the railway. Aden will thus benefit directly by having available a more plentiful supply of grain and other fresh foodstuffs.

Lahej has also been a centre for the collection of considerable quantities of goat and sheep skins, hides and coffee, coming down by caravan from the fertile Yemen country to Aden for purchase by exporters. From Lahej to Aden the only method of transport was by camel caravan, and in the last normal trade year the Aden Port Trust statistics show that an average of nearly 500 camel loads of produce per day came into Aden by caravan. Some part of these loads came from the East, but a good share of them came in via Lahej. Over these same caravan routes there was exported annually from Aden to the interior, in normal trade years, practically £100,000 worth of cotton piece goods, raw tobacco, spices, and grains. The number of camel loads (a camel load averages around 400 lb.) of exports is not ascertainable, but it was large, judging from the value of the goods carried.

Aden is the first of all Arabian ports, and is further important as a commercial centre for the collection and distribution of goods from and to the territories on both sides of the Red Sea and the Gulf of Aden. Owing to its superior advantages as a port it has long received a large share of the skins, hides, coffee, and other produce from the Yemen and other less important parts of the hinterland. The centre and capital of the rich and watered Yemen Plateau is Sanaa, which is about 200 miles north of Aden. Trade by caravan between Sanaa and Aden is said to have existed for many centuries, but in recent years, when speed in getting products to the coast has become more essential, some of the caravans have changed over from the Aden route to Hodeida, a port north of Aden, on the Red Sea, and about 150 miles from Sanaa.

The Hodeida-Sanaa Project.

Hodeida has been Turkish, and Aden has been and is British, and there has in recent years been much conjecture as to whether, by improving the former port and having better communication with the interior, it might not be possible to divert from Aden some of the business done by it with the Yemen. To this end a railroad from Hodeida to Sanaa was begun in 1906 by European engineers, using Turkish capital. Only a few miles of track were laid when the work stopped, and great supplies of railway material which had been brought in have since lain rusting on the shore near Hodeida. The matter of a railway from Aden to Sanaa had often been talked of, but owing to the longer distance as compared with Hodeida, and the possibly greater engineering difficulties when the mountains should be reached, no active steps to build such a road had been taken. As already stated, the necessities of war resulted in the beginning of the Aden-Lahej Railway, and as the start has been made with 30 miles of track, it may be possible to develop sufficient interest to continue for the 170 miles into Sanaa. The Government has built the railway to Lahej, and if it is continued private capital must, in all probability, carry it on.

The possibilities of profit in carrying the railway on from Lahej into the Yemen Mountains, and possibly to Sanaa, would seem most promising. The Yemen Plateau is well watered because of its altitude, and the soil is said to be fertile. This district produces the world's supply of genuine Mocha coffee, and many kinds of grain are successfully grown, while tobacco, indigo, cotton, fruits, and vegetables are also produced. Large herds and flocks of cattle, sheep, and goats are kept, and supply an important quantity of hides. Mocha coffee, the skins known to the trade as mochas, and hides and skins from the Yemen, would seem to be the most important products so far as world commerce is interested.

While the quantities of these products hitherto supplied have been considerable, they have naturally been limited by the difficulties of getting them to the coast for export, and by the further fact that the Arab farmer has had to devote much of his energy and attention to producing, as well, his own food supply. If he could get food from the outside, which would be feasible if a railway were built, he would have more time and energy to devote to producing greater quantities of the, to him, more profitable crop of fine Mocha coffee. He would incidentally want, and be able to buy, greater quantities of cotton piece goods and other manufactures from the world markets. These facts suggest, briefly and generally, the attractive possibilities offered to an extension of the Aden-Lahej railway to Sanaa, particularly as Hodeida-Sanaa Railway enterprise has for some years been abandoned, and is now obviously at a disadvantage compared with the Aden-Sanaa projects, Hodeida having been seriously damaged by bombardment during the war.

Engineers connected with the Aden-Lahej railway say that from the engineering viewpoint the construction of the road to a point 50 miles beyond Lahej would not offer great difficulties, but that the remaining 120 miles to Sanaa, being through a mountainous country, would undoubtedly offer difficulties, although the route has not been surveyed. As the Yemen country is said by travellers to resemble mountainous Abyssinia in many ways, it is unlikely that the physical difficulties of building a railway through the mountains would vary greatly from those comparatively unimportant ones of the route over which has been built the Franco-Ethiopian railway from Jibuti to Addis Abeba, 500 miles in length. It is possible that the Arab tribes between Lahej and Sanaa would not approve of a railway through their territory; and this is a feature for consideration.

Owing to the commercial, political, and general strategic importance of the Aden-Sanaa railway, it would seem probable that the line may be completed now that it has reached Lahej. Such a road would incidentally make Aden a much more livable place for Europeans by affording easy access to the cooler and more pleasant climate of the Yemen mountains, particularly during the seasons of greatest heat on the barren rocks of Aden; and the civilising effect of a railway upon the Arab tribes of the interior would not be an unimportant consideration.

INDIA'S TRADE IN JULY.

The trade returns for July, 1919, published by the Department of Statistics in India, show that imports amounted to £9,959,000, a decrease of £1,732,000; and exports (including re-exports) to £18,592,000, an increase of £5,027,000, as compared with the corresponding month of 1918. There was a considerable decrease in the exports of food, drink and tobacco amounting to £2,347,000, but raw materials and articles mainly manufactured increased by £5,778,000. Articles wholly or mainly manufactured rose by £645,000. During July of the pre-war year 1914, imports amounted to £9,335,000 and exports (including re-exports) to £13,045,000.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.
„ „ ALEXANDRIA, JAFFA and BEYROUTH.
„ „ CONSTANTINOPLE, ODESSA and other Black Sea Ports.

Also calling at other ports in Scandinavia, Levant and Black Sea (as inducement offers).

OLDEST STEAMSHIP LINE.

The Royal Mail Company's 80th Anniversary.

On September 26, 1839, a Royal charter was granted by Queen Victoria in the third year of her reign to the Royal Mail Steam Packet Company, which had been formed for the purpose of providing a mail and passenger service between "Great Britain, the West Indies, North and South America, and such other foreign parts as the public service may require." The ships of the company—for a long time past familiarly known as the R.M.S.P.—have kept up their connection with the West Indies ever since, in addition to serving Peninsular, South American, Moroccan, and Eastern ports.

It is remarkable how times have changed since the formation of the company. Its first vessels were paddle-boats of about 1,800 tons with a speed of about eight knots, and in those days the satisfactory victualling of passengers must have been a great difficulty, especially in the Tropics, as refrigerating machinery was unknown and live sheep and fowls had to be carried to ensure a supply of fresh meat, whilst dim oil-lamps were a poor substitute for the modern electric lights. The journey from the metropolis to Southampton for embarkation had also at that time to be made by road, as the first railway communication was not established until the following year—1840—when the London terminus was at Nine Elms. Waterloo Station was not opened until 1848, and Southampton Docks were non-existent.

The history of the company from many points of view is interesting to follow, affording as it does instance after instance of the development of trade routes to the benefit of British commerce in nearly all parts of the world, carried on by the company's own ships and those of its associated lines. The Panama Canal is one of the modern wonders of the world, but the Royal Mail Company organised transit by mules and canoes across the Isthmus as far back as 1846, and partially financed the Panama Railway Company in 1850.

Throughout its long history the company has provided steamers which have been of good service in war as well as in peace. The Coldstream Guards were taken in 1854 from Southampton to the Crimea in the Orinoco, and the Trent took the Royal Welsh Fusiliers to Constantinople. In the following year the Medway took the Royal Artillery to Balaclava. In 1861 the Confederate Commissioners—Slidell and Mason—were taken from the R.M.S.P. Trent by the Federal warship San Jacinto, and in connection with this incident, which nearly caused a rupture between England and America, the Magdalena and Parana carried troops to Halifax. In 1900 six of the company's vessels carried troops from Southampton to South Africa to take part in the Boer War, whilst, as regards the great war just terminated, practically the whole of the company's fleet has been on war service, either as armed cruisers, hospital ships, or carriers of food and munitions, among its famous modern vessels being the hospital ship Asturias, torpedoed in the English Channel, and the Alcantara, armed cruiser, which sank the German raider Greif in the North Sea on February 29, 1916.

It is interesting to note that on the 80th anniversary of the Royal Mail Company's foundation the first ship to resume the South American service after the war sailed from Southampton.

TRADE ROUTES FROM MOROCCO TO FEZ.

Articles in the French and local Press have lately been discussing the importance of the trade routes across the Algerian frontiers, says H.M. Agent at Tangier in a recent report. The *Journal* of July 17 gave details of the allotment of £7,250,000 for expenditure on public works for the current year, and some interesting information respecting the development of the trade routes to Fez, in view of the strong competition exerted via Melilla by the representatives of Spain, is contained in these articles.

At present the most favourable route for French trade is that across the Algerian frontier by Oudja, but it is anticipated that when the Tangier-Fez Railway is built and the harbour at Tangier constructed, the current of trade will return to the last-named town, whence it has lately been diverted to Casablanca and Kenitra. Fifteen years ago imports destined for Fez came by way of Tangier and Laraiche, but the French establishment at Casablanca, the creation of the port of Kenitra, and the construction of the railway on the shorter route, has driven the trade more and more to the latter places, and particularly to Casablanca. Various reasons are given in the articles for the establishment of another port to serve Fez and the hinterland. The insecurity to caravans on the Algerian routes is one, the French occupation of Eastern Morocco, and the completion of the railway from Oudja to Tasa, are among others which favour the development of traffic between Fez and Oran. The only obstacle that existed was the difficulty of transportation between Fez and Tasa by the hitherto long and precarious caravan route—122 kilos. out of a total distance of 602 kilos. Now, however, the establishment of the railway and a regular service of motor lorries within a few months has changed the outlook.

Oran, from which before the war there was a large export of wines, is considered favourable as a new transit port for Fez, because it would be more advantageous for use than Casablanca or the river port of Kenitra, which is often inaccessible, the result being that freights from France or foreign countries are lower than at the Atlantic ports, and are not burdened with the cost of anchorage, disembarkment being effected at the quay. The difference between the Customs regulations on the Atlantic coast and on the frontier also favours Oran, as does the difference between tariffs for certain goods in Eastern Morocco compared with those in Western Morocco. As it is this merchandise which represents the larger proportion of Moroccan imports, further support is lent to the desirability of Oran as a port from which the needs of Fez should be supplied.

AGRICULTURAL BANK FOR MOROCCO

H.M. Agent and Consul-General at Tangier reports that a French Bank of Agriculture, Commerce, and Industry is to be established in the French zone with a capital of 5,000,000 frs., at least 30 per cent. of which is reserved for subscription by residents in Morocco, the remainder to be subscribed in France. The principal business of the bank, according to the *Bulletin Officiel*, "will be to favour the economic development of the country by advancing funds for agricultural, industrial, or commercial enterprises."

TELEGRAMS FOR GREECE AND TURKEY

The Postmaster-General has made arrangements with the Eastern Telegraph Company under which telegrams paid at triple rates will receive priority of treatment over other private telegrams on the cables between this country and Greece, the Greek Islands, and Turkey; but, in view of the pressure now prevailing on the lines, it must be understood that a rapid service cannot be guaranteed. The charges will be 1s. 4½d. a word in the case of Greece, Corfu, Crete, Euboea, and Poros, and 1s. 6d. in the case of Turkey and the Greek Islands not already specified. The word "Urgent" must be inserted before the address, and paid for as an extra word.

LONDON COUNTY WESTMINSTER & PARR'S BANK LTD.

ESTABLISHED IN 1836.

Chairman: WALTER LEAF, Esq. Deputy Chairmen: SIR MONTAGU TURNER, R. HUGH TENNANT, Esq.

AUTHORISED CAPITAL	**£33,000,000**
PAID-UP CAPITAL	**8,503,718**

Near East Markets.

London Produce Report.

Currants.

Supplies are totally inadequate to meet the demand, and prices show a rising tendency. It is highly probable that the maximum retail values will be advanced, since the new crop has realised in some cases prices in advance of these values.

Sultanas.

High prices have been obtained for the small offerings, and supplies are now very limited.

Coffee.

There was a slow demand at auction this week, when 2,724 bags were offered. Prices realised were:—East Indian, good bold greenish, 140s. to 142s. 6d.; medium, 136s. to 137s. 6d.; Costa Rica, bold greenish, 144s.; Salvador, good bold greenish, 148s.; Nicaragua, fine bold greenish, 145s. The futures market has been quiet, with an easier tendency. Quotations:—December, 112s. 9d.; March, 108s. 6d.; May, 106s. 6d.; July, 105s.

Sugar.

Quotations remain unaltered. There has been a fair demand from manufacturers, and the Continent is again a strong buyer. Favourable news continues to be received regarding the Cuban crop. The sugar-cane area in India is 2,686,000 acres, as against 2,550,000 acres in 1918.

Seeds.

Trading has been very restricted. Quotations for linseed are:—Calcutta to London, Sept.-Oct., £37 10s., and Bombay ditto, £38 10s. The market in rapeseed is inactive, but the cottonseed market has been steadier. Egyptian f.a.q. Oct.-Nov. is quoted £23.

Oilcake, etc.

Imports of olive oil amounted to 2,228 tons. The price of this commodity is 150s. per cwt. Seed oils are lower, linseed being 81s. and rape oil crude 98s. Linseed cake was done last week at 500s., while other sales included cocoanut cake at 440s., ground nut cake at 440s., rapeseed cake at 360s., and palm kernel cake at 360s. to 380s.

Cyprus Vine and Vegetable Growing.

(From a Correspondent.)

The importation of vine leaves into Egypt is now prohibited, and Cyprus villagers have been duly notified. In the exportation of fruit to Egypt, which at this season is considerable when shipping allows, vine leaves have been largely used, and Cyprus, in which such stringent measures have been taken against vine pests, is now, so to speak, on the black list with other countries.

Egyptian papers have recently commented on the lost opportunities of Cyprus as regards vegetables, and there is good reason for the hint. Nothing so far has roused Cypriots from their lethargy in market gardening in their "garden of the East." Even potato culture, which it was hoped might become a really lucrative branch of industry, is carried out on a very insufficient scale. As regards all other vegetables, there is lamentable negligence. One excuse made is that the market for Europeans is small, and that natives are satisfied with vegetables as they are; also that communications are uncertain. The latter excuse is true, but larger supplies would bring better communications from Egypt. Perhaps the backwardness in fruit culture is more marked. Take one example only: Serbia, where conditions are very similar, exported before the war the finest plums, in jams and prunes, to the value of £650,000, while large quantities of this fruit were used locally, and also made into spirit. Plums grow just as well in Cyprus, but this is only one example out of many.

Sudan Produce.

The following particulars are taken from the C.E.B. report for July:—

Dura and Dukhn.

Kordofan Province.—One hundred and forty-three ardebs (420 rottles) of dura and seven ardebs of dukhn were sold in El Obeid market during the month, at an average price of £E3.668 per ardeb. Owing to shortage of the supply of grain in the province and its excessive cost in the markets dura was obtained by Government from Khartoum and sold to natives. There has been no danger of famine, and no shortage of seed.

Red Sea Province.—There has been a tremendous demand for the Government dura. This is no doubt due largely to actual want, but, of course, all are inclined to take advantage of the lower prices and to demand more than they require for present needs. It is extremely difficult in a province, which consists so largely of a nomad population, to know exactly what the monthly requirements really are, and the Arabs, if they think that dura is more easily obtainable in one district than another, are quite prepared to travel many miles to avail themselves of the easier conditions.

Blue Nile Province.—Considerable quantities of Government dura have been issued on loan. Dura brought into Muradas during the month, in ardebs of 300 rottles (135 kilos), Wad Medani, 2,596; Hassa Hissa, 816.

Berber Province.—The average prices of dura per ardeb of 380 rottles (171 kilos) were:—White and red, £E3.750; feterita, £E3.300. The introduction of Government dura has tended to steady dura prices.

Wheat.

Halfa Province.—The wheat crops, which promised so well at first, gave a poor yield. This was chiefly due to the high lift and the weak cattle, which the natives have not been in a position adequately to feed this year.

Sesame.

Kassala Province. — The approximate market price per ardeb of 300 rottles (135 kilos) were as follows:—Gedaref, £E3.750; Mefaza, £E3.000. Exports in ardebs:—Gedaref, 5,514; Mefaza, 3,401.

Sennar Province.—The sesame is now all sold. A certain amount is still being exported, but it is from merchants' stores.

Egyptian Crop.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in August:—

Cotton.

Lower Egypt.—The crop has continued to improve since last month, and is now only 10 per cent. below normal.

Middle and Upper Egypt.—Crop is as last month, almost normal.

The weather has been favourable. The water supply was ample except at tail ends of canals during the first quarter of the period under review. The cotton worm attack has affected the crop in Beheira and Daqahlîya, especially where precautions have been neglected. The examination of green bolls continues to show an improvement in the attack by the pink boll worm, which is still considerably less than during the corresponding periods of the last three years.

Maize (Nili).

Weather favourable and water supply generally ample. Many complaints from the Beheira and Upper Egypt that the sowing of the crop was delayed owing to shortage of water. Slight attacks of cotton worm and stalk borer are reported from Lower and Middle Egypt.

Millet (Nili).

Complaints from the Faîyûm that owing to insufficiency of water a smaller area has been planted this year.

Millet (Sefi).

Weather has been favourable and water supply sufficient. Harvesting has commenced, and the yield is reported as satisfactory.

Rice (Sefi).

Weather has been favourable, and water supply generally sufficient, with the exception of Daqahliya province. No enemies are reported. Prospects of the yield are below the average.

Rice (Nili).

Planting of Nili rice in the Faîyûm was completed by the middle of the month. The plants are looking well and healthy.

Sugar Cane.

Weather favourable, and water supply sufficient. Damage done by stalk borer is negligible, and the crop is in good condition.

The area under cotton in India is estimated at 13,302,000 acres as compared with 11,286,000 acres this time last year. The increase is due to favourable weather conditions at sowing time and to the high prices of cotton.

A cargo of raw materials, such as wool, bristles, horsehair, etc., to the value of £200,000, collected and shipped by the Trade Department of General Denikin's Government in South Russia, has arrived in this country by ss. Eden Hall.

THE
NORTH-WEST TANNERY
COMPANY, LIMITED.
CAWNPORE, INDIA.
Telegraphic Address:—"Leather, Cawnpore."

We are the Largest Manufacturers in India of—
SADDLERY, HARNESS, BAGS, TRUNKS, AND TRAVELLING REQUISITES.

PRICES CHEAPER THAN IN ENGLAND.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB, J.P.
Vice-Chairman—Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

Engineering Notes.

Trade Possibilities at Mosul.

Mosul, which is about 400 miles north of Baghdad, on the east bank of the Tigris, is celebrated for the manufacture of various kinds of earthenware, such as water basins, bowls, etc. It also specialises in the manufacture of silk and cotton goods. These goods, as a rule, are exported to places in the vicinity. Needless to say that for the manufacture of the goods home-made tools, devices, looms, etc., are used. There are also many marble quarries around the city, the product being used on a large scale, while a considerable quantity is shipped to Baghdad. There are also six springs of sulphur and other mineral waters, quicksilver, two rich crude petroleum fields, and three coal mines in the vicinity of Mosul. There are other rich oil-fields in Gayara and at another place near the town of Kerkook, both in the Mosul vilayet. Mosul contains 34 quarters, comprising 9,106 houses, 2,852 shops, 17 baths, 34 khans, 110 commercial houses, 62 coffee houses, 266 flour mills, 56 mosques, 11 Dervishes' convents, 31 gardens, 20 churches, 25 marble quarries, eight monasteries, and various other buildings. The male population of the whole district, according to the official census of 1913, was 193,848, of which 182,900 were Moslems and 10,800 Christians and Jews. The majority of the people speak the Arabic language, the rest speaking Kurdish. The Turkish language also is understood. It is firmly believed by those who know Mosul well that under a good government the district, and especially the town, will soon be an important manufacturing centre.

Milk Pasteurising Plant.

The people in the Near East are great consumers of milk in its original state. It is a desirable food for the poor as well as for the rich. Those who live in the country and obtain their milk supply from the sheep, goats, or cows that graze on the mountains never think of "bacteria"; in fact they do not believe that such "things" could be contained in milk, and nothing amuses them more than to be told that their beloved, clean and refreshing yaourt is full of "microbes" which prolong the life of man who eats them! In recent years, however, many dairies have been established in towns and even villages, where cows are kept, often under unhealthy conditions and the milk from such establishments is frequently suspected as the cause of certain complaints, especially among children. Several of the district authorities order such dairies to use sterilisers, or pasteurisers, and some of them have adopted the methods ordinarily used in France; but very few, if any, adopted the British system of sterilisation. But the newest British inventions in this line will undoubtedly be found more efficient and more economical than any other methods or plants. The latest and up-to-date plant for the pasteurisation of milk which is now offered in the markets is of a pattern which draws considerable attention. The system comprises three separate units—viz., the heater, holder, and cooler sections. The first of these consists of a series of double inclined tinned copper tubes, the inner tube of which is for milk and the outer one for water. As the milk passes rapidly through the inner tube it is heated to a temperature of 140 degs. F., and then flows to the holder. Here it is retained for a period of thirty minutes. Each sub-section of the holder consists of a series of eight large tinned copper tubes covered with asbestos sheeting, and the complete sections are entirely enclosed in an airtight jacket, which maintains the milk at a uniform temperature as it passes through. Flowing to the generator the milk undergoes the initial cooling process, for which purpose the circulating water of the heater section is utilised, and helps to cool the milk to about 90 degs. F. without the use of any additional water. This arrangement, say the inventors, saves 60 per cent. of steam power. After passing through the water and brine sections of the cooler, which are of similar construction to the heater, the milk reaches the churns, tanks, or bottling machines.

Uniformity of Heat.

It is said that by this system the milk is uniformly heated by a wet heat to a low temperature, at which it is retained for thirty minutes, during which period deleterious germs are effectively destroyed without the milk being in any way injured. The complete operation is conducted in closed conduits, which protect the milk from exposure to the air, and from re-contamination in cooling. Loss by evaporation is avoided, and the system is asserted to be very economical in the use of steam power. Thermometers are placed in a convenient position on both the heater and cooler sections, so that the temperature of the incoming and outgoing milk can easily be recorded. By the regulation of the number of heater, holder, and cooler sections, from 400 to 2,000 gallons of milk per hour can be dealt with, so that the system is suitable for the small or large dairyman.

A Glass Substitute.

Belgium was the principal supplier of glassware, especially ordinary pane glass, to most of the markets in the East; the reported scarcity of pane glass for windows, roofing, etc., in that region, therefore, is easily explained. Like many other Belgian industries during the war, the glassware industry has been quite disabled, and probably will remain so for some time to come. A good opportunity is thus open to enterprising manufacturers or exporters to secure good business in the Eastern markets in that line of trade if adequate measures are promptly taken. In the meantime, those who are in need of pane glass and cannot obtain it will probably be interested to know that a fabric which has the strength and lasting qualities of metal, and which may be suited to any shape and used as a substitute for glass as wind-shields, skylights in factories, screens for lamps, and for many ornamental purposes, may be easily prepared, according to a well-tried formula, from ordinary mosquito netting and glue, coloured according to taste and to the use to which it is to be put. Take 2 oz. of glue and let it stand for one half-hour in 32 oz. of water; then place the vessel containing the glue in a saucepan of boiling hot water and let it remain until the glue is melted. Do not try to hasten the melting by setting the vessel over the flame, as this will spoil the setting properties of the glue. Strain the liquid through a wet cheese cloth into a heated tray. Have at hand several pieces of mosquito netting 6 or 8 in. or more wide and cut across the entire width of the roll, which is usually 30 in. wide. If this netting is previously coated with nickel or zinc by electro deposition it will prove a stronger fabric. Grip the strip at the ends and pass it slowly through the hot glue, so that the formation of air spaces may be prevented. Suspend the strip for one hour or until thoroughly dried.

Quite Insoluble.

Having thus prepared several of these strips take each one singly, bend it into U-shape and pass it backwards and forwards through a solution composed of 2 oz. of 40 per cent. formaldehyde and 32 oz. of clear water. Suspend to dry without washing. This will set the glue so thoroughly that it will be insoluble even in boiling water. When the strips are dry they may be dyed into any colour with aniline dyes. Common red ink will dye the fabric a brilliant red for the photographic darkroom, and blue ink will furnish just the right shade for developing paper paints. This fabric is light, pliable, fireproof and waterproof; it is semi-transparent, and can be rolled up and packed away, and will lend itself to any use. Owing to the pliability and texture of the material, it can be readily cut into any desired shape or size to fill in a window sash.

The receipts for the Egyptian Markets, Ltd., for the week ended September 18 were:—Cattle markets, £390; general markets, £484; total, 874; total for year, £40,560.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended August 31 were £E10,735, making the total from the commencement of the year £E97,576. The figures for the corresponding period of 1918 were £E10,960 and £E121,338.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Tuesday.

As a result of the railway strike business in the market this week has been in a state of chaos, and buyers and sellers have scarcely known which way to turn. On the whole there has been a general tendency to mark time pending developments in the situation. It is feared that unless an early settlement of the dispute is reached numerous firms will have to close down very soon, owing to not being able to get raw material and fuel. No particular change can be recorded in the prospects for the Egyptian crop. There is some talk of a yield of about 6,250,000 cantars, but it is too early for any definite estimate to be published. Many fluctuations have again occurred in futures. In yarn made from Egyptian cotton demand has been quieter, there being very few buyers in the market. Users of American cotton have been rather alarmed at the decision of the United States Shipping Board to suspend sailings for the present. The general inquiry in piece goods for Egypt and Near Eastern outlets has been well maintained, but increased difficulties have been met with in arranging transactions. Rather more demand has been about for India. Standard makes have been in fair request for China. Further operations have occurred for Java and Singapore. Manufacturers have been very firm in quotation. In American yarns for home use the quotations put out have been generally nominal, and a certain amount of irregularity has shown itself. Users have had very little to buy. There has been less activity in shipping counts.

DISTRESS IN INDIA.

The India Office has issued the following telegram, received from the Viceroy, Revenue and Agriculture Department, dated September 26:—My telegram dated September 19. Condition of crops is generally satisfactory, and timely rain has much improved prospects in Deccan and Hyderabad. Poor houses in Deoghar sub-division of Santhal Parganas in Bihar and Orissa, and relief operations in the United Provinces except Etawah and in Broach and West Khandesh districts of Bombay Presidency have been closed. Numbers relieved:—Bengal: Works, 15,925; gratuitous, 12,012. Bihar and Orissa: Works, 8,238; gratuitous, 56,153. Feudatory States of Orissa: Works, 6,858; gratuitous, 32,436. United Provinces: Works, 23; gratuitous, 1,919. Central India: Works, 3,400; gratuitous, 8,100. Central Provinces: Works, 17,852; gratuitous, 13,403. Bombay: Works, 7,913; gratuitous, 34,242. Hyderabad: Works, 30,000; gratuitous, 86,000. Madras: Works, 54,875; gratuitous, 92,991.

Mr. E. C. D. Rawlins, H.M. Commercial Secretary for Greece, has left to take up his duties at his post, and communications should be addressed to him at H.B.M. Legation, Athens.

For BUILDING UP your HEALTH take

SUPPLIES AND PRICES IN TURKEY.

SAMSOUN, September 13.

The following extract is taken from a recent report received by the Imperial Ottoman Bank :—

Despite the large arrivals of the week (by four vessels from Italy, one from England, and one from Spain) representing a value of two and a-half million pounds Turkish, prices remain high. All goods are absorbed for Russia, Roumania, and in a lesser degree for Bulgaria. The stocks here remain in consequence insignificant. In the countries of production the shortage of commodities is becoming more and more in evidence.

MOROCCAN FISHING CONCESSION.

H.M. Representative at Tangiers reports that the *Bulletin Officiel* of August 4 contains a Dahir and Cahier des Charges granting a concession for the fishing rights in the Sidi Moussa Lagoon, situated at Oualadiya, between Mazagan and Saffi. The lagoon is a narrow estuary running up a few miles parallel to the coast line. Neither in the Dahir nor in the Cahier des Charges is there any mention of the term for which the concession has been granted, nor is there any provision made for declaring the concession to have lapsed, or to be withdrawn. It can hardly be supposed, however, that the concession is intended to be in perpetuity. The grantees —two Frenchmen—have the right to construct the necessary works, such as barrages, piers, fish ponds, etc., within the limits of their concession, which extend inshore to a distance of six metres beyond high-water mark, but they must do nothing that would prevent the flow of the tide to the end of the lagoon or keep fish from running up.

The grantees must establish a school of fishing for natives, of whom there must be at least eight, and, should the authorities so require, there may be as many as fifteen. The course of instruction will be for one year, but may be extended to eighteen months if the Protectorate authorities think proper. The grantee must instruct, lodge, feed and clothe these pupils at his own expense, and must also pay them wages varying from 25 centimes to a franc per day, as a minimum, according to their length of apprenticeship. The right of control is reserved to the Protectorate authorities over the exploitation of the fishing, the construction of works, the instruction of the apprentices, etc. A reserve is also made in regard to the rights of third parties to fish in the lagoon, with line, dip nets, or cast net.

FRENCH TRADE BANK.

A Bill has been presented to the French Chamber of Deputies for the purpose of approving the creation of a trade bank, which will provide financial facilities for the export trade. It is pointed out, says the *Board of Trade Journal*, that the long credits essential in commercial transactions with buyers in foreign countries, particularly in Latin-America, and also the Far East and in certain countries of the Levant, have operated against French exporters, who have not had the same facilities in this respect as have British, United States, and German shippers, and to this fact is attributed in great part the relatively poor position of the French export trade. The Bill proposes the establishment of a French National Bank of Foreign Commerce, with an initial capital of 100,000,000 francs. The bank will possess an organisation for the development of long-term credit business abroad, and will also collect information likely to be of service in connection therewith and to exporters. It will also establish branches, agencies, and connections abroad to work in co-operation with the central organition at home, and a special reserve fund will be formed for this purpose from money, including an annual subsidy, provided by the State.

The Viceroy has appointed Mr. G. A. Moncrieff, Resident Director, Alliance Bank of Simla, as Hon. Treasurer of the Imperial Indian Relief Fund.

The Maharajah of Travancore has subscribed fifteen lakhs towards the Indian War Loan. This makes his Highness's contributions towards the War Loan Rs.40 lakhs.

BULGARIAN NOTES.

American Tobacco Purchase.

(From Our Own Correspondent.)

Sofia, September 12.

During the last ten days representatives of the Standard Tobacco Co. of New York arrived here and purchased about two thousand tons of the choicest Macedonian and Thracian tobaccos at prices varying from 38 to 75 levas the kilogram according to quality and the year of the crops. There still remains a great quantity of tobacco in the country ready for export, which, according to the most recent regulations of the Direction of Prevoyance Social, may only be exported to Great Britain, the United States, France, Italy and neutral countries in exchange for the import of articles of first necessity prescribed by the said Direction, such as preserved sardines in tins of quarter and half kilogram, with or without oil, preserved meat, sugar, rice, linen, and a number of other goods.

Bulgarian Merchants to Visit England.

The British Board of Overseas Trade has granted permission to Messrs. Nicholas Dichkoff and Co. and Mr. Alexander Mehandjisky to visit England with the object of offering tobacco, opium, attar of roses, wool, hides, sheep, lamb and kid skins, and for buying agricultural machines and implements, electric materials, medical stuffs, and railway materials.

COMPANY NOTES & REPORTS

Assam Railways and Trading.

The report of the Assam Railways and Trading Company for the year ended March 31 last states that the length of line open to traffic is 105.20 miles. Capital expenditure on railway amounted to £21,171, making the total £793,716. Gross earnings amounted to Rs.13,78,079, a decrease of Rs.62,809, and expenditure to Rs.9,02,758, a decrease of Rs.38,039. The train miles run were 259,916, as against 315,159, while the number of passengers carried was 536,158, a decrease of 69,268. Total capital expenditure on the collieries, sawmills, and brick works remains at £365,983. Output and sales amounted to 257,746 tons and 263,155 tons, against 289,097 tons and 266,963 tons respectively. General revenue account shows a profit for the year of £106,654. After payment of debenture interest and allowing for preference dividends there remains a balance at credit of net revenue account of £17,483. The directors recommend a final dividend on the "B" stock of 3 per cent., making a total distribution of 5 per cent. for the year, leaving £2,483 to be carried forward. Meeting, Winchester House, E.C., October 8, noon.

Rupai Tea.

The report of the Rupai Tea Company for 1918 states that the profit amounted to £27,928: £27,472 was brought forward, making £55,400. After deducting debenture interest, £600: excess profits duty paid on account of 1917, £18,379, and commission to staff in Assam on additional profit of 1916, £515, there is left £35,906. An interim dividend at the rate of 6 per cent., less income-tax at 5s. 9d. in £, has already been paid and the directors now recommend a final dividend at the rate of 14 per cent., less tax at 5s. 9d. in £, and to carry forward £27,906, subject to excess profits duty.

COMPANY RESULTS, Etc.

The directors of the Eastern Telegraph Company announce the payment on October 15 next of a dividend at the rate of 3½ per cent. per annum, less income-tax, on the preference stock for the quarter ending September 30, and the second quarterly interim dividend of 1½ per cent. on the ordinary stock, free of income-tax, in respect of the year ending December 31 next.

Directors of the Grand (Ceylon) Rubber Estates, Limited, have declared an interim dividend of 5 per cent., less tax, payable October 13 to shareholders registered September 30.

The Bank of Athens announce that Coupon No. 15 of the Piraeus-Athens-Peloponnesus Railway 4 per cent. bonds, due July 14, will be paid on presentation at their offices, 22, Fenchurch Street, E.C.3.

Madras Electric Tramways (1904).—Holders of preference share warrants to bearer are notified that an interim dividend at the rate of 6 per cent. per annum, less income-tax, will be paid upon presentation of coupon No. 15 on and after September 30, at the National Provincial and Union Bank of England, ?, Princes Street, E.C.2.

Nagolle (Ceylon) Rubber and Tea.—Transfer books are closed from October 1 to 14, inclusive.

The Mercantile Bank of India.—An interim dividend at the rate of 14 per cent. per annum has been declared on the A and B shares, payable on and after October 7.

The directors of the Rani Travancore Rubber Company announce an interim dividend of 5 per cent.

The directors of the Assam Oil Co., Ltd., have declared an interim dividend for the half-year ended June 30, 1919, at the rate of 7 per cent. per annum on the Cumulative Seven per Cent. Participating Preference shares.

Ottoman 4 per Cent. Loan on the Egyptian Tribute.—Half-yearly coupons for interest due October 10 will be paid on and after that date by Messrs. Glyn, Mills, Currie and Company, 67, Lombard Street, E.C.

Egyptian import duties on leaf tobacco have been raised by 62 per cent., on cigarettes by 48 per cent., and on cigars by 50 per cent.

Italy and Greece have signed the Convention providing for railway communication between Rome and Athens, with a ferry from Otranto to Valona.

Sir Richard Frederick Crawford, G.C.M.G., K.B.E., of Dalbury, Knyvton Road, Bournemouth, Adviser on the Reorganisation of Turkish Customs, 1911-14, left £15,126, with net personalty £14,924.

A Reuter message from Simla states that a Bill was passed on September 24 by the Legislative Council empowering the Government to increase the limit to which the currency reserve can lie invested from 100 to 120 crores of rupees, 100 crores of which must be in British Treasury bills.

At an extraordinary general meeting of the East Indian Railway Company, held on October 1, at the Cannon Street Hotel, a resolution was adopted authorising the acceptance of the arrangement offered by the Secretary of State for India in Council to the company for the continuance of the management of the undertaking.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Business has this week been disorganised by the railway strike and the delays in communications. On the whole, the market has stood the shock rather well, and there has at no time been any rush to sell, but a steady amount of business has been passing at somewhat lower prices.

Egyptian Unifieds are closing only ¼ lower at 78½, after dipping to 78, and the 3½ per cent. prefs are about 1½ down at 66.

In Bank shares, whilst Nationals have dropped ½ to 19½, with some quiet buying in progress, Agriculturals have actually improved 1-16 to 5 9-16, with a good demand from Egypt. Anglo-Egyptians are 5-16 lower at 17⅞, but on the other hand Bank of Abyssinias are 4s. up at 34s.

In Railways there is no change to report.

Amongst Land descriptions, Aboukirs are 6d. lower at 27s., and Sidi Salems have dropped 1-16 to 2 5-16. Union Foncières have receded ⅛ to 3⅜, and Sudan Plantations, in which there is only a local market, have dropped rather sharply to 7⅜, a fall of ⅝ since last week.

Amongst Miscellaneous descriptions there is no change to report.

In Oil shares the market has also been weak, and Anglo-Egyptians are closing 3-32 lower at 5⅜. Roumanians show a decline of 1s. 9d. at 20s. 9d., and Traians are 2s. lower at 8s.

In Greek securities the '84 loan is 3 down at 68, but Monopolies have risen ½ to 56, and Rentes are about 1½ up at 54 xd. The 1910 issue is quoted 60 xd, and the 1914 loan, after declining to about 74, is closing only ½ down at 75½. Greek Currant Bonds have had a sharp rise of 2 to 92, round which price there are several unsatisfied buyers.

TRADE AT BATOUM.

There is a great deal of activity in trade at Batoum, says the *Board of Trade Journal*. During the period August 3-9 2,000 tons of manganese ore were exported from the port to Baltimore, and 301 tons of general cargo. Imports during the same period consisted of 100 tons of manufactured goods, 15 tons of soap, and 1 436 tons of general cargo. Numerous small Turkish sailing craft carry on an active trade with Crimean ports, with general cargoes, consisting chiefly of sugar. There is, of course, a great food shortage, and almost no coal. Prices, too, are high, and the exchange is in the region of 240 roubles to £1.

The Secretary for India announces that the acquisition rate for gold imported under license into India has been reduced from Rs.11 annas 11 to Rs.11 annas 9 per sovereign. The rate for gold bullion has been correspondingly altered from one rupee for 9.662 grains of fine gold to one rupee for 9.778 grains of fine gold. Gold which was engaged for shipment to India between September 15 and 29, while the higher rupee rates mentioned were in force, will be accepted in India at those rates on production of evidence of the fact and date of contract for purchase. Importers availing themselves of this arrangement will be required to give an undertaking to ship and deliver the gold with all possible expedition for payment at the rate stated.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

The Yugoslav Cabinet deadlock still continues. At the end of last week the Prince Regent requested M. Marco Trifkovitch to form a new Cabinet, intimating plainly at the same time that it should include members of all the most important groups, and that the list of the new Ministers must be presented to him by last Sunday at latest. Prince Alexander doubtless hoped that this application of the spur might bring about the desired result, and for a few hours it looked as if the hope would be justified. M. Trifkovitch did, in fact, submit a list of members ready to serve in the Cabinet; but, apparently because the selection was not catholic enough, the proposal was rejected; and M. Trifkovitch thereupon gave up the task. Dr. Trumbitch and other leading statesmen have made eloquent appeals for that unity which to outsiders would appear to be what Yugoslavia stands most in need of at the present moment, but party feeling is reported to have reached fever pitch; and the only way out of the difficulty seems to lie in persuading some one outside the whirlpool to undertake the very thankless task. In these circumstances all eyes are again turned towards M. Draga Pavlovitch, President of the Skupshtina, and in all probability the Prince Regent will request him to form a Cabinet that, representing all elements of importance, may be able to see the country through its present difficulties.

The Rome correspondent of the *Morning Post* reports that the Duke of Aosta and General Grazioli have accepted a mission to Fiume, presumably for the purpose of making Signor d'Annunzio see reason. Meanwhile Italy and Yugoslavia have both received hints from the Allied and Associated Governments to abstain from any provocative action. The self-appointed Dictator of Fiume has issued a decree fixing an election at the town for the choice of a representative in the Italian Chamber; but since he is receiving no support from Signor Nitti's Government, it is to be supposed that even this bit of braggadaccio will be ignored by the Powers as steadily as the many other follies that preceded it. It is, however, extremely unfortunate that the present dangerous situation is likely to be prolonged indefinitely by the illness of President Wilson.

In Roumania General Vaitoianu has succeeded in forming a Cabinet which must be unique in the history not only of Roumania but also of most countries. It contains no less than six Generals, with only one civilian portfolio, that of Justice. General Vaitoianu acts for the present as Minister for Foreign Affairs, but may hand over this office to M. Misu, who has served his country so ably as Minister in London. M. Misu has long been marked out for ministerial rank at home; he is not definitely associated with any party, and it is significant of the reputation that he enjoys that his name should have been mentioned in connection with each attempt to form a Cabinet since the resignation of M. Bratianu. Apart from his appointment, there is nothing in the composition of the new Ministry to suggest permanency. Greater Roumania is represented by Ministers without portfolios, but the formidable proportion of military officers points to an attempt at a non-partisan Government. If this Cabinet feels strong enough to raise the state of siege and to remove the censorship, and can then hold elections free from the heavy hand of ministerial influence, it will have deserved well of the country.

Like Roumania—and unlike Yugoslavia—Turkey has her new Cabinet. The position of the late Government had been becoming steadily worse for some time, and at the end of last month the Grand Vizier tendered the resignation of himself and his colleagues to the Sultan, by whom it was accepted. Some credit is due to Damad Ferid Pasha and his Cabinet for their courage in remaining in office so long—for a Turkish Ministry—in such difficult circumstances, and it is impossible to avoid feeling that they have not always received from the Powers that measure of help to which their sincere and well-meant, if not always well directed, endeavours would appear to have entitled them. The new Grand Vizier is General Ali Riza Pasha, a soldier of some distinction, who has formed a Cabinet which certainly cannot be suspected of sympathising with the C.U.P. or its programme. If only by reason of the long, and apparently quite unjustifiable, delay in settling the Peace Terms for Turkey, Ali Riza Pasha and his Government are sure to find their way beset by difficulties, and it remains to be seen whether they will be able to surmount the many and serious obstacles that they must encounter even in the most favourable conditions. If the expressions of goodwill that were made on behalf of the Powers to the Turkish deputation to Paris a few weeks ago meant anything at all, it is to be hoped that the Powers will now take entirely new methods of giving effect to their philanthropic aims.

On Tuesday Field-Marshal Sir Edmund Allenby was, at the Guildhall, presented with the Freedom of the City and with a Sword of Honour, and afterwards took luncheon with the Lord Mayor and Lady Mayoress at the Mansion House. In the course of expressing his thanks for the honour done him, the Field-Marshal paid a special tribute to the Arabs and to Emir Faisal, speaking with emphasis of the loyal support of the Emir, "who," he added, "is one of my greatest friends." His hearers were quick to take advantage of the opportunity afforded them of marking their own appreciation of our Arab allies, and later the Lord Mayor expressed the hope that the Emir's people might find in the celebration some recognition of their part in winning the victory. We are glad that these sentiments found expression, for we believe that Prince Faisal by his gallantry and his chivalry has won the sincere admiration of Englishmen, and we regret that they have not been afforded a suitable opportunity to manifest their feeling.

Persia has made a good beginning in the matter of setting her house in order after the state of confusion into which it had been thrown by the war. We reported last week the execution of Naib Hussein, a robber chief, who had achieved a notoriety that might almost be described as fame. Half-a-dozen times his death had been officially announced, only for the announcement to be contradicted by his recrudescence in such forcible style as to show that he was very much alive; and he and his son had for many years terrorised Kashan and its neighbourhood. Now their picturesque careers have been terminated beyond doubt, and the Persian Government is to be congratulated on the fact. Almost equally good reason for congratulation is provided by the announcement that "several polemical personalities have been temporarily banished, for active opposition to the Government." The wording of this announcement is quaint, and the stickler for constitutional procedure will probably find material for a fine display of frenzy over the Persian Government's action. But of the real wisdom of that action there will be no doubt in the minds of those best qualified to judge. Persia—like other countries—will get along much better without the freely offered criticism of agitators. Polemics, "polemical personalities," and politicians are not required at the present time, and they must not be allowed to hinder the work of statesmen and administrators, if Persia is to make real progress.

A British military mission is reported by a Teheran correspondent of *The Times* to be expected in that city. It has been invited to Persia by the Government of the Shah for the purpose of studying what forces are required to maintain order throughout the country. Thus another big step is being taken to render Persia independent, and to rid her of the constant menace of disorder along her main trade routes, and from the humiliating feeling that she had to rely for protection from her neighbours practically entirely upon foreign aid. The same correspondent announces that the Royal Engineers have constructed an excellent motor road from Kasr-i-Shirin, over the Pai-Tak Pass, to Kermanshah and Hamadan. This means that Teheran is in a fair way to be placed in rapid communication with Mesopotamia, and that one of the chief trade routes is being brought up to date. The fact that Kermanshah and Hamadan both lie within what was formerly the "Russian sphere" is not without significance.

The Spanish operations in Morocco have been very successful so far. On Sunday Spanish troops stormed Raisuli's stronghold, the Fondak of Wad Ras, after the ground had been prepared by a vigorous shelling, and this prompt following up of their early success will go far to restore their prestige, which had undoubtedly become seriously dimmed by the earlier operations against Raisuli, followed by the long period of inaction. Madrid is jubilant over the victory, which is regarded as justifying the high hopes placed in General Berenguer. There should be no slackening of effort, however, if Spanish Morocco is to be reduced to order, and until the elusive and resourceful Raisuli is safely laid by the heels Spain would be unwise indeed to regard her work there as anything like finished.

Malta has been passing through a trying time economically, and the fact has doubtless made the work of the political agitator in the island much easier than it would otherwise have been. It is difficult, nevertheless, to understand how the islanders can have allowed themselves to be led so far along the road of folly. It would be an interesting experiment to take a plebiscite of the population upon the question of the island remaining part of the British Empire, or being handed over to some other nation. Our Malta Correspondent's letters show that the pro-Italian party is losing ground, and that the Maltese are beginning to realise how much they owe to Great Britain. It is to be hoped that their gratitude will not be entirely of the kind defined as "a lively sense of favours to come." But it is to be noted that the Governor is reported to have left for England in connection with the proposals to give the island self-government, and to grant it an Imperial subsidy.

The full reports of Lord Chelmsford's speech at the opening session of the Indian Legislative Council show that the cabled summary did scant justice to an important and interesting pronouncement. We are not concerned just now with the Viceroy's references to past events, but his forecast of the immediate future calls for some comment, the more so that we feel a certain amount of difficulty in accepting his prognostications, though we can unreservedly admire the spirit of cautious optimism which he displayed. Put very shortly, his expectations point to an early relaxation of the existing strain on the political and economic spheres, and to an opportunity of settling down to solid constructive work directed towards the development of industries, and the remodelling of higher education, two branches of activity which, as he sees clearly, are very closely inter-related; the programme is undoubtedly well adapted to the needs of the time, but we have to ask whether its realisation is within the limits set by reasonable probability.

We are justified by the latest telegrams in looking for an early relaxation of the economic strain, which resulted mainly, though not entirely, from the bad weather of 1918. This year the rains have apparently sufficed to put the agricultural industry on its normal footing, though some parts of the country have had bad luck, and there should be little need to devote energy and intellect to the continued management of the food supply. We cannot, however, speak with equal confidence regarding the political tension. It is a small matter that the recent strike has delayed the proceedings of the Joint Committee on the Reform Bill, but there are grounds for doubting the ability of Parliament to deal with the question as rapidly as had been expected. A well-informed correspondent has recently expressed the opinion that the industrial legislation required in this country will need every day that remains between now and Christmas, and if that opinion is justified the Indian Bill will be left to struggle for a place in the welter of financial business to be expected in the spring. In that case the Indian Administration must expect to spend most of the year in what may fairly be described as its normal condition, overstrained at the moment, but hoping for an easier time next month.

Supposing, however, that the new constitution becomes law before Christmas, is there any real prospect that the political strain will be relaxed? The measure will be little more than a skeleton, and the elaboration of details will of itself be a task of considerable weight; meanwhile the politicians, some of whom are by no means certain how they will stand in the new conditions, will be doing their utmost to keep themselves prominently before the public, and they will seize every

Digitized by Google

opportunity afforded by the somewhat lax regulations of the Legislative Councils to bring forward the programmes by which they hope to win the favour of the enlarged electorate. We are inclined, therefore, to anticipate that the Administration will hear more and more of contentious politics until the new Councils have actually come into being, and we think there is a very real risk that essential constructive legislation may suffer in the turmoil, either from neglect or (what is more probable) from the concentration of party feeling on provisions which are in themselves of small importance, but are well adapted to exploitation from the electioneering point of view.

If these anticipations are realised, the result may well be serious. The Government of India have tackled, after far too much delay, two of the most urgent groups of questions on which the future of the country depends. They have on their hands the reports of two Commissions, each of which has succeeded in formulating a reasonable programme, in the one case for the improvement of higher education, in the other for the development of latent industrial possibilities. To transform these programmes into concrete measures, to deal with active opposition and with impatient idealists, and to steer a steady course through the troubled sea of amendments, all this is work of the most difficult and delicate nature; and the task can hardly be accomplished with entire success in an atmosphere such as is likely to prevail. The results of any inefficiency at this stage will not be manifest at once, but the next generation will suffer alike in mind and in pocket. We can only hope that the politicians will act in the spirit of Lord Chelmsford's stirring appeal, to grasp this great opportunity with both hands, and devote all their efforts to securing their country's good.

We could wish that the debate on the Punjab Indemnity Bill, the conclusion of which has been reported by cable, might be taken as the last word of the Indian Extremist Party on the deplorable events of last April; but judging by what the public are being told in this country, we are forced to believe that the campaign is by no means finished. The line which is being taken here is that some trifling disturbances provoked an outburst of official fury, and that when patriotic Indians succeeded in forcing an inquiry, the Commission has been packed and the offenders promised an indemnity in advance. So little is known of the facts that this line can apparently be taken with impunity, and its object can perhaps be inferred from the conclusion put forward—that it is now the Secretary of State's duty to have the case for the "prosecution" laid before the Commission, while the Government of India will naturally be responsible for their own defence. Mr. Montagu will doubtless be grateful for this suggestion, which at any rate points to a new sphere of usefulness for the much-abused India Office.

The chief interest in this campaign is, however, to be found in the grounds which are being put forward for discrediting the Commission in advance. Those members who have executive experience are, of course, represented as pledged beforehand, and as sufficiently astute to be able to hoodwink judicial innocents like Lord Hunter and Mr. Justice Rankin; while as regards the Indian members, the innuendoes we have seen in print are so disgraceful that we prefer not to reproduce them. The result of the whole is to confirm the opinion we had already formed—that the Commission has been well chosen, and will perform its task with all reasonable efficiency, but that its findings are not likely to produce that "harmony" to which Indian politicians still aspire. The Report will state the facts, and, as usual, the facts will be ignored; the campaign of abuse will continue, Lord Hunter and his colleagues receiving an adequate share, until circumstances arise to divert the stream in some other direction; and the progress of India towards the goal of self-government and self-respect will be appreciably retarded. It is a pity, but the Extremist politicians will have it so.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 18.

The Industrial Troubles.

The industrial situation has not materially altered since last I wrote to you. The strike of the Alexandria scavengers, it is true, suddenly collapsed as the result of an ultimatum delivered to them by the Municipality to return to work in twenty-four hours or to be struck off the employment roll, but the strike of the trams in Cairo and Alexandria continues; and as far as can be seen there is no immediate hope of a resumption of the services. There has been much criticism of the Government for its failure to intervene with a view to putting an end to a deadlock which, whilst creating great public inconvenience, is recognised to be due to the activities of the political element. As far as can be gathered, however, the authorities have not been idle, but have been concerting measures with a view to having some solid ground on which to base their intervention if it became necessary, and have been taking steps to deal with the political element behind the present industrial unrest.

The underlying cause of the present industrial unrest is admittedly economic. It has undoubtedly been aggravated by the political element, who have used it to suit their ends, but it is none the less economic at root; and if these economic causes can be removed, or at any rate attenuated, the workers are less likely to become the tools of the agitators, though as long as the latter are left to play their own game there will be no real industrial peace in the country. The main economic causes are, as everyone knows, the high cost of living and the inadequacy of the present rates paid for labour of every description; and the initial problem to be solved was to ascertain first how far the present high cost of living was justified and by what means it could be reduced; and, secondly, to what extent an alteration in the present rates of pay could be reasonably demanded by the workers, and in what measure the employers of labour can be authorised to increase the charges they make to the public for their services. Until these questions could to some degree be answered no State intervention was really possible.

These are questions, however, which could not be answered at a moment's notice or by a stroke of the pen. If a satisfactory and lasting solution was to be obtained, very careful consideration had to be given to the points mentioned above. On the other hand, pending a solution of these questions, some means had to be found of carrying on the public services, and at the same time of providing the employees with sufficient to enable them at any rate to make both ends meet. It has been on this principle that the Government has from time to time granted bonuses to its

personnel, and it is on this principle that attempts have been made to bring about an armistice between the tram companies and the tram workers pending the more complete examination of their relative positions—attempts which unfortunately have come to nought, for the simple reason that the syndicalist leaders insisted on the men accepting no arrangement—even though, in the case of that proposed for Cairo workers, it assured them, at any rate during the armistice, most of the points which they demanded—unless the unions were definitely recognised. I have seen the terms of the agreement, and I can only say that whatever their grievances against the company may have been, the men have put themselves completely in the wrong by not accepting the provisional arrangement offered them.

As regards the Government, the periodical granting of bonuses was admitted to be but a temporary expedient, and it has all along been recognised that the position would from time to time have to be reviewed until a more or less definite opinion could be formed of the extent to which the increase in the cost of living could reasonably be regarded as permanent. When the last bonus was granted it was decided that the time had come when in some measure this definite opinion could be formed, and Committees have been sitting to study the question with a view to making some permanent settlement. In parenthesis, it may be stated that the procedure followed by the Government has on the whole been successful, and that its success has to a great extent been contributed to by the loyalty with which the official class, which has suffered very much, has carried out its duties. Only lately has there been any whisper of industrial trouble amongst the artisan employees of the Government; and although to a certain extent this had been justified by the increase in the cost of living, it would not have made itself felt, in view of the assurances given by the Heads of Departments that the question was being seriously studied, had the "syndicalists" not been at work and tried to foment trouble in support of the general campaign which they have been carrying out.

One is glad to learn that the Committees have now completed their labours, and that a complete readjustment of salaries to officials and of rates of pay and conditions of service to the artisan and labourer categories has been elaborated. As far as concerns the officials and the enrolled daily workers, they are to receive an increase of 20 per cent. on their salaries, and a war bonus of 60 per cent. on the new salaries, the scheme to date back to August 1, but no one to receive more than £E300 in added salary and war bonus. This applies throughout the Service with the exception of the Native Court judges, who have recently received special treatment, and those of the Mixed Courts, who for some reason have had no special allowance to meet the increase in the cost of living.

The decision of the Government has created a sort of basis on which a discussion of the demands made by workers and of the concessions offered by employers in the country generally can now be embarked on. Admittedly each dispute will have its own peculiar characteristics, which may necessitate special consideration, but, generally speaking, a useful precedent has been set up which should materially assist in the settlement of these disputes and should put the Government, if it finds itself compelled to intervene eventually on behalf either of the workers or the employers, in a much stronger position than if it had not waited to study the situation, as it has done.

Price of Foodstuffs.

Simultaneously the investigation into the question of the justification for the present high price of foodstuffs, etc., has been proceeding, and a decision has been reached. Your readers may possibly recollect that the tariff was established in Egypt at the beginning of the war, but that it was not a success because (1) the authorities had no adequate machinery to impose its enforcement, and (2) the general public was too apathetic; and, although it complained, rendered no assistance whatsoever to the authorities in bringing offenders to book. This time an appeal is directly made to the general mass of consumers to assist in the campaign against the profiteers. The whole country is to be divided into zones, in each of which is to be set up a Committee of notables, whose task it will be to supervise transactions in their zone and report any attempts to evade the tariff to the authorities, who are being empowered to bring offenders before the civil and in certain cases before the Military Courts. The reintroduction of the tariff system alone, even if the public co-operates whole-heartedly, will not solve the difficulty, however. It will, indeed, be useless unless more abundant supplies are assured. It is understood that this difficulty is being met by the Government, who are arranging to place regular supplies of wheat, maize, meat, etc., on the market at relatively cheap prices.

It is sincerely to be hoped that now that the tariff has been introduced the Government will adhere to and enforce its decisions in connection with it, and that its efforts to increase supplies will be successful; for on these two factors, especially the second, depend the permanent relief of the present economic situation and the driving out of the profiteers, who in the main are responsible for it. Incidentally, it is interesting to note that the Egyptian public by being called upon to collaborate with the authorities is thereby being given the opportunity not only of protecting its own interests but also of demonstrating its ability to carry out the most elementary functions of municipal government.

Passages to Egypt.

There seems to be something radically wrong with the manner in which passages to Egypt are allotted by British steamers. British residents who have been returning during the past few weeks report that they have had very great difficulty in obtaining accommodation in England, and that some of them, in order not to be late in returning to Egypt, have had to come back viâ Italy, which is a far more expensive route than the Marseilles one. What seems inexplicable is the statement made by many of these returning residents that, although they were told in England that there was no more accommodation available, and many British officials and residents have in consequence been shut out, yet there have been amongst their fellow-passengers quite a number of foreigners, some of whom have admitted having obtained their accommodation at the last moment; whilst to make matters worse some of the transports have left Marseilles with quite a number of vacancies. Clearly there is a call for some very close inquiry, and for reorganisation of the machinery by means of which British officials and residents obtain accommodation. Certainly, in view of the numbers of Anglo-Egyptians and their families waiting to return, there is no excuse for a single berth to be vacant on any eastward-bound boat, and there is still less excuse for any accommodation on British transports being allotted to non-British passengers.

A Postscript.

I have re-opened this letter, as at the last moment has come the news that the Heliopolis Railway workers have agreed to resume work to-morrow for a month, during which their claims will receive consideration, the compromise being made on conditions which meet most of their demands. Meanwhile negotiations are proceeding with the other companies, and the Government has taken action against the political agitators, ten of whom have been ordered to leave the country.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, Sept. 16.

The Riot Commission.

The inquiry into the riots drags slowly on, and the home authorities seem determined to find out the real causes of unrest. Major Fox O.B.E., is not alone in believing that the pro-Italian party has added to the general state of dissatisfaction. In this connection it is of interest to read the Major's remarks: "This party (that is, the pro-Italian) is small but noisy, and preaches that Malta should belong to Italy. During the war its leader was tried by a general court-martial, was found guilty, and sentenced, but he subsequently received a free pardon from the late Governor."

The riot of the students, to which we referred when they occurred some time ago, came up for consideration by the Commission; and, as is the case in most student embroilments, it appears to have arisen from the hot-headedness of the young bloods who had been largely led away by those behind the scenes of a club known as the "Giovine Malta"—a juvenile club conducted on semi-political lines.

Concurrently with the Commission of Inquiry the general court-martial is proceeding, with sentences given to those found guilty of helping to cause sedition, one to nine months' hard labour, and another to penal servitude of three years.

Colonel Amery's Views on Malta.

The Parliamentary Under-Secretary for the Colonies has been, made his inquiry, and has left. Before leaving he gave somewhat fully his views on the island—not only as to the financial condition—his real object—but on the political and general situation. These remarks may be briefly summarised as follows:—He admired the industry and resourcefulness of the people; he saw that the great natural and historical attractions of the island should prove a valuable economic asset, and advocated the erection of suitable accommodation for visitors. He also suggested, what has been proposed so often before, organised emigration. Whilst appreciating Colonel Amery's remarks, we cannot help but add that it is the empty coffers of the island and the near approach to national bankruptcy which are the crux of the matter on which depends the solution. As finance was primarily the object of Colonel Amery's mission, it is to be hoped that the suggestions he may make may be followed out by the Home Government.

"Olla Podrida."

The Food Control Board still acts here, and the price of fresh beef has been fixed at 3s. 4d. per rotolo (28 ounces). This continuation of control is quite necessary, as it is plainly observable that secret profiteering is still rampant. The latest case brought to light has been that 600 dozen eggs have been discovered stored in tanks and subterranean passages.

A step in the right direction has been taken in establishing a Juvenile Court to prevent the presence of juveniles in Courts of Criminal Jurisdiction. Those who have been in Malta know, to some degree, the extent of the rapacity of the lower part of the local boyish element.

September 20.

The Reform of the Constitution.

Much is looked for, now that the Parliamentary Under-Secretary of State for the Colonies has carried out a thorough inquiry as to the grievances—supposed or real—and also the wishes of the people. The views of most sections of the community have been taken, including those of the President of the National Assembly, the elected members, His Majesty's Judges; while the aspirations of representative leading citizens have also had a hearing. It is easy to see that there is bound to be a conflict of views, but it is hoped that such a spirit of reasonableness and give-and-take will be manifested, that the result will be something lastingly good. The agitation for reform has well-nigh reached the stage of utter wearisomeness, and a significant sign of the times is that the local Press is less rabid, is showing more of common sense, and putting forth views more in keeping with practical politics.

The Riot Commission.

This Commission has completed its work, and its Report is anxiously awaited. From the latest evidence it transpires that, contrary to the general public belief, the home Government went out of its way to provide Admiralty work for the island, in order further to relieve the strain on it. As a matter of fact the Imperial Government kept 12,000 men employed instead of the usual 4,600, and Admiralty work was actually sent to Malta to keep up the employment, thanks largely to Admiral Ballard and the late Governor, Lord Methuen. Evidence such as this is proving disconcerting to the real culprits, the pro-Italian party, whilst at the same time it is showing the rank and file to what extent they have been hoodwinked.

A further point which has come very much to the fore in the course of the inquiry has been the inefficiency of the police in general, and the force has come in for some sharp criticism. The Commissioner, Lieut.-Colonel Bamford, has during his short time in the island made some startling discoveries, not the least of which is that the force is heavily in debt. This in itself is bad enough, but it appears that it may have led in many cases to bribery and corruption. Commissioner Bamford has gone further, and has advocated increased pay all round, with the elimination of those who still persist in contracting debts; and he supports sterner disciplinary measures in this all-important matter.

LETTER FROM PORT SAID.

(From Our Own Correspondent.)

Port Said, Sept. 19.

General News.

Things are somewhat settling down in Port Said, though it was feared that after the great Feast of the Sacrifice there might be some disturbances. The military authorities made preparations to deal with any trouble that might arise by posting pickets in various parts of the town. However, all went off quietly, and no one would notice now anything different from the normal life of the place.

On the 16th inst. H.M.S. "Alacrity" passed through the Canal on her way to the Far East, having on board Vice-Admiral Sir Alexander L. Duff, K.C.B., who is proceeding to China to take up duties as Commander-in-Chief on that station. Two days later H.M.S. "Hawkins," a first-class cruiser, which will be Admiral's Duff's flagship on the China station, passed through. H.M.S. "Hawkins" is one of the new type of cruisers, which has comparatively light armament but high speed. It will be remembered that Admiral Duff was the organiser of the convoy system for merchant vessels, by which the submarine menace to the country was eventually completely thwarted.

Housing Problem.

The housing problem is getting more acute than ever, and would-be tenants are offering landlords considerable bribes to get rid of present occupiers. Landlords, not being more sluggish than other folk where money is to be made, are taking the hint, and rents are now about double what they were before the war. Material is so expensive now that anyone who starts building is looked upon with suspicion or envy, according to individual ideas of meum and tuum. Another factor which accentuates the housing difficulty is the scarcity of available land; for many of the best sites are held by individuals who will not utilise them, and who will not sell, as they are hoping for a still greater appreciation of land values. The price of the Canal Company's land runs about £2 10s. per square metre, and that owned by the Government about £1 15s. per metre. The lesser price of the Government land is more apparent than real, as there are certain restrictions as to building, quite good and necessary, in their way; but the price even then makes it almost prohibitive for anyone except a war profiteer to build a residential villa.

BELGRADE LETTER.

(From Our Own Correspondent.)

Belgrade, Sept. 27.

The serio-comedy at Fiume is watched at Belgrade with mixed feelings of amusement and anxiety, but on the whole the Serbs are confident that Paris will eventually settle the matter on reasonable lines, and the dignity and correctness of their behaviour are in marked contrast to the *furor italicus*. The incident at Trogir (Trau) is regarded with a kind of resigned indignation, like the occupation of Bar (Antivari), in Montenegro, where the Italians have gone so far as to arrest Serbian civilian functionaries. When the American vessel left Trogir the town was quiet, patrolled by Yugoslav troops. The Italians made a poor show; for unarmed citizens appear to have been able to disarm many of them, while the majority fled in panic and threw down their weapons. A sixty-year-old veteran, Ivan Sentinela, cried, "Down with the rag," and, aided by Professor Katalinitch, tore down the offending Italian flag from the Town Hall. Dr. Petar Sentinela seized an Italian motor-car and took prisoners a crew of about a dozen men and a couple of officers. Women, too, joined in the fray, helping to disarm the Italian troops. Mme. Sunjara actually took a machine-gun, and Mme. Katitch disarmed an Italian officer. When Yugoslav regulars arrived the affair was over and peace restored.

The Cabinet Deadlock.

Dr. Pavlovitch is continuing his attempts to form a coalition Government, and has been in conference with Mr. Stoyan Protitch, M. Laginja, and Dr. Koroshets; but so far without result. The Croatian Nationalists are reported to be in favour of signing the peace; but it is easier for them to swallow the obnoxious minority clauses than it is for the Serbs, who are indeed mostly willing to sign in respect of the new provinces, provided that the old territories of the kingdom be excluded from its operation. So it is not unexpected that M. Protitch is against signing, though he formerly appeared willing. M. Pashitch seems to be acting as a kind of consultant to the Radical party, of which M. Protitch is still leader; both insist that the Radicals nominate the Prime Minister in the new Cabinet, and refuse to join with Dr. Pavlovitch. There is no doubt that the arrival of the Grand Old Man of Serbia has greatly strengthened the Radical cause, and it is quite probable that M. Protitch will once more be entrusted with the task of constructing a Cabinet. M. Triftkovitch's name has been mentioned, but not much importance is attached to this, as he is only leader of a small group of Dissidents, about half a dozen in number.

Meanwhile, many rumours are in the air. One is that Dr. Ante Trumbitch may form a Cabinet; another that a non-parliamentary provisional government be formed to carry on till the Constituent Assembly be summoned. There is some justification for this, since the present Skupshtina has arrogated to itself the position of a full Parliament, while in reality it is only a kind of provisional national council, the main duty of which was to prepare the ground for the Constituent Assembly. The expressions of discontent at the long crisis are coming in from all parts of the country, and there is an indefinable feeling in the air that the end is near. The most interesting rumour is that the Radical party is now in favour of a federal constitution. The origin of this cannot be traced to any statement by any politician, nor to any article in any of the Radical papers; but it would be a statesmanlike move, for it would win the adherence of the Yugoslav Club, of Dr. Koroshets, and of the Croatian Nationalists. One can hardly imagine that any one district could be against a federal system that would give them a large measure of autonomy, and owing to the different history of the component parts of Yugoslavia, giving rise to a different set of conditions in each district, it is certainly a very rational suggestion. One would expect that the keenest opposition to it would come from the Conservatives of Serbia, who would aim at a centralised and unified form of government. But it is attributed to the Radicals, who are in effect the Conservative party of Serbia; so it is a clever move tactically as well. From the foreigner's point of view it certainly seems the wisest course; it at once meets the objection of Liubliana and Zagreb to be dictated to by Belgrade, and gives Serajevo freedom to deal with its own peculiar set of conditions.

JERUSALEM. — JAFFA.

JERUSALEM NOTES.

(From a Correspondent.)

Jerusalem, Sept. 20.

An Arab Demonstration.

Reports have reached here from Damascus about a great demonstration which the people of that city and its vicinity organised and carried out on the 9th inst. Large crowds, composed of all classes and sects, paraded through the streets of the city protesting against the demand of the French Press for the execution of the Treaty of 1916. Many prominent speakers addressed the public, denouncing this demand, voicing the universal dissatisfaction caused by the proposed partition of Syria into Syria and Palestine, and pointing out the danger of such partition.

Before the departure of Emir Faisal from Damascus his attention was called by the Arab Club to the dangers that were threatening Syria in the form of this partitioning of the country, and from the influx of the Zionist. The deputation begged him to do his best to defend the rights of the Arabs of Palestine, and he promised to do so.

Cardinal Justini in Jerusalem.

On the 17th inst. the Italian cruiser carrying Cardinal Justini, representative of the Vatican, anchored in Jaffa. The Cardinal was met at the quay by the Military Governor of the district and the representatives of the other foreign Consuls and bodies. On Friday afternoon his Eminence left Jaffa for Jerusalem. He was met at the entrance of the city on the Jaffa road by the representatives of the Italian and the French Consuls and Military Attachés and notables of the city, who drove in a procession to the Jaffa Gate. On reaching the gate his Eminence descended and proceeded on foot to the Church, as is the custom.

NEW S.H.S. STAMPS.

One important step towards finality in the philatelic affairs of new Europe is the issue of unified postage stamps for the kingdom of the Serbs, Croats, and Slovenes, instead of the separate issues for Croatia, Slavonia, Bosnia, and Serbia. They bear the likeness of the veteran King Peter I., as overlord of Greater Serbia, and are inscribed in both Latin and Cyrillic characters. Meanwhile, from Agram (Yugoslavia) comes news that the Croatian national postage stamps issued on January 16 this year have been obsolete since May 27.

At a meeting of the Balkan Committee held on October 1 the following two resolutions were carried unanimously:—(1) In order to secure that the Balkan settlement now under consideration in Paris may form the basis for a durable peace in South-Eastern Europe, the Balkan Committee is of opinion that: (a) Bulgaria should be allowed to hold any port allotted to her on the Ægean Coast in full sovereignty; (b) Autonomy under the Yugosla flag should be secured to Macedonia together with a resident representative of the League of Nations. (2) The Balkan Committee places on record its condemnation of the Italian raid on Fiume in open defiance of the Peace Conference at Paris; and its conviction that in those Adriatic regions where the Slav peoples form the overwhelming majority of the population no settlement can be expected to be final which disregards either their racial aspirations or their economic needs.

CORRESPONDENCE.

BRITISH INTERESTS AND THE NEAR AND MIDDLE EAST.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It is encouraging to note from this week's NEAR EAST that Captain Ormsby-Gore is continuing his able advocacy of the institution of a new department for dealing with British interests and responsibilities in the Near and Middle East. We are on the threshold of a new era in these regions, and in the shaping of this era Britain is certain to have no inconsiderable share. Not only service but sympathy will be needed; not only knowledge, but understanding. To this end a special department, as advocated by Captain Ormsby-Gore, is a pre-requisite. It is not only salutary, but saving, for it is more economical to avoid errors than to repair them. It is necessary to have the right men "over here" as well as "over there." The Jewish, the Arab, and the Armenian national revivals are all constituent elements of the great renascence. A wondrous opportunity presents itself for aiding a series of far-reaching national movements which, wisely guided, can be helpful to both East and West, and inaugurate a new epoch in the history of mankind. Guidance will be needed "over here" and "over there." Front and base must be linked. Men who both understand and sympathise with these related manifestations and appreciate the spirit of the British Commonwealth of Nations are needed in the new department, where in friendly counsel much can be done to smooth the path and speed the pace of progress and fellowship.—I am, etc.,

BERTRAM B. BENAS.

The Athenæum, Liverpool.
October 6, 1919.

NEW ROUMANIAN CABINET.

The new Roumanian Cabinet is composed as follows:—

GENERAL VAITOIANU	Prime Minister and *ad interim* Foreign Affairs.
GENERAL LUPESCU	Public Instruction.
GENERAL POPOVISCI.....	Agriculture.
GENERAL J. POPESCU	Industry and Trade.
GENERAL ST. MIHAIL	Public Works.
GENERAL RASCANU	War.
M. MICLESCU	Justice.

Also the following Ministers without portfolio:—MM. Inculetz and Ciugureanu, Bessarabia; M. Nistor, Bukovina; and the Voivode of Vajda, M. Goldis, and M. St. Pop, Transylvania. It is further announced that, M. Misu, the Roumanian Minister in London and head of the Roumanian Peace Delegation, who left Paris yesterday for Bucharest, has been offered the post of Minister for Foreign Affairs.

According to further "revelations" made in the Vienna semi-official *Arbeiter Zeitung*, the Bulgarian Foreign Office informed the Austro-Hungarian Minister at Sofia on October 10, 1915, that "a frontier collision will be provoked in an uninhabited region in order to give grounds for an attack on Serbia."

THE BISHOP OF JERUSALEM ON ZIONISM.

The annual meeting of the Jerusalem and the East Mission was held on October 7 at the Church House, Westminster. The Bishop of London, who presided, said that he looked upon the mission as having untold possibilities. Jerusalem, in the hands we hoped and believed it would be left in, had the chance of becoming the centre of a far-reaching missionary effort stretching up towards Mesopotamia.

Colonel Sir Courtauld Thomson (formerly British Red Cross Commissioner in Palestine) said he had witnessed the remarkable work done by the mission. Speaking of the ophthalmia so much present in Egypt and Palestine, he said that a great consulting surgeon had told him that it was less due to climatic conditions than to dirt, ignorance, and superstition. A mother considered it an ill omen if anyone praised the good looks of her child, and to prevent this the infant was left in a deplorable state of dirt. Flies settled round the eyes, the mother did not brush them off, and ophthalmia followed.

The Bishop of Jerusalem said that if missionary work was carried on wisely among the Mohammedans we could win their love and respect, and very rarely need call forth their enmity; it was not a question of cramming religion down their throats. For work among the Jews the mission was taking out a very highly trained Orientalist. Referring to Zionism, the Bishop said the difficulty was that Zionism had not succeeded in winning the allegiance of more than a comparatively small fraction of the Jewish people throughout the world when the British Government announced that it would give its might and power to the support of the Zionist movement. By so doing it had put the leaders of that movement into a very difficult position. For a long time since Mr. Balfour's statement about encouraging the Jews to return to Palestine, and there to make their national home, not another word had proceeded from the mouth of the sphinx in London. The result had been a sea of intrigue. In addition to what had been said by the Government, a great deal had been said by the Press, harmless at home, but capable of complete misunderstanding in Palestine. He had no doubt the Jews would return, though when and how he did not know. What he was afraid of was that they might return under political pressure rather than under a movement of the spirit. But statements in the Press that the Jews were to return had created consternation in Palestine. The present inhabitants asked what about themselves? What was Great Britain going to do? He did not blame the leaders of the Zionist movement, but the people already in the country had been so irritated that it would be imposible to establish a Jewish State in Palestine at the present moment without providing an army of at least fifty thousand men to keep order.

NEW TURKISH CABINET.

Reuter's Constantinople Correspondent reports that the new Turkish Cabinet has been composed as follows:—

General ALI RIZA PASHA	Grand Vizier
MUSTAPHA RESHID PASHA	Foreign Affairs
DJEMAL PASHA	War

THE CARAVANSERAI.

In connection with my recent remarks on the commissions of newspaper boys, I am pleased to be able, through the kindness of Mr. H. E. Wortham, of the *Egyptian Mail*, to give some precise information. My correspondent writes:—

"Will you allow me to correct a mistaken supposition of 'Corsair's' regarding the remuneration of newsvendors in Cairo? They get the *Bourse Egyptienne* at seven milliemes and sell it at ten, and are thus not worse, but very much better, off than London newsboys, whose commission, he says, is a penny in the shilling. Their claim was that they should receive not 30 but 50 per cent. commission! In the case of the *Bourse*, the newsboy strikers were beaten. Other employers faced with equally exorbitant claims have not been so successful."

***

The following is part of a letter recently received from Belgrade:—

Wandering in the streets of Belgrade is a little poverty-stricken boy aged fifteen. He is chiefly remarkable for the fact that he is brother of the youth who by one act brought on the war which led to the union of the Southern Slavs, the downfall of Germany, the release of Alsace-Lorraine, the collapse of the Tsars, the break-up of Austria-Hungary, and the expansion of Italy. His name is Printsip, and it was his brother Javrilo who shot the Archduke Franz Ferdinand at Serajevo five years ago.

***

There have been a good many indications of late that the eastern coast of the Adriatic has not yet settled down after the war sufficiently to make it a really pleasing region for the Tame Tourist to disport himself—or herself—in. Even before d'Annunzio and his gallant band of brothers—or whatever they call themselves—went to Fiume that port seemed to have developed "a certain liveliness." Now—well, now, only Gabrielle himself could do justice to the state of affairs; so it is no use my trying. But what amuses me is to learn how the British phlegm seems to have puzzled the mercurial Latins. Before the Poet went to Fiume things were in a very sweet state: the Italians and French were doing the cat and dog business on every possible occasion; and the soldiers—officers and men alike—of all the other nations represented in the bear garden were going about armed to the teeth. The British, on the other hand, strolled about with only a cane or a bathing towel in their hands, the officers very often in flannels. And the other nationalities simply couldn't understand it.

***

With all respect to the excitable gentlemen who were thus puzzled, I would suggest that it is a pity they could not, and did not, follow the example set them by the British. But, of course, they did not, and could not; and rows, often leading to bloodshed, were, and doubtless are, quite common. Thus, for example, on one occasion at Cattaro a number of Italian officers and soldiers were in a café garden when a number of Serbian officers and soldiers were also present. Ere long the inevitable result followed. A too ardent adherent of one side—which I will not say—threw a bomb—a real bomb—into the enemy camp, so to say. Of course, there was gorgeous trouble at once, both sides using their swords and bayonets freely, with results that may be imagined. On the whole, the British method seems to me to have certain advantages over the other.

***

Another feature that I find it difficult to admire in the present state of "peace" on the eastern side of the Adriatic is the employment by Italy and Serbia—or by Italians and Serbians, perhaps I had better say!—of bands of Montenegrin *komitajis*, to fight t'other fellow and *his* bands. The subject has been mentioned, discreetly, by the Belgrade Correspondent of THE NEAR EAST. When it becomes possible to get at and publish the facts regarding the present state of much-harassed Montenegro it ought to make startling reading for those people who at present have no opportunity of learning what is going on there.

CORSAIR.

ZIONISM: The Jewish National Movement,

with Appendices of Diplomatic Documents and Contemporary Articles and Reports, by BERTRAM B. BENAS, B.A., LL.B., Barrister-at-Law.

"In this essay we have an attempt by a very competent authority to justify the very peculiar position of Jews in this world as compared with various nationalities. . . . The case is ably and persuasively put. . . . The appendices are of considerable interest. . . . The whole . . . is well worth careful study."—THE NEAR EAST.

"A book of this kind was largely needed—a brief yet comprehensive conspectus of Zionism, with an apparatus of authenticated documents."—THE LIVERPOOL COURIER.

"An instructive study of the Jewish National Movement. . . . All interested in Zionism—and who is not—will find much to stimulate thought." THE LIVERPOOL POST AND MERCURY.

Obtainable from THE ZIONIST ORGANISATION, 77, Great Russell Street, London, W.C.1. One Shilling. Postage 2d.

NEAR EAST BOOKSHELF.

THE SERBIAN LANGUAGE.*

There has been a boom in manuals and grammars of the Serbo-Croatian language during the war, but most of them have been superficial and hurriedly put together. This work is of a different stamp, and will be indispensable to the serious student of this language, which will repay study, not only because of its greatly increased commercial and political importance, but on account of its inherent beauty and wonderful popular literature. The authors deal in considerable detail with two points that have been shirked in all grammars hitherto published, that is, the aspects of the verb and the order of words in the sentence, above all the position of the reflexive pronoun, though oddly enough they have failed to lay stress on the inseparability of the negative from the verb. It is disappointing to find that here, as in all other published works on the language, the authors labour over the pronunciation of two peculiar letters which we can only express as dj and tj for typographical reasons. There is no difficulty in these. Dj has exactly the sound of the English d in the word "dew," that is to say, d followed by a y-sound, and is quite distinct from the Turco-Serbian letter corresponding to dzh, which is the English j. Beginners often quite unnecessarily confuse these two letters, owing to the wording of most grammars, which correspond respectively to the initial sounds in the two English words *dew* and *Jew*. The letter tj is the voiceless equivalent of dj, and we hear it in the English words *tube*, *bitumen*, and *picturesque*; it only offers difficulty to an Englishman when it occurs at the end of a word, as it does in the vast majority of Serbian surnames, where it is usually written *ch*; it is totally distinct from the true *ch*, and to pronounce it as such is a solecism that exactly corresponds to the common mispronunciation of *picture* as *pikcher*. It is interesting to note that tj is, in Serbian, the phonetic equivalent of the soft Turkish k or *kiaf*, though the Serbian gypsies retain the Turkish form. It is, perhaps, pedantic to regret that the authors have made this interesting point only half clear in the footnote on page 15; nor do they give prominence to one very marked peculiarity of the language, the collective feminine substantives in *-ad*, declined like *stvar* (page 48), which are singular in form, but in meaning are the effective plural of neuter nouns in *-e*; thus *bure*, a barrel (neut., nom., sing.), has for its plural *burad*, barrels, which is fem. sing., although the sense so far dominates the form that *buradima* is a common form in the oblique cases instead of the more correct *buradi*. Nor do we agree that the pluperfect is never used in conversation; *ja sam vetj bio izashao*, "I had already gone out," for instance, is quite a common expression. Beginners, it is true, cannot go far wrong if they confine themselves to the use of the perfect, as in French, but the imperfect (*kako se zvashe?* "What was his name?") and the preterite (*rekoh*, "I said") are commonly heard. The authors ignore the existence of a declinable present and past participle, describing *budutji*, *birshi*, etc., as adjectives. On page 210, referring to the use of the conjunction *da* to express an unreal condition, instances are given of its use with the past tense, but there is no example of its effective rhetorical use with the present. How often have the Serbs in Salonika used the expression, "*da smo sad u Srbiji!*" "If we were now in Serbia. . . ."

The difficult question of the Serbian accent, which is a matter of quantity and tone rather than stress, in contrast with the Russian, is well dealt with. No student of the language can do without this book, though the beginner may be frightened by the rather exaggerated difficulties, and it is to be hoped that a consignment has been sent to Belgrade for the benefit of the growing British colony.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Arabic.	Jewish.
1919. October	1919. September		1338. Moharram.	5680. Tishri
10	27	Friday	15	16
11	28	Saturday.....	16	17
12	29	Sunday	17	18
13	30	Monday	18	19
	October			
14	1	Tuesday	19	20
15	2	Wednesday	20	21
16	3	Thursday	21	22

Lord and Lady Inchcape have returned to 4, Seamore Place from Scotland.

Queen Marie of Roumania, with Princess Marie, left Bucharest for Italy on October 2.

Madame Misu, the wife of the Roumanian Minister, has returned to town from Eastbourne.

Mirza Abdol Ghaffer Khan Emadol Molk, Counsellor to the Persian Legation, returned to town on October 1 from Folkestone.

Major-Gen. MacMunn, Commander-in-Chief in Mesopotamia, arrived in Teheran on September 25 on a private visit to Sir Percy Cox.

The Prince of Wales has consented to preside at a festival dinner in aid of the Great Northern Central Hospital early in December.

The Senate of Glasgow University are conferring the degree of Doctor of Divinity on Bishop Gwynne at their next Graduation Ceremonial.

Our Belgrade Correspondent writes:—The Yugoslav representative on the International Danubian Commission is Captain Yanko Vilhar.

M. Yovan Yovanovitch, formerly Serbian Minister to the Court of St. James, and Madame Yovanovitch will leave London shortly for Belgrade.

General Lord Byng has accepted an invitation to become hon. president of the United Kingdom branch of the Great War Veterans' Association of Canada.

Sir Reginald Stubbs, formerly Colonial Secretary of Ceylon, who was appointed in February last to succeed Sir Francis May as Governor of Hong Kong, has arrived at the latter place.

Dr. Leco, Professor of Chemistry at the University of Belgrade and chief director of the chemistry institutions of the Yugoslavs, arrived in London on October 1 on a special mission.

Owing to the strike, Miss Frances E. Newton motored to Folkestone, en route to Trieste, to catch the Italian Lloyd s.s. "Helouan," leaving on October 9, on her return to Haifa, Palestine.

The Pope received in private audience on September 30 Count de Salis, Great Britain's Special Envoy to the Vatican, for the first time since his return from his recent mission to the Balkans.

The marriage was celebrated on October 2, at St. Augustine's Presbyterian Church, New Barnet, by the Rev. W. Fearson Halliday, M.A., T.C.D., between George H. Anderson, National Bank of India, and Beryl, youngest daughter of Mr. and Mrs. W. N. Weston, of New Barnet.

A marriage has been arranged, and will shortly take place, between Robert William Church, Indian State Railways, eldest son of Mr. W. J. Church, of Durham, and Winifred Florence, eldest daughter of Mr. and Mrs. G. Platt, The Priory, Hungerford, Berks.

The engagement is announced of Capt. Edward Davis Atkins (I.A.R.), 6th K.E.O. Cavalry, of Trans Nzoia, British East Africa, second son of the late H. C. Atkins, of Wynaad, India, and Mary Violet, second daughter of Herbert Sansome Preston, of King's Langley, Herts.

A marriage will shortly take place between Major-Gen. Sir Thomas O'Donnell, K.C.I.E., C.B., D.S.O., late D.M.S. India, and Marion Graham, widow of Capt. W. L. Graham, Indian Army, Reserve of Officers, eldest son of Mr. and Mrs. James N. Graham, of Carfin, Stonebyres, Lanarkshire, N.B.

General Gouraud is appointed High Commissioner of the French Republic in Syria, and Commander-in-Chief of the army in the Levant.

It is not expected that the Shah will reach London until the middle of November. His present visit to Paris is strictly private and later he intends to spend some time in the south of France, returning to Paris on an official visit at the beginning of November.

A number of missionaries representing the London Jews' Society are now engaged in re-opening the society's work in the East. The Rev. C. Neill is the head of the Jerusalem Mission, the Rev. A. C. Martin is to be responsible for the work in Baghdad and district, and the Rev. J. H. Adeney for Bucharest.

The marriage was celebrated on September 25 at St. Nicholas's, Hatherop Castle, Fairford, Glos., by the Rev. Harold Gibson, M.C., assisted by the Rev. A. Cheales, between Major Charles A. G. Mackintosh, of the Arab Bureau, The Residency, Cairo, Egypt, and Norna Labouchere, of 23, Chapel Street, Belgrave Square, S.W.

The Greek Premier, M. Venizelos, accompanied by M. Vassilovulos, arrived at Folkestone from Paris on October 3. His Excellency was met by the Greek Minister, M. Caclamanos, and Commander Talbot, specially attached by the British Government. The party motored to London. M. Venizelos dined later at the Greek Legation, Hyde Park Corner.

A marriage has been arranged, and will take place in November, between Captain Errol F. Arnoldi, Royal Engineers, eldest son of Frank Arnoldi, K.C., Toronto, Canada, and Ruth Gage, only daughter of the late H. F. Matthews, M.A., I.C.S., and Mrs. H. B. Jones, The Grange, Gillingham, Kent, and stepdaughter of Colonel H. B. Jones, C.B., R.E.

The Imperial Travel Bureau (132, Sloane Street, S.W.1) is an association of ex-officers formed with the idea of enabling the relatives of the fallen to visit war graves in Belgium, France, Egypt, Italy, and Palestine, under an organisation of experienced ex-officers who know these countries, and in many cases the actual ground. It is their aim to ensure privacy on these visits.

It is announced that the marriage was celebrated on September 4, at the Catholic Church, Indore, India, by the Rev. Father Raphael, O.C., between Captain F. L. R. Munn, M.C., 46th Punjabis, only son of the late Major F. H. Munn, D.S.O., Royal Irish Fusiliers, and Mrs. Munn, of Creggan, Athlone, Ireland, and Catherine Mary Aline, second daughter of Mr. Bernard Coventry, C.I.E. (late Agricultural Adviser to the Government of India), Indore.

The marriage was celebrated on September 30, at St. Paul's Church, Salisbury, by the Rev. H. W. Allen, Rector of the Parish, between Sydney William Cross, of Cairo and Port Said, son of the late G. A. Cross, formerly secretary of the London Homœpathic Hospital, and of Mrs. Cross, Muswell Hill, London, and Mary Amelia, daughter of the late William Beach, of Dunstan, Weston-super-Mare, and of Mrs. Beach, Wilton Road, Salisbury.

Canon Alexander Wood, of the Scottish Episcopalian Mission at Chanda, in the Central Provinces of India, has been nominated by the new Metropolitan of India, Dr. Westcott, formerly Bishop of Chota Nagpur, as his successor in that diocese. The Bishop-designate is a graduate of the University of Aberdeen. He was ordained in 1895, and after serving as curate of St. John's, Forfar, he left for the Mission at Chanda in 1898. In 1914 he became an hon. canon of Nagpur Cathedral.

The marriage was celebrated on September 27 at Powerscourt Church, Enniskerry, Co. Wicklow, by Rev. W. Boyle, assisted by Rev. H. C. S. Mecredy, between John Reginald Hare Duke, Egyptian State Railways, eldest son of the late Canon John Hare Duke, D.D., of Craigavad, Co. Down, and Priscilla Louisa Frances, widow of William Chatterton-Adams, and eldest daughter of the late Bindon Blood Stoney, F.R.S., LL.D., M.I.C.E., and of Mrs. Bindon Stoney, Mervyn, Enniskerry, Co. Wicklow.

THE CONQUEROR OF PALESTINE.

On October 7 Field-Marshal Sir Edmund Allenby, Commander-in-Chief of the British Army in Egypt and Palestine, received the Freedom of the City of London and was presented with a sword of honour. The occasion was a very memorable one. Prince Emir Faisal, who was in picturesque costume, took part in the reception, and received a great ovation.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

OBITUARY.

The death occurred on October 1 of the Rev. A. E. Stanley, of 14, Westbourne Square, W., late Senior Chaplain H.M. Indian Establishment, aged 57.

Major-Gen. Sir Charles Tyrwhitt Dawkins, K.C.M.G., C.B., died on October 4. He was born in November, 1858, and joined the Shropshire Light Infantry in 1878. In the year following, during the Afghan War, he served with the Kuram Division, in the Zaimusht Expedition, and the assault of Zawa, and received the medal. He also saw much service in the South African and European wars.

The death is announced in Edinburgh of Major-Gen. Sir John Munro Sym, K.C.B. He was born in 1839, and in 1858 he entered the Bengal Army; five years later saw service on the North-West Frontier of India, taking part in the operations in the Umbeyla Pass. He was engaged in the Hazara campaign, and in the Afghan War of 1879-80 was present at the battle of Charasiah, and took part in the march from Kabul to Kandahar. In 1888 he commanded a column in the Hazara Expedition, was again mentioned, and was nominated a member of the Order of the Bath. In 1891 he again commanded a column in the Miranzai Field Force, and was mentioned in despatches, and was promoted to major-general in 1896.

NEWS IN BRIEF.

The Volia, the cruiser which was seized by the British in the Black Sea, is to be returned to General Denikin.

Having completed their inquiry into events in the Smyrna Vilayet, the Allied Commissioners have returned to Constantinople.

A Malta telegram states that the Lieutenant-Governor has left for England in connection with the granting of self-government and of an Imperial subsidy to the island.

Our Malta Correspondent writes (September 20):—Troops have arrived in the island from the Fiume theatre of war in H.M.S. "Ceres" and "Cardiff."

By the recent purchases of some two score French and two dozen British aeroplanes, the Spanish Government has considerably increased the strength of its reconnaissance and fighting aeroplanes in Morocco.

Several members of the Moderate and Home Rule deputations, including Mr. Surendranath Bannerjee, arrived at Bombay from England on October 1. They all spoke hopefully of the prospects of the Indian Reforms Bill.

A Commission for the regulation of Danube shipping and the organisation of a shipping register is expected shortly at Budapest. Communication on the river will be made free from Regensburg to the mouth of the Sulina.

It is reported at Belgrade from Spalato that on September 22 an Italian airman dropped on Zara proclamations issued by d'Annunzio promising that he would occupy Spalato and Dalmatia as far as Cattaro as soon as he had sufficient forces.

Officers are being selected by the Supreme Council in Paris to consider means for the repatriation of German and Austrian prisoners of war from Siberia as soon as the Polish, Roumanian, Yugoslav, and Czecho-Slovak troops have been repatriated.

Emir Said, who was recently arrested by the British authorities in Syria, arrived at Marseilles on October 1. In an interview at Marseilles, he declared that he intended to remain in France until the situation in Syria had been finally settled by the Supreme Council.

The Times' correspondent in the Middle East states that from the railhead of the line from Mesopotamia at Kuretu, close to Kasr-i Shirin, on the Persian border, there is an excellent motor road over the Pai-Tak Pass to Kermanshah and Hamadan, made by the Royal Engineers.

Operations in the Spanish zone of Morocco have been resumed. The adherents of Raisuli refuse to release Lieutenant Tapia, who was recently taken prisoner, unless four Moorish prisoners are given up in exchange. Several Arab villages in the neighbourhood of Fondak are reported to be in flames.

The Modern Section of the War Memorials Exhibition at the Victoria and Albert Museum is now closed. Some of the exhibits in this section are being transferred to the War Memorials Exhibition shortly to be held at Burlington House. The Retrospective Section will remain open for the present.

The Secretary of State for India announces that revised rates of pay for cavalry, artillery, and infantry officers of the British Service in India, and for cavalry and infantry of the Indian Army (including the Indian Army Reserve of Officers) have now been approved, and will have effect from July 1, 1919.

Turkish bands, says a Constantinople telegram, have blown up the fort of Vezir Kopru, near Biledjik (Turkey in Asia, 50 miles east of Brusa).

A Reuter message states:—Egyptian Nationalists continue to agitate for the boycotting of Lord Milner's Commission, insisting that the Prime Minister should take the lead in ignoring it. It is believed that the Prime Minister favours the postponement of the Commission until peace with Turkey has been signed and the general treaty has been ratified.

"The Armenian Army has driven back the Turks towards the line Digur-Getchevan, in Transcaucasia, and is continuing its advance to the south of the River Aras, just to the north of the former Turco-Russian frontier. The threatened cutting of the line Kars-Alexandropol to the south of Djamousli, which has menaced the army for the last fortnight, is now averted."—Armenian Press Bureau.

The latest news regarding the captured British Mission under Colonel Jacobs in the Yemen is contained, Reuter's Agency learns, in a message dated September 27. This makes it clear that the members are alive and well. The telegram adds that the attitude of the Arabs is constantly changing, and they are now demanding the evacuation of Hodeidah by the British prior to the release of the Mission.

A correspondent in Switzerland writes:—Very numerous members of the Sultania Family of Egypt are staying at present in Switzerland, and intend remaining here throughout the winter. In Geneva are Princess Eminé Ismail, Princess Azizé Hassan, Princess Mehmed Ali Halim, and Prince Djéonil Tossoun. In Lausanne: Prince Abd El-Moneim, Princess Nimet Noukhbar, Princess Ibrahim Halim, Princess Bedia Halim, and Princess Bedia Osman. In Montreux: Prince Mehmed Ali. In Territet: Princess Izzet Djelal, Princess Zeyda Fuad, and Princess Eminé Chérine. In Mont-Pélerin: The Khedivah Ikbal. In Zurich: Prince and Princess Mehmed Ali Hassan. In Davos: Princess Eumer Tossoun and Princess Eminé Kiamil.

FRIDAY, OCTOBER 10, 1919.

THE EXPANSION OF INDIA.

India in these latter days is not backward in pressing her claims on the attention of the Empire and the world at large, and among the demands which perplex statesmen and come as a surprise to ordinary men a prominent place is taken by that for freedom to expand beyond the historic limits set by her mountains and her seas. This demand is twofold: sometimes it insists on the earmarking of some particular area, be it in Mesopotamia or East Africa or elsewhere, as a field for definitely Indian institutions and for colonisation in the ordinary sense; while at others it presses for absolute equality of treatment for Indians in every other portion of the world. In either case the demand is felt to be highly inconvenient by the authorities in India, while in the latter shape it is, to say the least, viewed with suspicion by statesmen and politicians in the Dominions and in foreign countries, and its recurring outbursts add materially to the burden borne by the weary Titans of the British Cabinet. It is worth while, therefore, to examine the matter at some little length, to endeavour to understand the basis of the popular clamour, and to see what action can be taken to provide such opportunities as the circumstances show to be required. The claim to expand has some basis in material considerations, but at the present time its force rests almost entirely on sentiment; and where sentiment exists statesmen can do little beyond allowing for its strength. It is important, however, to recognise that this particular sentiment is in itself a satisfactory symptom in that it marks a return of national self-respect. The fashion just now is to bestow extravagant praise on the old political system worked out in India before the Christian era. Whatever were the merits or defects of that system, it became finally bankrupt about eight centuries ago, when the country abandoned the task of defending its own frontiers, and lay helpless before a long succession of invaders. During these centuries there was no room for national self-respect, the new growth of which has been rendered possible only by the security which Britain has provided and the institutions which she has introduced. The sentiment in question is evidence that the work has been well done, and the friends of India can welcome it cordially, though they are bound to censure the form in which it sometimes finds expression.

When we turn to seek the material basis of the demand for expansion, we are met by a striking contrast. The claim is urged most strongly by men who are familiar with the congested poverty of some of the most important agricultural tracts, and who contend with justice that life in these conditions is not worth living. Some outlet, they say, must be found for the human energies wasted in such an environment. Other observers, however, insist with not less justice on the vast potential wealth lying dormant in the land, waiting to be won by just such energies as are now being wasted, and they urge that in view of these possibilities the export of brains and muscles is a crime against the country as a whole. The contrast is perhaps most obvious in the province of Bihar, where there are tracts with an agricultural population approximating to 1,000 persons to the square mile, and also highly mineralised areas where the supply of labour is the outstanding industrial question, but the same features can be observed over practically the whole country, and while it is true that the agricultural districts require an outlet for the stagnant population, it is equally true that mines and industries can afford that outlet to the advantage of India as a whole. Extensive emigration from the congested areas would leave the country much as it is: less food would be produced, but there would be fewer mouths, and the relation of mouths to food would not be materially affected. Migration to mines and industries would, on the other hand, largely increase the average national income, provided that agricultural efficiency were simultaneously increased, so that the smaller numbers remaining on the land should produce an undiminished supply of food and raw material. India, in fact, is just at the beginning of a vast process of economic reconstruction, and the essential condition for success is that the increase of agricultural efficiency shall keep pace with the development of industry, the land casting off its surplus workers as quickly as they can be absorbed in mines and factories. The process depends mainly on the energy which India herself contributes, and its pace cannot be completely controlled by the activities of the Administration; but there is nevertheless a well-defined sphere in which the State not only can but must act, and that is the expenditure of money and effort on preliminary operations which, taken by themselves, are unremunerative, but without which progress will be retarded and uneven. We hear much nowadays of a great forward move to be made in mining and manufacturing development as the result of the deliberations of the Industries Commission; such action is necessary, but we must insist that it will be largely sterilised unless a similar forward move is made in the development of agriculture. The Agricultural Departments have been starved for nearly a decade, and the consequence is that India is less ready than she should be for the industrial programme which has been prepared; until the lost ground is recovered a marked economic advance cannot be expected, but given wise guidance and adequate expenditure on the great productive departments, there are good grounds for hoping that Indian peasants and workmen will be placed in a position to march steadily forward towards a state of well-being of which as yet they scarcely dream.

We do not think, therefore, that material considerations would justify the provision of facilities for mass-emigration at the present time, and so far as can be foreseen no such need is likely to arise in the near future; the interests of India will be secured more effectively by a redistribution of workers than by a reduction in their numbers. But when this view has been accepted, the fact remains that outlets are still required for the exceptional cases. Every country produces its share of social and economic misfits, and the number produced in India is exceptionally large. At present many of them tend to drift into the ranks of professional criminals, or in the alternative join the crowd of religious mendicants, and thus contribute to the maintenance of a pernicious parasitic class; they are often well fitted to thrive in a different environment, and their departure would relieve India of a burden, while benefiting the countries in which they made their homes. For the sake of these exceptions, as well in recognition of the sentiments to which we have referred, we trust that no effort will be spared to secure for Indians the widest possible scope both within the Empire and beyond its borders; men of all classes should have an extensive field of choice, and should not be tied down to a few countries with an environment similar to that from which they seek to escape. At the same time there is at present no need of special inducements to tempt Indians to go abroad; the true line of policy seems to us to be to keep the door wide open, but to leave the individual to decide whether the vista which it offers is sufficiently attractive. Let the exceptions go freely, but let ordinary people, and the leaders of ordinary people in particular, concentrate their attention on their own land, the potential resources of which are so enormous that even its vast population can be profitably employed.

CYPRIOTE SHRINES.

By Lieut.-Comdr. H. C. LUKE, R.N.V.R.

II.*

Many other remarkable relics at one time found a home in Cyprus. These included a part of the rope by which our Lord was bound by the Jews when led away to crucifixion, one of the thirty pieces of silver paid to Judas Iscariot for betraying Him, one of the nails by which He was fastened to the Cross, together with three drops of His blood, one of the jars containing the water which He changed into wine at Cana in Galilee, one of the arms of S. Anne, the mother of the Virgin Mary, and a rock on the summit of Mount Troödos which disputed with Ararat the honour of having been the resting-place of the Ark. These objects, and many others described by the early chroniclers of Cyprus, are no longer in the island, and have disappeared from ken; but in recent years there has sprung into prominence a shrine bidding fair to outdo them in the popularity they once enjoyed.

MEVLEVI TEKYÉ, NICOSIA.

At the extreme end of the Karpass peninsula, that long and narrow strip of land which, like an index finger, points at the Syrian coast, is a tiny Gothic chapel, built in the days of the Lusignans over three ἁγιάσματα, or holy springs. The name of the place is Apostolos Andreas, for the springs are believed to have issued from the spot where S. Andrew first set foot on Cyprian soil. A visit to this Ultima Thule of Cyprus is no light undertaking for an inhabitant of, say, Limassol or Paphos, entailing, unless he can afford to drive many days of weary journeying on donkeys; and for this reason pilgrimages to the shrine were, until lately, few and far between. The sanctity of the spot was recognized, but it had no resounding miracle to its credit; and thus there was little inducement for a pilgrim to embark on an expedition which would take him from his home for three or four weeks, or even more. Those who visited the spot were for the most part people of the neighbourhood, of which S. Andrew is supreme and undisputed patron (being alluded to by Karpass folk as "the saint" *tout court*); and the popularity of the shrine remained largely local until 1912. In that year there occurred an episode which has made it the most frequented place of pilgrimage in the island, and has enriched it beyond its founders' wildest ambitions.

In 1895 one Maria Georgiou, a Greek peasant woman and a widow, living in the small seaport of Alaia, on the border of the vilayets of Adana and Konia in Asia Minor, lost her son Panteli, a lad of thirteen. The boy had gone to a neighbouring village to visit an old friend of the family, the *papas* who had baptized him, and was not seen again. His mother, after waiting in vain for his return, set out for the village, in the hope of finding him there. But neither the priest nor anyone else had seen Panteli, all trace of whom had completely vanished. Inquiries were set afoot, but without result, and the only way in which the boy's mysterious disappearance could be explained was by the supposition that one of the roving bands of brigands which infested the neighbourhood had kidnapped him as he was walking along the road. Years passed, and the sorrowing mother abandoned all hope of finding her child.

Seventeen years later, in the early part of 1912, Maria declared one morning that in the night she had seen a vision of S. Andrew. The Apostle, so she affirmed, had appeared to her as she slept, and had communicated to her a clear and precise injunction. He bade her, if she desired to hear news of her long-lost son, make a pilgrimage to his shrine in Cyprus, to the church of Apostolos Andreas; and she announced her intention of proceeding thither with as little delay as possible.

Setting out from Alaia, she travelled through Adana and Tarsus to the port of Mersina, where she embarked for Larnaca, in Cyprus. It was the week before the Orthodox Easter, and the ship was filled with Cypriotes, labourers on the Baghdad railway, who were returning home to celebrate the feast, τὸ μεγάλο πάσχα, with their families and friends. Among the deck passengers were also two Turkish dervishes, with one of whom Maria fell into conversation. It transpired that they were bound for the same destination, and that the dervish and his companion were proceeding to Cyprus on business connected with the property of the *tekyé* of Mevlevi dervishes in Nicosia. It should, perhaps, be explained that in parts of the interior of Asia Minor the Greek peasants are largely, and in some districts wholly, ignorant of Greek, and employ the Turkish language not only in everyday life, but even for the celebration of the liturgy in their churches. Hence Maria engaged more naturally in conversation with the Turkish-speaking member of a Moslem religious confraternity than with her Cypriote co-religionists. For some time they talked of the events of the voyage and of the unknown island, their objective, until a chance question from her companion moved Maria to tell him of her loss and marvellous vision, the cause of her journey to the distant shrine.

For a while the dervish listened in silence, but became more and more agitated as she proceeded with her story. Finally, he asked her if her son had any distinguishing marks on his body.

"Yes," said Maria; "a mole on his chest and another on his shoulder."

* The first part of this article appeared in THE NEAR EAST of September 19

Digitized by Google

On hearing this the Turk opened his robe and showed the very marks which Maria had described, while the woman first gazed dully, then leaned forward and touched them, as if unable to believe the evidence of her eyes. Her companion poured out a flood of explanations, unintelligible to any but the mother, whose quick instinct was now convinced of the truth which the bearded and strange face had previously concealed. With a cry she clasped her son in her arms, as he tore off his high brown bonnet of camel-hair and flung it into the sea. Though stunned at first by the sudden joy of their reunion, the pair were soon able to talk connectedly. The son told the mother how, as he was going to the priest's village on the fateful day, he had been kidnapped by Turkish brigands, who eventually disposed of him in Constantinople. There, after passing through various hands, he was instructed in the tenets of Islam, and educated as a dervish. He was never left alone, and was moved constantly from place to place, so that his childish memories had very nearly become effaced. He had forgotten his native place and the name of his parents, yet some strange and instinctive attraction had drawn him to his mother, whose story, with its details of events and places, reforged in a flash the missing links in the chain of memory which still bound him to his former life. When Maria was calm she turned to the passengers who had gathered around her, and, with the slow tears of age running down her wrinkled face, told them of the miracle which had restored her son after so many years. The Cypriote labourers, many of whom hailed from the Karpass, raised shouts of rejoicing, and fell on their knees to praise the saint for the sight which they had been privileged to witness. Willing hands helped the ex-dervish out of his robe, and clothed him in the baggy blue breeches, loose shirt, and embroidered waistcoat worn by the Christian peasantry of Cyprus, the men contending for the honour of providing them from their store. A collection was made for Panteli and his mother, who announced their intention of going together to the shrine to return thanks for their happiness; and thus, surrounded by their newly-made friends, and in an atmosphere of religious fervour, the two arrived at Larnaca.

It is no part of the purpose of this narrative to account for Maria's vision and its marvellous accomplishment. Let it be assumed that it was one of those remarkable occurrences whose prevalence in the Levant explains the multitude of wonder-working shrines and icons, and the faith reposed in them by the population at large.[3] To show that this faith is common to all classes, it is only necessary to recall the illness of ex-King Constantine of Greece in May, 1915, when, at the instance of the Greek Government and of the Holy Synod, the famous icon of the "Evangelistria" of Tenos was brought by a man-of-war from its island home to the Piræus, and thence was carried in solemn procession to the King's sick-room in Athens.[4] The reunion of Panteli and his mother through the intervention of S. Andrew has assured the popularity of "the saint" for many years to come. In the place of a trickle of pilgrims from surrounding villages, an impressive stream from all corners of the island now converges upon the chapel at the season of the *panegyris*. Generous gifts fill the monastic coffers, the modern church above the mediæval chapel is choked with *ex voto* offerings, the accommodation for pilgrims has been enlarged, and the managing committee of the monastery is spending a substantial sum of money on the construction of a carriage-road, and talks of installing a telephone. Such are the results of a modern miracle.

A quaint account of an earlier miracle is given by Alexander Drummond, English Consul in Cyprus from 1753 to 1759, in the course of a description of the church of S. Mamas at Morphou, on the west coast of the island[5]:—"S. Mamas, to whom this church is dedicated, performed abundance of miracles while he lived upon earth, and even now affords daily matter for astonishment. When alive he either could not or would not pay his carache (*kharaj*), or poll-money, and the collectors were always restrained by the operation of some preternatural power upon their bodies and spirits from using him in the savage manner in which they treated others who were deficient in their payments. The prince, being informed of this extraordinary circumstance, ordered him to be hunted out from the hollow rocks, caves, and gloomy woods in which he always lived, and brought into his presence; and S. George and S. Demetrius, hearing of his being taken, followed, overtook, and accompanied him in his captivity. During his journey to court, seeing a lion rush out of a thicket and seize a lamb, to the terror and astonishment of his guards, he ordered the beast to quit his prey, and his command was instantly obeyed by the lion, who fawned and wagged his tail in token of submission. The good man, being tired with walking, took the lamb in his arms, and mounting the wild beast rode forwards to court, to the amazement of all who saw him. He presented himself in this equipage to the king, who, being apprised of these circumstances, accepted the lamb, generously remitted the caraches he owed, and gave orders that the saint should live without paying any tax for the future. Thus favoured he came hither and built a little church, in which at his death his body was deposited. This is one way of telling his story, which is varied by every papa whom you consult on the subject. As I have related one of his performances while in life, I will now communicate one of the feats he has acted since he went to the other world. Just above the place where he lay interred a marble sarcophagus was placed, and on the wall is a picture representing him riding on the lion, with the lamb in one hand and a shepherd's crook in the other; upon his right is S. George, and on his left S. Demetrius, both on horseback."

"The Turks," adds Drummond, "expecting to find a treasure in this sarcophagus, broke it up, and ever since, through two little holes which were then made, water is continually conveyed into a hollow, being supplied from the sweat that issues from the face of the above picture, which is never dry, though those of his brethren saints, who are close to him, show no signs of moisture."

The sarcophagus of S. Mamas continues to sweat to this day, but the liquid issuing from it (to which Father Stephen de Lusignan attributes some remarkably piquant properties) is reinforced by water discreetly poured into the tomb by the custodians of the church through the holes made by the Turks.

(To be continued.)

[3] Did miracles not sometimes take place, that faith would long since have disappeared. A favourite modern Greek proverb is to the effect that a Saint who works no wonders is not worth bothering about:—

"'Αγιος ποὺ δὲν θαυματουργεῖ δὲν λατρεύεται."

[4] In consequence of this, so many other celebrated icons offered their services that the Greek Government had to issue a notice intimating politely that no more were required.

GAME PROTECTION IN CYPRUS.

(From Our Cyprus Correspondent.)

Under the Game and Wild Bird Protection Law, considerable tracts of land in all the six administrative districts of Cyprus have been closed against sportsmen from November 1, 1919, to August 12, 1921. The measure is a very wise one, and the areas seem well selected. So great has been the destruction of game, owing to the immensely increased issue of gun licences, coincident with largely extended cultivation, that protective steps became necessary some years ago, but it was not till 1911 that a comprehensive law was passed, under Sir Hamilton Goold-Adams, dealing with the preservation of all game and of wild birds. Moufflon, the only species of large game in the forests, was threatened with extinction. No person can now kill or take one without a special permission from the High Commissioner, only given under very exceptional circumstances. The francolin, which used to be fairly plentiful, as it is in many parts of Asia Minor, is now rarely found except in a few valleys of the Papho district. This bird is also specially protected. No one can take or sell the eggs of any game bird; nor can the skins or eggs be exported. No birds may be shot from shelters except wild swans, geese, and ducks, nor may decoys be used.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Next week will see the opening of the Athens Exhibition of the Federation of British Industries. This enterprise marks an entirely new departure in Great Britain's relations with the Near East, and the exhibition will be in every way worthy of the occasion. No more suitable building than the Zappeion could be imagined, and there the thousands of visitors will be able to inspect a wealth of exhibits of British manufactures. I understand that about 300 firms are exhibiting, and the manufactures shown will make the exhibition as nearly representative of the industries of the United Kingdom as possible in the time at the disposal of the Federation for organising the event. The preliminary work, it must be remembered, has been carried on in most unfavourable conditions. Industries generally were in a state of flux for some months after the Armistice, and the representative character of the exhibition is a great tribute to the resolution with which British manufacturers have faced the task of reconstruction.

***

It would be impossible in these columns to give the exhibits in detail, but their comprehensive nature will be gathered when I say that they range from aeroplanes to household requisites, from oil engines to glassware and hardware, and from motor-cars to dyes and chemicals. In short, the exhibition includes examples of all the commodities of which Greece and other Near Eastern countries are in need; and its great value lies in the fact that it will show business and commercial circles in Greece and the Levant the varied ways in which Great Britain can be of assistance in the work of reconstruction. I have constantly emphasised the keen desire on the part of the Balkan countries for the development of commercial relations with this country. By arranging this exhibition the Federation has gone more than half way to meeting this desire, and in so doing has given a lead to British manufacturers and exporters which I trust they will not be slow to follow.

***

There is no doubt at all as to the results of the exhibition. All accounts agree that the keenest interest is being taken in the enterprise not only in Greece, but also throughout the Levant. British goods have never lacked appreciation in the Near East, and commercial circles there are fully alive to the advantages offered them by the exhibition; and it is to be expected that while it lasts Athens will be thronged with business men from all parts. It is evident, in short, that the exhibition will be the means of giving a great impetus to British trade with the Balkans.

***

Judging from information which reaches me with regard to last month's Leipzig Fair, I do not think that British manufacturers need worry themselves about the prospect of German competition in the near future. The general impression conveyed by the fair was, I understand, that nearly all German industries are in a most critical position, this being due in the first place to the coal shortage, and, secondly, to the loss of export trade, without which Germany is unable to obtain the requisite raw materials. The whole fair emphasised the desire of the German people to recover its economic position, but among every class of exhibits there was striking evidence of the hopeless dependence of Germany on raw materials from abroad, and on an increased coal output. With the German glass, pottery, textile, leather, toy, and numerous other branches of industry either closed down or being worked at from 5 to 10 per cent. of their normal output the fair left no room for doubt that Germany has been placed by the war in a very difficult position indeed.

***

As regards the special features of the fair, new mechanical devices and novelties were much in evidence, the German manufacturer, my correspondent points out, concentrating in this direction with a view to forcing a wedge into foreign markets. It was also much remarked that wherever possible production had been confined to articles requiring the absolute minimum of coal and raw materials from abroad. Some of the sections were largely exhibitions of substitutes, notably the section for textiles, the exhibits of which, my correspondent comments, were very poor, mostly made of shoddy; while there was a great display of paper carpets, rugs, tablecloths, etc. It is worth noting that the prices of these paper textiles were high; for instance, paper rugs, which at a distance looked like the genuine article, cost about double the pre-war price of the real thing. The general conclusion to be derived from the fair is that the will to win is still present in Germany, but that the means are lacking at the moment to resume the struggle for trade.

***

The settlement of the brief railway strike leaves the industrial outlook brighter than it has been for many a day. It has done much to clear the air, since would-be strikers have learnt the lesson that the resources at the disposal of a community are quite adequate for the maintenance of essential services until such time as the strikers condescend to return to work. There are, it is true, some industrial problems in the offing, but these despite, I remain convinced that the industries of this country will now begin to go rapidly ahead. Since the turn of the year the trade returns have borne testimony to the general industrial recovery, and I shall be much surprised if the export figures are not revolutionised during the next few months.

***

In the American consular report which I quoted last week on a new Arabian railway, the question of an extension of the line from Lahej to Sanaa was discussed, and it was pointed out that a feature for consideration would be the attitude of the Arab tribes in the vicinity. That sums up the position rather mildly. I cannot imagine the Arabs between Lahej and Sanaa regarding with anything but annoyance an attempt to introduce the "iron horse" into their domain, and they have a habit of expressing their feelings rather freely when they are displeased, and in a manner apt to be extremely unpleasant for the object of their attentions. No, it would be a piquant experience, but I for one would not care to form one of the working party, and frankly, I cannot imagine the railway being constructed at any rate in the near future.

***

There is an interesting note on the Egyptian flax industry in the September issue of the *Journal* of the British Chamber of Commerce of Egypt, which remarks that many years ago flax was an article of some importance in Egypt, but that from various causes, including faulty treatment of the stalk, the trade languished. "With the large demand from Europe, however, the old business has again come into prominence," adds the *Journal*, "and the excellent quality of the Egyptian product as compared with the Indian and Continental varieties, coupled with improved methods of preparation, have fostered the trade, which is now only limited by short supply. During the four months ended April 30 this year over 143 tons were exported, as against 36 tons for the same period last year. With the arrival of new machinery to cope with the much increased production anticipated next year, an impetus should be given which will establish the Egyptian flax industry, now very favourably considered in Europe, on a sound basis.

***

The idea of an all-India banking institution has frequently been put forward in the past fifty years, and an impetus has been given to the project by the industrial development of the country. The union of the three Presidency banks is the obvious method of establishing such an institution, and it has this advantage, that the amalgamation will not be open to the objection so often raised in regard to banking developments in this country, that it tends to diminish competition, since the three banks each have their own spheres of action, the banks of Bombay and Madras being limited respectively to the Bombay and Madras Presidencies, while the Bank of Bengal covers Bengal and the rest of India outside Bombay and Madras. There is no question of the gain to India by a strong institution formed by the three banks; but it is at least open to doubt whether the immediate object aimed at—namely, the provision of increased banking facilities—could not have been attained more readily by freeing these banks from restrictions.

COMMENTATOR.

The Coal Resources of the Near East.

A General Survey.—I.

By John Kirsopp, M.I.M.E., F.G.S.

At the present time there is an acute shortage of coal throughout the whole of Europe, a position which is likely to continue for some time to come. In common with other regions, many countries in the Near East were largely dependent on Great Britain for their supplies, and now that it is impossible at present to obtain their requirements from us, the question of the coal resources of these countries becomes naturally of exceptional importance. The following table, compiled from statistics of the export of fuel (coal, coke, and manufactured fuel) from Great Britain for the year 1913, will testify to the extent of such dependence in the past, and will also, perhaps, approximately indicate their present industrial condition :—

	Tons.		Value.
Aden and Dependencies	181,204	..	£154,350
Algeria	1,496,356	..	1,059,606
Bulgaria	58,170	..	45,342

Ceylon and Dependencies ..	219,637	..	205,384
	14,223,711	..	£10,600,985
In addition the following countries produced respectively (in 1912†):—			
Bulgaria	245,314	..	—
Roumania	242,025	..	—
Russia.....	31,296,900	..	—
Serbia	313,001	..	—
‡Turkey	745,676	..	—
British India.....	14,706,339	..	£3,310,365
Total Consumption.....	61,772,966	..	—

The figures quoted in the subsequent text regarding the extent of the various resources includes all coals of one foot or over in thickness, and existing within a depth of 4,000 ft., which has been in the main briefly extracted from a large mass of information gathered together and tabulated from geological surveys and mining bureaus throughout the world by the International Geological Congress at their Twelfth Session, held in Toronto in 1913. Without further reference it will be understood that, dealing with the subject, as the writer is doing, in the light of the position in 1913, the geographical distribution of countries then obtaining has been followed for the sake of simplicity.

Turkey, with her enormous and undeveloped coal resources, her large expanse of coast-line adjacent thereto, thus being more or less within favourable situation of exportation facilities, offers an attractive starting point for such a survey.

Turkey in Asia.

No geological survey has yet been made of the Turkish Empire, and, according to the writings of M. Leon Dominian, the knowledge and extent of its coal resources are still very limited. The north-westernmost projection of Asia Minor immediately south-east of the Dardanelles forms part of a district wherein lignite deposits have been worked in a number of localities. The formation of this district can also be traced to the north on the adjoining European coast of the Marmora. These lignite beds occur mostly in the Tertiary Cacustrine deposits, probably in a zone of transition between the Miocene and the Pliocene. In the Ægean Sea the same grade of coal is found in the islands of Mytilene and Lemnos, where it was mined in 1875. The best-known of the deposits is worked at Manjilik, where the outcrop coal seam can be traced for a distance of four kilometres (2½ miles), the product being used as fuel for an electric power station feeding the smelters and workings. Lignite is also found near Lampsacus, but has not yet been worked, but is mined in the Troad, near Edremid, the product being sent to the seaport of Akchai, where it is stacked and sold in small quantities. Further south, near Loma, the terminal of a branch railway from Manissa, there are also mining operations on a small scale, and near Panderma, 4 km. from Tchamakdagh, some exploration work took place about 20 years ago. Samples of the coal analysis :—Volatile matter, 32.6 per cent.; fixed carbon, 45.4 per cent.; ash, 12.6 per cent. Further west, lignite outcrops occur at Dernirtash, 20 km. north of Broussa, and at Ghemlik, and mining was carried on formerly at Tchaidere, near Bilejek, and at Gueve, near Seyyud. The most westerly extension of these coals exists in the mountains environing Tchai, near Afiounkarahissar. The thickness of the coal attains 2 metres (6 ft. 6¾ in.). Practically every one of the abovementioned deposits are capable of development in order to meet local requirements.

The Heraclea coalfield is at present the best developed in Turkey. It comprises a length of about 60 km. (37¼ miles) in length along the Asiatic coast of the Black Sea, between the seaports of Heraclea and Filios, the former town being situated 135 nautical miles from Constantinople. The coal beds outcrop near the coast, and are known to extend farther than 8 km. inland. The coast facing this section of the Black Sea is precipitous, 60 m. or under elevation, and gradually increasing southward. The geological formation outcrop in three long and parallel bands consisting of culm, lower carboniferous amentoner, and upper carboniferous coal measures. The correlation of this sequence with the belaceous of the Balkans has been established, and the local subdivision corresponding to the three stages of the European carboniferous are respectively Aladjaaghzy, or lower stage; Cozloo, or the middle stage; and the Caradon, or upper stage. The best coal is derived from the Cozloo, this and the Aladjaaghzy subdivisions being also economically the most important. The western boundary of the basin is determined by a long fault line occurring at Kiosseaghzy at a distance of about 10 km. east of Heraclea; hereabouts some thin seams of coal being worked of the Cozloo stage, the entire measures seemingly having sunk at this point. Immediately beyond are situated the valleys of Kiretchlik, Chaoushaghzy, and Ilisoo, within whose limits the Aladjaaghzy series is first seen. About 20 km. (127 miles) further east, the Cozloo series outcrop, and at this portion of the field the widest and greatest exploitation and mining operations have been and are being carried on. The coal measures come on about 2 km. (1½ miles) further east, and at Domooz taking a gradually southerly strike inland, attaining a width of 5 km. (3 1-6 miles) across the Zoongooldak Valley, and extending beyond Tchatalaghzy Valley to Gooksoo. Mining ceases at this locality, but coal is known to occur as far east as Djide. The Aladjaaghzy stage is best represented in the locality bearing that name, where fifteen seams of an average thickness of 0.75 (2 ft. 6 in.) occur, and are known by different names, although several of them are probably the same, but cut up by the profound faulting to which this region has been subjected. The same measures have also been developed to a less degree in the valley of Kiretchlik, and at Tchaoushaghzy.

A zone of transition between the Aladjaaghzy and the Cozloo measures is revealed by a number of almost vertical seams with a thickness of those below. They occur along a double east-west line of faulting which form the southern extremity of the coal basin. These vertical seams therefore indicate the beginning of the Cozloo stage, best represented in the valleys of Zoongooldak, Kilimli, and Tchatalaghzy. The strata in this zone dip respectively to the north and south, forming an anticlinal fold plainly discernible in the valley of Kilimli. Twenty-five seams are distinguished locally, with an average thickness of 1.5m. (4 ft. 11 in.).

The possible zone of transition representing the upper level of the Cozloo stage is best seen in the vicinity of the Kiosseaghzy fault. Two systems of seams occur here known as the Tsamly and Beylik groups, the former comprising fairly thick seams having a maximum thickness of 2 metres. The Tsamly system can be traced to the seashore of the village bearing that name, and extends to Candilly Valley, a distance exceeding 4km. (2½ miles) in length. The Caradon zone comprises eight seams which have been worked at Caradon, Tchatalaghzy and Cozloo, their thickness varying between 1 and 1.5m. (3 ft. 3⅓ in. and 4 ft. 11 in.).

The Amasra basin comprising the Tchatalaghzy district, consisting of five seams of similar average thickness, also appears to form part of the same series, and the outcrops east of the town of Amasra near Capoosoo probably constitute an extension of this group. A number of outcrops also exist in the valley of Itisoo near Sefedier also belonging to this group. The coal mined at Heraclea is bituminous, and belongs to two groups. That obtained from the middle series is excellent for coking purposes, whilst the Aladjaaghzy product is used chiefly for the manufacture of illuminating gas and for steam generation. The annual output from this coalfield has increased from 70,997 metric tons in 1884 to 750,000 metric tons in 1911, and probably will soon reach a million tons owing to the settlement of dispute between the Turkish Government and the French company holding the most important concession in the district.

Eastern Asia Minor.

A large number of coal seams of all grades occur in the region extending east of the 34th meridian east of Greenwich to the Russian and Persian boundaries. Lignite is found in the Tavihandagh Mountain in the vicinity of Mersivan, and coal outcrops in the immediate neighbourhood of Tokat are also in a district 60 km. (37¼ miles) south-east of that town, and further south near the town of Sivas. Coal exists and extends almost from the eastern to the western boundary of the province of Mamouretuetziz, the localities being Tchemishguedsek, Zafranik, Dersim, and Derstek, and lignite occurs at Shengyah near Baibourt.

In the Erzeroum district mining operations have been done on coal seams of the Upper Eocene age, viz. at Kukurtlu, Sivishlu, Tazegul, and Chareet, in the province of Erzeroum, Kheneke in the province of Narman, and at Varlik in Terjan province. These lignite seams are well developed at Kheneke, near Migri in the valley of the Arax, as well as to the east in the Kashkaldagh Mountain. South of Erzeroum bituminous coal occurs in the mountains lying west of Mushplain, and anthracite is found near Erooh in the province of Bitlis between the villages of Tchemak and Dergal, and also farther west near Galu, suggesting the possible existence of an anthracite basin in this region. West of the Persian boundary ample reserves of fuel exist in the province of Van, viz., lignite at Bashkale in the Hekiari district and near Tcough Pass.

Bituminous coal is found at Aktchai on the Karasoo river about 24 km. from the harbour of Chesaker on Lake Van, and also at Sivan near Archek 27 km. (16¾ miles) east of Van. At Chahmanis in the district of Chatak a number of seams occur with a maximum thickness of 1m.

Mesopotamia.

Coal was mined about half a century ago in the northern section of Harpot province, and used on the river boats plying on the Tigris, as also at Jebel Hamrin, 90 km. (55¾ miles) north-east of Baghdad, and has been found at Mosul. North-east of Baghdad 160 km. (99 1-3 miles) upper coals are to a small extent mined by the natives in the low hills lying east of Kafri, near the Nasalah village.

Syria.

Lignite occurs in the province of Beyrout, and to a very small extent is worked near Gezzim and also near Kermael, both deposits being capable of yielding much larger outputs. Outcrops also exist in the valley of the Nahrelkalb. In the Lebanon, coal occurs at Falooga, near Hamana, at Æbdin, near Bekfaya, Mreyjatt, and Gezzim, at Falooga there having been native exploitation on a small scale in order to supply the silk factories of the district with fuel. Other deposits exist at Meshgara, in the Bekas Mountains, and Huleh, in the province of Damascus, also in the neighbourhood of Tyre and Safed, and at about 80 km. (49½ miles) south-east of Aleppo. Two other localities regarding which very little is known are Suedieh, on the Mediterranean coast, and the Ajiloon province in Palestine.

The distribution of coal in Asia Minor is wide. It exists in the Beirootdagh Mountains, and anthracite has been found near Siz, between Adana and Zeitoon, in the valley of the Jihoon River. The south-western coast of Asia Minor is also not devoid of coal. Seams are known near Makry, in the foothills of the Eljikdagh Mountain, and in the province of Smyrna. Lignite beds exist at Gulhissar, Mitas, Sokia, Aidin, Kiosh, Nazilli, Scala Nuova, and Keramos. The Sokia and Nazilli seams have been developed for local use.

Turkey in Europe.

The Keshan district, in the province of Adrianople, has been prospected for coal more thoroughly than other districts of European Turkey. Here several seams of bituminous quality occur at the edge of synclinal sandstone basin, 13 km. (8 miles) in diameter, one of which 1 metre thick, has the characteristics of a cannel coal, with a specific gravity of 1.37, and yields about 2 per cent. of ash, has been proved by prospecting borings at Boztepe, 9.6 km. (6 miles) west of Keshan, and several seams are known to exist along the Marmora coast between Sarkeui and Ganis, 48 km. (29¾ miles) south-east of Keshan, their thickness varying between 0.30 and 0.45 m. (1 ft. and 1 ft. 6 ins.).

Another deposit, with seams averaging about 0.70 m. (2 ft. 4 ins.) in thickness, occurs at the head of the Gulf of Saros, near the village of Capoodjidere. The extension of the Marmora-Ægean lignite field can be traced to the vicinity of the seaport of Rodosto, in the Sea of Marmora, and to Dervent, near Dedeagatch, 5 km. (3 miles) from Ferejik station of the Oriental Railway, and lignite is also known at Soofii and Oozoonkeupri, and at Grissanhissan, about 8 km. (10 miles) from Xanthis railway station. (In Albania a fair quality of coal has been mined near the towns of Telvino and Triano.)

As no geological survey has ever been made, it is impossible to give any approximate probable reserve, but from the foregoing it will be seen that the available coal reserves of the region must be enormous and, with the exception of the Heraclea mines, practically virgin and untapped. The building of railroads through certain sections of the country will probably have an important bearing on the future growth of the mining industry. M. Dominian states that the annual consumption of coal in Turkey and such of the adjacent countries as are geographically dependent on her (Egypt, for instance) may be safely reckoned at about five million tons, whilst the annual production of Turkish coal is still less than one million tons.

Greece.

There are several deposits of lignite throughout the country, principally on the island of Eubœa and in Oropos and Aliveri. The coal is, however, of poor quality, and the only deposits that were being worked were at Coumi (Eubœa), where there are two seams having an aggregate thickness of 2.2 m. (7 ft. 2 ins.), calculated as covering an area of 20 s. km. (12½ square miles), and with an actual reserve of ten million metric tons. The deposits at Oropos, Aliveri, etc., are reckoned to contain a probable approximate reserve of thirty million metric tons.

ROUMANIA'S RAILWAYS.

Credits Needed for Material.

The most important problem of reconstruction for Roumania has been the restoration of communications. The current issue of the *Board of Trade Journal* gives an important review of the Roumanian railway situation, dated August 18, from the Director-General of Roumanian Railways, which we quote below:—

On November 12—at the time of the Armistice—both in Wallachia and in Moldavia, there were only 150 locomotives at the disposal of the Roumanian Government for the whole of the original kingdom. In spite of this it was necessary to lose no time to arrange for the following transports:—(1) Repatriation of more than 150,000 refugees with their luggage from Moldavia. (2) Repatriation of the Roumanian Army with all its munition depots and equipment. (3) Redespatching after reorganisation of the Roumanian Army of the Dniester, as well as that of the Theiss. (4) Revictualling of the country with the cereals received from England and America at the ports of Constanza and Braila.

At the same time, it was necessary to busy ourselves from the first with re-establishing workshops to enable them to handle the repairs of locomotives, wagons and coaches, tracks and bridges, station buildings and installations.

Lack of Materials.

One of the difficulties encountered in the repair of rolling stock was the absence of materials. All belting had been requisitioned. Luckily, however, a small amount of material was found in certain depots which the Germans had not had time to destroy. The workshops were started again in the month of December. The conditions of labour were miserable. Without clothes and food the morale was not conducive to hard work. But the most important cause of low output was the lack of materials. It was for this reason that the Government was obliged to stop piecework—the only means of controlling the work—but it was impossible to establish rates for making any definite piece while the proper material was lacking, and it was necessary to employ other materials and to have recourse to methods invented locally for each piece. With coke and pig-iron lacking, it is easy to imagine the output of the foundaries.

The English Mission at once realised the state of things and lost no time in arranging a credit of £500,000 for the materials which were urgently necessary. But this material could only suffice for two months, during which it was thought that Roumania, having obtained the desired help from the Allied Powers, would be able to put its rolling stock into condition again. Unfortunately, the country is still awaiting other credits, and, to make matters worse, only a small quantity of the material promised has come to hand, and scarcely 500 tons of the total of 2,000 have reached the workshops yet, or are in one of the Roumanian ports, or *en route* at the time of writing.

In order to understand the state in which the locomotives were, owing to lack of materials, it will suffice to say that since 1914 there have been no materials, and that it was only by the interchange of parts at the expense of the rest of the locomotives that it has been possible to keep some going. The final limit has now been reached, however; 150 engines are still working, but are momentarily in danger of falling to pieces. Since the Armistice 280 engines have left the workshops to deal with the daily train kilometrage of 25,000 in the original kingdom of Roumania. They would do more if it were not for the difficulties in maintaining a good service, due to the destruction of the other installations, such as telegraphs, which necessitates their stopping at every station, and by increasing the block length to the total distance apart of the stations. The destruction of the safety devices for the switches and signals, and, finally, the congestion of traffic, due to the insufficient number of trains, also promote delays. All the above causes contribute not a little to the bad utilisation of locomotives, without mentioning the low calorific value of the coal from the Petroshani mines, especially for engines which are not adapted for coal burning. Outside help has been insignificant. Sixty locomotives have been received from France, which have had to be put into workshops, both for assembling, and especially for cleaning the boiler tubes.

Hungarian System.

The railway system taken over from Hungary is none the better for having been used by the Germans and having been abandoned by the Hungarians, who took with them all they could. Some difficulties have arisen from the union of three railway systems—Roumania, Austria, and Hungary, in Transylvania—difficulties of different languages, different methods of working, etc., caused by the fusion of such different railway systems, will be apparent to any specialist, and their uniting will not be the work of a day, especially after such a war as this, which is not yet finished for Roumania.

The best proof of the activity of Roumanian engineers is the speed with which they have re-established the railway tracks. Three months after the evacuation the train service was resumed on all Roumanian lines, with the exception of the two large bridges over the Danube and the Sereth. The rebuilding of these bridges is continuing. The working is hindered greatly by the destruction of the safety apparatus, water installations, etc. Although of only secondary importance, they form together a sufficient cause to delay the circulation, and are the cause of the bad use of material. The state of the station buildings is the worst. Certain stations no longer exist. In this case, however, the authorities are not waiting for foreigners to help in the work, the materials for which can be found to a large degree in the country. If the country can obtain credits for materials, the work of reconstruction would proceed rapidly. It will certainly be necessary to complete existing material with new wagons and locomotives, unless these can be taken from Hungary—*i.e.*, the material belonging to the Transylvanian railways, and that which the Germans took from Roumania.

Near East Markets.

LONDON PRODUCE REPORT.

Currants.

The position with regard to this commodity remains unchanged. The advancing tendency of prices has continued, and it is obvious that if retailers are to obtain supplies the maximum retail rates will have to be changed.

Sultanas.

The supply of sultanas is still very limited, and the strong demand keeps the level of prices high.

Coffee.

Business has been very restricted. At auction this week 2,932 packages were offered, and met with only a moderate demand. Prices obtained included East Indian bold grey-greenish and greenish 145s. to 152s. 6d., and medium 137s. for export, Costa Rica fine bold greenish 156s. to 157s. 6d., good bold and bold 151s. 6d. to 155s. 6d. The futures market has been featureless. Quotations are:—December 118s. 6d., May 109s. 3d., July 107s. 3d.

Sugar.

Both for home consumption and for export the demand is very firm, and quotations are steady with an advancing tendency. There are ample stocks in the country at the moment, and the restriction imposed during the strike was to ease distribution.

The British Sugar Beet Growers' Society state that in the coming factory season in Germany there will be about 50 fewer raw sugar factories in operation than in 1913. The area under sugar beet it is stated has declined by about 19.4 per cent., the weight and sugar content of the crops being also seriously below the average. In France the damage has been on a much larger scale. Before the war there were 250 factories turning out one million tons of sugar annually. Of this about three-quarters were consumed in France, the remaining quarter being exported. The invaders destroyed 150 factories, and to-day the production is less than 150,000 tons per annum. The world's supply has fallen greatly below the demand, and will apparently continue to fall. The society therefore point out that it is urgently necessary that England should produce, as well as consume, sugar, and no longer be, as she was before the war, wholly dependent upon imported supplies.

Oilseeds.

Linseed has been rather dull, and buyers and sellers have had difficulty in coming to terms. Quotations, Calcutta to London, October-November, 39s. per cwt., Bombay 40s. There has been little more activity in rapeseed. Quotations, ordinary Ferozepore at Hull 33s., October-November 37s.; Toria 39s. The cottonseed market has been inactive, and buyers have had the advantage. The Egyptian new crop is quoted f.a.q. 20s., while the quotation for Bombay-Hull, spot, is 17s., and for December-January 19s.

Oilcake, etc.

The market in oilcakes is much more active, as this is the season when there is the greatest demand for the land. Linseed cake at 500s., soya bean cake at 480s. to 500s., decorticated arachis cake at 480s., cottonseed cake at 400s., and rapeseed cake at 340s. to 360s., have all been in strong request. Oils are easier. Linseed oil has been done at 81s. 6d., rapeseed oil at 98s. to 102s., refined cotton oil at 100s., and crude cotton oil at 75s. to 80s., and soya bean oil at 82s.

World's Cereal Crops.

The Board of Agriculture has received the following information from the International Agricultural Institute at Rome:—The yield of wheat in Spain, Scotland, Italy, Canada, the United States, India, Japan, and Tunis is estimated at 929,525,000 cwt., or 5.6 per cent. below the 1918 crop, and 1.1 per cent. below the average yield of the five years 1913-17. The estimated production of rye for Italy, Canada, and the United States is given as 48,274,000 cwt., or 7.1 per cent. below last year's production, but 67.3 per cent. above the average crop for the years 1913-17. The barley crop for Scotland, Italy, Canada, the United States, Japan, and Tunis is estimated at 159,397,000 cwt., or 15.1 per cent. below last year's production. The estimated production of oats in Scotland, Italy, Canada, the United States, Japan, and Tunis is 491,933,000 cwt., or 18.4 per cent. below the 1918 yield. The maize crop in Italy, Canada, and the United States is estimated at 1,473,592,000 cwt., or 10.2 per cent. above the 1918 production.

TRADE CONDITIONS IN MALTA.

(From Our Own Correspondent.)

Malta, September 22.

Six hundred tons of white sugar have reached the island by the ss. Molchonoff, and will be available for sale to the public shortly. Only brown sugar of a very coarse type has been on the market, this being retailed at 11d. per rotolo (28 oz.). The white sugar is to be 35 per cent. higher in price.

The latest imports into the island will give some idea as to the requirements of our markets. The chief are cotton seed, frozen beef, and glass and enamel ware.

Looked at generally, the financial and commercial position of the island is very uncertain. All recognise that something will have to be done, and that quickly; but what, is another matter.

Merchants are having their licences suspended for various contraventions of the food regulations.

September 27.

White sugar has been put on the market through the agency of the local Government. The price has been fixed at 1s. 3½d. per rotolo, so there can be no profiteering at least in this particular food, whilst it is seen that with the importation of large orders already placed in Egypt, the price of this commodity will soon fall.

The price for local wheat has been fixed at 80s. per cwt. of 480 lb.

The chief imports—all in great local request—have been the cargo of sugar, rice, and leather.

TRADE WITH BULGARIA.

Import and Export Regulations.

The Bulgarian Government, by an Order dated August 6 and published in the *Official Gazette* on August 13, has introduced alterations in the control of imports and exports. From the date of the publication of the Order all previous Orders were annulled and the new Order came into force declaring the import and export of all the articles mentioned in lists annexed to the Order free from special permits for these articles. Changes in these lists (exclusions or additions of other articles) will come into force one month after publication. Special permits issued up to the date of the Order remain valid, but permits for goods not mentioned in these lists, the import or export of which should not have been effected within three months from the publication of this Order will become null and void. Every importer of goods must hold the original invoice from the vendor, certified by the chamber of commerce, society, or corporation of the exchange, or accompanied by the official exchange list, or, in the last resort, certified by some authority in the country from which the goods are exported. This invoice, signed by the importer with this declaration, "I hereby declare that the prices shown in the present invoice are the actual prices," must be deposited in duplicate with the chamber of commerce in whose district the goods are imported, or, if the Customs House is in a town where there is no chamber of commerce or committee, will be returned to the merchant.

Every merchant must sell his goods wholesale, accompanied by an invoice signed by himself and certified by the chamber of commerce or committee, who will verify the prices by those indicated in the original invoice deposited with them. The importer has the right to sell wholesale and retail, as also his buyer, but after that the last buyers can sell only retail to the consumer, when the increase on the original price (viz., that of the importer), representing the merchants' profit (excluding only the cost of carriage) must not exceed for the first sale 15 per cent. (if retail 20 per cent.), for the second sale 10 per cent. (if retail 20 per cent.), for the third sale 15 per cent., or altogether 40 per cent. Every invoice issued by the merchants in connection with the sale of imported goods must be certified by the chamber of commerce (or by the committee, where there is no chamber of commerce), so that it may be clearly shown that the merchant is selling within the limits of profit established by law. Members of chambers of commerce, in towns outside their central seat, are attached as members with a consultative voice to the local committee to advise on all questions which concern this Order. Each chamber will notify the respective committee of the name and address of its member in that town.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended September 10 were £E2,114, making the total for the year £E106,355. The corresponding figures for 1918 were £E2,910 and £E130,336.

Dr J. Collis Browne's Chlorodyne

Safeguard your Health with this Reliable Medicine.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.

COTTON GROWING IN MESOPOTAMIA.

By Brevet Major P. M. Hope, O.B.E.

It was good reading to find that the British Cotton Growing Association had decided to send out two experts to Mesopotamia on a mission to inspect the land there with a view of developing the growing of cotton as an industry of the country.

I have recently returned after spending three strenuous years in Mesopotamia and Persia, and I was connected as an engineer with experimental cotton gardens laid out by the Government just below Baghdad, so that any future development of the country in this form is of great interest to me, as I know from actual experience on what lines the experiments were made. I have also had an opportunity of perusing the official reports and data, and I can vouch for the great success of the experiments, and I am one of those who believe that as a cotton and cereal producing country Mesopotamia has a very great future before it.

The Government experiments were conducted by a cotton expert, who took up several acres of land about six miles below Baghdad, on the bank of the Tigris just above the junction of the Tigris and Diala rivers. Seeds were imported from all cotton growing parts of the world, and each lot of seeds was allocated to a certain block of land. All necessary tilling of the lands was done by local Arabs, mostly women. For irrigation a six-inch high-lift pump, driven by an oil engine, was fixed on the bank of the river, and the water conducted inland over the cotton field by raised earth channels. I inspected the crop after it had come up, and it certainly impressed one by reason of the large amount of cotton borne. As was natural, some seeds did much better than others, but the experiments amply proved that in a large tract of Mesopotamia there could be grown a cotton of longer staple and of at least equal quantities to anywhere in the world.

Since my return to this country, I have constantly represented the great commercial possibilities of Mesopotamia, and I was glad to notice that Sir William Marshall, speaking at Durham, after receiving a degree from Durham University, stated that in his opinion Mesopotamia would become one of the greatest cotton-producing country of the world. I do not think that any real policy has been laid down by the Civil Government as to how it is proposed to assist commercial organisations in the acquisition of land, but it appears to me that one of the soundest methods of development would be to give private enterprise every possible encouragement to take up land and thus to open up the country. It may be that the Local Government would be averse to allowing land to be purchased outright: in fact the prices ruling for land near Baghdad at present would make this course commercially impossible, but it is sincerely to be hoped that any leases granted will be drawn up on an equitable basis and allowed to be renewable at stated figures on their expiration. It has so very often happened in the initial handling of our possessions that the Governor or Commissioner has thought so much about securing the rights of the inhabitants that he has drawn up such impossible restrictions on the opening up of commercial enterprise in his jurisdiction as to put back the development of the country for many years.

It is extremely unlikely that large sums of money can be granted by the Home Government to assist Mesopotamia. It is therefore in my opinion vital for the quick development of the country that any advances made by large commercial organisations of this country to open up trade by investing capital in Mesopotamia should be met with sympathetic consideration by the Civil Government, and if that is done I have little doubt that British commercial firms will only be too willing to take a hand in making Mesopotamia one of the most prosperous adjuncts of the British Empire, and in developing through Mesopotamia Persia.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The settlement of the railway dispute during the past week has been welcomed by traders in all sections of the market. With this obstacle removed buyers and sellers have been able to make progress. Inquiry has been very substantial, the tone strong, and the turnover in yarn and cloth larger. Advices relating to the Egyptian crop have again been favourable, and the plants are said to be doing well. Demand in Egypt for yarns has shown an improvement, and spinners have been very firm in quotation, in fact, there has been a tendency for rates to be advanced. Business in cloth for Egypt and the Near East generally has been substantial, although more business probably would have been done if buyers could have secured earlier delivery than most makers have been willing to grant. An encouraging trade has been done in cloth for India, chiefly in miscellaneous fabrics. Grey shirtings, sheetings, and fancies have been in steady request for China. Rather more activity has transpired in home trade circles. Prices in home American yarns have been advanced, and transactions have been on a larger scale. Export descriptions have again attracted considerable attention.

The Egyptian Crop.

Recent reports relating to the Egyptian cotton crop for the current season have been favourable, and there seems to be every probability of a substantial yield. The plants are rather backward, but the general conditions are satisfactory, and it is stated that the pink boll worm is doing less damage than usual. The area under cultivation is estimated at 1,573,662 feddans against 1,315,572 feddans last year, and 1,677,308 feddans in 1917. It is rather early for any definite forecast to be published of the probable output this season, but according to some authorities the crop is expected to be between 6,000,000 and 6,250,000 cantars. Last year the acreage was restricted by order of the Government, and the growth only amounted to about 4,826,000 cantars. In the previous season of 1917-18 the yield was 6,316,000 cantars.

Cotton Trade Prosperity.

It is usual for numerous Lancashire cotton spinning companies to take stock at the end of September, and the results just announced are striking. According to a table of fifty reports, all the companies have made a distribution to shareholders, and in no case has the dividend been less than 10 per cent. per annum. One company has paid a dividend at the rate of 120 per cent. per annum, and another at the rate of 80 per cent. per annum. Three concerns have paid 40 per cent., five 30 per cent., three 25 per cent., twenty-three 20 per cent., six 15 per cent., and eight 10 per cent. per annum. Certain companies, in addition to paying a substantial dividend, have decided to increase the paid-up capital by paying calls out of past profits. For instance, the directors of the Dale Mill, Rochdale, are paying a call of 10s., and the directors of Era Mill, Rochdale, are paying a call of £1 out of profits. A bonus call of 20s. a share is being paid by the Haugh Mill at Newhey, and the directors of the Mons Mill, Todmorden, are paying a bonus call of 10s., whilst the Newhey Ring Mill is increasing its paid-up capital by 30s. a share out of profits. The New Ladyhouse Mill at Milnrow is paying a bonus call of £1 a share. The results just announced are probably the best ever recorded by Lancashire spinning companies, and it is probable that this record will even be exceeded by the companies that take stock at the end of December.

IRRIGATION IN INDIA IN 1918-19.

The "Review of Irrigation in British India" in 1917-18 shows that during that period the area irrigated amounted to almost 26,000,000 acres, or about 40,625 square miles. Productive works were responsible for 16,922,000 acres of this area. The capital outlay of the year on productive irrigation works amounted to nearly 57¾ crores of rupees. The gross revenue reached Rs.701½ lakhs, and working expenses nearly Rs.216⅜ lakhs. The net revenue, at a little over 485 lakhs, represents a return of 8.40 per cent. on the total capital outlay. The total areas irrigated by thirty-six protective works in operation amounted to 497,000 acres. The net revenue was only a little over one lakh, equivalent to 0.10 per cent. on the total outlay. This low return is partly due to expenditure on works under construction which are not yet earning.

It is reported that the Indian authorities have sanctioned a proposal to establish aerodromes for commercial purposes at Calcutta, Bombay, Karachi, Nagpur, Madras, Rangoon, Singapore, and Delhi. The Government advocate the formation of a big company independent of any aircraft construction company, with a monopoly for the carriage of mails for ten years.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.
„ „ ALEXANDRIA, JAFFA and BEYROUTH.

Engineering Notes.

New Fiat Car.

A new 20-25 h.p. six-cylinder car was presented by the Fiat Company at the Paris Salon, and will be produced by them during the coming season. This car, which presents a very neat appearance, is notable for the care which has been taken to render every part fully accessible. The engine, clutch and gearbox form a unit secured in the frame by four point attachment. The steering gear is bolted to this unit, and it carries all the carburettor, ignition, clutch and brake controls. The cylinders are a single casting with detachable head, this system having been adopted because of the greater accuracy it gives in boring and grinding, and also because of the facility it affords for cleaning out carbon deposit. The crankshaft is of the balanced type carried in four plain bearings. The greatest care has been taken to secure accurate balancing, with the result that the engine is absolutely free from vibration at all speeds. The valves are on one side and naturally have their stems inclosed. The magneto and water pump are driven by means of a cross shaft, this arrangement giving the maximum of accessibility to these two organs. The fan, a four-blade cast aluminium, is driven by a belt from the crankshaft. The electric generator is of circular section and is received in a circular extension of the timing gear housing.

New Type of Carburettor.

The carburettor is an entirely new double type with a single float chamber and is provided with two slow running and two high speed jets. All the hot air for the carburettor is drawn in around the valve stems, but instead of passing through a gauze in the valve stem cover, it is admitted at the rear of the cylinder block. All the petrol is contained in a tank at the rear, and is brought forward by means of an air pump driven off the camshaft. A single aluminium housing containing both the clutch and the gears is bolted to the rear face of the engine base chamber. The rear axle is an entirely new construction. The axle casing, which also encloses the propeller shaft, is formed of two steel stampings which are welded together into a very light but rigid housing. On the rear face of the central portion of the axle housing there is a detachable plate which carries the whole of the differential and the crown wheel. Both sets of brakes are now on the rear wheels and are operated by lever and pedal through flexible steel cables. The six-cylinder chassis has a wheelbase of 129 inches and a track of 55 inches, with a length of 106 inches available for the body. The speed with full touring body is 56 miles an hour.

Mesopotamia's Oilfields.

Germany, who kept a very keen eye on the mineral wealth of Asia Minor, showed a particular interest in Mesopotamia, whose oil deposits appear, according to German investigations, to form the western limit of the vast system of petroliferous strata which extend from the Apsheron Peninsula (Baku and neighbourhood) on the Caspian Sea to the mountainous frontiers of Persia and to Baluchistan. The Ahwaz wells are situated in the neighbourhood of the Persian Gulf, and their oil has proved, according to German opinion, to have splendid qualities as a liquid fuel. The most productive areas of Mesopotamia are found at Mendeli, of which the oil has a similar, and not inferior, composition to that of Baku. The deposit of Hit, on the Euphrates, is noted for its numerous and good bituminous springs, which rival the asphalts of Trinidad. The springs of Mendeli and Hit, and those of Ramadi and Nafata, also on the banks of the Euphrates, belong to the vilayet of Baghdad and to that of Mosul, situated to the north-east of the first-named. Here also are the still richer springs of Kerkuk, where the oil appears on the surface, as well as those of Tuz-Kharmati, Kifri, Gahara, and Nimrod. At Kerkuk the oil is obtained in many places from hand-dug wells three or four metres deep. The total production, of a value of 30,000 to 40,000 piastres, was sent during the war, according to a German version, into Kurdistan. At Kerkuk is the celebrated spring mentioned by Strabo, the source of the "eternal fires" worshipped by the Arabs. At Sulphur Mountain, Kifri, where there are the ruins of an ancient Sassanid castle, about half-a-dozen rich oil springs flow. Generally in this region the oil sources are found in the faults of gypsum beds, the oil above salt springs, and the local Arabs utilize both the salt and the oil, sending all to Baghdad. Except the petroliferous area of Tuz-Kharmati, all the fields above mentioned were the property of the Turkish civil list. The Sultan Abdul Hamid had intended to develop on his personal account all the discovered sources, but the project was not carried into effect. Before the war it was said that French and English syndicates had made all possible efforts to obtain charters for developing the oilfields of Turkey; there was even a question of a Turkish syndicate. The Turkish Government, on the other hand, had the idea of a State monopoly for the development of all its oilfields. According to German opinion, a rational development of the oilfields of Mesopotamia is severely handicapped by the great difficulties of transport, but as the British, the Germans say, have shown at Ahwaz, these difficulties can easily be surmounted. The above-named deposits are situated partly in the neighbourhood of the Baghdad railway, whence branch lines could easily be constructed. The rich oil deposits of Gahara are even crossed by this line, and there being no cheap coal, the locomotives of this line and its branches could with great advantage burn oil fuel.

An Important Amalgamation.

The reported amalgamation of five leading British agricultural machinery and implement manufacturers will, undoubtedly, have a far-reaching effect in the present "Trade Struggle" which, since the cessation of hostilities, is carried on with acute energy throughout the East for economic and trade supremacy in that region. The amalgamation has been formed under the title of "The Agricultural and General Engineers, Limited, the amount of capital involved being £3,000,000. The firms concerned are Messrs. Aveling and Porter, Ltd., Rochester; Messrs. Richard Garret and Sons., Ltd., Leiston; Messrs. E. H. Bentall and Co., Ltd., Heybridge; Messrs. J. and F. Howard, Ltd., Bedford; and Messrs. Blackstone and Co., Ltd., Stamford. The names of these firms, apart from being household words in the agricultural engineering industry of this country, are familiar to the agriculturists and others in the Near and Middle East, the Balkan States, and South Russia, where for many years in the past they were among the principal suppliers of agricultural implements, machinery, traction engines, steam-road-rollers, etc. The object of the amalgamation is, according to authoritative information, to secure a world-wide expansion of all branches of the agricultural engineering trade, and the prospects of attaining this are described as "magnificent." Mass production upon scientific lines will be aimed at, but the works of the various firms will remain entirely under the control of their own boards of directors. Commercial efficiency will be sought by thorough organisation of the productive and sales side of the business; but while the works will be solely concerned with production, from the London offices of the new body the whole question of selling will be dealt with. In view of the systematic commercial and economic energy of foreign competitors in the Near East, developments in the progress of the amalgamation will be awaited with much interest in those markets.

Method to Economise Coal.

The unsettled "coal crisis" and the continuous advance in the price of coal are causing considerable anxiety to householders as well as to manufacturers and steam users. Coal may be roughly divided into three groups—anthracite, with over 90 per cent. of carbon and a smokeless flame; bituminous coal, with 70 to 80 per cent. of carbon, used for household purposes; and steam coal, intermediate in character between the two. As the second category is of general interest at present, we will describe here what the effect is of gas chlorine on bituminous coal. It has been proved that if such coal be immersed in water containing chlorine in solution, the coal absorbs the gas to the extent of 0.10 per cent. Small though this proportion is, the effect on the bituminous fuel is remarkable, causing it to burn like anthracite coal—i.e., slowly and without the formation of soot or smoke or much ash. In boiler tests the evaporation has proved to be 25 per cent. better with chlorinated bituminous slack than with similar but untreated material. The process is very cheap, and coal so treated will not burn in the present wasteful way, which means considerable economy of fuel and with better results.

TRADE ENQUIRIES.

ENGINEER.—Englishman with extensive experience in Turkey and Near East in the erection of Oil and Gas Engines, Suction Gas Plants, Steam Engines, Thrashing and Flour Milling Machinery, etc., etc., speaks Turkish. Wishes either erection of plant or permanent situation.—Box 144, THE NEAR EAST, 1, Devonshire Square, E.C.2.

SUPPLIES AND PRICES IN TURKEY.

STAMBOUL, September 20.

The following extracts are from a recent report received by the Imperial Ottoman Bank :—

The market remains active and prices are maintained despite the low exchange and the continued depreciation in Russian and Roumanian paper money. The arrivals of the week, of small importance, have been, as usual, bought up for the Black Sea ports, principally Batoum and Novorossisk. The tendency of the market is clearly towards higher prices, and it is not thought that the position will be changed within the next six months, the term of the delivery of the last orders for manufacturers.

Produce.

There is a downward tendency, following the decline in the rates of exchange on Europe.

Sugar.—Independently of that reason, successive offerings from the centres of production have had the effect here of inducing holders to try to dispose of their stocks at very low prices. The quotation for Java sugar for October delivery is £57-£58 the ton, and the futures market is £60-£61 the ton. American sugar is quoted 104s. to 108s. 100 kilos. Arrivals, two vessels containing 250 wagon loads of American. Stocks here about 650 wagon loads.

Coffee.—There is no change to report. There have been no arrivals and the market is quiet.

Rice.—The falling tendency of this commodity continues. Arrivals of the week: 15 wagon loads of American. Prices: Ps.42 to Ps.45 the oke, according to quality.

Exports.

The decline in foreign exchange has also influenced the prices of the products of the country, which have fallen.

Opium.—The market has been inactive and sales have been insignificant. 2 cases of Druggist Karahissar at Ps.7.70, against 7.90 the previous week; 7 cases of Soft I. Hadji-Keuy at Ps.10.70.

Mohair.—Arrivals of the week, 140 bales. Sales: 78 at Ps.80 the oke, prices showing a decline of Ps.5 the oke.

Wool.—No arrivals or sales; market quiet.

Silk.—A dozen bales of silk from Broussa were sold at £T12.70 the oke, against £T13 the previous week. Syrian is completely ignored at £T10.25 nominal.

Cereals.—Wheat, Ps.12 to 14 the oke, according to quality; barley, Ps.6¾-7 the oke, according to quality. Flour, extra, £T13 the sack; 1, £T12 the sack; 2, £T11 the sack. There has been a fall of £T½ on the prices of the previous week.

The India Office announces that the applications received at the sixth sale in New York of telegraphic transfers on India totalled Rs.1,13,63,000. The average rate realised was 43.0945 cents per rupee. At the seventh sale to be held next week the amount offered will be Rs.30,00,000, and the minimum price will be 42¾ cents per rupee.

For BUILDING UP your HEALTH take

WILKINSON'S (Estd. since 1829)

SHIPPING INTELLIGENCE.

Shipping at Malta.

(From Our Own Correspondent.)

Malta, September 22.

It has been a fairly busy week. The latest and most notable arrivals and sailings have been as follows :—

Arrivals.—s.s. Calypso from Algiers, s.s. Brodhurst from Madagascar and Port Said, s.s. Glengorm Castle from Marseilles, H.M.S. Speedy from Marseilles, s.s. Caledonia from Alexandria, and H.M.S. Coras from Fiume.

Sailings.—H.M.S. T.B.D. Tribune, s.s. Vesta for Piræus, s.s. Calypso for Marseilles, and s.s. Caledonia for London.

There seems to be a desire to establish a Mail Service between Malta and Syracuse as in pre-war days. At that time it was undertaken by the Adria Steamship Company. There can be no doubt that a daily service would prove of great commercial value, and it is a pity that local capitalists do not come forward to fill the breach. Naturally Government support ought to be forthcoming.

September 27.

This week the arrival of the depot ship H.M.S. Ambrose and six submarines of the L class has aroused great local interest, since, although the Island was on one of the main high-roads to the East, and was a great port of military and naval call during the war, few submarines of a modern type were seen in the port. In addition to the above, H.M. ships Donovan, Boxol, and the oiler Derdgal are in port. Other notable arrivals are also chiefly naval. H.M. Trawler Andrew King and T.B.D. Tribune.

Freight Markets.

There is still a great shortage of tonnage and the demand holds good. The outward coal markets are firm. Fixtures are reported from Wales at 20s.; Liverpool, 17s. 6d.; London, 45s.; Gibraltar, option Aden, 55s. The Mediterranean markets are also firm, Alexandria fixing up to 55s. Inquiries were circulating for the Near East, and Aden was fixed at 55s., this being the first fixture reported for some time past. The Eastern markets are exceedingly dull and India has done a very poor business. On scale basis, Karachi or Bombay would pay 105s. to this country, and on deadweight up to 125s. might be conceded. Jute from Calcutta would pay 180s.

The United States Shipping Board rates on coal from North Atlantic ports and Charleston S.C. are, per ton, to Piræus 134s.; Salonika, 124s.; Constantinople, Constanza, Smyrna, 124s.; Alexandria and Port Said, 124s.

CYPRUS CAROB CROP.

(From A Correspondent.)

The carob crop is estimated to be about 30 per cent. less than that of last year. The present price is 32s. to 34s. the Aleppo kantar, at Limassol. Carob growers have had an unusual experience in failing to obtain sufficient labourers for the gathering of the beans. In some places the villagers who usually seek employment said it would not pay them to leave their villages owing to the shortage; and considerable difficulty was caused. At Limassol, the principal place of export, the *namals* (porters) struck for higher wages, stating that they were not paid a living wage. The merchants were obliged to concede higher rates.

COMPANY MEETING.

Assam Railways and Trading.

The annual general meeting of the Assam Railways and Trading Company, Ltd., was held on October 9 at Winchester House, Old Broad Street, London, Lord Ribblesdale (the chairman of the company) presiding.

The secretary (Mr. S. M. Jack) read the notice convening the meeting and the report of the auditors.

The chairman, in moving the adoption of the report and accounts, said that the effect of the epidemic of influenza, to which he had referred at the last meeting of the company, had proved to be much greater than at first had been anticipated It had not only made itself felt on the immediate coal out-turn, but had left as a legacy a good deal of maintenance work undone which had had to be made good at subsequent dates before the collieries could be put upon their proper footing. The reduction in the coal output was the outstanding feature of the year; it had also reduced traffic earnings on the railway and had influenced the whole of the accounts under consideration. Another thing from which they had suffered—in fact, it was affecting them more in the current year than in the twelve months covered by the accounts—was that they had been feeling the effects of the long period through the war during which they had been unable to ship supplies to India. They had suffered and were still suffering from a shortage of wire rope and of pit tubs, both essential for working the mines. Things were getting better, but those were additional difficulties which had hampered them in getting production back to its normal condition. Having started the year with good stocks of coal, they had been enabled to maintain to a great extent their position of the previous year, but they had been prevented from extending and supplying many of the markets in which, in the ordinary course, they would have done business had their coal supplies been available. Quantities sold had been practically the same as in the previous year, but owing to improved prices a higher total figure for the coal sold had been obtained.

Generally the colliery year had been a very difficult one, but most of the difficulties had been overcome or were in process of being overcome, and they were returning to their ordinary position. The collieries, the board was assured, were in thoroughly good order, and Mr. Harris, their colliery adviser, had sailed for India and would report on the collieries for the information of the board. As to the railway, traffics were slightly less. Coaching traffic was less owing to the number of trains having been reduced, and to the fact that the increased cost of living among the native population in Assam had rendered the native disinclined to travel so much. In goods the chief decrease had been in the carriage of coal. They had also carried less tea, but on the whole, taking present conditions into consideration, traffics were not disappointing. On the other side, the board were able to point to a decrease in expenditure. Possibly that might have resulted in part from their inability to carry out work which might have been done had material been available, but the line and all the rolling stock had been well maintained. In connection with the railway, too, it was important to note that in relation to the right of the Government to purchase the line at the end of 1921, they had recently heard from the Secretary of State that subject to certain conditions with which the company had had no difficulty in agreeing to comply, the Government had decided not to buy the line at present, which would postpone until 1931 the right to purchase it. They had recently been in negotiation with the Government to secure fresh timber concessions, and extensive areas on each side of the line had been granted to them. The intention of the board was considerably to extend their timber business, and in particular they intended to develop the supply of railway sleepers, which would be treated with preservatives by a method which the Assam Oil Company had tested, and for which that undertaking would supply most of the necessary ingredients. The "New Garden" referred to in the report was being opened between Digboi and Tingrai Station, and from all reports opportunities at that spot were favourable, and the development would be conducive to the benefit of the company. The Assam Oil Company had increased its rate of dividend to 8 per cent., and the Makum Company had again paid 20 per cent., while the Rivers Company had paid the same dividend. As to Namdang, he hoped that by March 31 next a much smaller figure would be shown as owing by that company. The actual result of the year's working was a profit of £106,654, as against £108,953.

Mr. Butler seconded the motion, and it was carried unanimously.

The dividends paid and to be paid, as set out in the report, were sanctioned and approved, the retiring directors and the auditors were reappointed, and a vote of thanks to the chairman and directors terminated the meeting.

COMPANY RESULTS, Etc.

East Indian Railway Company.—The registers of holders of the 3 per cent. new debenture stock and the 3½ per cent. debenture stock will be closed from October 14 to November 3, both days inclusive, for the purpose of preparing warrants for the payment of interest for the three months ending November 3.

The directors of the Scottish Ceylon Tea Company have declared an interim dividend of 4 per cent. on the ordinary shares.

GREEK HONOUR FOR LORD MAYOR AND SHERIFFS.

The King of the Hellenes has conferred upon the Lord Mayor the Cross of Grand Commander of the Order of George I. and upon the ex-Sheriffs, Sir Banister Fletcher and Sir William R. Smith, the Commandership of the same Order, in celebration of the victorious conclusion of the war and the establishment of peace. The Greek Minister (M. Caclamanos) invested them with the insignia at the Mansion House on October 8.

Mr. Robert Gladstone, of Liverpool, retired merchant, formerly of Messrs. Ogilvy Gillanders and Co., for eleven years chairman of the Mersey Docks and Harbour Board, formerly chairman of the East India and China Section of the Liverpool Chamber of Commerce, who died on July 12, aged 85 years, left unsettled property of the gross value of £143,058, with net personalty £134,340.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Excepting in the oil department, business this week has been extremely quiet in nearly all the stocks we quote, and here and there the market has inclined to be on the easy side. Among Government stocks, Egyptian Unifieds have been especially weak, changing hands as low as 77¼, at which price they close. The 3½ per Cent. Prefs. are also a shade easier, closing at 65½.

In Bank shares, Nationals have been steadily absorbed at the current price of 19½, while Agriculturals have been in rather strong demand on local buying, and have been pushed up to 5¾.

Prices for Railway stocks are all unchanged.

In Land descriptions Aboukirs are a little harder at 27s. 9d., and Sudan Plantations have also been in rather good demand, closing in the neighbourhood of 7 15-16.

In the Miscellaneous group there are no changes to report.

The Oil market has predominated during the whole of the week; it has been exceedingly strong and active. Anglo-Egyptians are closing at 5 31-32, Roumanians at 24s., and Traians at 11s. 6d.; these are all notable increases, especially the last two, the quotations last week having been 5⅜, 20s. 9d., and 8s. respectively.

Among Greek securities the only change to report is a fall in the 1914 Loan to 74½.

The traffic receipts of the Suez Canal from September 9 to October 3 were 2,270,000 francs against 820,000 last year.

The report on the Maritime Trade and Customs Administration of Burma for 1918-19 shows that the export of rice and paddy from Burma, including Burma and Indian ports, was 2,487,171 tons of the value of Rs. 24,13.91 lakhs, against 2,058,631 tons valued at Rs. 18,52.73 lakhs for the previous year.

AYAHS' HOME,

NOTES OF THE WEEK.

The prolongation of the political deadlock in Yugoslavia is as much a matter for regret among the friends of the new kingdom as it is a source of weakness to the country itself. Failure to evolve a working agreement between the chief parties had intensified mutual animosities, and M. Pashitch was reported to have been summoned to act as peacemaker. The rôle would have been a novel one for the veteran statesman of Serbia, who was bitterly attacked during the war for his uncompromising policy and autocratic methods. But the Prince-Regent has made a fifth effort to find a less violent solution by entrusting M. Drashkovitch, a member of the Davidovitch Cabinet, with the task of forming a Ministry. It is certain that Yugoslavia is in urgent need of reaching some political settlement which will enable the country to proceed with its constitutional organisation and to devote more attention to economic reconstruction. The Paris Conference provided the opportunity for removing M. Pashitch's vigorous personality from the administration of the new State, but Yugoslavia has not found political salvation during his absence. From a distance it would seem as if political parties were looking to strengthening their own positions, instead of allowing the political sagacity of the new kingdom as a whole to assert itself through a Constituent Assembly and the regrouping of parties in the light of altered conditions.

The resignation of the Bulgarian Prime Minister follows upon the success of the Agrarian Party at the recent elections rather than as a direct consequence of the conditions of peace imposed upon Bulgaria. Indeed, if it be true that M. Theodoroff, although not a member of M. Stamboliski's Government, will remain at the head of the Bulgarian Peace Delegation, the decision suggests the inference that the Bulgarians intend to accept their fate philosophically. In the Delegation as originally constituted the five chief political parties were all represented, and there was little chance of anyone seeking to make political capital out of the failure to secure better peace terms. The present arrangement of retaining the services of M. Theodoroff in Paris is the best for all concerned, although his personal reluctance to sign a treaty which hands over to Serbia part of the district of Tsaribrod, which he has represented in Parliament off and on for twenty-five years, can be understood. But he has earned the goodwill and respect of the Powers represented in the Allied Military Mission at Sofia by his correct and tactful attitude, and in this way he has done much to lessen the prejudice created by Bulgaria's action in the war.

M. Stamboliski's career will be watched with interest outside Bulgaria. As head of the Agrarian Party his political outlook is mainly bounded by domestic problems, and it will be no bad thing for the country if, for a season while foreign affairs offer a more or less barren field for Bulgarian statesmanship, the whole attention of the Government and people is concentrated on internal reform and material progress. M. Stamboliski came into special prominence as an outspoken critic of King Ferdinand's policy; but if he was ever driven to coquet with Republican theories, there is no reason to suppose that the attitude survived King Ferdinand's reign for long. The interval between the signing of the Armistice and the Peace Terms has been long enough to enable the majority of Bulgarians to recognise that they have in King Boris an able and essentially democratic sovereign as well as a valuable asset to the country. His tenure of the throne is the best possible guarantee against the nation being exploited by personal ambition and political antagonism carried to excess.

The political situation in Turkey is somewhat disquieting. The new Cabinet is reported to be in close touch with Mustapha Kemal Pasha, the "Nationalist" leader, who has issued a manifesto assuring it of his support; and it now appears to be quite within the bounds of possibility that the Cabinet may attempt to follow the old policy of the Committee of Union and Progress. Such a development could hardly please anybody outside Turkey, with the exception of the Germans and, apparently, the *Temps*, which shows a disposition to welcome the new Government as likely to favour French interests—presumably financial. For the rest, the obscurity of the situation and the conflicting reports that come to hand make it advisable to suspend judgment until Ali Riza Pasha and his colleagues are more firmly in the saddle, before endeavouring to guess in which direction they will ride.

The report that General Allenby was cutting short his visit and returning in haste to Egypt not unnaturally gave rise to rumours that things there had taken a turn for the worse. The report was promptly contradicted, and it was officially announced that General Allenby is returning in a few days only because his period of leave will then have expired. It is

Digitized by Google

obvious, however, that Egypt remains extremely restless, and the latest move of the Extremists is to endeavour to secure a boycott of the Milner Commission, if it should begin its labours before the Peace terms with Turkey are settled. According to a Paris report, the British Government has actually abandoned the idea of the Commission, but it is impossible to credit such a rumour. To give way now to the clamour of the students, the disaffected junior officials, and the rest of Zaghlul Pasha's noisy following would be most unwise. It would certainly be regarded as a sign of weakness, and the less rabid of the "Nationalists," who have broken away to some extent from the extremist influence, and are showing an inclination to endeavour to come to terms direct with England, would be thrown back into the arms of Zaghlul Pasha. However distasteful the fact may be to the "Nationalists," Great Britain is in Egypt to stay; she recognises the responsibility placed upon her to ascertain how best she can serve the country in the new world conditions brought about by the war; and she has appointed the Commission to help her in performing her duty. In such circumstances she is unlikely to be turned from her path by methods hitherto followed by the Zaghlulites.

The appointment of General Gouraud as French High Commissioner in Syria has led to a fresh discussion of the Syrian Question by the French Press. Suspicion of Great Britain is, happily, less in evidence, though by no means entirely absent; but there is clearly a very sore feeling on the subject, and the Emir Faisal is coming in for some criticism which would be called vulgar if it came from any other quarter than Paris. Even if there were no question of mandates for any portion of the lands peopled by Arabs, the Emir would have before him a task of extreme difficulty; and the misunderstandings—many of them avoidable—over the question have made it the more difficult. But the Prince has shown himself a statesman of no mean parts, if not moulded strictly on conventional lines, and it would be as unwise as it would be ungenerous to predict that he will not prove equal to overcoming all the difficulties he may have to encounter. It is to be hoped, therefore, that the Paris Press may soon adopt a more friendly tone towards him, and a less querulous one in regard to the Syrian Question generally. General Gouraud has set an admirable example in a statement he has made through an interviewer, but it would be idle to pretend that the example has been widely followed yet.

Among the men who know the facts there will probably be a substantial measure of agreement with the main conclusions reached by Sir George Buchanan in the series of articles on Mesopotamia published recently in *The Times*. The country, in his view, is not at the moment an Eldorado; immediate possibilities of trade exist, but the development of production must be slow, and the irrigation works, on which almost everything depends, must themselves wait on the increase of the population. The immediate need is to check extravagant expenditure, and put the finances on a sound basis; otherwise the drain on this country is likely to be great, while the chances of an adequate return are small. Perhaps these conclusions can best be summarised by saying that what Mesopotamia needs just now is a strong civil administrator, a man of the type of Cromer, always ready to go forward, but never forgetting to cut the coat according to the cloth.

Perhaps we shall be considered fanciful if we suggest that the pace of development will depend largely on the progress made in designing tractors for use in agriculture. The immediate need of Mesopotamia is men, and in Asia the area which men can cultivate is at present limited strictly by the pace of the oxen which they drive; replace oxen by tractors, and a given population can till much more ground, so that irrigation schemes would become remunerative far more quickly than is possible under existing conditions. The tractor has come with a rush; three years ago it was a name, and now it can almost be described as an integral part of English agriculture. Even the latest models are not in our judgment sufficiently "fool-proof" for widespread use in Asia, but the course of mechanical invention is usually from complexity to simplicity, and experts in India are, we know, watching eagerly for a model suited to their special needs; if that model should happily materialise, Mesopotamia, and the other waste spaces of Asia, could go ahead, and the world would be very much richer than it is to-day.

The reassembling of the Joint Committee on Indian Reform was marked by an important development of the case for the opposition; the heavy artillery came quickly into play, and by this time the members know the worst that is to be said about the official scheme. Sir William Duke and Sir James Brunyate have spoken against the emasculation of the Secretary of State's Council, perhaps the most dubious item on Mr. Montagu's ambitious programme; Sir Thomas Holland has pleaded for the maintenance of central control over the development of industries in accordance with the recommendations of the Commission over which he presided; Sir John Hewett and Sir Michael O'Dwyer have stated the case for unified government, and thus attacked the very foundation of the Reform Bill; his Highness the Aga Khan has urged the grant of the suffrage to women, and the introduction of such constitutional expedients as the Referendum and the Initiative; while Mr. Booth Tucker, of the Salvation Army, has very properly been allowed to speak for the backward and depressed classes, the people who never had a chance before we went to India, and who stand to lose most by a restoration of anything like oligarchy.

From some points of view Mr. Booth Tucker is the most interesting witness who has appeared before the Committee. The Salvation Army in India has a worthy record. Deficient perhaps in that worldly wisdom which characterises the older ecclesiastical institutions, be they Christian, Moslem, or Hindu, the Army has tackled with zeal and devotion some of the problems which those institutions have usually been content to shirk; it can show well-laid foundations and a certain amount of definite achievement; and, though the statement will probably be repudiated, it has undoubtedly set the example for those philanthropical movements which are beginning to take a place among the activities of the Indian *intelligenzia*. There is no one in India better qualified than Mr. Booth Tucker to speak of the limitations, the failings and the aspirations—for there are aspirations—of the depressed and oppressed classes who constitute such an important fraction of the population, and the Committee can scarcely fail to have been impressed by his plea for the maintenance of the British element in the administration, the element in which these classes have found, as he said, a warm and consistent friend.

When, however, Mr. Booth Tucker condemns the Dyarchy on the specific ground that it is non-Indian, we think his argument goes a little astray. The Dyarchy is not Indian, but neither is the spirit in which the Salvation Army works. The pride of spiritual ascendancy, the rigours of social ostracism, the sterilising influence of caste, even the existence of the criminal tribes, everything in fact against which the Army fights, is distinctly Indian, the necessary product of Indian ideas and institutions carried to their logical development. The Salvation Army stands for the essentially British principle that every man should have a fair chance of "making good," and if we are to condemn Dyarchy because it is non-Indian, we must condemn Mr. Booth Tucker's work on precisely the same ground. We do not, however, condemn it, because we hold that India now needs to assimilate certain Western ideas, of which equality of opportunity is perhaps the most important; and nearly the strongest argument for the Dyarchy is that it may be regarded as the first step on the long and difficult road leading to this eventual result.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 24.

The Zaghlul Delegation.

For some time past there have been rumours of a split in the Zaghlul Delegation; but although various members had returned to Egypt, pains had been taken to explain that their return was not due to disagreement, but in order to attend to their own affairs and to carry out certain work for the Delegation. Confirmation of the rumours has, however, now been vouchsafed, in the form of a statement issued by the local Committee to the effect that two of the members, of whom Ismail Sidky Pasha, one of the "martyred four" is one, have no longer any connection with the Delegation. From inquiries made in trustworthy quarters, I gather that these two gentlemen, together with Hussein Pasha Wassef, another influential member, severed their connection with Zaghlul Pasha and his fellow-delegates because they considered that he should work through London, and not continue through the channels in which he has been engaged during the past few months. I understand that, having rightly read the times, they considered that the proper course was for them to go to London and endeavour to negotiate there, but that Zaghlul Pasha categorically refused to change his tactics.

Meanwhile the extremist section of the vernacular Press is indulging in a licence which rarely if ever has been seen in this country before; and articles attacking the British administration and tending to excite the public by innuendo and insinuation are appearing daily. It is to be hoped that some steps will be taken to stop this campaign, which can be productive of no good, and can serve only to embitter relations between the Egyptians and the British. Already action has been taken against the editor of a humorous Arabic paper for certain scurrillous articles and pictures affecting not only the British, but also some leading Mohammedan dignitaries; but the chief offenders in this anti-British campaign are more highly placed on the journalistic ladder.

The Industrial Situation.

So far there is no improvement in the strike situation. As reported in my postscript last week, the Cairo Metropolitan has resumed work, but there is talk of a cessation, as the workers affirm that the company has not carried out all the conditions of the compromise. As for the other services, there is no hint of a settlement.

As previously mentioned, there is little doubt that the *Bourse du Travail*, founded some three months ago by an ex-mechanic drawing £E9 a month, is responsible for the general discontent now prevalent in the industrial community. Its avowed aim is to improve the lot of industrial workers in this country; but its tactics have clearly proved that its object is to justify the existence of its directors, to promulgate Bolshevistic doctrine, and to bring pressure to bear on the Government and employers by reason of the syndicates which it has been so busily founding. As an illustration of this, I might cite the following two incidents. Representatives of the *Bourse* called on the proprietors of *Al Mokattam* and informed them that they must grant their printing staff an increase of 30 per cent. The proprietors replied that they had actually granted an all-round increase of 50 per cent. Thereupon their callers declared that the increase must be granted through the "Printers' Syndicate" which the *Bourse* had formed, and which the proprietors must recognise. The proprietors categorically (and quite rightly) refused, as they objected to this intervention between them and their men, with whom they had always dealt directly in the past, and who were perfectly satisfied and content. The reply of the *Bourse* was to call the men out on strike, and a portion of the staff complied, under pressure. Obviously here is a case where the welfare of the workers was not the object in view. The other instance was that of the *Egyptian Mail*, whose compositors received an order to refuse to set up any articles which reflected adversely on the *Bourse* or its directors. A plainer case of Bolshevistic methods could not be imagined.

It is satisfactory to hear that the founder and Secretary-General of the *Bourse*, "Pezzutto," has been arrested and is being deported, and that several of his colleagues are about to be similarly treated. The next step should be the suppression of the *Bourse*, which, if allowed to continue its activities, might well become a danger to society. For the legitimate claims of the industrial community to have some protection against disloyal and harsh masters no one can fail to have sympathy; and it is understood that the Government has under serious consideration a law recognising unions and fixing regulations for their operation, which should meet all reasonable requirements of the local situation. But ar attempt such as has been made by "Pezzutto" and his confederates to set up an *Imperium in Imperio*, and under the cloak of solicitude for the welfare of the workers, to create an organisation which should be able to impose its will on employers, and possibly eventually on the Government itself, no sensible minded person can tolerate for one moment; and the sooner such an attempt is stamped out the better it will be not only for the workers themselves but also for the country in general.

The War Bonuses.

The all-round increases to its personnel granted by the Government, which were generally considered to be on a generous scale, appear not to have given satisfaction in certain quarters; and a chorus of protest has gone up from the smaller officials, led by the Railways and Telegraphs, who for some time have been restless, and will, it is to be feared, yet be an element of trouble and anxiety to the authorities. It is understood that the Government is reconsidering the question with a view to seeing whether a larger proportionate increase cannot be given to the lowest grades. It is quite possible that in regard to the latter the fact that they were drawing 60 per cent. bonus already led them to be disappointed when the Government's latest decision turned out to be a further increase of only 32 per cent. for them, and there may possibly be some excuse for some further concession in their favour, but the case of higher grades is different.

BELGRADE LETTER.

(From Our Own Correspondent.)

Belgrade, October 1.

The Cabine Deadlock

The "crisis day by day" has passed the stage when it got on everybody's nerves, and the general irritation is almost subsiding into a kind of fatalistic resignation, as though it were the normal state of affairs. The organs of each party abuse the other, and the independent papers throw the blame on all the politicians in general; for most people feel that such a crisis is quite unnecessary, and there is a good deal of resentment against the Radical Party that provoked it, whose unbending attitude prevents a solution. The line of cleavage remains the same, the Socialists and Montenegrins supporting the Democrats, while the Slovene and Croatian parties support the Radicals. The strength of each group remains about equal; it is difficult to see a way out of the impasse; for the Radicals will not consent even to Dr. Pavlovitch forming a coalition Government with a sole object of hastening the summoning of the Constituent Assembly. It is hard to foresee what will be the result of the elections when they do come off, but many think that the Radicals will lose much, and that the hands of the Socialist-Democratic *bloc* will be strengthened.

Meanwhile the Radicals are conducting a campaign against Dr. Pavlovitch, which is the more bitter because he was once a member of their party, and they refuse to recognise in him an independent personage; and the Radicals, who are weaker than the Democrats as a party, are supported by the minor groups of Dissidents, Liberals, etc., led by M. Trifkovitch, Dr. Bogdan Medakovitch, M. Ribarats, and, of course, Dr. Koroshets—whose reputation and popularity have suffered considerably owing to his enigmatical attitude during these wearisome three months. A possible explanation of the impasse is that no group cares to associate itself with the responsibilities of office at such a time, when internal affairs are in such urgent need of settlement and external affairs most grave, with the Austrian treaty awaiting signature, and a virtual (if unofficial) war with Italy menacing in the Adriatic.

The Adriatic Danger.

Trogir is now quiet, the Dalmatians forming a powerful battalion of volunteers for the protection of the country. Reports from Dakar state that the Italian 26th Army Corps is threatening to cross the demarcation line, while Rome declares that the Yugoslavs are massing troops on their side. Small blame to them if they do, for even their worst enemies can hardly claim that the behaviour of the S.H.S. is anything but correct. Belgrade looks to Paris to see that justice is done, but every day wasted aggravates the danger, and makes it harder to control popular feeling. And the Serbs, Croats, and Slovenes, in spite of their union, in spite of their victories, in spite of their population of some 13 millions, still remain without a port, while the Italians hold up large quantities of British merchandise destined for Belgrade and Zagreb, which had been unloaded at Fiume before d'Annunzio's adventure; and British ships, shut out of that port, are depositing at Trieste and Venice cargoes for Serbia and Croatia, which the Italians refuse to let through.

Sir Charles Des Graz.

The British Minister, Sir Charles des Graz, left Belgrade on September 29. He had made himself very popular with the Serbs.

October 7.

On September 30, at a conference of the Democratic ..nion, it was unanimously decided to give a negative reply .. M. Protitch's invitation to delegate representatives to the Cabinet which he was attempting to form; the reasons for the rejection were that a Government under the leadership of M. Protitch was likely to be reactionary in social policy and particularly in national questions, and that M. Protitch was an impossible person to collaborate with. The Radical leader has completely alienated not only the Democrats, but the Socialists and the Montenegrins, both of whom declined to enter a coalition with him, the latter, led by M. Dakovich and M. Yoyich, politely declining to take any side in purely party questions. M. Protitch, irritated by his failure, gave vent to an outburst of anger against M. Pribitchevitch. When the Democratic Club called upon him to apologise, he defended himself on the grounds that it was purely a personal matter between him and the Minister of the Interior. It will doubtless be remembered that it was personal animosity against this gentleman that was one of the ostensible reasons of M. Protitch's original resignation, which brought on the crisis.

As it appeared to be the personality of M. Protitch that was the obstacle, it was suggested that another member of the party be put forward as leader, and to the surprise of the public, M. Marko Trifkovitch, leader of the Dissident Radicals, came forward. But the democratic *bloc* maintained its refusal, encouraged perhaps by the appearance of a rift in the Radical group, for both M. Trifkovitch and M. Protitch want the portfolio of the Interior. As M. Protitch declined the responsibility, on Friday, October 3, the Prince Regent entrusted M. Trifkovitch with the task of forming a Coalition Cabinet. At the same time, the Minister of Foreign Affairs, Dr. Ante Trumbitch, issued a public appeal to all parties to sink their differences and form at least a provisional Government that would allow the delegates to return to Paris, where the fate of Yugoslavia was being decided in their absence.

M. Trifkovitch at once met with a categorical refusal on the part of the Democrats and their associates, who refused to recognise in him a suitable leader; for he had only half a dozen dissidents in his "party," and was, in fact, merely the mouthpiece of M. Protitch. He succeeded, however, in forming a Cabinet, and a remarkable one it was, under the circumstances, for it consisted practically entirely of Radicals with Dr. Politch and Dr. Kernits, members of the Croat Nationalist Party. On Monday, October 6, he drove to Topchider to report to the Prince, and submit his list for the royal assent. It was accounted an omen that his car broke down on the way, and he finished his journey in a cab. The Prince remarked that the Cabinet was not a Coalition one, but a purely partisan selection, and withdrew the mandate. The same evening he once more sent for the Speaker, Dr. Dragi Pavlovitch, for consultation.

CYPRUS NOTES.

(From a Correspondent.)

Smallpox Epidemic.

The smallpox epidemic is unfortunately spreading, there being over fifty cases in the isolation hospital at Platres. There are cases in the Papho and Larnaca districts, and at Limasol one case out of several has ended fatally—that of a woman from Egypt. The Commissioner of Limasol has issued notices that none of the fairs can be held. At Nicosia the Commissioner, through the Greek Resident Archdeacon, has requested the Archbishop to take steps to prevent the holding of the Festival at the Máchaera Monastery. The great festival of the Cross at Omodhos, one of the principal fairs in Cyprus, will not be held. As might be expected, some of the papers blame the Government, without any reason, for the outbreak, and complain that the supply of vaccine is insufficient.

Wheat Cornering.

The scarcity of wheat is causing many complaints, and some papers take a gloomy view, anticipating trouble in the winter. They accuse the Government of want of foresight, and state that the steps against profiteering are "a parody," being quite insufficient to prevent unbridled abuses and sordid gains, which should be more severely dealt with. There have been a number of convictions already.

Greek National Meeting.

Arrangements have been made to hold a Pan-Cypriot national gathering at Nicosia on September 29, at which representatives of all towns and villages are to attend. The election of these persons was held on Sunday, September 7. Under the circumstances the police were naturally directed to keep an eye on proceedings, to make inquiries, and ascertain the names of the representatives chosen. The newspapers, however, express surprise that the Government should have deemed this necessary. The meeting is convened in order to express the feelings of the Greek Cypriots with regard to the petition for union with Greece. The name-day of the King of Greece was observed on September 12. The Bishop of Papho despatched a telegram to Athens conveying felicitations from the Church and Greek Orthodox people of Cyprus.

PALESTINE NOTES.

(From a Correspondent.)

Welcome Changes.

The growing sense of security, and of relief from an oppressive Government, is being fortified by clear evidence of the zeal with which the O.E.T.A. (South) administration is taking in hand the work of restoration and encouraging the resumption of business throughout the country. Firm government, combined with justice for all, is as necessary as it is novel. In Jerusalem the signs of progress are very manifest, and amongst the welcome innovations already in hand is the scheme, initiated under the Royal Engineers, of sewerage for the very insanitary Jewish quarter. The work of the Military Governors throughout the territory is admirable, and a gradual transformation is apparent in all directions. At Haifa—*e.g.*, to mention only one locality—Colonel E. Stanton, C.M.G. (who is going on leave), has done excellent work. The sanitary condition of the native quarters has been vastly improved, and energetic steps are being taken to help farmers. The port is growing rapidly in importance, and presents a busy scene.

Agriculture and Zionism.

In the sphere of agriculture improvements must, of course, be gradual. The industry is deplorably handicapped by the many evils due to the war, by shortage of labour, a great increase in wages, and the ever-pressing lack of capital, which new banking facilities may, it is hoped, gradually tend to relieve. But already the work of the Military Governors is bearing fruit. Although a lingering sense of uncertainty as to the outlook is natural, here and there, and people ask whether the new order is to be permanent or only a transitory phase, confidence will soon be generally established and will stimulate production. But sanguine supporters of Zionist immigration schemes must not imagine that a land flowing with milk and honey will emerge, as by magic, from the chaos. The wholesome warnings given by Dr. Weizmann and others are opportune, and it must be clearly understood that here, as in most parts of our own Empire, it is only those who possess knowledge and capital, as well as patience, that can hope to find suitable homes. On all accounts the process of settlement in the "Jewish National Home" must be very gradual, and the aspirations of those who do not know the country can only fall into practical shape on further acquaintance with the views and feelings of the inhabitants, Moslem and Christian.

Jaffa oranges are world-famed, and their export important. Owing to the existence of scale in citrus trees in Egypt, the importation of any kind of citrus trees from that country is prohibited under severe penalties. Breaches of the order can be dealt with by military magistrates.

Helping the Trader.

The Government *Gazette*, in its Commercial Section, gives valuable advice, which it may be hoped will be continued. It offers, for instance, information—based on home intelligence—as to the conditions and requirements of the English market in the matter of olive oil and raisins. Edible oil, which Liverpool imports chiefly from Spain and Sicily, fetches 15s. to 16s. c.i.f. the gallon; while commercial or "technical" oil is required in London, Liverpool, and other ports for soap manufacture. With regard to raisins, directions are given regarding the methods of preparation, now far too primitive, and the packing of both stalked and loose raisins. In both these branches of industry Palestine can advance, to a very great extent, to the benefit of export trade, once a stable Government is established. It is to be hoped that a wise dissemination of such commercial advice may be adopted. This section of the *Gazette* might in time become the nucleus of an agricultural journal. Leaflets in Arabic on some subjects, distributed to and through Mukhtars, might do good. At first they might have but little effect, as was found to be the case amongst the Russian peasantry, under very similar circumstances; but in time they might justify trouble and some small expense.

A Palestine Directory is being prepared in Cairo by the "Société Orientale de Publicité," and should be a useful work.

The Roumanian Legation in London issued a statement on October 8 informing the Jews born in the territory of the old Kingdom of Roumania that they will become Roumanian citizens by making a declaration that they were born in Roumania and have never had foreign protection. Those who have complied with the laws of recruiting, those who have been mobilised in any of the campaigns from 1913 to the present time, even if they are actually under age, as well as the widows and legitimate children under age of men who died in those campaigns, have only to declare that they wish to obtain the rights of citizenship. That will be enough. There are penalties for false declarations.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, September 27.

The Riot Commission.

From the verbatim reports which are issued daily by the local Press much information is being gleamed regarding the Riot Commission, and it appears that the present Commission will not follow the ineffectual line characteristic of so many Commissions which have been held in the past. The thoroughness of the evidence given and elicited may be gauged from the following facts which have come to light, and the narration of the most salient of these will give the readers of The Near East a good idea as to the state of the island and the cause of its embroilments. Monsignor Panzavecchia openly stated that he did not sympathise with the way the English behave in Malta; he also made impolite remarks in the presence of the French Consul. Blame is also attached by some to the local Government for taking no heed of the middle class; whilst one witness openly stated that the Government in Malta "never cared a fig for the workmen." The world discontent has been also brought forward as a cause of the unrest, and Malta is charged with following in the wake of Ireland, India, and Egypt; while the difference of treatment to the local troops on demobilisation as compared with the British troops has come in for much comment.

The whole matter in a nutshell is that the labouring classes of Malta are just beginning to feel their feet, and also that there is a strong anti-Government feeling encouraged by a few fanatical would-be leaders, with supposed Italian leanings. It does not appear to have been fully recognised what state the island would be reduced to if the dockyard, fleet, and army were cut down; but this is not impossible.

"Olla Podrida."

The British troops have arrived here from Fiume, and it is stated that not a single British soldier remains now in that theatre of warfare. The arrival of the troops has forced the hands of the authorities as far as the Russian refugees are concerned, and these are being sent out of the island in batches. They express regret at their departure, but their exit is welcomed by many locally.

Profiteering is still rampant, and there is a generally expressed wish that the Government should control all supplies, and that co-operative societies should be encouraged.

PHYSICAL CHARACTERISTICS OF PALESTINE AND SYRIA.

Lecturing at the School of Oriental Studies in London last Friday, Mr. A. Sefi described the physical characteristics of Palestine and Syria. He said the country stretched from El Arish on the borders of Egypt to the Euphrates. Passing northward from El Arish, the first town met with was Gaza. Sand dunes lay between Gaza and the sea, which was four miles away; but Gaza carried on a considerable trade in the export of barley. The barley was malting barley of very high quality, with plenty of sugar in it. The Arabs brought it into the town in sacks carried on the backs of camels. It began to arrive in June, a time of the year when rain was unknown there, and was emptied out in the market place, piled into pyramids ten or twelve feet high, and left in the open air until sold. Then it was again put into sacks and carried on the backs of donkeys or camels to the seashore, to be again emptied out into the open air to await the arrival of the steamer. When this event took place the barley was once more put into sacks, which were put into boats and barges and rowed out to where the steamer lay in the open roadstead. Then the barley was lifted by a crane on to the steamer and stowed in the hold. The embarcation of three or four thousand tons of barley would be accomplished in fine weather in two or three days, but in bad weather the operation might take a fortnight

Palestine, said the lecturer, had great need of harbours. At Jaffa, in fine weather, one would arrive in the morning and find the sea like lead; but there was always a north wind in the afternoon, and then the water became very rough; so that it was difficult to board the steamer from a boat. Jaffa was the port of Jerusalem, thirty miles away; but, owing to the badness of the harbour, was likely to be superseded by Haifa. It would be very difficult to build a good harbour at Jaffa on account of the great depth of the sea. Haifa had the safest harbour in that part of the world. It was the port of the Hauran, where enormous quanities of grain were grown, and was a starting point for the Hejaz Railway.

Among other places mentioned by the lecturer was Tiberias, where, he said, there were still thermal baths good for rheumatism, but now so filthy that they could not be used.

The people of Palestine and Syria, said Mr. Sefi, had not always been inhospitable to Christian pilgrims. A traveller in 1483 reported passing many cisterns from which the Saracens drew water with great exertion and offered it to the pilgrims for the love of God; and at Hebron he found a hospital which they maintained, and where they supplied all who asked with bread, oil, and broth. That the charity was largely availed of was shown by the fact that the hospital baked twelve hundred loaves a day, and spent twenty-four thousand ducats annually.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Turks of the "Young" persuasion are not wanted in Switzerland, I observe. At any rate, the Geneva correspondent of the *Daily Express* reports that: "The Swiss Federal authorities have refused to permit Turkish ex-Ministers to make Lausanne their centre of propaganda and agitation. Talaat Pasha and Djemal Pasha have been refused admission to Switzerland, while Djavid Bey and Hakki Pasha, who have been residing in this country since the Armistice, have been notified that they must leave within a fortnight." It is not at all surprising to be told, by the same correspondent, that all these undesirables "have chosen to go to Germany," or that the Swiss are delighted to be rid from them. But what I should like to know is this: if Talaat and Jemal (or "Djemal," as the *Express* calls him) have made application for leave to settle in Switzerland, why were they not instantly arrested? They are surely badly "wanted," nominally by the Turkish Government, really by the Allied Powers; and presumably they must have made their whereabouts known when they asked leave to inflict themselves on Switzerland. But, I suppose, the lawyers will look after them—as long as they have any funds left!

***

I hope our railwaymen will take note of the fact that the Russian Bolshevists "heard the news" of their general strike "with joy and enthusiasm"—and that they will think out quietly for themselves just what that means. They should note also that the "Bolshis" congratulate them on having "broken the chains of civil peace," and on having "declared war on the Government." If these phrases mean anything at all, they mean that the strikers ought to be proud of going against all law and order, and of defying the rulers elected by the votes of their countrymen. I decline to believe that any decent English (and I mean *English*) workman would find any cause for self-congratulation in that fact. Happily, the British railwaymen, as a body, want no truck with the Russian Reds; though they may sing "The Red Flag" now and then, as a puppy will chew soap!

***

Dates—the fruit, not the "1066-1087" kind of thing—are a subject of interest to me, as some of my readers probably remember. My eye was, therefore, very quickly caught by the line "Dates for Pigs," which appeared over a letter to *The Times* the other day. The writer, a Mr. Russell-Smith, described how he had been allowed by our wonderful Government officials to purchase a couple of tons of dates as food for his pigs, on giving a guarantee that they should not be allowed to "reach the public in the shape of food." Needless to say, the fruit was bad, so bad that it had been condemned as unfit for human consumption; and, of course, I am not suggesting that the authorities were not doing right in keeping it from being so used. But the scandalous thing is that, according to Mr. Russell-Smith, these dates were part of 1,500 tons . . . landed early in the year, *warehoused until they became unfit for human food*, and then condemned." The italics are mine. Mr. Russell-Smith estimates that had the authorities let the public get the dates in sound condition, "the country would have saved, perhaps, £40,000." I have heard some extraordinary—and very scandalous—stories about date shipments and sales, but this would take same beating. How would it be to make the guilty parties feed on the condemned dates until ——!

***

I fancy that a competition to decide where the boundaries of Syria lie would produce some very wild guesses. Personally I am open to admit that it was rather a shock to me to find that Mosul should be regarded (by the French, at any rate) as Syrian; and I suspect that most people would place the eastern boundary somewhere between Damascus and the Euphrates. Be that as it may, very few competitors would go so far in the other direction as to make the Meander a Syrian river. But I notice that one of the big London dailies did so the other day, when it headed a paragraph about the delimitation of the Greek and Italian zones "Future of Syria." And by the same token it referred in the same paragraph to the much-respected British General at Smyrna as General "Milner"!

CORSAIR.

CORRESPONDENCE.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Would your correspondent, "A Cypriot" (THE NEAR EAST, September 30), state what are "the vested interests of some Englishmen in Cyprus"? I am not clear as to what these are, and should be glad to know.

I am, etc.,

October 11, 1919. A READER.

As the direct result of the disturbances which took place in Egypt last spring, revenue during April fell off by over half as ocmpared with April, 1918, the principal decreases being in land tax, Customs and tobacco dues, judicial fees, railways, etc. The month's account balances with a deficit of £E714,000, against a surplus of £E393,000 in April, 1918.

The *Busrch Times* (September 7) announces:—His Highness Sheikh Faisal (the son of H.H. Sheikh Abd el Aziz es Saud, Ruler of Nejd), Sheikh Ahmad ibn Abdulla (the cousin of the same ruler), and Sheikh Abdulla al Khassib, a minister of Nejd, last month left Riyadh, the capital of Nejd, en route to England on the invitation of the British Government. In their journey through the desert from Nejd they were accompanied by an escort of 300 camel riders, and it was after an eight days' journey that they reached Hassa, the sheikh of which province ceremoniously and cordially received the visitors. The party rested for eight days at Hassa before proceeding to Bandar al Ajier, on the Persian Gulf, where, by the courtesy of the Sheikh of Bahrein, a ship was awaiting to take them to Bahrein. They were welcomed at Bahrein both by the Sheikh of Bahrein and the British Agent, who at a reception referred to the good relations existing between His Britannic Majesty's Government and the Arab princes. The sheikhs subsequently took ship for Bombay.

PRESS ON THE NEAR EAST.

The Balkans.

The *New Statesman* (September 27) in commenting upon the recent treaty with Bulgaria, sums up the whole problem of peace in the Balkans thus:—

What is the way out of this tangle? We do not presume to offer a perfect and easy plan. But it is obvious that the League will have to find one, and it is obvious that a part of it must consist in satisfying the more legitimate aspirations of the Bulgars. "Shut Bulgarian ambitions up in a fortress," says an old proverb, "and they will blow it up." The Comitaji movement of fifteen years ago is an illustration of the truth of the proverb; and we do not want a new "Comitajism" in Macedonia. Whether it will be possible in the near future to make an autonomous Macedonia we do not know. In the past, it was a promising plan, but the obstacles on the part of Serbia and Greece are evidently greater now, and, moreover, there will be a general reluctance to create yet another State: there are too many already. But it is certainly towards the idea of federation that the League of Nations will have to direct its efforts. Such a federation was within an ace of accomplishment in 1912-13, when the mad treachery of Bulgaria upset it. There are still, however, enough wise counsellors in the Balkans, as well as in America and Western Europe, to make it a practicable aim once more. Meantime, the League will have the immediate duty of tempering the wind to the shorn lamb. Bulgaria's rights in her "corridor" and her Ægean port must be vigilantly guarded. The Greeks have strongly opposed this concession (on the rather extravagant plea, amongst others, that it provides the Bulgarians with a submarine base against Greece), and they are not likely at the outset to do anything to make the scheme work smoothly. The freedom of religious and cultural minorities must be rigorously upheld throughout the Peninsula. Pascal observed that men never do evil so cheerfully and so thoroughly as when they are acting in the name of religion. To call the bloody ecclesiastical warfare which has disgraced the Balkans for the past generation "religious" is perhaps a mockery. But it has been instigated by the rival professors of Christianity of the Exarchist and Patriarchist Churches, and carried out very "cheerfully and thoroughly" by their disciples—real and pretended—in a constant reign of terror and persecution and massacre to the utter demoralisation of all the peoples of Macedonia. Finally, if we may mingle small things with great, we venture to hope that the new era will see a diminution of that fatuous propaganda, which has contributed much to the general harm in the Balkans, and which consists in appealing to the glories of the great Tsar Stephen Dushan, the Byzantine Emperors, and other irrelevant national heroes of a dim past.

Distracted Egypt.

In an article headed "Lord Milner and Egypt," a Cairo correspondent of the *Morning Post* states that the followers of Saad Pasha Zaghlul are working desperately hard to secure a boycott of the Milner Commission. After quoting some of their arguments, he continues:—

How far the extremists will succeed in their attempt to frighten their fellow-countrymen into silence remains to be seen. But Nationalist methods of terrorism have not been unsuccessful as regards those who gave evidence against the murderers of March last, and a great many moderate men who value their skins at a higher rate than free speech will probably prefer not to give evidence. The boldness of the "Left" is indeed surprising. Yesterday the students of the School of Law, who are returning to their studies on Saturday next after a vacation of nearly seven months, issued a manifesto that they were ready at any time to strike again on behalf of the "beloved fatherland," and proceeded to lecture the Prime Minister on his duties, which being administrative rather than political, imposed on him the necessity of following the orders of Zaghlul, the political leader of the country, and ignoring the Commission. This amazing production shows the spirit animating the student and lawyer class, and it seems that the Ministry itself, which consists almost entirely of ex-judges and lawyers, is wobbling. Sir Mohamed Pasha Said has been trying hard to make a party. But there are indications that he doubts whether he will be able to hold his Ministry together in the face of the passions that will be unchained when the Commission arrives.

The article concludes with a truly remarkable illustration of the manner in which the Nationalists are exploiting the workman:—

The hands at the Army workshops are paid on piece rates, which have remained the same since the days of Mohamed Aly, when they were fixed extremely high in order to induce Egyptians to become artisans. Lately the inevitable lawyer appeared on the scene, talked to the men, and formed a syndicate, of which he became the president and treasurer. Then to justify his existence he brought forward the claim that the men henceforth should be paid by the day. The director of the shops pointed out to the men that if this were done their pay would be diminished by nearly 50 per cent., and advised them in their own interest to continue as they were. But the workers, while admitting the truth of what their director said, stuck to it that they must follow the advice of their "avocato." Truly, Egypt is a strange country!

"The Moslem World."

"If I had a million dollars," writes Rev. James P. McNaughton, now of Constantinople, in the October number of the *Moslem World*, "I would first of all pay my debts. This is what any honest man would do." He then goes on to show the immense debt we owe the Near East, and how we may now pay it by the work of reconstruction after the war. Dr. Donald B. Macdonald, of Hartford Theological Seminary, contributes a scholarly article on the "Arabian Nights," showing that this classic is not a mere story-book, but the best mirror of Moslem thought and ideas. The early efforts made by the pioneers of the United Presbyterian Church in Egypt is sketched by Miss Lydia S. McCague. Those interested in the preparation of Christian literature and its dissemination in Moslem lands will read with interest the articles by Dr. Herrick on Christian literature in Turkey, and by Dr. Shellabear on special literature for Moslems in Malaysia.

NEW BULGARIAN CABINET.

Reuter's Paris Correspondent reports, under date of October 14, that a telegram from Sofia gives the constitution of the new Bulgarian Cabinet which has been formed to sign the Peace Treaty as follows:—

Premier and Minister for War	M. STAMBOULINSKI.
Public Instruction	M. KAALOFF. (?)
Railways	M. TORLAKOFF.
Interior	M. DIMITROFF.
Agriculture.....	M. DASKALOFF.
Foreign Affairs	M. MAGGIAROFF.
Commerce	M. BUROFF.

The portfolios of Justice and Public Works will be given to Democrats, and that of Finance to a Progressive. A telegram from Sofia states that M. Theodoroff, although not belonging to M. Stamboulinski's Cabinet, will remain President of the Bulgarian Delegation at the Peace Conference.

ZIONISM: The Jewish National Movement,

with Appendices of Diplomatic Documents and Contemporary Articles and Reports, by BERTRAM B. BENAS, B.A., LL.B., Barrister-at-Law.

"In this essay we have an attempt by a very competent authority to justify the very peculiar position of Jews in this world as compared with various nationalities. . . . The case is ably and persuasively put. . . . The appendices are of considerable interest. . . . The whole . . . is well worth careful study."—THE NEAR EAST.

"A book of this kind was largely needed—a brief yet comprehensive conspectus of Zionism, with an apparatus of authenticated documents."—THE LIVERPOOL COURIER.

"An instructive study of the Jewish National Movement. . . . All interested in Zionism—and who is not—will find much to stimulate thought."—THE LIVERPOOL POST AND MERCURY.

NEAR EAST BOOKSHELF.

THE PROMISED LAND.*

It is difficult to criticise this book for two reasons. In the first place, the author is so entirely and admirably devoted to his subject that his enthusiasm of itself carries one along; and in the second place, because it is really not a book at all, but a collection of papers, extracts, appendices, and quotations that are extraordinarily comprehensive, but often unnecessary. In the third place, we may add that the author quotes most of the views in favour of Zionism, which is natural enough, but he says little of the opposition, either within the ranks of the Chosen People, or without. That is a mistake; it throws the achievement out of perspective, and we could have spared some of the pages which are occupied by leaders from the *Dundee Advertiser* and the Aberdeen papers, and even, perhaps, our own comments on the movement (which we acknowledge with blushing modesty) for a considered analysis of the relation of Zionism to Judaism this last fifteen years, and of the relation of the rest of the world to both Judaism and Zionism. Had this been done, the book would have been less of an industrious compilation, and altogether more informative. The author, for instance, in touching on the hardships suffered by the Jews in Russia during the German invasion of Poland, does not allude to the very prevalent belief on both sides that a large number of Polish Jews made money out of the war by buying and selling for the German Government. Nor does he discuss the belief, also very prevalent among British Jews, that anti-Semitism has grown in this country during the last twenty years from nothing to a not altogether negligible factor, and that this unfortunate spirit will have to be fought, since it is capable of doing considerable harm to those intimate relations between England and Palestine which will, we believe, be advantageous to both countries. The almost verbatim report of the great demonstration at the London Opera House—which only omits the very long but nevertheless extremely interesting speech which Mr. Zangwill made on that occasion—frankly does not compensate for these omissions to discuss the atmosphere in which Zionism has recently lived and grown.

These defects, on the other hand, are atoned for by a very charming and intimate sketch of Sir Mark Sykes, whose premature death last February was a heavy blow not only to Zionism, but to England. Sykes, as we knew him before the war, might have sat for a picture of the happy warrior—one felt that life had given him everything, health, wealth, brains, oratory, a happy knack of occasional journalism, a love of music, an innate knowledge of men and statecraft, and one felt that life had been right in endowing him so generously, for he gave out in his boyish enthusiasm more than he took. Who could dream that fate, in giving him everything at thirty, was to dash the brimming cup away at thirty-nine? The tragedy of the thing, not less than the help he gave to Zionism, has moved the not too fluent pen of the compiler of the "History of Zionism" to real eloquence, and we have rarely read a more touching obituary notice.

AN INTERESTING VISITOR.

An interesting visitor has lately arrived in this country from Mesopotamia, viz., Lady Surma d'Mar Shimun, sister of the Patriarch of the little Assyrian or Nestorian "millet" which existed before the war in the rugged mountain district of Hakkiari, Kurdistan. This small body of Christian mountaineers threw in their lot with the Entente in the early days of the war on the faith of Russian promises of support. This help not being forthcoming, they found themselves exposed to the attacks of their old Kurdish enemies and to those of Turkish regular troops. For some months they maintained their resistance, but at the last were driven to evacuate their mountains and retire, under the leadership of their Patriarch, to Urmi, in Persian territory, where the Christian population was of the same stock as themselves. Here they continued under arms, and were definitely recognized as allies of the Entente by General Offley Shore, who was then occupied in the work of reorganizing the Russian force in the Caucasus.

The complete breakdown of Russia left this little nation exposed once more to the attacks of Turks, Persians, and Kurds, but they still proved able to defend themselves, though they lost their Patriarch and leader. This man (known officially by the title of Mar Shimun) was treacherously murdered by the Agha of the Shekak Kurds (Simko) at a peace conference to which the Bishop had been invited under safe conduct.

Ultimately, Assyrian powers of defence broke down, and though prospects of assistance were open to them from the British army in Baghdad, the nation was forced to evacuate Urmi and undertake a national "trek" to the south to avoid destruction. Though they suffered horribly en route, this great migration was carried out, with British assistance, and the whole nation (or it should rather be said the remains of it) was received to the hospitality of the British Government and settled in a large refugee camp at Bakoubah, near Baghdad.

The question of the future of this "millet" of Christian mountaineers is one that is now engaging the attention of the British authorities in Mesopotamia, and is an important factor in the settlement of the whole province of Mosul. Lady Surma is now visiting England (with the full approval of both the civil and military authorities in the province) in order to put the case and desires of her people before the British Government. She comes as their authorised representative, and the only one recognized by either the "millet" itself or by the British Government.

Lady Surma, who is a professed nun of her own communion, is at present the guest of an Anglican Sisterhood, viz., the "Sisters of Bethany," Lloyd Square, W.C.

MEDIÆVAL AND MODERN GREECE.

The Koraes chair at King's College, London, was occupied for the first time on October 7, when Professor Arnold J. Toynbee delivered an address on the place in history of Mediæval and Modern Greece.

The lecturer said that according to the traditional presentation a great contrast was made between the history of Western and Eastern Europe. Behind both lay the shadowy figure of the Roman Empire, but, whereas we saw in the West a valley of the shadow of death leading out into the light by the beginning of the eighth century, in the East we were shown instead the life in death of the old Roman Empire, which was supposed to expire in 1453. Then came a belated dark age until the eighteenth century.

This view, Professor Toynbee said, he did not accept. The seventh century and onwards was as truly a dark age in Eastern Europe as in the West. So also the setting up of Ottoman dominion was less of a break than was commonly supposed. At the time of the French Revolution there was going on a revival of the Greeks in the Ottoman Empire, so that when the war of independence came it seemed more like a struggle to inherit the Turks ascendancy than to escape from it.

The Steppes, from which had come hordes of barbarians, and the Middle East, which had threatened Greece with the even greater danger of an incompatible civilisation, were, said the lecturer, two great factors that differentiated Mediæval Greece from Western Europe; the psychological attitude of Greece at that time towards Orientalism was a curious blend of repugnance and imitation. To-day the influence of the Middle East no longer differentiated Greece from the West, for all Europe was now concerned in the Middle Eastern question. The greater part of the vast territories which Alexander had sought to bring under the influence of European civilisation were passing under various European peoples. Greece was stepping into the place of the Ottoman Empire as the land bridge between the Middle East and Europe, and Greek statesmen would be exercised upon the problem of enabling Moslems and Europeans to live together.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Arabic.	Jewish.
1919. October	1919. October		1338. Moharram.	5680. Tishri
17	4	Friday	22	23
18	5	Saturday.....	23	24
19	6	Sunday	24	25
20	7	Monday	25	26
21	8	Tuesday	26	27
22	9	Wednesday	27	28
23	10	Thursday	28	29

The Maharaja of Kapurthala has arrived in Paris.

The Gaekwar of Baroda arrived in Paris on October 10.

Count Léon Ostroróg has arrived in London from Warsaw.

M. Venizelos spent the week-end with Sir Arthur and Lady Crosfield.

Earl Curzon has lately become a vice-president of the League of Nations Union.

Prince and Princess Alexis Kara Georgevitch have arrived in London from Paris.

Lady Stradbroke has left England for Egypt, where she will join her husband.

Sir Charles des Graz, formerly British Minister in Serbia, has returned to London.

The Shah of Persia will, Reuter's Agency learns, be the guest of the King from the 31st inst. to November 4.

Miss A. J. Dickinson has returned from Serbia for the Ridley Art Club exhibition at the Grafton Galleries, opening October 18.

The Aga Khan had the honour of being invited to luncheon with the King and Queen at Buckingham Palace on October 10.

It is now definitely announced that M. Nicolas Misu, the Roumanian Minister in London, has accepted the post of Minister for Foreign Affairs.

Mrs. Arthur Pery-Knox-Gore and Agnes Lady Hughes have left London to join Lieutenant-Colonel Arthur Pery-Knox-Gore, D.S.O., A.Q.M.G., at Constantinople.

Professor Voronoff, the Russian doctor who claims to have discovered how to effect the restoration of youth, was for some time physician to the former Khedive of Egypt.

M. Venizelos on Tuesday called upon M. Demetrius Caclamanos, the Greek Minister, at the Legation. M. Venizelos has cancelled his visits to Manchester, Cardiff, and Liverpool.

Sir Rennell and Lady Rodd gave a farewell reception at the Italo-Britannic Institute in Rome before leaving for the Mission to which Sir Rennell has been appointed in Egypt.

The engagement is announced between Cuthbert Glennie, of Doom Dooma, Assam, and Marjorie Joyce, youngest daughter of Mr. and Mrs. W. S. Warren, of Essendene, Caterham, Surrey.

At a meeting of the Central Asian Society to be held at 22, Albemarle Street on October 22, at 4.30 p.m., Mr. Ikbal Ali Shah will give a lecture on "Afghanistan." Lord Carnock will preside.

The marriage arranged between Mr. J. R. R. Fullerton, 19th Royal Hussars, and the Hon. Moira de Yarburgh-Bateson will take place immediately owing to the regiment being ordered to India.

The Shah has notified his willingness to visit the Guildhall on Saturday, November 1. He will be presented by the Corporation with an address of welcome and entertained at a déjeuner.

The King of the Hellenes has appointed Colonel Ritchie, the Lord Mayor of Liverpool, a Commander of the Order of George I., and has conferred a similar honour upon Dr. Utting, the ex-Lord Mayor.

The engagement is announced of Major J. L. Forbes, D.S.O., M.C., R.G.A., youngest son of the late Major L. Forbes, H.E.I.C., 2nd Bengal Grenadiers and H.M. 31st Regiment, and of Mrs. Forbes, of Shillingstone, Dorset, to Eleanor Valentine, second daughter of the late Canon Glyn, of Brancepeth, Durham, and of Mrs. Glyn, of Netley Court, Netley.

Sir Alban Young had an audience of the King at Buckingham Palace on October 10, and kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Belgrade.

Sir Ronald Graham had an audience of the King on Monday morning at Buckingham Palace and kissed hands upon his appointment as Envoy Extraordinary and Minister Plenipotentiary at The Hague.

The King has granted to Lieutenant-Colonel Edward Henry Ross, Leicestershire Regiment, his Majesty's licence and authority to wear the Insignia of the Fourth Class of the Order of the Nile conferred upon him by the Sultan of Egypt.

Dr. F. J. Scrimgeour, O.B.E., is at present in this country on furlough from Palestine. He returns to Nazareth as Director of the British Hospital there; and has been appointed the Honorary Consulting Surgeon to Occupied Enemy Territory Administration (South).

A marriage has been arranged, and will take place shortly, between William Day, Egyptian P.W.D., eldest son of Donald D. Day, F.R.C.S., and Mrs. Day, of Norwich, and Olive, second daughter of the late H. L. Mellersh and Mrs. Mellersh, Sydney, Australia.

Lady Boyle entertained at dinner at Queen's Gate on Monday the British Minister to the Kingdom of Serbs, Croats, and Slovenes, Sir Charles des Graz, formerly British Minister at Belgrade, Dr. Dragoutine Koyitch, the Serbian Chargé d'Affaires, Madame Koyitch, and Lady Grogan.

A marriage is arranged to take place on October 22 between Herbert Ernest, second son of the late Malcolm Fulcher Beamish, District Superintendent, Imperial Indian Police, and Violet Amy, younger daughter of the late I. J. Mann, M.Inst.C.E., and Mrs. Mann, of Iken Rectory, Tunstall, Suffolk.

The engagement is announced of Harold Arthur, only surviving son of Mr. and Mrs. Harold Brocklebank, of Grizedale Hall, Lancashire, and Morwenna, only daughter of Mr. Athelstan Riley, Seigneur de la Trinité, Jersey, of 2, Kensington Court, W., and the late Hon. Mrs. Athelstan Riley.

The marriage arranged between Pamela, daughter of Mr. John and Lady Evelyn Cobbold, of Holywells, Ipswich, and Mr. Charles Hambro, son of Sir Eric and Lady Hambro, of Pickhurst Mead, Hayes, Kent, will take place at St. Clement's Church, Ipswich, on October 22 at 2.30 p.m.

A marriage has been arranged, and will shortly take place, between Capt. Aubrey Martin Clarke, 7th Gloucestershire Regt., of Hewaheta, Ceylon, son of the late John Henry Clarke and Mrs. Clarke, of Amherst House, Clifton Park, Bristol, and Evelyn, eldest daughter of Gladstone Robinson, of Timaru, New Zealand.

The engagement is announced between Captain Julian G. B. de Wilton, 8th Cavalry, Indian Army, younger son of Major A. W. de Wilton, Inspector-General of Prisons, Ceylon, and of Mrs. de Wilton, and Marjorie, younger daughter of J. G. Chapman and Mrs. Chapman, of The Oaks, Beech Grove, Harrogate, Yorkshire.

It is announced that the marriage took place on September 8, at St. Paul's Cathedral, Calcutta, between Capt. H. Cecil Stork, I.C.S. and I.A.R.O., son of Mr. and Mrs. H. W. Stork, of Bridlington, and Marjorie, daughter of Lieut.-Col. F. R. S. Cosens, 1/4th Devon Regiment, and the late Mrs. Cosens, of Oakham, Rutland.

On October 8, at St. Mary's Church, Cadogan Street, the marriage took place of Lieut.-Colonel Herbert G. A. Garsia, D.S.O., Egyptian Army, son of the late Lieut.-Colonel M. C. Garsia, C.B., to Myra, widow of Frederick Mooney, Barrister-at-Law, and daughter of Sir George Fottrell, K.C.B., Dunmara, Ballybrack, Co. Dublin.

In connection with the approaching visit of the Shah to the Guildhall, the *Morning Post* recalls that in 1873 a similar address was presented to the then occupant of the Persian throne, and a ball was given, which is still regarded as one of the most brilliant functions ever held at the Guildhall, the guests exceeding 10,000, and the choicest plate of the Mansion House and the Guilds being displayed. The Lord Mayor, who then acted as the City's spokesman, was the late Sir Sydney Waterlow.

Our Port Said Correspondent writes:—The Rev. E. W. Hamond, M.A., who has been English Chaplain in Port Said for the last two years, has just left, having been released by the local Church Committee. Mr. Hamond is going to take up duties as Vice-Principal of the English College in Jerusalem, where his scholastic attainments will no doubt find fuller scope and encouragement than in Port Said. The Church services will be carried on by the available military chaplains till more permanent arrangements can be made. Mr. Hamond carries with him the best wishes of the community, where his unfailing suavity and courtesy made him many friends.

It is announced that on July 23, at Tiflis, Caucasus, Captain C. Basil Harness was married to Mlle. Rita N. Kalianski, daughter of the late M. Nicholai Kalianski, Doctor of Law, Warsaw, and niece of Prince Lvoft.

It is officially announced that the departure of Field-Marshal Viscount Allenby, who was to have left London for Egypt on Tuesday, has been postponed for a week. It is stated there is nothing significant in his departure; his leave having expired, he is going back to G.H.Q. On his journey out the Field-Marshal will, it is understood, make a tour of the battlefields of France.

The engagement is announced between Captain (temp. major) Wilmot Smyth Caulfeild, M.C., the Prince of Wales's Leinster Regiment, D.A.Q.M.G., Highland Division, younger surviving son of Brigadier-General J. E. Caulfeild, C.M.G., and Mrs. Caulfeild, late of Corozal, Jersey, and Meredith De Lisle (Merry), younger daughter of Mr. and Mrs. Reginald John, of Colombo, Ceylon, and 4, Durward House, Kensington Court, W.

Reuter's Agency has received from Colonel Arion, of the staff of Prince Nicholas of Roumania, who is now at Eton, the following:—Statements have been published in the foreign Press that Prince Carol, the Crown Prince of Roumania, had tendered his abdication, which the King and Council of Ministers had considered and accepted. It was further reported that at the same Council Prince Nicholas, younger brother of Prince Carol, had been declared Crown Prince of Roumania. These statements are not in accordance with the facts, for no such Council was held and no action taken either by the King or the Government of Roumania in any way affecting the position of Prince Carol as the Crown Prince.

APPOINTMENTS, ETC.

It is announced that M. Robert de Caix is to be general secretary to the High Commissioner of the French Republic in Syria.

Mr. I. D. Elliott, Judicial Secretary to the United Provinces' Government, is appointed a member of the provincial Legislative Council.

Mr. Walton, Joint Secretary of the Board of Revenue, United Provinces, is taking long leave, and will be succeeded by Mr. Bomford, Collector of Basti.

Dr. Edward Hindle, Kingsley Lecturer and Bye Fellow of Magdalene College, Cambridge, Assistant to the Quick Professor of Biology, has been elected to the Chair of Biology in the School of Medicine, Cairo.

The King has approved the appointment of Mr. Leonard Christian Adami, of the Indian Civil Service, to be a Judge of the Patna High Court, in succession to Mr. Justice Roe, who is retiring from the Bench in November.

The Secretary of State for India has appointed Mr. R. G. Jaquet, C.I.E., Joint Accountant-General, India Office, to be Accountant-General on the retirement of Mr. W. Badock, C.S.I. Mr. W. S. Durrant, Assistant Accountant-General, is promoted to be Deputy Accountant-General.

OBITUARY.

Inspector-General Adam Brunton Messer, whose death is announced, entered the Navy in 1859 and served in it till 1896. From May, 1888, until April, 1892, he was in charge of Malta Hospital.

Major-General George Upton Prior died last Sunday at his residence, Ethorpe, Gerrards Cross. He served in the Afghan War, 1878-9, and was a Knight of Grace of the Order of St. John of Jerusalem.

Col. R. C. Hadow, late Indian Staff Corps, and Commandant of the 15th Sikhs, of The Ferns, Eastbourne, died suddenly at Teddington last Friday, in his 69th year. He served in the Afghan War, 1878-1880, and was in the march from Kabul to Kandahar and the battle of Kandahar, receiving the medal with two clasps and bronze star. He also took part in the Sudan Expedition of 1885 and in the Miranzi Expedition, 1891, and served with the Chitral relief force, 1895. He took part in the operations on the North-West frontier of India in 1897-1898 and the Tirah Expedition.

We regret to announce that the Countess of Bessborough died on Saturday at Bessborough, after a short illness. She was the fifth daughter of the late Sir Josiah Guest, and married the Earl of Bessborough in 1875. There were six children of the marriage, of whom the eldest is Lady Oranmore and Browne. The other surviving sons and daughters are Lady Irene Congreve; Lord Duncannon, M.P. for Dover; Lieut. the Hon. Bertie Ponsonby, Grenadier Guards; and Lady Gweneth Baring. The other son, Major the Hon. Cyril Miles Ponsonby, was killed in action in 1915. Lady Bessborough took an active interest in war work, and was hon. secretary to the Y.M.C.A. Auxiliary Committee for France. She was appointed C.B.E. last year.

Major-Gen. Sir Charles Henry Scott, K.C.B., Colonel Commandant of the Royal Artillery, has died at Cousley Wood, Wadhurst, Sussex. In 1892 he was appointed ordnance consulting officer for India; in April, 1895, deputy director-general of ordnance; and in the following June inspector-general of ordnance. He served in 1897-8 with the Tirah Expedition, receiving the medal with two clasps, and the Companionship of the Bath. General Scott had been secretary to the Government of India, in charge of the military supply department, and was a member of the Governor-General's Council from November, 1905, till April, 1909.

Our Cairo Correspondent writes (September 24):—Anglo-Egypt received a great shock this week through the death of Lieut.-Col. B. F. E. Keeling, which occurred suddenly on the night of Saturday, the 20th. Col. Keeling had but recently been appointed Surveyor-General of Egypt, in succession to Mr. E. M. Dowson, who had been promoted Under Secretary of State for Finance, and he was also chairman of the newly-formed Cotton Research Board. Before the war he had done good work as Director of the Physical Survey, and he was amongst the first to join up when hostilities began. He served in the Army with great credit, gaining the M.C. and O.B.E., and retiring in the end with the rank of lieut.-colonel. He had been somewhat severely wounded in the hand, and it is understood that his wound still gave him a great deal of trouble. In the short time Col. Keeling had held his new post in Egypt he had already done very good work, and shown promise of greater things, for he combined scientific knowledge with keen judgment and administrative ability. It is generally felt that his death will be a great loss to Egypt. Certainly at the present moment we can ill spare men of this calibre. In view of his military rank and services, he was accorded a military funeral, a gun carriage and firing party of 300 men being provided. A large number of British officials and friends walked in the procession from the Anglo-American Hospital to Old Cairo, and there was a very representative gathering at the graveside, the Commander-in-Chief being represented by Col. French, C.P.O., and the Ministers of Finance and Agriculture by Messrs. F. T. Dallin and A. T. McKillop, their respective Under Secretaries of State. A large number of Egyptians, mostly members of the Survey Staff, were also present, and one of them delivered an eloquent panegyric after the funeral service.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

FRIDAY, OCTOBER 17, 1919.

THE AFGHANISTAN TREATY.

At no time in the world's history is it difficult for anyone who is definitely in search of trouble to achieve the object in view. In existing circumstances the quest is peculiarly facile, as the new Ameer of Afghanistan is bent upon proving. He inaugurated his reign with a wanton invasion of India, apparently undertaken under the grandiose impression that the population of the country would welcome him as a heaven-sent deliverer. The expedition from a military point of view was a fiasco, and it would have been a comparatively simple matter for the India Government to have administered to the Afghans a lesson that would have effectually checked for a long time to come Ameer Aman Ullah's imperialistic aims. But for some reason not yet established—for the breakdown in the transport and medical arrangements of the campaign could only have been a temporary inconvenience—the Imperial Government accepted the first overtures for peace made in a far from correct manner by theAmeer. Even the negotiations were protracted by the truculence of the Afghan envoy. In the end, however, he appeared to have made a virtue of necessity, and a peace agreement was duly signed. From the official summary of the document issued by the Government it was to be inferred that from the British point of view a satisfactory ending of the Ameer's crazy venture had been reached. The new ruler of Afghanistan forfeited his subsidy from Great Britain, as well as the privilege of importing arms and munitions of war through India, and had to agree to a rectification of the Indo-Afghan frontier. Only subsequently was it disclosed that Aman Ullah had received a *quid pro quo* in gaining control of Afghanistan's external relations. This important concession might have escaped notice altogether if the Ameer, still in quest of trouble, had not chosen to make immediate use of it in a peculiarly aggressive way. Within two months an Afghan Legation which was to establish itself in Soviet Russia made its way to Moscow, where it has been received with and has given expression to grandiloquent denunciation of Great Britain, while Afghan troops are at Merv, which is in Soviet hands. Even more mischievous still, Afghan officials have given out misleading accounts of the Peace Treaty, and have affirmed that various humiliating conditions have to be carried out by the British within six months. The effect of these reports, which had been spread, particularly along the Turkestan frontier, the semi-official statement continues, is said to have been bad.

From such an announcement the British public not unnaturally infers that further complications with Afghanistan are to be expected, and it is inclined to cavil at the handling of the Afghan situation as well as to resent the misplaced satisfaction that it expressed over the terms of the Peace Treaty on the strength of an incomplete summary. The restoration to Afghanistan of control over its external relations was not, it is true, embodied in the actual Treaty, but formed the subject of a letter subsequently handed to the Afghan Envoy by the British plenipotentiary. To this extent there was no actual suppression of the terms of the Treaty in the official summary; but the concession clearly had such an essential bearing on the agreement arrived at between the two countries that the omission to mention it simultaneously with the Treaty must inevitably expose both the Government of India and the Home Government to the charge of being anxious to gloss over a surrender of which they had no reason to be proud. Such action, though typical of much that the British public has experienced during the war, is as unfortunate in its effect as it is derogatory to the intelligence of those responsible. Any explanation that may now be given of the concession will have been wrung as an excuse from a reluctant Government. There must, however, have been some reason for relinquishing Great Britain's control over the foreign relations of Afghanistan. This restriction on Afghanistan's independence was first imposed by the Treaty of Gandamak, May, 1879, by which the Ameer undertook to conduct his relations with foreign States in accordance with the advice and wishes of the British Government. It was re-enacted the following year, on the accession of Ameer Abdur Rahman Khan, by an exchange of letters, in which it was stipulated that the Ameer could "have no political relations with any foreign Power except with the British Government." So long as the ruler of Afghanistan kept faith, the stipulation regarding the control of external affairs was valuable, but it was evident that as soon as he elected to kick over the traces no machinery existed for the effective control of Afghan relations with neighbours to the north and west. It might, therefore, be argued that it was better to surrender a prerogative that had no practical significance, but which tended to run counter to the spirit of the new relationship between Great Powers and their *protégés*. Any explanation at the time would have been more felicitous than the attempt to keep the concession from the knowledge of the public, which can but prejudice further action on the part of the Government in the settlement of the Afghan problem.

Ameer Aman Ullah clearly entertains ambitious designs, and it may not be unprofitable to allow him to burn his fingers in the Bolshevist cauldron. His Legation to the Soviet Government will not have been able to enjoy the latter's hospitality for many days before the Reds prepared to evacuate Moscow. Whether the members return converted to Bolshevism or strongly hostile to it the results for the Ameer are likely to be equally untoward. As far as Great Britain is concerned it is better to have a ruler in Afghanistan openly hostile than one who carries on intrigues under the cloak of friendly relations. The frontier tribes will not be slow to take their cue from Kabul, and a recrudescence of the recent trouble may be looked for. This time, it is to be hoped, the military authorities will be able to avoid the shortcomings that paralysed the last campaign, and they will not be likely to repeat the mistake of stopping short in their advance, before the completeness of the Afghan defeat has been brought home to the people. At the same time some heed must be given to the new spirit animating even the most backward constitutionally of the peoples, and it may be advantageous to be rid of the control of Afghanistan's external relations, which was never easy to carry out, unless more effective representation could be secured at Kabul. The danger that it was sought to guard against by imposing the restriction, however, must be met by other means.

TO AMATEUR PHOTOGRAPHERS.

The Editor will be glad to consider photographs of Near Eastern scenery, types, places of interest, etc., etc., suitable for reproduction in THE NEAR EAST. *When desired, payment will be made for the right of producing such photographs. Readers should state, when forwarding pictures, whether payment is desired or not.*

Photographs should be sent either packed between stout cards or rolled in a cardboard tube, and should on no account be folded. Titles and notes should be attached to each photo, and should be very clearly written.

MANDATES AND HISTORY.

By JANUS.

Now that the Allied Orientalists have finished their deliberations, and concerted measures for the extension of those branches of knowledge with which they are concerned, I want to appeal to them to come out of their libraries for a little and tell us what light their studies throw on the political problems of to-day and to-morrow. These problems need all the daylight that can be got. Mandates are in the air, and, mandates or no mandates, the democracies of the West are coming into closer and closer touch with Eastern countries; they need to understand the conditions with which their statesmen have to deal, and if they are left to act without understanding they are sure to make a terrible mess. Now to the ordinary democrat the East, as it stands, is incomprehensible. If he happens to be a very wise man he will be content to leave its problems to experts, but that chance seldom comes off in practice, and the best way of avoiding disastrous blunders is to make it possible for him to understand. This is work for historians more than anybody else. As Dr. Marshall writes in "Industry and Trade," "present structures are, for the greater part, direct and almost necessary consequences of conditions which have developed almost continuously from the Middle Ages to the present time," and if the democracies are told how the East of to-day has come into existence the incomprehensible will become the inevitable, and they will be able to see what their statesmen and administrators are about.

Now the scholars may reply that all their knowledge is already in print. That is more or less true, but the present sources will not meet the need. To learn what is known on any single point of Eastern history you must as a rule go through a few monographs and a long series of Journals or Transactions, probably in three or four languages, and certainly assuming a width of knowledge which the general reader does not possess. The ordinary intelligent working man has neither the gifts nor the inclination to pursue this process: tired with his day's work, he does not want to go a marketing, but expects to find his meal ready cooked. A few countries such as India can, it is true, offer general text-books of their history, but these meritorious works are in the strictest sense unreadable. The old books were not so bad, for formerly knowledge was scanty, and there was room for human interest, but now so much is known that text-books are mere frameworks, indispensable to students who mean to fit fresh knowledge into the frame, but useless to men who intend to go no farther. What I want the scholars to do is this: First, forget all about the Pyramids, the Hittites, the Vedas, and such absorbing topics; second, discard from their hand frontiers, wars, and dynasties, manuscripts, coins, and inscriptions, in fact nearly everything they hold; then, taking a convenient starting point, trace in plain English the growth of those indigenous institutions under which the East has groaned, and the working of the formative ideas (not very numerous) which have rendered those institutions possible, or have occasionally contributed to their modifications. Tell us, in a word, how the East which we know has come into existence, and what results have followed from contact with the West. With that knowledge on hand the democracies will be able to shape their own course; without it they must either drift or remain at the mercy of any crank or charlatan who happens to get hold of the rudder.

That is my appeal; but example is better than precept, and to show more clearly what I want, I will glance at the great idea of administrative exploitation, which the West has had time to forget, but which is still painfully familiar in the East. Almost wherever you look under Eastern rule you find an established governing class, bound by little in the way of law, and employed chiefly in extracting the last obtainable penny from the productive members of the population, and in keeping for themselves as much as possible of the spoil, subject to the claims of their superiors in the official hierarchy. This type of administration is no novelty, and in the East it knows no frontiers; dynasties may change, but the system is maintained; and the Temple of Solomon rested, as the Taj still rests, on the sweat and groans of the men who paid for its erection. Most visitors to the East have described the system in operation, but none of them more effectively than Sir Thomas Roe, who wrote from the Court of the Emperor Jahangir, three centuries ago, that his neighbours "live as fishes do in the sea—the great ones eat up the little. For first the farmer robs the peasant, the gentleman robs the farmer, the greater robs the lesser, and the King robs all." That is the great idea: the people toil for the personal benefit of the ruling classes; and if you watch its operation over a few centuries you find that certain results follow with a high degree of uniformity. The country is impoverished; there is no accumulation of capital, though there may be large hoards of the precious metals; a very low standard of life is established; the ruling class forms the habit of exploiting, and, what is far worse, the masses get used to being exploited, as, it is said, eels get used to being skinned. Everyone learns the terrible lesson that it is better to exploit than to produce, and all productive energy is sterilised, because any man who is worth his salt sets to work as a parasite and preys upon his neighbours.

Now let us see what has happened when Englishmen have stumbled into such an environment. Starting as traders, we have usually found ourselves compelled to take charge of the administration, and we have fought gallantly, though not with entire success, against the tendency to exploit the masses. In this struggle we have got no help from producers, because the old habit of being exploited is extraordinarily persistent; and new parasitic classes—landlords, lawyers, and the like—spring up almost as quickly as you tie the hands of the old. Then we have, of course, introduced education, and while the masses have ignored it, the parasites have been quick to take advantage of the new learning, and so we come to one of the outstanding features of the modern East. The exploiting class of yesterday has become the *Intelligenzia* of to-day, and while the ideal of conscious exploitation may have been abandoned, the underlying habit of mind continues to exercise a preponderating influence on Oriental politics. The Indian *Intelligenzia*, for instance, do not, as a body, desire to exploit the peasants, but they still regard themselves as "the country," which the peasants have to feed and clothe. The peasants, on the other hand, are just beginning to shake off the habit of being exploited, and to realise, however imperfectly, that their needs and wishes ought to count. Here we have the initial stage of one of those conflicts which are apt to split a country to pieces: in the end the peasant has got to come out master, and what Lord Selborne's Joint Committee is really trying to do—if the members only knew it—is to devise a scheme to effect the change by gradual and peaceful means.

This sketch of the working of one idea is, of course, not put forward as a complete account of Oriental politics and economics, but as an illustration of how those subjects must be treated if they are to be made intelligible to ordinary men. I have followed only a single thread; the historian who takes up my challenge will have to bring various other ideas and institutions into the picture—fatalism, slavery, the seclusion of women, and so on, and show how their interactions have contributed to build up the East we know, marked as it is by a strong underlying unity with many characteristic divergences in

detail. The work is worth doing, and I think it could be done by anyone possessed of the requisite knowledge, if only he will keep his knowledge under control, and exhibit just so much of it as is needed to bring out clearly the main currents in the turbid and impetuous stream, a stream which, as far as I can see, must either fertilise or devastate the world.

NEWS IN BRIEF.

A movement in on foot among some native students to organise an Egyptian Boy Scouts Brigade.

The Bulgarian State Press will shortly begin the printing of postcards of the value of 15c. and 10c.

The sale and purchase of plums for use in the manufacture of brandy has been forbidden in Bulgaria.

A report from Athens states that the meeting of Parliament, which had been fixed for October 13, has been postponed for a month.

The Bulgarian Ministry of Agriculture is engaged on a project for placing the exploitation of forests belonging to monasteries under State control.

According to a Zara dispatch, the battleship Franz Joseph, allotted to the Yugoslav Navy, which sank during a hurricane, now lies at a depth of 100 ft.

The *Morgenpost* announces that the ex-King Ferdinand of Bulgaria has bought an estate in Mergentheim (Würtemberg), and intends taking up his permanent residence there.

The *Lokalanzeiger* says that 1,800 British troops have arrived in Budapest, and that 2,000 Italians are expected. Both forces are destined for policing work after the departure of the Roumanians.

In its report on the disturbances which occurred in Malta in June, the Inquiry Commission lays stress on the dockyard and general labour unrest that prevailed, and on constitutional and religious questions and police inaction.

Ferik Ghalib Pasha, the former Governor of the Hejaz, Ferik Said Pasha, former Governor of the Yemen, and Muhi el-Din Pasha, former Governor of the Irak, who were interned in Cairo, have been released, and have returned to Constantinople.

Information dated October 4 has been received from Col. Jacob, the head of the British Mission captured by the tribes in the Yemen. At that time communications were passing between the Imam of the Yemen and the Mission with a view to its release.

Rats have become such a pest everywhere in Beyrout and are causing so much havoc that the authorities have taken the matter in hand. The Military Governor of Beyrout has announced that a reward will be given for every rat handed into the police post, whether alive or dead.

The Government of India are making an enquiry into the causes of the perishing of paper in India which involves the premature destruction of old books and records, and in this connection Mr. Chapman, Librarian of the Imperial Library, will be visiting all important libraries in India containing a collection of old books with the object of finding out their condition.

CHESS.

Señor Capablanca returned to London this week on the conclusion of his northern tour. Besides the simultaneous exhibitions at Newcastle and Glasgow, to which reference has already been made in these columns, he gave two exhibitions at Liverpool, on one occasion meeting thirty-four players and winning thirty, losing three, and drawing one of the games, and on the other, meeting forty players, winning all but four of the games, again having three losses and a draw. At Manchester, where he encountered the strongest team he has met since he played at the City of London Chess Club, he had one draw out of thirty games, while at Stoke-on-Trent and at Leeds he won all his games, in both cases having forty opponents. This week his engagements included exhibitions at Norwich, the National Liberal Club, and Hampstead, while on Saturday he will play at Thornton Heath.

The winter season of the City of London Chess Club began on October 11 with a rapid transit tournament, which was won by Sir G. A. Thomas. The usual tournaments of the club commence next week. Remarkable entries have been received, plainly indicating the great enthusiasm at present prevailing for the game.

The Kent County Chess Association is holding a congress at Bromley from April 5 to April 10, when the chief event will be an open tournament limited to thirty-six first-class players.

The following game was played between Señor Capablanca and Dr. A. G. Olland in the Victory Tournament at Hastings:—Queen's Gambit declined; Rubinstein's variation. White, Capablanca. Black, Olland. 1. P—Q4, P—Q4; 2. P—QB4, P—K3; 3. Kt—KB3, P—QB4; 4. P x QP, KP x P; 5 Kt—B3, Kt—KB3; 6. P—KKt3, B—K3; 7. B—Kt2, Kt—B3; 8. 0—0; B—K2; 9. P x P, B x P; 10. B—Kt5, B—K2; 11. COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The announcement is made that the Greek Government has decided upon the issue of a new internal loan up to the amount of some £12,000,000 in Treasury bonds at six per cent., redeemable in three years. Greece's last domestic loan, in May, was for £3,000,000. With the help of the banks it was over-subscribed to the extent of nine or ten million drachmæ; but it was felt at the time that the national response, although satisfactory, was not in proportion to the wealth of the country. By asking for a considerably larger sum this time the Government will be giving the investing public wider scope. If in the meantime M. Venizelos should have returned to Greece and succeeded in restoring confidence over the labour situation, there should be little doubt as to the success of the loan, which might well be vested with all the glamour of a "Victory Loan" for the Hellenic race.

***

Each week brings news of fresh industrial issues in India, either for additional capital for existing companies or for new enterprises. A notable feature of the latter is the tendency towards increasing Indian representation on the boards of management. This is undoubtedly a step in the right direction, as it must make for a growing sense of responsibility among the Indian population as a whole, a useful concomitant to wider political responsibilities. The principle is worthy of extension in the countries now coming under the mandatory system. I have great hopes that the solution of the Syrian problem will be found in the co-operation of Arabs with British and French capitalists in commercial and industrial enterprises. The Emir Faisal, from all reports, is shrewd enough to recognise the advantages of the scheme.

***

October 11 saw the issue of the prospectus of the long-expected Sudan Loan, subscriptions being invited for an amount of £3,500,000 in 5½ per Cent. Guaranteed Bonds at 95½ per cent. The interest on the bonds is guaranteed by the Imperial Government. The bonds are redeemable at 105 per cent. by a cumulative sinking fund, annual drawings commencing on November 1, 1929, and terminating not later than November 1, 1959. The Sudan Government may, on or after November 1, 1939, redeem the outstanding portion of the issue at 105 per cent. on giving three months' notice. Of the present loan, which forms part of the £6,000,000 authorised by Parliament for meeting expenditure on irrigation and railways, £1,000,000 had already been taken up, and it throws an interesting light on the present tendency of investors that the demand for the balance was such that the lists were closed early this week.

***

A marked expansion is to be noted in Greek revenues for the first seven months of the present year. The receipts from monopolies amounted to 26,431,573 drachmæ as against the estimate of 16,858,333 drachmæ, an increase on the 1918 figures of 3,863,935 drachmæ. The increase has been much more marked in the case of the Piræus Customs receipts. The estimate was 6,241,656 drachmæ, while the actual receipts were 26,668,803 drachmæ, as against 17,771,000 drachmæ for the corresponding period last year. In July the rate of advance was much less than in June, actually about 32 per cent., compared with 51 per cent., the reason being in July last year conditions were beginning to approach the normal.

***

At this time of the year the average housewife is beginning to consider the question of buying dried fruit in advance for the Christmas season. I am afraid that there will not be much buying this year, for the simple reason that the fruit is extremely unlikely to be available. The reports of the Smyrna sultana crop have been increasingly unfavourable, and according to the annual report on Greek currants of Messrs. Burlumi, this year's crop of Greek currants is now estimated at no more than 120,000 tons. Given good yields, then there would have been a fair prospect that this country would have been well supplied with both these fruits. But the position, briefly, is that the prices of sultanas and currants are extremely high, and are going up; that other countries are willing to pay these prices; and that unless this country follows suit the sultanas and currants will simply go elsewhere.

***

At the statutory meeting of Morum's Oriental Stores, the chairman, Mr. F. Young, briefly reviewed the present position of the business. He emphasised the fact that there was not a great deal of competition, and that if any competition did come they stood in a splendid position to meet it. Before the war the trade of the stores went to Germany and Austria, but since the business had been taken over the greater part of 1½ million pounds' worth of goods had gone there from this country. Their object was, he pointed out, as far as they could to bring all the trade to this country and to make the stores an outlet for a large amount of British manufactured goods.

***

The unrest and strikes in Egypt have naturally restricted the development of the stores; but, despite these difficulties, the turnover for the four months ended July increased by 25 per cent. Mr. Young pointed out that that period did not cover the best months for trading stores, and said that they looked forward to being able in the next eight months quite to maintain the increase. He did not want to be too optimistic, but he thought it would improve even on the ratio of increase that they showed for the last few months; and, given settled conditions, the prospects were promising for the stores in Egypt and Palestine. Mr. Young referred to the opening of the branch in Jerusalem, and also stated that the question of opening a branch in Constantinople was under consideration.

***

Complaints are still being received with regard to postal and cable delays between this country and the East, and it is evident that the need for improvement in these services is still very great. In a further letter to the Postmaster-General in regard to cable delays, the president of the Manchester Chamber of Commerce cites cases of a cable taking four days from Egypt, and one from China which took six days to come, and points out that the delay of eight to twelve days necessary on this basis before the answer to the message can be received is placing British trade under a grave handicap at a time when the maximum overseas trade is vitally necessary in the national interest. "During the period of the war," he continues, "merchants accepted the fact that the number of cables usable for business purposes had to be strictly limited, owing mainly to the censorship and the abnormal pressure of Government messages; but both these causes of delay have now been removed, and there seems no adequate reason to account for long periods of transmission. Owing to repeated representations, the position was considerably improved, but it is now becoming worse, and it is imperative that if our foreign trade is to be restored and developed, the cable service should immediately be raised to the pre-war standard."

***

The position with regard to postal communications may be better than it was, but there is unquestionably vast scope for improvement. And while any uncertainty exists it follows that business must be carried on at a serious disadvantage. If there ever was a time when British commerce required every facility, it is now, when attempts are being made to establish a footing in markets like those of the Near East before our competitors have obtained a monopoly of the trades. I would therefore once again urge upon the authorities the necessity of doing everything possible to remove the present grounds of complaint in regard to these services. As I have pointed out before, they must be clearly aware of the reasons for the present position, and it should not be difficult to find a remedy.

THE CYCLONE IN EASTERN BENGAL.

Particulars of Damage.

The India Office has issued the following telegram received from the Government of India dated October 4:—

Following are particulars of cyclone on the night of September 24, 25 in Eastern Bengal which caused considerable damage to property and loss of life, but full information not available yet. Many buildings at Khulna were destroyed and persons injured rendered homeless accomdated in Government buildings. Many boats lost, and one passenger steamer believed lost. One corpse recovered from river. Considerable damage also caused at Dacca, where many houses destroyed and river boats reported lost. Impossible to estimate at present number of men killed or drowned, but twelve cases reported on September 25 last. Owing to interruption of railway and telegraphic communication no news from Mymensingh available.

A later telegram from the Government of India, dated October 7, states:—

Cyclone caused greatest damage along Padma and Dhalleswari Rivers in Dacca district, particularly Munshiganj sub-division, where many villages were destroyed and large numbers of people drowned. Standing paddy crops slightly damaged, but great loss of stored grain and jute. Sugar-cane crop largely destroyed. Fatalities Indians not numerous. Impossible to estimate at present loss of life by sinking of river-craft. Inland steamer companies have lost heavily. Considerable damage to property in Kishoreganj and Natrokona sub-division of Mymensingh, but only one death so far reported. Bakarganj less seriously affected, but a few deaths from sinking of boats reported. Local authorities have been authorised to incur expenditure in anticipation of sanction to relieve immediate distress and preparations for distribution of agricultural loans in train. Fifty thousand maunds of Burma rice sent to Lohanganj in Dacca to replace destroyed stock. Steps are being taken to open relief fund. It is feared that heavy expenditure necessary on Government buildings damaged or destroyed. Hon. Mr. Cumming has proceeded to affected area.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director General of Commercial Intelligence, Calcutta, dated October 1:—

Rainfall nearly general in Peninsula and North Eastern India. Severe cyclone greatly damaged crops and live stock Dacca division and Khulna, September 24.

Agricultural outlook generally hopeful, though much will depend on rain during next fortnight in the Punjab, United Provinces, Bihar and Orissa and Bengal where rain essential for sowing wheat and maturing rice. There has recently been frequent and excellent rain throughout Peninsula which has completely saved situation in Bombay and Madras, Deccan and Hyderabad, which otherwise would have been serious. This rain has now reached Central India and United Provinces and it appears to be extending northward. Good harvests seem assured in Bombay and Central Provinces and fair harvests elsewhere. Economic conditions greatly improved. Price of food grains tending to fall in all provinces except Madras. Prices still excessively high in Bengal, but owing to measures taken to restrict exports and import Burma rice there was pronounced fall in prices during last week.

Bombay cotton market steady. Fully good Broach April-May quoted Rs.483. Piece goods market depressed owing to unstable exchange.

Calcutta jute sackings markets steady but little doing. Hessians steadier.

Dated October 8.

General rain, except in North-Western India. More required high lands, west Bengal. Damage done by cyclone to standing crops not so serious as anticipated.

Bombay cotton market steady. Fully good broach April-May, quoted Rs. 487. Piecegoods market is depressed, with poor demand but light stocks. Calcutta Gunny and Hessians markets steady.

COAL SHORTAGE AT PORT SAID.

(From Our Own Correspondent.)

Port Said, October 3.

The chief topic of conversation in business circles, which here are practically synonymous with shipping, is now coal. For some time past supplies from England have been very short, and stocks have run low. In fact, for two days last week there were no colliers at all in the port, which is an almost unheard of thing. The last shipmaster to leave attributed the shortage partly, if not wholly, to the dilatory tactics of labour at the ports. He told your correspondent that he was nine days under the coal-tips in Cardiff. He had in pre-war days loaded there in twenty-four hours, and in the U.S.A. had had his ship loaded in eighteen hours. There appeared to be no shortage of coal ready to ship, but it was simply the passive resistance to anything in the nature of real work of the so-called workmen. One of the officers of the ship had occasion to speak to the foreman of the gang, and eventually found him with two others playing cards in a shed on shore. He told the officer that he would come when he had finished his game, and not before. This was at eleven in the morning. Comment is superfluous.

Owing to the uncertainty of future supplies of coal in Port Said the British authorities have shut down on all coal stocks, and have ordered agents to supply no coal to merchant shipping (other than transports) going west, and only to British merchant vessels going east. It is hoped that the stringency of this order will be modified in a few days' time when there is a better idea of possible future supplies, but that is how matters stand at present.

German Trade Expected.

Trade in the country has hardly found itself yet, and is in a state of what might be called suspended animation. This is partly due to manufacturers at home not being able to guarantee delivery either early or in the middle-future, if one may coin such an expression. Another contributing cause is the difficulty of freights, space being extremely difficult to get, and very expensive when obtained. There is also a feeling amongst the native buyers that in a few weeks' time the German and Austrian travellers will be coming along and will be offering goods for nothing, only making a slight profit on the wrappings. They do not seem to realise that even a hungry German will not be able to make and sell things at the same price at which he dumped them before the war. The disaffected part of the population are jubilant over the troubles at home, and believe it will hasten the time when the country will be over-run with German drummers giving any credit and doing anything to get orders, profitable or otherwise.

DISTRESS IN INDIA.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agricultural Department, dated October 10:—

Our telegram dated October 3.—Relief operations in the United Provinces and in Amraoti district of Central Provinces, and gratuitous relief in Jubbulpore, Damoh and Mandla districts of the latter province, have been closed. In Hyderabad prospects are now hopeful, and the number of persons on relief works is decreasing. Numbers received:—Bengal (incomplete figures), gratuitous, 6,155. Bihar and Orissa: works, 3,796; gratuitous, 52,695. Feudatory States of Orissa: works, 6,806; gratuitous, 2,37(J)1. Central India: works, 3,300; gratuitous, 8,000. Central Provinces: works, 19,343; gratuitous, 5,444. Bombay: works, 3,550; gratuitous, 20,658. Hyderabad: works, 19,000; gratuitous, 32,000. Madras: works, 59,088; gratuitous (incomplete figures), 70,625.

The death occurred at Wallasey, Cheshire, on October 8, in his sixty-eighth year, of Mr. Marshall Little, one of the most prominent men in the Black Sea shipping trade. He was the founder of the firm of Marshall Little and Sons, Liverpool. The funeral took place at Flaybrick Hill Cemetery, Birkenhead, on October 11.

THE BRITISH EXHIBITION AT ATHENS.

INFLUENCE ON TRADE WITH THE NEAR EAST.

The Exhibition of British Manufactures at Athens, which has been organised by the Federation of British Industries, was opened last Monday, October 13, and its formal opening by the King of the Hellenes will take place on October 19. The idea of the exhibition originated during the visit to this country last year of the Greek Industrial and Commercial Mission, when it was suggested that it would be an excellent thing to give commercial circles in Greece an opportunity of seeing the industrial potentialities of this country. It was obvious that if the exhibition was to be of the fullest utility in furthering the growth of British commercial relations with the Near East, it would have to be held at an early date, and the choice of October left the bare minimum of time for the vast work of organisation entailed. In the circumstances, the completeness of the exhibition speaks volumes for the energy and enterprise of the Federation and for the enthusiasm of the manufacturers who have readily availed themselves of the opportunity to introduce their commodities to the Near Eastern markets. The exhibits comprise the manufactures of over 300 of the leading firms, and the exhibition is a wonderfully complete reflex of the industrial resources of the United Kingdom. It would not, indeed, be far short of the mark to describe it as the England of industry and commerce in miniature, and it is admirably calculated to fulfil its purpose of showing Greece and the Near East generally the innumerable ways in which this country can be of assistance in reconstruction and afterwards when the conditions of world commerce are once again normal.

Machinery.

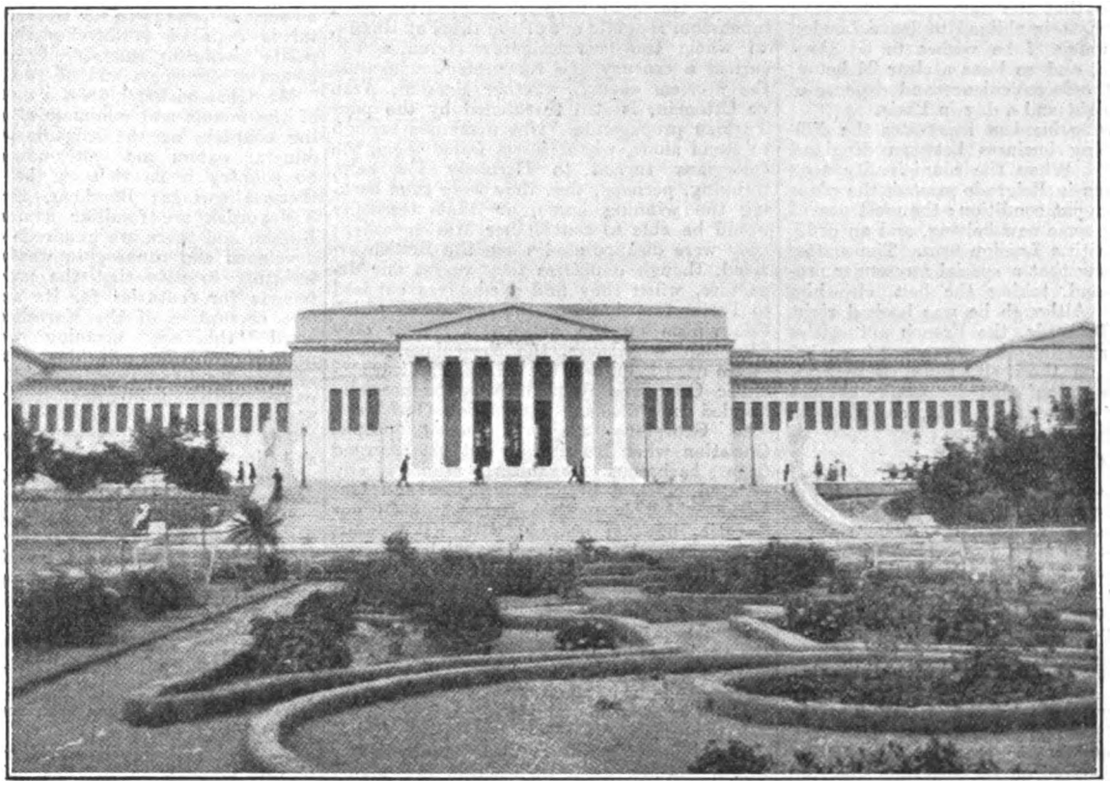
The exhibition, which is being held in the beautiful Zappeion building—than which it would be difficult to imagine a more suitable structure for the purpose—consists of four sections—machinery, textiles and clothing, furniture and decorations, and chemicals and miscellaneous—and each section is of the most comprehensive character. The Machinery section, which is naturally the largest in the exhibition, includes such exhibits as gas engines, motor cars, tractors, electric fittings, and building equipment. One-third of the space in the Zappeion is given over to this section, but all the exhibits are not being shown there An annexe to the main exhibition is given up to motors; tractors are being exhibited where it is possible to see them in operation, and aeroplanes where flights can be made. Arrangements were made for a large Handley-Page machine to fly to Athens in time for the opening of the exhibition; and there will be daily flights for the benefit of exhibitors.

Other Exhibits.

The Textile section contains a notable selection of the famous products of Lancashire. The exhibits include every variety of cotton and woollen piece goods, and such commodities as ready-made clothing and hosiery. The exhibits in the Furniture section include everything that is in use in the ordinary household. Bedsteads, chests of drawers, and similar staple articles of the home are, of course, being shown, and also kitchen ware, cutlery, table linen, and other things required by the housewife. The Chemicals and Miscellaneous section is one of the most interesting in the exhibition. The exhibits in the Chemicals section are of an extremely varied character, and will, no doubt, surprise visitors who have not hitherto realised the capacity of British manufacturing chemists. A notable feature of the exhibition is the food products section, which contains examples of most of the articles of food manufactured in this country, many of them, no doubt, new to Greece.

It is interesting to note that the cinematograph has been enlisted to show visitors how some of the manufactures exhibited were made. This is the first time, presumably, that such a use has been made of this agency at an exhibition, and the innovation is particularly happy, because nothing could be better calculated to emphasise the value of British manufactures than a glimpse of the thorough workmanship that obtains in our factories and workshops. Another valuable feature is the presence at the exhibition of skilled mechanics, who have been sent to Athens by some of the firms represented in the machinery section. Greece is seriously handicapped by a shortage of expert mechanics, and the presence of these skilled engineers means that those who purchase machinery will be able to have it properly erected, while they will be able to have existing machinery renewed or repaired. In this connection it is understood that efforts will be made to arrange for British mechanics to be available permanently in Greece. If this can be done, it would undoubtedly prove an invaluable factor in the commercial relations between the two countries.

There is not a shadow of doubt as to the success of the exhibition, for not only in Greece but throughout the Levant the undertaking has excited the keenest interest in business circles, and expectations that the Zappeion will be thronged with visitors will undoubtedly be realised. In short, British manufactures, through the agency of the Federation, will have been brought before buyers in the Near East in a way which would not have been possible otherwise, and it may be assumed that the immediate result will be a great number of orders for goods of all kinds. The exhibition will, in short, provide the entrée to the Near Eastern market, and for what happens afterwards manufacturers and labour will be jointly responsible. Without initiative on the part of manufacturers it will be impossible to retain the advantage that will accrue from the exhibition, or to make further progress, but with the best will in the world manufacturers cannot cater properly for markets without the willing co-operation of labour. There is now no doubt of the desire of manufacturers to establish relations with the Near East, and it can only be hoped that labour will realise that the achievement of its desires depends on rapid production for consumers abroad. Given that is the case, then the great opening presented in the Near East will not pass to other countries, for it must be remembered that the almost universal desire in the Near East is for commercial relations with the United Kingdom, and buyers will not go elsewhere, be competitors never so persistent, unless it is clear that we are unable to supply the goods that are required.



THE ZAPPEION.

GREAT BRITAIN AND YUGOSLAVIA.

Handicaps to Trade Development

(From Our Belgrade Correspondent.)

October 1.

One of the chief inconveniences of life for the British colony in Serbia is the absence of a parcels post. Communications with London are very difficult, though they are easy enough with Paris. A Frenchman in Belgrade cabled home for some articles, which were delivered within ten days; and there is a through truck from Paris to Belgrade three times a month. Yet the British colony is without telegrams, for a cable that takes over fifteen days is useless; postage is slow, though it has been improved recently; but parcels post is non-existent; it is urgently and insistently wanted, and nobody can understand why we have not got it. The commercial community require it for the despatch of catalogues, samples, and commodities, and the whole of the colony require it for purposes of ordinary convenience.

Another complaint is the difficulty of through communication. The London-Paris train frequently misses connection with the Simplon-Orient express, which leaves Paris at 9 p.m., so that the unfortunate traveller to the Near East is obliged to leave London the previous day if he wishes to be absolutely certain, and so loses a clear 24 hours, apart from the inconvenience and expense of spending a night and a day in Paris.

The following incident illustrates the difficulties of doing business between England and Serbia. When the municipality took over the trams in Belgrade most of the plant was in a worn-out condition; the most urgent need was for some new belting, and an order was placed with a London firm. The matter was so pressing that a special messenger proceeded overland, taking the belt with him as luggage. Although he was booked right through to Belgrade, the French autnorities insisted on charging the messenger over 100 francs duty on the belt, since, they said, there was no proof that he would in fact continue his journey to Serbia, and that he might sell the belt in France.

Lack of Banking Facilities.

One of the obstacles to the development of British export trade to Yugoslavia is the absence of banking facilities. There are a number of small local banks, but of foreign banks the only one operating is the Franco-Serb, which is reputed to have done very good business during the current year. There have been many rumours of the impending arrival of a British bank, or of the formation of an Anglo-Serbian bank, but nothing has materialised so far. One rumour was very persistent and precise; it was traced to the arrival of a Serbian financier from London, reputedly merely to secure the formal signatures required on the Belgrade side, but nothing more has been heard of it. One can hardly believe the report that the failure of negotiations was due to a misunderstanding between the contracting parties owing to the mutual ignorance of each other's language.

That there is scope for a British bank in Yugoslavia hardly requires proof. That it is wanted, and wanted badly, can be testified by any member of the growing British colony in Belgrade, who are anxiously waiting for banking facilities.

GEORGIA'S MINERAL RESOURCES.

Undeveloped Oilfields.

"Mineral Resources of Georgia and Caucasia; with a chapter on the Manganese Industry of Georgia." By D. Ghambashidze, F.R.G.S. (London: George Allen and Unwin, Limited. 8s. 6d. net.)

This work of reference is a welcome addition to the scanty literature in English dealing with any aspect of the Caucasus, a country as little known to the British, indeed, to the European public, as it is deserving of attention in view of its immense and varied interests. The problematic future, the important strategic position, commanding a gateway from Europe to Asia, and the great resources of this fascinating country, make it well worth the careful study of statesmen and men of commerce and industry. The ancient Georgian Empire, reappearing as a mushroom republic out of the ruins of Russia, to whom the last Emperor Hercules VI. turned a century ago for protection against the Moslem enemy, whether Persian, Arab or Ottoman, is still threatened by the pan-Turkish propaganda. Not numerous enough to stand alone, when Russia failed them, the Georgians turned to Germany for help, thinking, perhaps, that they were thus backing the winning horse, or that Germany would be able to control her Moslem allies; they were disappointed when the British arrived, though doubtless they regret our departure, when they find themselves exposed to Tartar fanaticism on the east and Turkish Chauvinism on the south-west. Their only Christian neighbours, the Armenians, themselves need help, and the military and aristocratic Georgians despise their commercially minded neighbouring and fellow-Christians The Georgians are an ancient people, Christian when Russia had not yet emerged from barbarous paganism, ethnologically isolated, with a peculiar alphabet and language which is neither Indo-European nor Semitic, but *sui generis*, with its Hevsur, Mingrelian, Laz and other dialects. Yet they insist that Russian savants left stranded in the fine Caucasian Museum at Tiflis shall write their scientific works in Georgian, defeating thus their own ends and condemning the work to oblivion.

Their country is one of great beauty and infinite natural resource; the land is extremely fertile, but the people are lazy. Only one important mineral is lacking—coal, but this is amply compensated by the presence of oil. Many parts of Georgia are highly petroliferous, but oil is exploited so far outside their frontiers, for neither Baku, Grozny, nor Maikop are in Georgia. A British syndicate has made a plucky attempt to develop a new oilfield in Guria, and it is to be hoped that a period of peace will enable them to continue their work (interrupted and almost destroyed by the war) and crown their efforts with success.

The dominant mineral is manganese, the fields of the Kutais Government having produced almost half the world's output; British capital was confined to a single company, and Greek, Armenian and Georgian capital were overshadowed by German; quite the biggest unit was the Schalken Gruben and Hüttenverein of Gelsenkirchen, which in the first half of 1914 so greatly intensified its output that though operations were guillotined by the war, the statistics of that year show no reduction. Their property was sequestered by the Russian Government, and negotiations for its acquisiton by a British group were in progress in 1915, when our representative at Kutais learned that a peremptory order from Petrograd forbade transactions. It is, perhaps, not fanciful to see in this the dark hand of Rasputin, whose intrigues were always busy when big money was in the air.

Another source of potential wealth is the immense deposits of copper which extend practically from the Black Sea to the Caspian. The Caucasus Copper Company is the only British interest in this field. The works fell into the hands of the Turks in 1915, when the manager was wounded, but the enemy did no serious damage to the works. Large capital is required to develop these great deposits owing to the scarcity of roads and means of transport and of fuel.

Mr. Ghambashidze gives a detailed account of the metals and non-metals, with interesting chapters on the subsidiary question of mineral waters and water-power. Probably no country is so rich as the Caucasus in thermal springs; Borzhom, Essentuki, and Kislovordsk are familiar names throughout Russia, and there are hundreds of others undeveloped and running to waste. It is interesting to note that the name of Tiflis, famous for centuries for its sulphur baths, is a corruption of the Kartelian (Georgian) word "thbilissi," meaning warm. It is probably only a coincidence that this resembles Teplitz, Toplitsa and other place-names with an identical meaning in the Slavonic languages.

The book is richly supplied with statistics and illustrated by a fine series of photographs of some of the most famous bits of Caucasian scenery.

It is certainly to be hoped that British enterprise will turn its attention to the great resources of the Caucasus, but the Georgians must drop an Anglophobe policy if they are looking to London for capital.

Information has been received by the Board of Trade from his Majesty's Chargé d'Affaires at Bucharest to the effect that the registration of trade marks has been resumed by the Roumanian Government.

A circular to the shareholders of the New Grosny Oilfields states that, with regard to the petroleum industry in Algeria, a good deal of prospecting work has been done in the neighbourhood of the oil deposits, several wells having been drilled successfully into the oil-bearing strata.

INDIAN CHURCH AID ASSOCIATION.
The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the India Bishops to carry on religious and educational work among these classes, upon whom so much depends.

For further particulars apply to

Engineering Notes.

Results of Tractor's Trials.

It is very satisfactory to hear that the successes of a British agricultural tractor on its trials recently in Egypt influenced a large landowner so effectively that, according to reports, some large orders for agricultural machinery which he was preparing for America are now to be sent to this country. Whatever may be the value of this report, it is well known that the display of machinery at work is more inviting and effective in sales than catalogues and "chats." Egypt is still adhering to many of the primitive tools, implements, and methods of cultivation, but recently the better classes seem anxious to introduce a thoroughly modern agricultural system.

The trials of the tractor, referred to above, have taken place at the experimental farm at Ghizeh. Under the direction of Abdul Hamid Fathi Bey, Assistant Director of the School of Agriculture, a tract of land was selected and marked out for the trials. This tract consisted of berseem stubble that had not been irrigated for several weeks, intersected by ridges and water channels, and made a rather severe test for the tractor. Under these conditions the tractor, with one of three ploughs, averaged about five feddans per day of ten hours, ploughing to an average depth of 17 centimetres. The tractor's capabilities were also demonstrated in crossing channels, turning on banks, etc., these tests showing that it is practically impossible to overturn the machine.

In the actual ploughing test, the land was steadiiy ploughed in a very practical and thorough fashion, the furrows showing evenness and depth that convinced the onlookers of the advantages of tractors for this work. Ridges, valleys, and a footpath were taken in turn without difficulty. A further demonstration was given on a tract of land irrigated ten days before. Under such conditions this was turned over with the greatest ease, and to a greater width and depth, whilst the acreage covered was considerably increased. After only a week's tuition, two natives successfully manipulated the outfit, and general satisfaction was expressed with the result of the demonstrations and with the suitability of the tractor for work under the conditions prevailing in Egypt.

Efficiency of Tractors.

Yet as another instance of what a British-made tractor can accomplish, we may refer to a demonstration which the makers of the machine recently held, by submitting their machine to a thirty-days' non-stop test, when it cut 315 acres of wheat, 71 acres of oats, ploughed 157 acres, disced 9¾ acres, and hauled a load for a distance of sixty-one miles. Such tests, even though presumably carried out under favourable conditions, with the machine in the hands of experts, are useful for propaganda work, and it would be interesting to see similar attempts made by other tractors. This would effectually remove the doubts sometimes expressed as to whether the agricultural tractor can stand up to the heavy duty imposed upon it.

Shipbuilding in India.

The demand for small cargo boats for service in the Eastern Mediterranean coast and the islands has apparently been extended to India, where, according to authentic reports, there is also an increasing demand for similar boats, especially in the vicinity of ports and rivers. Judging from the drawings published by a shipping contemporary of a type of vessel which has been designed for service on the river Hooghly, and evidently representing the type mostly favoured for such purpose in India—since three other similar vessels are being built there—it seems that there will soon be a good number of well-designed, strong, and serviceable small cargo boats on the Indian rivers, which, in spite of their size, will lack neither modern loading and unloading equipments, nor good accommodations for the crew, nor even want in smartness of appearance. They will probably give the death-blow to the picturesque native boats, like the modern motor boat has done to the gondoliers of Venice. The vessel referred to above for service on the Hooghly is 65 ft. in length, with a beam of 14 ft. from the outside of the planking, whilst the draught is limited to 5 ft. when fully loaded. The propelling machinery, which consists of a 100 h.p. oil engine, is installed amidships, and there are two cargo holds, one forward and one aft, each served by a derrick. A funnel is fitted to the vessel, up which the exhaust is taken, and forward of this is the pilot house. The crew is accommodated right forward under the fore deck. The engine is controlled from the pilot house, whilst there is an oil-driven winch located on the main deck with a barrel for handling the hoisting gear on both masts.

As mentioned above, three vessels of this type are now being built for use in India, mainly by Indian labour, the construction throughout being of Indian teak with copper fastenings. Engines of British manufacture are being fitted.

A Japanese Boat.

In view of the apparent "rush" of Eastern Mediterranean shipowners and others to buy Japanese steamers, it may be of interest to such buyers to hear that, according to influential British shipping journals, the recently reported stranding and subsequent breaking amidships of the new Japanese steamer "Yoten Maru" on her voyage to New York was a serious piece of news to British underwriters. It was evident, they add, that the casualty was serious even on first reports, for her engine-room was said to be flooded and the prospect of salvage difficult, but it was not thought at first that a new steel vessel of 7,149 gross tons would become a total loss in so short a time. The vessel was built of steel at the Osaka Iron Works in Japan, and had quadruple expansion engines; and her insured value is £296,000.

MALTA TRADE NOTES.

(From Our Own Correspondent.)

Malta, October 3.

In view of the financial straits in which the island finds itself, it is gratifying to be able to record signs of an increasing readiness to invest local capital in local concerns. The formation of the Malta Fishing Company, Ltd., is a welcome indication of this change. The capital has been increased to £25,000, to be issued in 340 nominative shares of £50 each and 1,600 ordinary shares of £5. These shares are offered to the public for subscription at par, and the £5 shares are redeemable at £6. A successful future should be before this company, and the public should reap a great advantage therefrom, for it has been common knowledge for a long time past that there has been much profiteering in the fish supply and that middlemen have been reaping exorbitant gains; so much so that the local government has had to control the prices. Despite this action, the prices are still inflated, and in some cases stand at as high a figure as 4s. per rotolo; that is, for 28 oz. The new fishing company has the good wishes of all sections of the community.

Irrigation.

With the rains late and water scarce there is the usual outcry for schemes of irrigation. The Royal Commission of some years ago laid great emphasis on the need for irrigation, but nothing has been done, but now that affairs have become so serious that a committee of officers have met at the office of the Chief Engineer of the Dockyard to consider the possible economies which may be effected in the consumption of water by the War Department in the Malta Command, perhaps the local authorities will rise to the occasion. The dilatoriness of the local government in looking after the real and vital interests of the people has been on several occasions given as one of the chief causes of the recent riots.

Miscellaneous.

Mr. Luigi Antonio Camilleri, LL.D., has been appointed officer in charge of the French Consular Agency at Victoria Gozo.

With a view of avoiding economic difficulties, the Control Board is requiring a return of the amount of foodstuffs on hand, on order, or en route to be handed in on the 15th and at the end of each month.

A strong Committee has been appointed by the Government of India to investigate the condition of the sugar industry and its further development.

The Foreign Office announces that the Black Lists, the withdrawal of which was announced in the *Board of Trade Journal* of May 1 last, have now, according to a decision of the Supreme Economic Council, been definitely abolished.

The South Indian Railway Co. invites tenders for the supply of E class double bogie tank engines and D class engines with tenders. (Spec., £2 each, Secretary, Finsbury Pavement House. Drawings from Mr. Robert White, 3, Victoria Street. S.W.1.). Tenders close November 11.

Near East Markets.

LONDON PRODUCE REPORT.

Currants.

Supplies on hand are now very small, and such transactions as have taken place have been at advanced prices. The outlook in general is most unpromising, as will be seen from Messrs. Burlumi's report. The estimate for the new Greek crop is now reduced to 120,000 tons, and other countries are willing to buy currants at increasing prices. It seems only too probable, therefore, that this market will go short.

Sultanas.

There is nothing new to record. Stocks are scanty and prices are now being paid by manufacturers in excess of the maximum retail values.

Coffee.

While the home trade has been brisker, the demand for export has temporarily fallen off. Offerings at auction this week totalled 5,010 packages. Costa Rica good bold and bold grey greenish brought 151s. 6d. to 153s. for export, while fine bold and bold greenish brought 142s. 6d. to 147s. for the home trade. East India realised 143s. 6d. to 146s. for extra bold fair greenish, and 142s. for bold. The futures market has been quiet. Quotations:—December, 119s. 9d.; March, 113s.; May, 108s. 7½d.; July, 106s. 7½d.

Sugar.

The market has been steady, with a firm demand. Prices of raw sugar show an upward trend.

Oilseeds.

Linseed has advanced in price, and is quoted, Calcutta to London, October-November, 44s. per cwt.; ditto, Bombay, 45s. According to the International Institute of Agriculture this year's linseed crop is the smallest on record. The market in rapeseed is quiet. Bold Ferozepore is quoted at 38s. and Toria at 40s.

Oil cake, etc.

Linseed oil is firm at 94s. for spot and at 93½ for November-December. Soya bean oil has been offered at 80s. Coconut cake has been in good request at 420s. per ton. Supplies of soya bean cake are short.

OPIUM MARKETS.

Messrs. Barker Bros., Smyrna, report as follows for the week ended September 19:—Owing to heavy purchases last week and to a dearth of available stock our market early this week opened at 30 piastres per oke higher. A few cases changed hands at the higher demands of our dealers, but buying soon stopped owing to a sudden material drop in the exchange from Ps.360 per pound sterling to Ps.335, and with very little demand at this low figure. Nevertheless some Continental orders had to be executed, followed by speculative purchases bringing up the sales of the week to 66 cases at 15s. to 20s. per lb. c.i.f. U.K. ports. Slightly selected druggists' is now at 17s. per lb., bases 11 per cent. Manufacturing material is now at 16s. 6d. per lb., bases 11 per cent. Yerli fine elastic paste is now at 19s. to 20s. as to quality. Common low grades from 10s. to 15s. The arrivals from the interior since last June to date amount to 650 cases, against 9 at the same period last year.

GREEK CURRANTS.

Continuous Rise in Prices.

The following extracts are from Messrs. Burlumi's annual report on currants, dated September 30:—

We refer to our last report, dated October 10, 1918, in which we estimated the crop of currants at about 140,000 to 145,000 tons. The shipments to the United Kingdom during the current year opening on August 23, 1918, and closing on August 22, 1919, reached 86,000 tons, a weight exceeding considerably the importation of the year before and, in fact, of any other year's importation. The danger of the enemy sinking the steamers bringing goods to her opponents, reduced their number considerably and increased the freight for currants to the United Kingdom to 350s., and even to 400s., per ton during the first four months of the 1918-19 season. The freight of the British steamers was reduced by the British Government to 200s. per ton in December, after the conclusion of the armistice. After the month of March, the British Government permitting the shipment of currants to the U.K. on Greek steamers, the freight dropped down to 60s., and even to 50s., per ton for London, and to 70s. to 80s. for Liverpool. The home consumption of the season from September 1, 1918, to August 31, 1919, attained 76,531 tons and this weight exceeds that of any previous season. The importation during the time previous to Christmas was inadequate for the usually large consumption during that part of the currant season, but the consumption in the spring and summer of 1919, has been much larger than the usual weight, which proved the necessity of the article to its consumers.

The crop of 1918 is believed to have rendered 125,000 tons, and the addition of the 33,000 tons of the 1917 crop brought over to the crop of 1918, increased the supplies of 1918-19 to 158,000 tons. Of these supplies, 100,000 were exported to foreign countries, and the balance of 58,000 tons were used in Greece in many ways, but principally in the production of wine and spirits. The Privileged Company have sold to wine and spirit producers all the retained currants at considerably higher prices than they could get during the previous season. The certificates for the retention of currants remaining in circulation on August 22 last were 6,500 tons. The Privileged Company has declared a dividend of 10 per cent. on its Ordinary shares, with a corresponding distribution on the Founders' shares. The wine and spirits companies that use the retained and other currants have paid higher dividends than in any other season.

The stock in London at the end of August, 1918, was 187 tons, according to the reports of the "Grocer," and currants were not allowed to be sold by retailers unless they were cleaned in the United Kingdom. The obligation to clean almost all dried fruits rested on the retailer or the wholesailer at a cost of 3s. 9d. per cwt. This condition, imposed on July, 1918, remained in force up to the middle of February last, and the price had been fixed by the Food Controller at 108s. 3d. per cwt. duty paid. This price lasted from July, 1918, until February 17 last, when the highest for the wholesale price was reduced to 71s. per cwt. and the highest retail for the lowest as well as for the finest currants was reduced to 10d. per pound. On April 14 the Ministry of Food declared that all restrictions as to the importation of currants would be withdrawn, but that the highest retail price could not be increased over the 10d. per pound. These conditions for the sale of currants were to remain in force until September 1. There was practically little importation of 1918 currants until April, and sales were made to dealers early in May at the following prices:—60s. per cwt. for Pyrgos currants, duty paid; 62s. per cwt. for Amalias currants, duty paid; 64s. per cwt. for Patras currants, duty paid; and 66s. per cwt. for Gulf currants, duty paid.

The prices of currants were raised in Greece from May to the end of the 1918—1919 season, and the whole of the fruit was disposed of at prices increasing continuously up to the end of the season in all the consuming countries. Pyrgos fruit was paid in June at 75s. per cwt., duty paid, in London. Amalias at 76s., Patras at 77s., and Vostizza at 80s. The stock in London at the end of May was 2,000 tons, against 500 tons on the same date in 1916, and 1,800 tons at the end of May, 1917. The prices of currants rose continuously, and in spite of the considerable importations in the last three months of the season they closed at the end of August at the highest. Nothing could be got under 82s., duty paid, while Vostizza went up to 90s. At the present moment the currants on offer are very few, and the lowest prices to-day in London are 85s. to 90s. per cwt., duty paid. There is really no stock of currants in Liverpool and Bristol, and the prices quoted in these two markets are really nominal. Of the currants grown in 1918, as well as of the stocks of the 1917 in August of last year, 100,000 tons have been exported and the balance of 58,000 tons was used in Greece, as already stated. The new season has opened there at high prices.

The new crop was expected two months ago to give us about 140,000 tons, and even 150,000; but the present estimates, in consequence of heavy rains during August and this month, have reduced the estimates down to 120,000 tons. The retention in kind which was up to August 22 ten per cent. on the 1918 crop has been reduced to 7½ per cent. on the present crop. The shipments so far have been very small, and the weight afloat for the ports of the United Kingdom does not exceed 6,000 tons. The prices demanded by shippers for the qualities offered to the United Kingdom buyers to day vary from 75s. to 80s. per cwt., cost, freight, and insurance to London, and these prices are higher than those expected by the Food Ministry that has undertaken the purchase and supply to the British consumers. Sales have been made in London for September shipment at lower than the above prices; but the shipment of these sales appears to be put off to October, in the hope of the holders in Greece reducing their prices. The United States and Canada have already bought considerable quantities of the new currants, and the Continent is willing to pay the present prices. These sales have encouraged the growers to maintain the prices and refuse lower offers, because the costs of producing currants now are treble and in many provinces still higher than they were before the war. The higher prices of wines and spirits have increased the use both of fresh and dried currants in their production, and this use during last season has absorbed over 50,000 tons in spite of the high price of the fruit.

THE HELLENIC COMPANY OF MARITIME ENTERPRISES
(PALIOS LINE.)
Head Office - PIRÆUS.

COMPANY MEETING.

MORUMS ORIENTAL STORES, LIMITED.

Increased Turnover.

The statutory meeting of Morums Oriental Stores, Limited, was held on October 10 at Winchester House, Mr. Frank Young presiding.

The secretary (Mr. Geo. Frampton), having read the notice convening the meeting, the chairman said:—Gentlemen, a report has been sent to all the shareholders, and I think we can take it as read. This is the statutory meeting of the company, which we have to hold in order to comply with the Companies Acts. There is no business to be transacted, and the short time which has elapsed since the incorporation of the company precludes the possibility of a general discussion of its business. The necessary steps are being taken to procure the registration of the company in both Egypt and Palestine, and formally to transfer to the company the property taken over from the vendor.

The Branches of the Company.

Now, you would like to hear something about the property that we have acquired. The property consists of general stores, principally dealing with soft goods, and we have branches in Cairo (3), Alexandria, Tanta, Mansoura, Jaffa, and Jerusalem. This is an old-established business. It has been established about fifty years, and when war broke out—it was owned by Austrian capitalists—of course the Egyptian Government took these stores. There were three really large stores in Cairo. Two of these, our competitors, were closed down; the third one, formerly owned by Steins, was taken by the Egyptian Government, and the vendors bought this store from the Controller. Now, in this business we have 32 departments, and the business is a great asset to the country. We have not a great deal of competition at present, and, if any competition did come, we stand in a splendid position to meet it. The business has been called "the Harrods of Egypt," the developments are very good and the prospects most excellent. Before the war all the trade of these stores used to go to Germany and Austria, and you will be glad to hear that since we took them over about 1½ million pounds' worth of goods have gone there, principally from this country. That, I think, is a good thing from every point of view; and, of course, our object is, as far as we can, to bring all the trade to this country and make it an outlet for a large amount of British manufactured goods.

Unrest in Egypt.

Now just a word about the unrest which has prevailed in Egypt during the last few months. You will remember all about it, the riots which happened and the aftermath of those riots, creating a period of unrest in the country. This naturally had the effect of restricting the progressive course of our business; and just recently we have had the tramway strike in Cairo, which has caused a certain amount of inconvenience. Well, you will be pleased to hear that, notwithstanding all these difficulties, our turnover during the four months since we took over the business—that is, April, May, June, and July of this year—has increased 25 per cent. And those four months are not the best months of the year. The best months for trading stores of our kind in Egypt are from October to the end of March, so that we have the best eight months yet to come. In connection with that we have just received a letter from our manager, dated September 18, in which he says:—"As a matter of fact our daily takings, compared with those of last year's corresponding period, show an increase, which has continued to the present day." I think that is a most satisfactory statement to give you, considering the unrest that has taken place there. Our turnover has actually increased, so that if the unrest had not taken place we should, no doubt, have increased the turnover still further, and we look forward to being able in the next eight months quite to maintain that increase. I do not want to be too optimistic, but I think it will improve even on the ratio of increase that we show for the last few months. I myself am quite optimistic about the unrest in Egypt. We have Lord Milner's Commission going out to look into this matter, and Lord Allenby, in his speech the other day, referring to Egypt and the unrest there, said that "as far as he could see the troubles in Egypt had subsided and Egypt would remain quiet." So that, given settled times in Egypt, your directors feel very optimistic about the future of this business there, and also in Palestine

In connection with that, I might tell you that when Jerusalem was taken over we were not exactly asked by the Government, but we were advised that the utmost support would be given to us if we went to Jerusalem and opened a store there. We did so, and for the goods we sent up to Jerusalem we charged exactly the same price as we charged in Cairo, Alexandria, and our other branches. Without question, it stopped a lot of profiteering that was going on up there, and it was a great help to the troops and also to the people. The directors had under consideration the possibility of opening a branch in Constantinople, and should the negotiations come to a successful conclusion we have no doubt that it will be an important branch, and one which will show very good results.

With regard to the management in Egypt and Palestine, we suffered a loss by the death of Mr. Syson, our manager, who had been managing the business for about two years, but we were fortunate in having with us Mr. Goldstein, who is of Spanish nationality, and has been connected with the business for nearly thirty years. We have appointed him manager in Egypt and Palestine. Mr. Goldstein has recently been on a visit to England, and we discussed with him at great length the present position and general policy to be pursued, and he has returned fully conversant with our wishes regarding the general conduct of the business.

Directors to Visit Egypt.

I may say that one of our directors is going to Egypt within the next week or two, and the other directors have it in their mind to go there in the near future, so that we may be kept in close touch with the business and with its needs and requirements. You will no doubt agree with me that it is a very great thing for a company of this kind to have Messrs. Erlanger connected with us. Their advice is of great importance to us. The directors have decided to close the accounts of the company at June 30 in each year. We hope, therefore, to be in a position to submit the annual accounts to the shareholders during the month of October or November in each year. I do not think there is anything else that I can tell you. There being no resolution to put before the meeting, this really terminates the proceedings, but I shall be pleased to answer to the best of my ability any questions that shareholders may wish to address to me. You will gather from what I have said that we have a most optimistic opinion about the future, and certainly the developments since your company took over the business have been most satisfactory—indeed, considering everything better than we could have anticipated.

A vote of thanks to the chairman terminated the proceedings.

COMPANY NOTES & REPORTS

Barsi Light Railway.

The report of the Barsi Light Railway for the year to March 31 states that the net earnings for the year, less Indian income-tax, amounted to £33,365 17s. 1d., or, adding the exchange adjustment of £4,403 2s. 2d., £37,768 19s. 3d. After providing the interest on the debenture stock, £5,600, and the interest and sinking fund instalment, etc., on the "Latur Extension" debentures, £5,649, there is left £26,519 19s. 3d., which, with the balance of £11,002 brought forward from the previous year, makes £37,521 19s. 3d. at credit of net revenue account. The directors have transferred £4,153 5s. 1d. to credit of reserve account for the equalisation of dividends, etc., which account now stands at £82,000, and have reserved £1,358 10s. as a provision for income-tax on undistributed profits. An interim dividend of 3 per cent. (or 6s. per share) was paid on April 25 last, and the directors now recommend that a final dividend of 3 per cent., with a bonus of 2 per cent. (10s. per share in all) be paid. This will make a total distribution of 8 per cent. for the year, and leave £11,210 4s. 2d. to be carried forward. As against the previous year there is an increase of 118,656 passengers and Rs.84,544 in coaching traffic and sundry receipts, and of 12,867 tons and Rs.65,377 in goods traffic, making a total increase of Rs.1,49,921; on the other hand, working expenses show an increase of Rs.42,119, so that the increase in net earnings as compared with last year is reduced to Rs.1,07,802. War conditions may be said to have prevailed throughout the past year, as, owing to the trouble on the North-West Frontier, the restrictions on the movements of pilgrims and on the through booking of goods had to be maintained by the main line railway. These restrictions, though somewhat modified, are still in force, and apart from being a direct handicap on this railway operate in restraint of trade in the district it serves. Business generally was also much affected by the epidemic of influenza last autumn and by the regulations necessary for controlling the movement of food grains, etc., consequent on the existence of a state of famine in other parts of the country. The percentage of working expenses to gross earnings works out at 48.24, as compared with 51.75 in the previous year. The approximate traffic receipts from April 1 to August 30, 1919, amount to Rs.6,77,600, equal to Rs.264.45 per mile per week, as compared with Rs.3,72,100 (Rs.144.27 per mile per week) during the corresponding period of last year. The restrictions on railway traffic—both passenger and goods—have been considerably modified, and both classes of traffic show a steady improvement, while the attendance of pilgrims at the Ashadi Fair at Pandharpur in July was a record one, and accounts for much of the above increase to date. The directors have elected Mr. Frederick Schooling, F.I.A., to fill the vacancy on the board due to the death last year of Mr. F. M. Halliday.

Nizam's Guaranteed State Railways.

The report of H.H. the Nizam's Guaranteed State Railways Company for the year ended March 31 last states that on the broad gauge system expenditure on capital account was £22,312, bringing the total to £3,979,788. The net earnings, after deducting £21,538 payable to the Government of India on account of the Bezwada extension, amount to £212,491. The sum required to meet the charges in respect of debentures and income tax adjustments, together with 5 per cent. on the capital stock, amounts to £212,447, leaving a surplus of £44 divisible between the Government of H.H. the Nizam and the company. In respect of the Hyderabad Godavery Valley Line (metre gauge), expenditure on capital account was £20,330, bringing the total to £2,108,116. Net earnings amount to £216,191. The sum required to meet the charges in respect of the debentures and income tax adjustments amounts to £104,973, leaving a surplus of £111,218 divisible between the Government of H.H. the Nizam and the company. The directors recommend a final dividend on the capital stock for the year at the rate of 2½ per cent., plus a bonus of 1½ per cent., less income tax, making a total distribution at the rate of 6 per cent. for the year. Warrants will be issued on October 23. Meeting, Winchester House, E.C., October 21, 3 p.m.

STRANGERS' HOME FOR ASIATICS,

SUPPLIES AND PRICES IN TURKEY.

CONSTANTINOPLE, September 27.

The following extracts are taken from a recent report received by the Imperial Ottoman Bank :—

The prices keep up in Europe, in England as well as in Italy, on account of continuous buying, but the local trade in manufactured goods has suffered this week a temporary set back owing to the persistent decline in the rate of exchange and in the price of roubles, in addition to the troubled situation in Anatolia. The business of the week is considerably less than that of the previous week.

Produce.

Sugar.—The market is weak. There have been new offers from producing centres. The arrivals of the week amount to 300 wagons. Quotations are :—Java, £57-£58 per ton, and £59-£60 per ton afloat.

Coffee.—No arrivals. Quiet market. Prices Ps.70/75 per oke.

Rice.—Arrivals five wagons. No business. Stocks about 100 wagons.

Tea.—Market strong, with tendency to rise.

Exports.

Opium.—Sales of the week, 70 cases Druggist Kara Hissar, Ps.740 per oke. Prices unchanged. The stock here amounts to about 2,000 cases.

Mohair.—Arrivals, 330 bales. Sales, 200 bales Angora at Ps.80; 140 bales Konia (Malikeuy) at Ps.70 per oke. The market is firm.

Wool.—Arrivals 160 bales. No transactions. The tendency is to fall.

Silk (Raw).—Fifteen bales of Broussa have been sold at £T12.75 per kilo. Syrian has been ignored at £T10-£T10.50 per kilo nominal.

Cereals.—Prices, which had fallen at the commencement of the week, rose from 2 to 5 piastres the oke on account of the stoppage of arrivals.

PORT DEVELOPMENTS AT CASABLANCA AND SAFFI.

H.M. Agent and Consul-General at Tangier reports that a loan of 40,000,000 fr., for the purpose of developing the ports of Casablanca and Saffi, has been adopted in principle, the interest and sinking fund being secured on the receipts of the Caisse Spéciale. Mooring buoys are to be placed at Casablanca in positions under the shelter of the large mole. The question of increasing shipping facilities at the ports of the French Protectorate is under consideration, and more especially the establishment of a regular service between Cadiz and Casablanca, which would be of great utility from the point of view of mail and passenger services. Work in connection with port development at Casablanca, while hindered by the war, was nevertheless carried on and is now being completed with all possible speed. The large mole had attained a length of 1,030 metres in August, and it is hoped to complete the bend of 200 metres additional by the end of the year. A landing-stage of 275 metres has also to be finished, which is expected within about eighteen months, when the largest vessels will be able to land their passengers. The Shereefian Government invite tenders for the construction of a port for lighters here. Persons who wish to tender should give information concerning important marine works already carried out by them and stating the names of the engineer in charge, and should present certificates or other papers in proof of their competence before November 1 to La Direction Generale des Travaux Public at Rabat. Those admitted to tender will receive notice thereof and will be able to obtain particulars of the works to be executed.

The directors of the Indo-European Telegraph Company have declared an interim dividend for the half-year ended June 30 at the rate of 5 per cent. per annum, free of tax, payable on and after November 1 to holders registered October 31.

LANCASHIRE COTTON.

Trade Improving.

(From Our Own Correspondent.)

Manchester, Wednesday.

A very large turnover has transpired in the market during the past week, and spinners and manufacturers have extended their engagements. Prices all round have been advanced to a considerable extent, and numerous producers have been very independent when business has been offering. Information with reference to the Egyptian crop has been scarce during the week, but the growth is understood to be doing well. Spinners of yarn made from Egyptian cotton are in a very strong position, and in most quarters producers have sufficient contracts on hand to keep them fully employed for a long time to come. In spite of the long delivery often required and the higher prices demanded, an encouraging trade has been put through. In American cotton circles sentiment has been very bullish, and values have appreciated. Demand in piece goods for Egypt and the Near East generally has again been very extensive, and some large orders have been placed with makers. Inquiry in cloth for India has been on broader lines, and sales of fair weight have been put through for Calcutta, Bombay, Madras, and Karachi. Buyers for China have again given useful support in a variety of styles. Java, Singapore, and South America have operated freely, and in home trade fabrics increased activity has been met with. Home American yarns have been purchased with freedom at hardening rates, and descriptions suitable for shipment abroad have been in better request. For the Levant a healthy business has been offering, but producers are deeply sold, and delivery difficulties have been experienced.

Liverpool Cotton Association.

The Liverpool Cotton Association has published its annual report for the season 1918-19. The average price of middling American cotton during the year was 19.73d. per lb., against 21.68d. per lb, in 1917-18. The average price of fully good fair Sakellarios Egyptian cotton was 27.85d. per lb., against 30.97d. per lb. in the previous season. The highest price of American cotton during the year was on August 30, 1918, when middling qualities were quoted at 24.77d. per lb. The lowest point was reached on March 7, 1919, when 15.24d. per lb. was quoted for middling. The American cotton crop amounted to 11,603,000 bales, against 11,912,000 bales in 1917-18. The Egyptian crop totalled to 4,820,660 cantars, as compared with 6,307,618 cantars in the previous year. The total imported into Great Britain compared with the preceding year shows an increase of 214,753 bales American, 17,015 bales Peruvian, 3,201 bales West Indian, 1,872 bales African, and a decrease of 12,213 bales Brazilian, 70,813 bales Egyptian, and 126,798 bales East Indian, the total increase being 27,027 bales. The average weekly consumption of Great Britain during the year was 55,270 bales, consisting of 41,020 bales American, 9,920 bales Egyptian, 2,310 bales Peruvian, 1,420 bales East Indian, 290 bales African, 220 bales Brazilian, and 90 bales West Indian, being a decrease of 1,660 bales. The total weight of cotton consumed in Great Britain during the year was 1,526,218,182 lbs., against 1,498,875,677 lbs. in 1917-18. The figures given relating to the distribution of the American crop are very interesting. Of the total supplies during the four years ending 1919 the proportion sent to Great Britain was 20.87 per cent., against 25.45 per cent. in the five years ending 1915. On the other hand, the takings of spinners in the United States during the last four years amount to 57.61 per cent. of the total supplies, against only 39.63 per cent. in the five years ended 1915.

COMPANY RESULTS, Etc.

The directors of the Ceylon Tea Plantations Company have declared an interim dividend of 10 per cent., less tax, on the ordinary shares on account of 1919, payable on and after October 31.

The numbers are announced of 107 debentures amounting to £10,700 of the Land and Mortgage Company of Egypt four and a-half per cent. debentures (series B), which have been drawn for repayment at par on November 11.

The transfer books of the second Mortgage Debenture stock of the British Burmah Petroleum Company Limited, have been closed until November 1 for the preparation of the warrants for interest payable on that day.

It is announced that coupons for accumulated arrears of dividend on the five and a-half per cent cumulative preference shares of the Egyptian Delta Light Railways, Limited, for the years ended March 31, 1914, 1915, 1916, 1917, and 1918 are now ready for issue. Share warrants to bearer and registered certificates must be lodged either at the offices of the company, 210-216, Gresham House, Old Broad Street, London, E.C.2, or with the National Bank of Egypt, Cairo or Alexandria, for endorsement. Preference shares Nos. 1 to 104,078 are entitled to the following coupons:—For 1914 coupon, "Q" representing 1½ per cent., equal to 1s. per share, less income tax; for 1915 coupon, "R" representing 3 per cent., equal to 6s. per share, less income tax; for 1916 coupon, "S" representing 5½ per cent., equal to 11s. per share, less income tax; for 1917 coupon, "T" representing 5½ per cent., equal to 11s. per share, less income tax; for 1918 coupon, "U" representing 2 per cent., equal to 4s. per share, less income tax.

The Bank of England are prepared to receive the coupons due November 1 on Egyptian Unified Bonds; the necessary lists can be procured on application at the Dividend Pay Office, 5-6, Lombard Street, E.C.

The directors of the Guardian Eastern Insurance Company met informally in Manchester on October 7, a large number of the shareholders resident in Lancashire, and, in his address the chairman stated that the support already accorded to the company gave promise of a very active future.

The World Cotton Conference was opened at New Orleans on October 13.

Mr. H. Beacon has resigned the position of manager of the British Bank for Foreign Trade, and will proceed to Paris at the end of the present month to take up an appointment on the management of Messrs. Cox and Co. (France).

SHIPPING INTELLIGENCE.

Shipping at Malta.

(From Our Own Correspondent.)

Malta, October 3.

Most of the steamship lines are now running normally, to the advantage of the whole community and of the merchants in particular. During the past few days the P. and O. company have been represented by the "Khyber," outward bound. Other arrivals have been British s.s. "Sitra" from Liverpool, "Adra" from Barry, the "Andalusian," and the transport "Himalaya" for Marseilles. There has been fair activity amongst the naval craft, nearly all bound for "home," whilst the representative nature of these ships can be judged from the latest list:—H.M.T.B.D. "Swallow," the sloop "Honeysuckle," the hospital ship "St. Margaret of Scotland," the trawler "Moonshine," and submarines L.1, L.3, L.4, L.9, and L.15.

New Shipping Services.

The Cunard Steamship Company announce the opening up of new services. Sailings between Antwerp, Rotterdam, and ports in the Mediterranean, the Levant, and the Black Sea will be conducted in conjunction with the present services from London. With a view to the development of the Smyrna and United Kingdom East Coast trade, a working arrangement has been entered into with Messrs. T. Bowen, Rees, and Company, of Smyrna.

The fleet of thirteen steamers of A. Laird and Co., Londonderry, Dublin, and Glasgow, has been sold to an English company. The purchase price is stated to be a million pounds.

A new company has been registered under the title, "Egyptian Transport Service, Ltd.," with a capital of £5,000, to carry on the business of carriers, forwarding agents, wharfingers, shipowners, charterers, ship and insurance brokers, etc.

The ss. Antonia (ex Lundy), 2,857 tons gross, 1,799 net, has been sold by the Egypt and Levant Steam Shipping Co., London, to buyers not stated.

The ss. Caliros (ex Riplingham), 2,570 tons gross, 1,649 net, has been sold by Mr. Jean Sapariz of Piræus, to buyers not stated.

The ss. Emmanuel, 2,490 tons, owned by A. A. Capparis, of Piræus, had her tail shaft broken, on September 24 at Barry for Hampton Roads.

An urgent problem before the new Financial Adviser to Egypt will be to devise means whereby new sources of revenue may be created.

Owing to the disturbances in Egypt last spring, the revenue during April declined by over half as compared with April, 1918.

The Oilfields Finance Corporation, Limited, announces that the guaranteed issue of £468,442 "A" shares of £1 each of the Baku Consolidated Oilfields, Limited, credited with 2s. 6d. paid, has been oversubscribed, and that consequently the underwriters will not be called upon.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has been a good deal of activity this week, with irregular movements in prices. The rise in the French exchange has again been a depressing influence in those securities in which the Continent is interested. On the other hand, there has been some good local buying in certain directions, and Egypt has been sending buying orders for various securities. The tone, therefore, on the whole, has been a fairly cheerful one.

In Government stocks Egyptian Unifieds have been in strong demand throughout the week, and close 1¼ up at 78½, but there are only buyers at the moment. In Egypt 3½ per cent. pref. the price remains firm at 65½, after dropping to 64½.

In Bank shares National Banks, on local purchases, jumped up to 20, but on some small sales there has been a reaction to 19⅝—a rise of one-eighth. Agriculturals, also, on local buying, went up to 6, but finish only one-eighth higher at 5⅞. Agricultural prefs. have been dealt in to a fair extent in the neighbourhood of 7⅛, but are closing unaltered at 7¼, as there are no sellers at the moment, and buyers are bid 7⅛. Anglo-Egyptian Banks have improved ½ to 18. Bank of Abyssinias are 1s. up at 35s.

In Railways, Delta Lights have advanced one-eighth to 6½.

Amongst Land shares there has been a movement in Aboukirs, which have been steadily bought, and which finish 1s. 9d. up at 29s. 6d., after having touched 30s. In Allotments there has been some business at the current price, and there are further buyers. As regards Béhéras, after some weakness they have firmed up again and close unaltered. The preference shares are one-eighth down at 4⅜. Egyptian Consolidated Lands are 4½d. easier at 2s. 4½d., but there has been some quiet buying at the lower level. Delta Lands dropped 1s. to 12s. 9d., but close only 6d. down at 13s. 3d. Gharbieh Lands are one-eighth easier at 2 3-16, and Sidi Salems have shed a similar fraction, and are 2 3-16 also. New Egyptians have receded 6d. to 22s. 6d., and Sudan Plantations, after rising to 8½, are closing only one-eighth up at 8 1-16. There has been some renewal of demand for Union Foncières, which close one-eighth higher at 3½.

In Miscellaneous shares the feature has been a demand for Salts and Sodas, which are closing ¼ higher at 3 3-16. Khedivial Prefs. have dropped ¼ to 3⅞.

In Oil shares there was at one time a rather severe reaction, but the market is again closing with a firm tendency. Anglo-Egyptians, after dropping to 5, finish 5-32 down at 5½. Roumanians close 9d. up at 24s. 9d., and Traians have improved 1s. 6d. to 13s.

In Greek securities, on sales from Paris, the 1881 and 1884 Loans have dropped to 65½, a decline of 4½ and 2½ respectively. Monopolies, Rentes, and the 1902 Loan have remained firm spots with only buyers about. The 1890 Loan has suffered in sympathy with the 1881 and 1884 Loans, and is quoted 4 down at 66. The 5 per cent. "Currant" bonds have been in constant demand at the existing quotation of 94. The 1914 Loan has also been affected by sales from Paris, and is closing a point down at 73½.

For BUILDING UP your HEALTH take

WILKINSON'S (Estd. since 1829)

ESSENCE OR FLUID EXTRACT OF RED JAMAICA

We cannot speak too highly of it."—Lancet. **SARSAPARILLA**

(The best "Pick-Me-Up")

Pronounced by the Highest Medical Authorities the Safest and Most Reliable Remedy for

Torpid Liver, Debility, Eruptions, and the most WONDERFUL PURIFIER of the HUMAN BLOOD.

IMPORTANT EVIDENCE.—"We recommend your Jamaica Sarsaparilla."—Medical Review.

The only preparation for removing what may be called the sequelæ of a mercurial course."—Sir R. Martin.

The late Lord Clyde said:—"I am never without it, for when feeling depressed or out of sorts from anxiety or fatigue, a dose or two animates me."

"It cured me of Torpid Liver after all other remedies failed."—Earl of Aldborough.

N.B. Indispensable to all who value Health.

A World-wide Reputation for over Three-Quarters of a Century.

NOTES OF THE WEEK.

The prospect of the United States accepting a mandate for Armenia is becoming steadily smaller and smaller. The Washington correspondent of the *Morning Post* quotes an agency despatch from Constantinople to the effect that the American Commission which has been investigating the situation in the Near East is opposed to the States accepting a mandate for Turkey. But, the report adds, the Commission advises that should a mandate be accepted the American control should extend to the Caucasus, thus taking in the Baku, Batoum, and other oilfields. This is a very different attitude from that of the Americans who desire their country to take up the burden from purely altruistic motives; but it is by no means unnatural that America should desire a *quid pro quo;* and though the question of frontiers would almost certainly give rise to serious difficulties, the proposal would be well worth considering carefully, and would be likely to meet with strong support in this country. Unfortunately the comparatively few Americans who are really anxious to see their country intervene in Turkish affairs for the sake of the peoples of the Turkish Empire are reported to be making practically no headway in converting their countrymen to their views.

Meanwhile Turkey is muddling along as best she may, and appears to be no more ready now than she ever has been to play her part in the new world which the politicians have been promising to us for some time. Indeed, with the exit of Damad Ferid Pasha's Cabinet she seems to have drifted back almost into her old course. The Committee of Union and Progress is making its influence felt very strongly once more, and will probably score a victory at the elections; while its opponents are reported to have made up their minds to refrain from taking any part in the proceedings. Unless the Powers take some step quickly to stop the dry rot that is setting in, they must eventually be held responsible for whatever consequences may follow. And it is at least possible that these consequences may be extremely unpleasant for Europe.

The most interesting development in connection with the Syrian question is a proposal put forward by the Emir Faisal for the appointment of a Military Commission, to sit in London, to discuss the situation in view of the imminent withdrawal of British troops from Syria. Particulars of the proposal will be found on another page. It is understood that the British Government considers that, subject to existing agreements, the matter is one for settlement between the Emir and France. The Prince, who is now in Paris, has already had personal conversations with M. Clemenceau; and it is to be hoped that, with a little readiness to give and take on both sides, the difficulties and dangers—for dangers there are—of the present situation will be removed. Attacks upon the Emir Faisal, which continue to be numerous in the French Press, are unlikely to conduce to this end.

The outlook with regard to the Fiume and Adriatic problems has distinctly improved during the past week. Signor d'Annunzio is reported to be in a less unyielding mood; he has addressed a memorial to M. Clemenceau on Fiume, containing proposals for making the port absolutely free; and he has issued a manifesto to the Serbs, addressing them as heroes, and advocating the burying of differences due to the Adriatic question. Incidentally it is reported that signs of dissatisfaction have appeared amongst his followers. Far more important than these things, however, is the announcement that Signor Tittoni has forwarded to the Paris Conference suggestions for a solution of the whole Adriatic problem, which are stated to be in effect an acceptance of President Wilson's proposals. According to this plan, an independent State of Fiume would be set up, under the protection of the League of Nations. It would include the districts of Idria and Adelberg, but the district of Volosca would go to Italy, ensuring communication between that country and Fiume. Signor Tittoni also asks that Lagosta, the southernmost of the Dalmatian islands, should be given to Italy, and that Zara should be a free city, diplomatically represented by Italy. These concessions he regards as the utmost that can be offered, and if Washington rejects the proposal, he will decline responsibility for any evils that may follow. In the meantime it may be noted that M. Pashitch and the Yugoslav delegation, who arrived in Paris on Tuesday, are reported to have taken with them their Government's final instructions on the Fiume question.

The Ministerial crisis in Bulgaria caused the Sofia Government to apply to the Paris Conference for ten days' extension of the period within which they were required to sign the Treaty of Peace; but the delega-

Digitized by Google

tion, at the head of which M. Theodoroff, the late Prime Minister, remains, lost no time in returning to France, and this week should see the treaty duly signed. Peace in the Balkans is the greatest possible asset to all the countries of the Peninsula, and it is of considerable interest, therefore, to watch how the conditions imposed on Bulgaria are received in the country. Reports of a threatened upheaval entirely lack confirmation. They have been circulated at various intervals since the Armistice, but in every instance have been proved to be untrue. No doubt there is inflammable material in Bulgaria, as in most countries at this time, but a firm hand was kept upon it under the late regime, and there is no reason to doubt that M. Stambolisky's Government will prove equally capable of maintaining tranquillity. His Foreign Minister is M. Madjaroff, formerly Bulgarian Minister in London, who latterly held the portfolio of War in M. Theodoroff's Cabinet, and was responsible for peace and order in the country under the eyes of the heads of the Allied Mission. This duty now devolves upon the Prime Minister himself. His task will be simplified in some measure by the circumstance that Bulgaria has had an abundant harvest, which has secured her adequate supplies for some time to come.

Last week, as already recorded, the Prince Regent of Serbia made the fifth attempt to find a way out of the political crisis by entrusting M. Drashkovitch with the task of forming a Cabinet. M. Drashkovitch was Minister of Communications under M. Davidovitch, and it was expected that he would try to associate with him in office as many as possible of the members of the Davidovitch Ministry. So far there has been no news of the success of his efforts to form a Government; but in view of the general impatience felt at the prolongation of the crisis, a further failure seems unlikely. At best the new Cabinet would be a temporary expedient to enable the elections to be held. With so many politicians inclined to play for their own hand, it is essential that the nation as a whole should be allowed to decide the lines on which it wishes to be governed in the future. According to one report the Davidovitch Ministry is to "carry on," reinforced by M. Bianchini, without portfolio.

No further developments in the political situation in Roumania have so far been announced. As the *raison d'être* of the new Ministry is to carry through the elections, the chief interest in the near future would ordinarily centre in the electoral campaign. According to the latest reports, however, the Opposition leaders persist in their refusal to acquiesce in the holding of elections while a form of martial law exists in the country and a rigorous censorship is enforced. If a large section of the electorate abstains from going to the poll, it is obvious that the results of the election cannot have that settling effect on the country that the interests of Roumania render essential at this time. It is to be hoped, therefore, that before the elections are held an understanding will have been reached between the Government and the Opposition. The presence of M. Misu in the Cabinet offered some hope of a satisfactory settlement. He has kept himself aloof in the past from party politics, but his personal friendship with M. Take Jonescu, the chief leader of the Opposition, promised to provide a golden bridge for all concerned. It is now reported that he is to return to Paris as chief of the Roumanian delegation, and it is to be feared that his influence on home politics will have been removed at a critical stage.

The absence of M Misu from Bucharest, however, may be compensated for by the new step which the Allies are now reported to have taken. A fresh Note, it is announced, has been addressed to Roumania, as a result of Sir George Clerk's mission. In it the Supreme Council state that taking into account the desire of the Roumanian Government to preserve for the future the alliance with the Entente Powers, it is ready to discuss modifications of the clauses of the Treaty relating to Roumania's internal affairs as soon as it learns that the Roumanian Government is ready to sign the Treaty of St. Germain. The Allies express the hope that Roumania will accept this offer of collaboration. It is a matter for regret that the Supreme Council has not shown a more generous spirit in reopening the subject of the Peace Treaty with Roumania. To take any step at all is an admission that the Council has been in the wrong. Why not go the whole length, and not make the promise to revise the objectionable clauses, which alone were responsible for Roumania's refusal to sign, conditional upon her readiness to sign? The original attitude of the Supreme Council had no slight bearing on the political complications which have ensued in Roumania.

Very little news of Montenegro reaches the outside world. Count de Salis, who recently undertook on behalf of the British Government a mission of inquiry into the conditions in the country, has returned to England, and his report, it is understood, has been in the hands of the Government for a fortnight or longer. Parliament will, no doubt, be informed whether it is proposed to make known the results of the investigations. In the meantime a mission of relief under Colonel Cheke has paid a brief visit to Cettinje and has returned to Trieste, where it is proposed to collect the stores most needed in Montenegro with a view to their distribution at the earliest possible date. American relief has already reached the country, but it is an open question whether the methods of distribution adopted, owing to no fault of the Red Cross officials, did not result in political discrimination being made in regard to the recipients. When British relief is given to the Montenegrins, care should be taken that it reaches the people according to their need, and without regard to their political leanings.

It was announced last Saturday that the King had been pleased to approve the appointment of Field-Marshal Viscount Allenby as High Commissioner for Egypt and the Sudan, in succession to General Sir Reginald Wingate. The announcement can have been a surprise to very few people. General Allenby has come to fill in the public eye and the public affections the place formerly occupied by Lord Kitchener, and he was obviously marked out as successor to Sir Reginald Wingate, who, it was generally understood, would not return to Cairo. The new High Commissioner has a heavy task before him, and if he is to carry it through he will require all the help that the Home Government can give him; though such help may probably best take the form of leaving him a free hand and sparing him futile advice. The record of his achievements, especially in Palestine, proves that he is a fine administrator as well as a brilliant soldier, and the combination is just what is required in Egypt at the present time. It is possible that, in view of the change, the Government may think it wise to delay the despatch of the Milner Commission. The chief objection to such a step would lie in the probability that it would be misinterpreted in Egypt, and proclaimed by the Extremists as another "victory."

Sir Reginald Wingate, the retiring High Commissioner, deserves the nation's gratitude for all the good work he has done in the long period—over thirty years—that he has served his country on the Nile. It would be difficult to praise too highly his services in the Sudan, with which his name will always be associated. He played one of the chief parts, if not the chief part, in bringing that country from a state of savagery and anarchy to a state of rapidly spreading civilization and prosperity, and the great influence he exerted over the natives is bound to have a lasting effect. It is generally believed that he had no desire to exchange Khartoum for Cairo, and only did so in response to the urgent request of Downing Street. In any case, he moved north at a time of quite exceptional difficulty, and his record at Cairo is one of tireless work and self-sacrifice. In Egypt, as in the Sudan, he made a host of friends for himself, and General Allenby has more than once testified to the loyal way in which Sir Reginald Wingate constantly assisted him.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, October 2.

The Political Situation.

Neither the industrial nor the political situation has undergone any improvement. In fact, while the former has remained stationary, the political situation has, in my opinion, become aggravated. This aggravation is due to many causes, but chiefly to three factors which have intervened during the past week.

The first is the publication of a letter addressed from Paris by Saad Pasha Zaghlul to Mahmud Soliman Pasha, President of the Cairo Committee of the Egyptian Delegation. In this letter, or rather in the portion to which publicity has been given, he writes that he and his colleagues bless the men and young men of Egypt for the wise spirit which has determined them to have nothing to do with the Milner Commission when it comes to Egypt. He declares that this Commission, since it is to carry out its labours under the British Protectorate, will be working contrary to the national aspirations of the Egyptians, and if it is allowed to be successful, can but conduce to the continuation of the condition of servitude under which the Egyptians exist. He concludes by calling upon the Egyptians to persevere in their determination to boycott the Milner Commission, and blesses their work in this connection.

The second factor has been the publication of a telegraphic summary of the interview which Lord Milner granted to the *Pall Mall Gazette*. The fact that Lord Milner declared that the question of the Protectorate did not come within the scope of his Commission, which in carrying out its mandate to inquire into the causes of the recent disorders and present proposals for constitutional reforms must assume the existence of the British Protectorate, has been sufficient to confirm the Extremists in their determination to adopt a hostile attitude towards him and his colleagues, and to encourage the mass of their compatriots to follow their example. Apart from the fact that this attitude is due to Zaghlul's characteristic obstinacy and his well-known hatred of all things British, there is little doubt that it is prompted by the fear that if their compatriots in Egypt make contact with the Commission and discuss the situation with it, the position of the Paris Delegation will become stultified and its influence will be gone.

The third factor is the apparent intention of H.B.M.'s Government to send the Commission to Egypt before the Turkish peace conditions have been settled. As explained three weeks ago, the more instructed members of the Egyptian Community do not consider themselves free to enter upon a discussion with the Commission until Turkey has by treaty accepted the removal of her suzerainty. It was hoped that the British Government would wait until matters had been settled with Turkey, and the possibility that the Commission may after all come to Egypt before this is an accomplished fact is disquieting the more instructed leading Egyptians; and there are, indeed, rumours of a Ministerial crisis.

Audacious Press Attacks.

While the publication of Zaghlul's letter has given an impetus to the boycott movement, Lord Milner's declaration has served as an admirable text for the Extremists and their organs to base further attacks on the British administration and to encourage hostility to the Commission. The tone and the audacity of the vernacular Press—I refer to the larger portion thereof, which at the present moment is playing the Extremists' game—are beyond all conception. Articles and letters, which in their virulence and thinly veiled innuendo exceed anything which saw light in the worst days of the Sheikh Shawish period of Egyptian Nationalist activity, appear day after day, accompanied by letters from all sorts and conditions of people, many of whom are unknown and hail from distant parts of the country, but whose entrance into the fray clearly indicates how far the effects of the present campaign are reaching. In addition, circulars, similar to those which made their appearance during the troubles last spring, and issued by the same secret Committee which was then responsible for their publication, are being distributed broadcast, attacking Lord Milner and his Commission in most disgraceful language, and openly inciting Egyptians to show their hostility to them and the British Government and their refusal to accept the British Protectorate by every means in their power.

Without wishing to appear to be an alarmist, I must say that this campaign seems to me to be assuming very serious proportions. In a country like this, where the "Kilma Maktuba" ("written word") is all-convincing to a credulous and illiterate population, the persistent appearance in print of such attacks on the British Government and their representatives, couched in such inflammatory and suggestive language, cannot fail to have the worst effect on the population; and by reason of the influence which these continuous attacks are bound to have on the minds of *exaltés*, they might quite possibly lead to unfortunate personal incidents, of which we have lately had an example. It is these personal attacks as a result of the present unrestrained campaign, both in and outside the Press, that are to be feared far more than any general combination of the Egyptian public against the Milner Commission. Indeed, I am convinced that the Commission, once it is here, will find any number of Egyptians of every shade of opinion, even from among those who are loudly advocating a boycott, ready to come before it and give it the information of which it is in need, though the question of the Peace Treaty with Turkey may make some hesitate.

There is, indeed, in this country a large body of Moderates no less patriotic than the Extremists, who are fully alive to the real motives of the latter and the dangerous road along which they are leading the country; who recognise that they must submit to the inevitable, as represented by the British Protectorate; and who realise that it is only by collaborating with the British Government that they can hope to secure a beginning of the political liberty which they, like their Extremist compatriots, desire for their country. These Moderates would long ago have come forward and voiced their opinion of the methods and tactics of the Extremists in public, had they been assured of some support from the British Government. Unfortunately, our policy—and whilst we have had no fixed political policy for the past fifteen years we have certainly adhered stedfastly to this line of action—our policy has in the past been to leave those who would be our friends out in the cold and give our consideration to the relatively small minority of agitators who by their vociferation have attracted our attention. And this has been carried to the point that we have often shaped our decisions or, indeed, reversed them in order, as we thought to win them over to our side. We have not, I regret to say, considered it worth while to support those representing the large majority of the population who are at

heart friendly inclined towards us; and in the circumstances it is not surprising that the spectacle of the small body of agitators receiving attention and, from time to time, satisfaction from us, should on the one hand create the impression that we are weak and afraid; and should, on the other hand, have disheartened and discouraged those who wished us well to the point of forcing them either to side with the Extremist minority or to hold aloof from all participation in the struggle.

A Weak Point.

During the political crisis which has sapped the energies of the country since the Armistice the one factor that has failed us has been the existence of a Moderate party, capable by its personality of resisting the insidious intrigues and machinations of the Extremist minority; of bringing home to the people in a manner which no body of Englishmen could achieve the harm which this minority is doing the country and the self-interested motives actuating it; and of assisting us to work out the constitutional reforms and outline the measure of self-government which, long before either Rushdi Pasha or Zaghlul Pasha voiced their feelings on the matter, we had decided to grant Egypt.

No matter what political concessions the Milner Commission may recommend, no matter how the present crisis is overcome, two essential factors must be recognised and must characterise our future administration of Egypt. In the first place, we must have a policy. And not only must we have a policy, but we must make it clear to the people of Egypt beyond all possibility of misunderstanding, what that policy is; and having announced it we must adhere to it. Secondly, we must find out who are our friends, and, wherever possible, we must support and protect them, so that not only may they stand by us in a time of stress, but they may be an example to the other elements of the country and attract adherents from their ranks instead of, as at present, the ranks of the Extremists being swelled by the weaker of the Moderates. Only by such means can we hope successfully to resist the elements of reaction which will always be active in their hostility to any régime which does not give Egypt complete independence.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, October 3.

The Riots.

Perhaps the most striking piece of evidence which has transpired in the riots inquiry is the statement made by the Rev. Monsignor Panzavecchia relative to the attitude of the Church in opposing compulsory education. Naturally, he has been taken to task by all sections of the community. Various charges have been made in the Press as to the attitude he took up, and the reverend gentleman has laid himself open to being taxed "with a biassed judgment or attempting a subtle manœuvre to excite the prejudice of the mob against education." It will be interesting to note what reply Monsignor will offer. His statements certainly require explanation and modification.

The Lieutenant-Governor.

Leave of absence has been granted to his Honour W. C. F. Robertson, C.M.G., the Lieutenant-Governor.

Miscellaneous.

A great outcry has been raised against the wholesale destruction of fish by the use of explosives, chiefly cordite. The local authorities are very generally and widely blamed for their leniency in this matter. The seriousness of the affair is self-evident, and if steps are not soon taken to combat the evil, Malta will in the near future be crippled in another of her industries. The island has lost far too many already. It certainly seems odd that no attempt has been made to establish hatcheries in connection with this important industry.

Holders of stocks of coal can only deal or transfer with the permission of the Collector of Customs.

The Reverend Canon A. H. C. Fargus, the new chaplain of St. Paul's Cathedral (Anglican), Valletta, has arrived and taken up duties.

Major Victor Freudo Azopardi, LL.D., has been appointed Assistant Crown Advocate. The appointment appears a popular one.

CYPRUS NOTES.

(From Our Correspondent.)

Greek Demonstrations.

The election of representatives for the great Greek meeting of September 29 has been carried out in almost all the villages of Cyprus, and the Greek papers claim that a clear "verdict," which should settle all doubts, has been given by the people, "at the bidding of their ecclesiastical and political leaders." Among the latter are the "*ex officio* representatives," including a member and ex-members of the Legislative Council, and mayors of towns, who are apparently self-elected, and whose influence no doubt will be a controlling element at the meeting. The Limassol paper *Alethia* ("Truth") states that the Government has, through its organs, witnessed all that took place; and if the object was to ascertain the truth, Greeks would welcome the "unusual" step taken by the Government. But, whatever this or that zaptieh may report to his superiors, no doubt whatever can exist regarding the popular feeling from one end of Cyprus to the other.

Reports from the Mission in London announce that after an intolerable heat-wave the Archbishop sought a change for three weeks at Westcliff. Some of the other members proceeded to Paris, where two of them were received by M. Venizelos. The views of the Greeks in Paris regarding the Cypriot question, and also regarding the Græco-Italian differences, were found to be favourable. The members then separated, one or two proceeding to Vichy, another to Contrexville. They pray—but hardly hope—that it may not be necessary to return to London. They await the discussion in the House of Commons. In case there should be much more delay, five or six members will probably return to Cyprus, two or three remaining in London till the Cyprus question is settled. Altogether, a favourable view of the situation is taken.

End of Summer Season.

The summer season has come to an end rather earlier than in late years. The Government offices moved down from Troodos on September 23. The smallpox epidemic has clouded the last part of the season. Over 90 cases are reported, 12 ending fatally. In spite of precautions, sporadic cases are occurring in fresh villages The Bishop of Papho, in his capacity of Acting Archbishop, besides cancelling arrangements for all fairs and festivals, has addressed a circular to all the clergy calling upon them and the laity to offer special prayers in the churches.

The Proclamation of May 29, 1917, by which the exportation of newspapers from Cyprus was forbidden, has at last been cancelled.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, October 1.

The New Government.

After a crisis lasting seventeen days, a new Government has at length been formed, under the presidency of General Vaitoianu.

Contrary to general expectations, the efforts of M. Manolescu-Ramniceanu to form a Cabinet came to an abrupt and unsuccessful end, mainly on account of the Transylvanian political chiefs having refused to take part in a Government which they regarded as threatening their political liberty. The failure of M. Ramniceanu, following on the abortive attempts of M. Maniu to constitute a concentrated national Government, and the apparent inability of either of the recognised political parties to prepare a definite and practical programme, left but one alternative—the formation of a military Cabinet. This task was entrusted to General Vaitoianu, who was the Commander of the second Roumanian Army during the war and Minister of War in the late Government under M. Bratianu; so that in him the new Government has a leader of considerable political experience, as well as of the highest military standing.

By a decree issued by the King on September 27, General Vaitoianu was appointed President of the Council, Secretary of State for Internal Affairs, and Minister *ad interim* for External Affairs, the remaining portfolios being held by the following: General Roscanu, Minister of War; General Popovici, Minister of Lands; General Popescu, Ministry of Industry and Commerce and *ad interim* Minister of Finance; M. Miclescu, Minister of Justice; General Lupescu, Minister of Education; and General Mihail, Minister of Public Works. The following, representative of Greater Roumania, have been appointed to the Cabinet as Ministers without portfolio: MM. Stefan Pop and V. Goldish, from Transylvania; M. I. Inculetz and Dr. Ciugureanu, from Bessarabia; and Dr. Nistor, from Bukovina.

This newly constituted council of ministers has issued a declaration stating that they are desirous of maintaining the strongest ties with the Allies, while at the same time preserving the rights and dignity of the State. This statement is, of course, almost meaningless; and it is impossible to gather therefrom what their attitude will be in face of the questions which are so urgently pressing for settlement at the present moment. However, it is certain that the new Government will settle definitely in some way or other these questions, probably by signing the Austrian Treaty after obtaining any possible modifications of the terms of the Special Convention.

The Opposition View.

The Opposition Press does not look upon the new Government with favour, and resents what amounts almost to a military dictatorship, especially in view of an announcement by General Vaitoianu that the censorship—which he terms at present preventive—will be replaced by what he calls a repressive censorship. He has promised that in view of the forthcoming elections, the present stringent restrictions relating to public meetings will be modified, and the official "state of siege" ameliorated.

As one of the functions of the new Government will be to preside over the forthcoming general elections, these elections are being postponed from the date originally fixed, in the early part of this month, for three or four weeks.

Sir George Clerk's Impression.

The reply to the Note handed to M. Bratianu by Sir George Clerk was given to the latter last Sunday, and he at once left Bucharest for Paris. The impressions which Sir George Clerk gathered as a result of his visit are said to be favourable to Roumania's representations.

SCATTERED SOUTH SLAVS.

(From Our Belgrade Correspondent.)

The military prowess of the Yugoslav divisions on the Macedonian front has attracted attention to the large South Slav colonies abroad, who have furnished such important reinforcements to the exhausted and depleted Serbian Army. It is surprising how many settlers returned from New Zealand and the Argentine to fight for their country; for with all their prosperity in their new homes they have kept alive the love of their Motherland. But it is a noteworthy fact that scarcely any of them were from Serbia itself. The yeomen of the kingdom were far too happy and prosperous at home to wish to emigrate, and a Serb who had been abroad or seen the sea before 1915 was indeed a rarity. The repressive policy of Austria had led to emigration on a large scale from Dalmatia and Herzegovina. The natives of these regions are an exceptionally fine set of men, but the large proportion of stony wastes could hardly support the population, especially when the country was deliberately kept by Vienna in a backward state. It is commonly stated that for all good public works in Dalmatia the country was indebted to Napoleon's armies. We have no statistics of Yugoslav colonies in New Zealand and in Argentine, but figures are available for the United States. It is estimated that there are nearly 100,000 Serbs, almost all from Serbian Hungary, in the United States, where they earn good wages—from 100 to 125 dollars a week—as skilled labourers. Many work on farms and in mines. In recent years there has been a great increase in the number of Slovenes; in 1896 there were 30,000; to-day there are 250,000, who form prosperous colonies in the Pittsburg district; in Cleveland there are 30,000, and many, too, in Chicago. There are many employed as lumbermen and stave-workers in West Virginia and the South. But the Croats are the most numerous. In 1733 there arrived the pioneer Croat, Father Konsag, said to be the first man who made a map of Lower California, Another prominent Croat was the Rev. Joseph Kundek, who came in 1840; and became Vicar-General of the diocese of Vincennes, Indiana, in which State he is said to have founded a dozen cities. To-day there are nearly half-a-million Croats in the U.S.A.; there are 50,000 of them near Pittsburg, another 50,000 near Chicago, and 10,000 in the neighbourhood of Cleveland; on the Pacific Coast there are some 50,000 Dalmatian Croats engaged in the fishing and fruit industries; nearly all the staves for claret barrels are said to be made by Croats in the Southern States, and the New Orleans oyster beds are said to be entirely owned by Dalmatians. South of that city there is an area of 100 square miles of territory exclusively inhabited by Croats.

The Canadian Division contained a relatively large proportion of Croats, Serbs, and Montenegrins.

These Yugoslavs retain their national feeling; they sent at least 15,000 volunteers to Salonika, and have many well-organised and prosperous benefit societies. There is a strong tendency, now that their national dream is at last fulfilled, to return to their Motherland, on whose fortunes and politics the return of so rich, experienced, educated, and powerful a contingent is bound to have a beneficent and far-reaching effect.

ROUMANIA AND THE POWERS.

(From a Correspondent.)

Bucharest.

Misunderstandings and Rumours.

Roumania has lately been suffering under the wisdom of the Supreme Council. That august body decided on interfering with the relations between the Roumanians and the Minorities of other races amongst them; special solicitude was shown for the Jews, the more important of whom bear German or Slav names. To this direct interference in Roumania's domestic matters was added a series of notes or ultimatums on the subject of requisitioning and similar pastimes in Bolshevist Hungary. The Roumanians considered themselves entitled to "making a bit" over settling in three days a matter which the Supreme Council had failed to regulate in five months—namely, the account with Bela Kun.

There were the usual series of misunderstandings, of telegraphic and other messages which never arrived anywhere; so the Supreme Council sent an emissary to Bucharest.

It is to be regretted that an Englishman was chosen (not necessarily with any great deliberation) to convey the Supreme Council's decision (or whatever it was), for in this country the idea is being spread assiduously that the harsh treatment meted out to Roumania is due chiefly to the Anglo-Saxons in their desire for commercial world-domination. It is said—and the rumour is certainly not denied by an eminent Ally in this city—that the original note to Roumania was drawn up in English, and that even its translation into French, the language of diplomatic amenity, failed to soften the document's severity of tone. Again, at least one of the Anglo-Saxon representatives among the Great Five is considered by racial affinity to be unduly partial to one of the "Minorities." But, even so, the tendency is to make of Great Britain the cat's paw. Rumour assigned to us the projected naval demonstration off Constanza; and, as already remarked, the Mercury of the Olympians was an Englishman. It was significant that no member of any "Allied or Associated" Legation appeared at the station to see Sir George Clerk off.

Trade Rivalry.

There is at bottom of all this a definite purpose, which the Great Five, or at least the British representative, are too great to see—namely, the quite common purpose of ousting trade rivals.

British trade, despite the ineptitude and indifference of those servants of the public who are supposed to assist its development, had begun to look up in this country, and our Allies were becoming anxious. Even the blocking of the railway lines by trains carrying French and Italian goods (not forgetting the trains from Switzerland carrying, under armed escort, chocolate, lace, silks, and such-like necessaries towards the reconstruction of a war-worn country), had failed to keep out British goods entirely.

The anti-Anglo-Saxon—or, strictly speaking, anti-British—sections of the local Press are now proposing the formation of a group—France, Italy, Roumania, the Latin Sisters, to include in course of time the Czecho-Slovak Republic, Poland, and Yugoslavs. The idea is sound—normal relations must be established among neighbours—but it seems to leave Great Britain out.

It is obvious that our Olympian is far above such matters as national trade interests, and there is as yet insufficient proof that lesser stars in the diplomatic, consular and other constellations are alive to our interests or capable of furthering them. It will probably devolve on the business man to form an organisation to insist on his affairs meeting with more than academic interest.

The Ministerial Crisis.

The wisdom of the Great Five, as expressed in its Notes to Roumania, led to the Ministerial crisis, which has at last been settled, the end of the crisis coinciding with the departure of the Supreme Council's emissary. Several attempts were made to form a Ministry, and at one time M. Maniu seemed near to arriving at that consummation. He failed, however, possibly because he may have laid too much emphasis on the rights and claims of the new territories, notably Transylvania—or Ardeal, to resume the name it was known by to Herodotus and Strabo.

The new Ministry consists chiefly of distinguished soldiers who have, however, not yet had an opportunity of proving themselves statesmen. It may be assumed that they will follow the line taken by M. Bratianu, refusing to sign the Peace Treaty on account of the "Minority" clause. In fact, everyone feels that the hand of Roumania's strong man is still guiding the affairs of the country.

The Bucharest View of Paris.

The Ministerial crisis did not appear to affect the average Roumanian much, and the fact that the new Ministry contains so many soldiers, though commented upon adversely by some of the papers, does not worry the people particularly. The Roumanian, sharp-witted and ingenious, is drawing much amusement out of the impossible position into which the course of events—but chiefly their own ignorance and ineptitude—have landed the Supreme Council, the body which represents all the experience and wisdom of the Great Powers of Western Civilization. The Roumanians point out: first, that those Olympians failed to subdue Bela Kun, and left him to a smaller Power, which settled the matter in three days, and was rewarded by an ultimatum or so, which no one took seriously. Then there is the spirit of Italian "Risorgimento" let loose in Fiume! No one here believes in the Italian Government's innocence or inclination to check d'Annunzio's exuberance. But then there are people here who read history, especially that of national strivings after freedom, and they recall the attitude taken towards Garibaldi. Such studies are no doubt beneath the consideration of the Olympians. They are much too human.

Again, people are looking forward to more entertainment when other excitable people follow d'Annunzio's lead in various corners of Europe where the settlement of vexed questions depends upon the Supreme Council's knowledge of history, geography, ethnography, and other common but useful subjects.

The functions of the Supreme Council seem to be approaching those of the "Reichsrat" of the Holy Roman Empire of unhallowed memory, that of adding to the gaiety of nations and providing shocking examples for posterity.

THE CARAVANSERAI.

According to a paragraph in the *Morning Post*, Mr. Montagu, the Secretary of State for India, said recently to an Indian gentleman: "We both belong to oppressed races, and we must therefore work together." It seems to me that this cannot be correct; but if it be so, it would be interesting to know: (1) Just what Mr. Montagu meant, and (2) what the Government thinks about it. The fact that Mr. Montagu fills such a high position is, of course, sufficient proof that *he* is not oppressed; and the fact that he is a man of some tact, and possibly more caution, suggests that he would be unlikely to say such a thing as he is supposed, or reported, to have said. It seems to me that it would be of service to the State to have this question threshed out, and I shall be disappointed if some member of Parliament does not see that it is done.

***

Sir John Bland-Sutton, in opening the Winter Session of the Middlesex Hospital Medical School, recently referred to the turkey's habit of winking. The wink—Sir John explained, is an unconscious performance on the bird's part, and is performed with a third lid described as "an opaque white curtain." When I was out East I heard a story, which is quite unprintable, about an unhappy curate who was afflicted with an uncontrollable wink. But *he* had no third lid on which to cast the blame for the painful experiences through which he passed. That, however, is not what I set out to remark. When I saw the heading of the report of the lecture, "Why the Turkey Winks," I was at once reminded of the remark of a friend, long resident in Turkey, who declared that he had never seen a Turk wink. Others have told me the same thing, and I am unable to recall a single instance of the kind myself. But I have known Arabs to wink, just as and when an Englishman might do. So I conclude the Arab idea of humour is more like our own than the Turk's. Undoubtedly the latter is much slower-witted than the Arab, and his taste runs in the direction of the practical joke than of the play of wit.

***

Apropos of my remarks a few weeks ago upon the strike of the Cairo newsboys, I observe that the men who sell the Paris newspapers in the streets struck work recently "in sympathy with the booksellers' assistants who are on strike." This is really serious! If Paris does not get the very latest "news" *and views* on the Syrian Question, how is that great Question to be properly ventilated? Let M. Clemenceau persuade the newsvendors to return to their duty, placing their love of country before their love of the booksellers' assistants. I am sure that that vigorous, if not always accurately informed writer who signs himself "Un Diplomate," of the *Paris-Midi*, will gladly aid in bringing about a reconciliation!

***

The latter gentleman has attracted my notice by his extraordinary insinuations regarding the Emir Faisal. He suggested that the Emir would be better employed in fighting in the Yemen than in looking after Syrian interests in Europe, and declared that "Loutfallah, President of the Arab Nationalist Committee at Damascus," was staying at the Ritz, "carrying on a campaign against the Emir," etc. "What," asked this astute "Diplomate," "what will happen to the Emir if he is disowned by his own friends on the Damascus Committee?" What, indeed! But unfortunately for him, Loutfallah Bey has written to the Press to say that, so far as he knows, no such committee as that mentioned by "Un Diplomate" exists in Damascus; that he is "president of no committee whatever," and that he is not, and never has been carrying on a campaign against the Emir. He is, he adds, "only the delegate of the Union Syrienne, whose president is my brother, M. Loutfallah Bey, who is in complete understanding with his Highness and the Arab Party in Damascus." After this it almost looks as if "Un Diplomate" might himself be better employed in fighting his country's foes than in writing twaddle. At least, if he must write, he might make sure of his facts before he insults one who has given proofs of *his* courage!

CORRESPONDENCE.

BULGARIA AND THE PEACE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Although I am not *au courant* with recent happenings in the Bulgarian capital, the telegram which appears in to-day's *Times* announcing the formation of a new Cabinet appears to me instructive, and enables one to surmise something of what has occurred since the terms of the Peace Conference became known.

The Bulgarian peace conditions, characterised as "mild" by the British Press, must have fallen like a thunderbolt on a somewhat naif and primitive people who firmly believed, notwithstanding many disillusionments, in the realisation of President Wilson's fourteen points, in the innate honesty of the Western Powers, and in the ability of America to fulfil her engagements.

The result speaks much for the common sense and stability of the Bulgarian people. In spite of the loss of the Bulgarian portions of the Dobruja and Macedonia to their Roumanian and Serbian neighbours, and the annexation of the Ægean littoral, with its newly developed roads, railways, and harbour, to Greece, there is no sign of anarchy, and they seem to have taken their punishment like men.

As far as is known, King Boris, a young and democratic ruler, still remains as constitutional Sovereign, and order is being maintained.

The Premier is M. Stamboliski, the leader of the Agrarian Party. He was thrown into prison at the time of the entry of Bulgaria in 1915 into the war by the late King Ferdinand, and remained there for two years because he threatened the King with the loss of his head should he prove to have taken the wrong course against the advice of his Ministers. When the Bulgarian line broke in the autumn of 1918, and discontented soldiers were marching on Sofia, he was released and sent to meet the soldiers to calm them down. He went, but instead of calming them down, declared himself President of a new republic, and appointed his henchman Dashkaloff as his Commander-in-Chief, with the intention of marching on Sofia. He was met, however, and defeated, with the loss of over 1,000 men, by German troops. But the movement would have continued had not King Ferdinand taken the advice of his Cabinet and abdicated. Stamboliski remained in hiding until pardoned and made a member of the Government by M. Theodoroff.

Dashkaloff becomes Minister of Agriculture. He is an intelligent and well-educated young man, who, without being Germanophil, has studied in Berlin.

The Foreign Minister is presumably Dr. Madjaroff, who was for many years Bulgarian Minister in London. His appointment is a guarantee of the steady and Anglophil policy likely to be pursued by M. Stamboliski.

The latter, though a reformer, is no Socialist. For him the question of a republic or a constitutional monarchy is not of great importance. He is an ardent advocate for encouraging commercial relations between Bulgaria and Western Europe, especially with England, which has been neglected in the past. He will found an English bank in Sofia. Possessing, as he does, the entire confidence of the peasants, he will link it up with the agrarian banks and will encourage modern methods of agriculture.

Such, at any rate, were his views before the result of the Peace Conference became known, and the present news leads one to hope that such will be his future policy.—I am, etc.,

October 15. A FORMER CORRESPONDENT.

THE SYRIAN PROBLEM.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Why waste ink and time on platitudes when all that France need do to settle this Syrian problem is to accept the mandate for Syria in the most agreeable way for their future clients? The financial and economic claims of France in Syria are strong and undeniable, and she will be entitled to look after them; but the spiritual welfare of the nation must lie in the hands of the Arabs, who will require to be gently guided by unbiassed advice, especially after being for the last twelve months or more much provoked by short-sighted, prejudiced Frenchmen and Syrians of a certain denomination.

This is a solution of the highest political importance to all concerned, and it would take me too long to explain all its present and future bearings on the task of human progress, now entrusted to the League of Nations. Whereas, should France persist in her design to divide Syria between Christian and Mohammedan, and to garrison both, or even either section, I foresee nothing but unrest, trouble, and bloodshed for a generation to come in that part of the Holy Land! And France as well as the Hedjaz being the allies of Great Britain, anything that injures them will injure her

I am, etc.,

October 22. A. SEFI

PRESS ON THE NEAR EAST.

M. Venizelos on Thrace—

On Tuesday the *Morning Post* published an article on "The Future of Thrace," by M. Venizelos. The Greek Prime Minister first deals with the question of population, urging that as the Peace Conference, in deciding similar questions elsewhere, had based its considerations on the normal pre-war status of the countries concerned, they should do so also in regard to Thrace. The Greeks, he shows, have been reduced by eviction and persecution; and he draws the obvious moral that to allow such tactics to succeed would be setting a premium on dishonesty. These arguments will not be new to our readers, but as put forward by M. Venizelos they will repay reading once more. Perhaps, however, the most interesting part of the article is that in which M. Venizelos writes of the future of Constantinople. He says:

The argument which is being brought forward to the effect that the Power which will undertake the mandate for Constantinople will be subjected to heavy expenses for the covering of which a proportionate hinterland is necessary is not an argument consistent with the principles recognised by the Conference as the guiding ones in the framing of the Peace Treaty. It has been well stated by President Wilson that the right of a people to choose their own political status and government transcends all other considerations brought to bear by the economic interest of others, and that a people are no more to be used "as pawns and tools."

Constantinople can very well meet the expenses of its administration, even without the Thracian hinterland. Moreover, it can very well—if necessary—incorporate larger territories around the Sea of Marmora and in Asia Minor, where there exists a Turkish majority—that is to say, a majority belonging to a nation characterised both by the conscience of humanity and by the Supreme Council of the Conference as altogether incapable of governing foreign races, and in the last resort the expenses of Constantinople could be borne, if necessary, by the League of Nations, for it would be unjust that Greece should be doomed to bear them by being prevented from including within her boundaries by far the most excellent part of her national inheritance.

It would be doubly unjust to Greece if, in addition to not being given Constantinople—by reason of the great international interests which centre in that city—she be deprived as well of Thrace, for the simple purpose of increasing the revenue of the State of Constantinople. The disappointment which Hellenism will feel in such a case will indeed be a most bitter one.

This injustice against Greece will be all the more severe when one takes into consideration the fact that all the other Allied nations of Eastern and Central Europe—Czecho-Slovakia, Jugo-Slavia, Poland, and Roumania—will include within their new boundaries nearly the whole of their national strength; whereas Greece, even with the incorporation of Thrace, will have 30 per cent. of her co-nationals in Europe and Asia Minor outside her boundaries. And if we take into consideration the Greeks who live outside of Europe, the Hellenic nation in such a case will but include within its frontiers 65 per cent. of its national family.

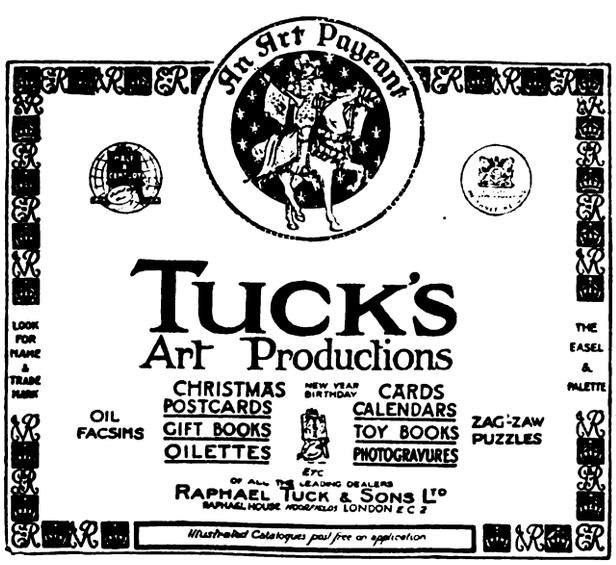
—And Bulgaria.

M. Venizelos is of opinion that Bulgaria will accept the peace only with a vindictive feeling. Therefore, he asks, "will the cause of peace be at all served if the Greek nation comes out of the Conference with a feeling that its national interests have been overlooked by the very Powers at the side of which it has fought the good fight?" And he goes on:

May I also be permitted to mention another complaint which the Greek nation will be justified in having? When, on the first week of last February, the Council of Ten referred the Greek claims to the Commission on Greek affairs, this Commission pronounced itself in favour of the Hellenic claims on Thrace almost in their entirety. And I am glad to state that the American member of this Commission was in full accord with his French and English colleagues on this subject. It was, therefore, quite natural for me to consider since then that the Thracian question would be settled in favour of Greece. Moreover, as I was aware that for the purpose of imposing this solution on the Bulgarians and the Turks the only available Allied Army would be the Greek one, not only did I not proceed to demobilise it after the signing of the Armistice, but, on the contrary, I increased its strength from ten divisions—its total on the day of the Armistice—to twelve divisions on a war footing. The upkeep of such a large force for a whole year since the Armistice has caused an extra item of 1,400,000,000 drachmæ in the Greek Budget, which is a most serious burden for a small nation to bear. Had there been no favourable report on the Thracian question Greece would at least have proceeded to partial demobilisation, keeping at most five divisions on a war footing instead of twelve.

After a glance at Bulgaria's financial position, the article concludes:

I have already had the courage of assenting to very painful national sacrifices, only for the sake of assuring the success of the higher general interests of the peoples of the Peninsular. But I am equally certain that any sacrifices of the Hellenic interests to-day will in no way serve the higher interests of mankind. For I venture to believe that my policy during the great war has been one based on a higher conception of political morality. Should this policy, therefore, be judged by the Greek people and the rest of the world as having failed to be crowned with success, in spite of the full victory of the Allied effort, such a verdict would in no way contribute towards the strengthening of the moral principles guiding the governing of peoples.



THE FUTURE OF AFGHANISTAN.

At a meeting of the Central Asian Society, held on Wednesday afternoon at the Rooms, 22, Albemarle Street, London, an interesting lecture on Afghanistan was delivered by Mr. Ikbal Ali Shah, a native of the country, who is at present studying at Edinburgh University. The chair was occupied by Sir Frederick Fryer, who in opening the proceedings expressed, on behalf of the Council and members of the Society, the deep sorrow they all experienced at the death of Sir Henry Trotter, who had for some time filled the position of chairman of the Society.

Mr. Ikbal Ali Shah, in the course of his lecture, remarked that for the people of this country to fully realise the actual attitude of the Afghans it was necessary that they should understand that it was one of distrust of foreigners. What was at the very foundation of the anti-foreign feeling was the dread of the loss of their racial independence. The Ameer Abdur Rahman Khan did everything in his power to convince his subjects that Great Britain was friendly disposed to them, and that Russia was their real enemy. He had made strenuous efforts to establish diplomatic relations with the Court of St. James, but instead of securing this representation and of having direct contact with the British Foreign Office—which was, after all, the most perfect in the world—Afghanistan was kept under the external political control of the Viceroy of India. Those who were most intimately associated with political affairs at Kabul were conscious of the fact that through an Embassy in London a new and happy era in Anglo-Afghan relations would be inaugurated. The late war the lecturer attributed to misunderstanding. The Ameer's object was to undermine the pro-British influence of his predecessor, and to attain it he was directly assisted with Bolshevist gold. Although Russia was in a state of dissolution, the Russian menace in Afghanistan was not yet dead. Its revival would best be combated by a strong Central Asian alliance, with Kabul as the centre. Against the intrigues of Russia and Germany it would be well to have India securely buffered by a group of federated Central Asian States. Mr. Ikbal Ali Shah urged the claims of his country for British investors for the extension of railways, particularly through the Khyber Pass, and for the development of her internal industry and commerce. The promise of a remunerative return was very bright, and he estimated that the country was capable of a trade amounting in value to between £7,000,000 and £8,000,000 per annum.

In the course of a short discussion which followed the lecture, the opinion was freely expressed that there was no desire on the part of this country to encroach on the independence of Afghanistan. Most of the trouble in that country was caused by restraint not being imposed upon those of Bolshevist tendencies.

An inquest was opened at Southwark on Tuesday on Lyoubicha Lyoubichitsch, a lieutenant-colonel in the Serbian Army, who fell from a train near Orpington on Saturday, and died in Guy's Hospital from injuries to the head. Evidence showed that he was suffering from nerves, and was on his way to Belgrade.

TO AMATEUR PHOTOGRAPHERS.

The Editor will be glad to consider photographs of Near Eastern scenery, types, places of interest, etc., etc., suitable for reproduction in THE NEAR EAST. *When desired, payment will be made for the right of producing such photographs. Readers should state, when forwarding pictures, whether payment is desired or not.*

Photographs should be sent either packed between stout cards or rolled in a cardboard tube, and should on no account be folded. Titles and notes should be attached to each photo, and should be very clearly written.

NEAR EAST BOOKSHELF.

THE CINDERELLA OF WAR.*

The Salonika Expeditionary Force was from its very inception the least popular theatre of war. In France there was glory, in Mesopotamia adventure, in Palestine something of the old romance of the Crusades; at Salonika there was more malaria than glory or adventure, and for months at a time almost the very existence of the armies there was practically forgotten by the public at home, except when the amateur strategists quarrelled in the newspapers over the Eastern and Western theories of war. Yet altogether there were about a quarter of a million men there, according to Mr. Seligman's estimate, a by no means inconsiderable force. The figures he cites, by the way, are the first we have seen which attempt to give with any accuracy of detail the strength of the Allied establishment in Greece.

For a long time, indeed, it looked as though the critics of the force were justified. The presence of the force in Greece seemed as fatuous in a military sense as Allied diplomatic policy in Greece had been in a political sense, and that is saying a great deal. Nothing happened, or seemed to happen, while the pull-devil, pull-baker competition of Constantine and M. Venizelos proceeded; but in fact M. Venizelos would have been able to do little had it not been for the presence of the Allies at his back in Salonika, and meanwhile the Serbian Army was refitting. In the end the Allies at last found a military policy for the Balkans, which leads one to hope that, incredible though it sounds, they may one day discover a political policy for the Balkans; and after the prolonged halt which followed the capture of Monastir, the long-expected blow was at last got in against Bulgaria, with crushing effect. On this Mr. Seligman has much to say, and we make no apology for quoting some of his conclusions. He repeats the curious story that Bulgaria had contracted to fight for Germany for three years and no more, which was widely believed; and it is a fact that a Bulgarian participation lasted almost exactly three years. But we beg leave to doubt the truth of the legend. When Bulgaria came in she thought Germany was winning, and both Ferdinand and his Ministers appear to have anticipated an easy triumph; almost certainly they had no expectation whatever of a three years' war. In any event, if Germany had continued to hold the advantage in Europe, it would have been beyond the power of Bulgaria to withdraw, three years or no three years. Those who tied themselves to the chariot-wheels of Prussia could only hope to stop when the coach stopped; and so it proved. Mr. Seligman has no delusions about the Bulgarian character. They fought well, but not so well as the Serbs, for whose valour he rightly considers that no words of praise can be too high. The Bulgars fought the British and French with some regard to the rules of war, and with indications that they possessed a sense of humour—they sent a message, for instance, that we could play football in a field exposed to shell-fire, but if we continued to drill there the consequences would be unfortunate; but in their dealings with the Serbs no rules of war counted for anything. They had, in fact, two standards of behaviour for the campaign.

But it is admitted that they got tired of the business before we did. If they did not fight a losing battle well, it was because they had had more than enough, and because Prussia let them down. They appealed for help in September, 1918, and Hindenburg was unable to give it them. After that they collapsed at once, and their only anxiety was to cut their losses. If this spectacle does not exactly move our admiration, it is only fair to remember that the war shaped itself to the Bulgar mind as emphatically a political war, and that as soon as the political opportunity was seen to be hopeless, common-sense told them to wind up the affair. It was Prussian *real-politik* in a Near Eastern setting.

Mr. Seligman has given us a really good and informative book on the Salonika side-show. The least interesting and least valuable part is that of which he (or more probably his publishers) seem to be most proud—a character sketch of ex-King Constantine, based upon information supplied by M. Melas, the ex-King's secretary. It contains nothing new except the whitewash, and the whitewash does everything except wash white.

A far more valuable feature is the endless series of good stories, anecdotes, and good humour which pervades these pages. An army which did not lose its temper in Salonika was indeed unconquerable, and the author has done well to preserve this aspect of the campaign.

Among the autumn announcements of the Broadway House is "The Modern Crusaders: or, the 231st Infantry Brigade in Palestine," by Capt. R. E. C. Adams, M.C.

* "The Salonika Side-Show." By V. J. Seligman. (George Allen an Unwin. 10s. 6d. net.)

CHESS.

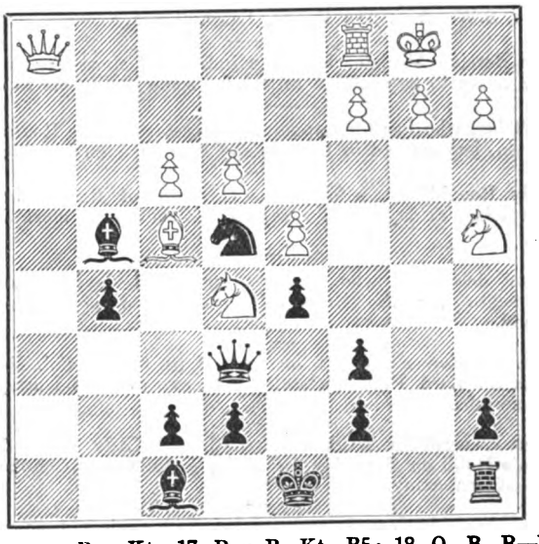
Senor Capablanca's simultaneous displays last week were quite as successful as the earlier exhibitions of his tour. At Norwich he met 41 opponents, winning 38 of the games and drawing the remaining three, while at the National Liberal Club he contested 40 games and won nearly all. The Hampstead Chess Club also brought against him a team of 40, including some very strong players, and on this occasion he won 34 of the games, drew four, and lost two. Finally, on Saturday, he was opposed by a team of 42 players of the Surrey Chess Association at Thornton Heath. The fact that he had already that week given three previous exhibitions no doubt told on him to some extent, but he nevertheless won 35 of the games, drew four, and lost the remaining three, one of the successful players being Mr. H. C. Griffiths.

October 21 saw the commencement of the City of London Chess Club's tournaments. The entries for the Gastineau Cup, the championship of the club, number thirty, and the contest is being played in three sections, the first four in each going into the final. The strength of the tournament can be gauged from the fact that the players include Sir G. A. Thomas (former champion of the club), Messrs. R. P. Michell, W. Winter, and R. H. V. Scott, all of whom played in the Victory tournament at Hastings, and E. G. Sergeant, another former champion of the club, who won the Minor Victory Tournament at Hastings, and also R. C. J. Walker, the holder, and two other former champions of the club, J. H. Blake and H. Jacobs. Entries for the other tournaments are equally numerous. Thus there are twenty-two for the Moccatta Cup and sixteen for the Russell.

It has been suggested that M. Rubinstein, the famous Russian expert, who is regarded by many as being well in the running for the world's championship, will shortly pay a visit to America. It may be hoped that if the visit takes place it will be found possible to bring about a match between him and Senor Capablanca.

Here is a short game from the Minor Victory Tournament at Hastings:—Opening, Ruy Lopez; White, M. A. Gibaud; Black, Mr. E. G. Sergeant. 1. P—K4, P—K4; 2. Kt—KB3, Kt—QB3; 3. B—Kt5, P—QR3; 4. B—R4, Kt—B3; 5. Q—K2, P—QKt4; 6. B—Kt3, B—B4(1); 7. Kt—B3, P—Q3; 8. P—QR4, B—KKt5(2); 9. P x P, Kt—Q5; 10. Q—Q3, B x Kt; 11. P x B, Kt—R4; 12. Kt—Q5, 0—0; 13. B—B4, P x P; 14. R x R, Q x R; 15. B x P, P—QB3; 16. P—Kt4.

Position after White's 16th move (P—Kt4).



16. . . . P x Kt; 17. P x B, Kt—B5; 18. Q—B, R—Kt; 19. B—Q3, R—Kt8; 20. Resigns.

1. Black has now an excellent development.

2. A move which completely cramps White's game.

The following is an even shorter game from one of the first-class tournaments at Hastings:—Opening, Queen's Gambit declined; White, Mr. W. Gooding; Black, Mr. C. Hammond. 1. P—Q4, P—Q4; 2. P—QB4, P—K3; 3. Kt—QB3, P—B4; 4. BP x P, KP x P; 5. P—K4, P x KP; 6. P—Q5, Kt—KB3; 7. B—KKt5, Q—R4; 8 Q—Q2, QKt—Q2; 9. 0—0, B—Q3; 10. P—B3, P x P; 11. R—K (ch.) K—B; 12. Kt x P, P—R3; 13. B—B4, Q—B2; 14. B x B, Q x B; 15. Kt—QKt5, Q x P; 16. R—K8 ch(1). Resigns.

1. A sacrifice which had not entered into Black's calculations. The finish is exceedingly pretty.

CARO-KANN.

THE P. E. F.

The October *Quarterly Statement* of the Palestine Exploration Fund contains a photograph of the late Dr. Leonard King, formerly chairman of the Executive Committee of the Fund. In the Notes and News it is announced that Mr. D. G. Hogarth, C.M.G., has consented to act as Dr. King's successor in the post. Among the papers included are "Kedesh-Naphtali and Taanach," by Stanley A. Cook; "Stone Altars and Cap-marks in South Palestine," by Captain Douglas P. Blair; another instalment of Philip Baldensperger's "Immovable East"; and Mr. Joseph Offord's "Archæological Notes on Jewish Antiquities." In view of the increased opportunities for work, it is good to see the Fund showing plenty of signs of vitality.

Prince Nosrat ed Dowleh left London for Paris last Friday.

Prince and Princess Alexis Kara-Georgevitch left London on Sunday for Paris.

M. S. Yovanovitch has been appointed Secretary to the Serbian Legation.

M. and Madame Gennadius have returned from Bournemouth to 14, De Vere Gardens.

M. Beza, Secretary to the Roumanian Legation, has returned to London from Bucharest.

M. Cafantaris, the Greek Minister of Agriculture, arrived in London on Sunday from Athens.

Colonel Rosetti, the Military Attaché to the Roumanian Legation, has returned to London from Paris.

The Persia Society hopes to entertain H.H. Prince Firooz Nosrat-ed-Dowleh at dinner at an early date.

Lord and Lady Sydenham have returned to 101, Onslow Square, S.W., from The Priory, Lamberhurst.

The Persian Minister has been indisposed since Friday last, and is likely to be confined to bed for some little time to come.

M. Tilea, who has been appointed Secretary to the Roumanian Legation, has arrived in London and entered upon his duties.

Lady Ronaldshay, wife of the Governor of Bengal, left for Calcutta last Friday, after a stay in this country of more than a year.

Count de Salis, who recently conducted investigations in Montenegro for the British Government, has returned to England.

Mrs. H. Mercer has left town for Malta to join Col. Mercer, who is on Lord Plumer's staff. She expects to be away for some months.

Lieut.-General Sir William Marshall, with Lady Marshall, left Brown's Hotel on Saturday for India, to take over command of the Southern Army.

Gen. Sir Charles Townshend has just made a tour of the Rhondda Valley. Lady Townshend presented gifts from local associations to ex-Service men.

Sir J. Rennell Rodd, who, with Lady Rodd and his family, is coming to London, will, after his arrival, proceed to Egypt as a member of Lord Milner's Mission.

General Watson, Chief Administrator for Occupied Enemy Territory Administration, has been making a tour of the Jewish communities and settlements in Palestine.

M. Misu, the Roumanian Minister for Foreign Affairs, is expected to leave Bucharest shortly for Paris, where he will act as chief of the Roumanian Peace Delegation.

Mme. Koyitch, the wife of the Chargé d'Affaires for the Kingdom of the Serbs, Croats, and Slovenes, held a reception at the Legation in Queen's Gate on Wednesday.

Field-Marshal Lord Allenby had booked his passage for Port Said from Marseilles by the P. and O. liner Kaiser-i-Hind, but he postponed his departure at the last minute and cancelled the passage.

On September 28, at Cairo, Major Charles Jennings, Leicestershire Regt., son of the Rev. H. E. Jennings, vicar of St. Clements, East Dulwich, was married to Margery, only daughter of Colonel A. E. Tate, C.S.I., C.M.G., of The Wilderness, Wimborne Road, Bournemouth.

The engagement is announced between Frederick Day Ardagh, B.A.(Oxon), second son of Dr. and Mrs. Ardagh, of Haslemere, Surrey, and Sheila, youngest daughter of the late W. A. Wilson, of Pita Ratmalie, Haputale, Ceylon, and Mrs. Wilson, of 9, Tavistock Square, London.

The engagement is announced of Lieutenant Walter Anley Hawes, R.A.M.C., youngest son of Charles Anley Hawes and Mrs. Hawes, of Bombay, India, and Ethel Kathleen, eldest daughter of Henry V. E. Longworthy, J.P., and Mrs. Longworthy, of Field Place, Malden, Surrey.

On October 14, at St. Margaret's Church, Uxbridge, Major Lionel Arthur Hawes, D.S.O., M.C., R.A., second son of Mr. and Mrs. C. A. Hawes, of Bombay, was married to Gwendolen Mary, only daughter of Mr. D. H. Grimsdale, J.P., and Mrs. Grimsdale, of The Shrubbery, Uxbridge.

The engagement is announced of Captain William Paterson Hay Lightbody, P.M.O., O.E.T.A., Haifa, son of the late Mr. J. H. Lightbody and of Mrs. J. H. Lightbody, of 62, Carrington Street, Glasgow, and Dorothy Mildred, daughter of C. Edward E. Cooke, J.P., and Mrs. Cooke, of The Manor House, Bygrave, Baldock, Herts.

M. Venizelos was the guest at dinner on Tuesday evening of Sir John and Lady Stavridi. Among the guests invited to meet M. Venizelos were the Greek Minister, the Earl of Reading, Mr. and Mrs. Winston Churchill, Sir Alfred and Lady Mond, Sir Gordon and Lady Nairne, Mrs. Bertram Brooke, and Mr. Harold Spender.

The engagement is announced of Major Hamilton Gardiner, Egyptian Civil Service (late R.F.A.), only son of Major-Gen. H. L. Gardiner, C.B., and Mrs. Gardiner, of Hilden, Rye, and Diana, eldest daughter of Mr. and Mrs. W. H. Patterson, of 25, Queen's Gate Gardens, S.W.7, and The White House, Watch Bell Street, Rye.

A marriage has been arranged, and will shortly take place, between Major Basil Moody, Indian Army Reserve, eldest son of the late Rev. W. H. Moody, rector of Bentley, Hants., and Mrs. Moody, of Linslade, Bucks, and Eva Mary Evans, third daughter of Mr. and Mrs. Lewis Evans, of Witheby, Sidmouth, and Russells, Watford.

Major H. W. V. Temperley, who was Assistant Attaché with the Serbian Army during the offensive of 1918, and who travelled extensively in Yugoslavia, and was subsequently at the Paris Conference for three months (during August was Acting Attaché at Belgrade), returned to England the middle of September. He has now resigned his office, and taken up the post of Reader in Modern History at Cambridge University.

On October 14, at Canterbury Cathedral, Captain Eustace E. V. Temperley, M.C. (late R.E.), of Jodhpore, India, was married to Myrtle Irene Stuart, daughter of the late Canon E. A. Stuart, of Canterbury, and Mrs. Stuart, 47, Aberdeen Park, Highbury. The Dean of Canterbury officiated, assisted by the Rev. A. Temperley, father of the bridegroom.

On October 13, at the Parish Church, Eastbourne, Major Charles Forbes Battye, M.C., Royal West Kent Regt., only son of the late Capt. C. F. Battye, Indian Staff Corps, and of Mrs. Battye, 20, Hartington Mansions, Eastbourne, was married to Sybil Constance, only daughter of the late Rev. Colin Grant-Dalton, Rector of Wincanton, Somerset, and of Mrs. C. Grant-Dalton, Ellerthwaite, Eastbourne.

A marriage has been arranged and will take place on Saturday, November 15, at St. Mary's, Speen, between R. W. L. Dunlop, C.I.E., D.S.O., temporary lieutenant-colonel, R.F.A., son of the late Rev. R. V. Dunlop and Mrs. Dunlop, of Speen Hill House, Newbury, and Mrs. Forbes Robertson, widow of Captain Keith Forbes Robertson, Rifle Brigade, and daughter of Captain Edgar Duke, R.A.M.C.

At the Investiture held at St. James's Palace on October 18 Prince Arthur of Connaught invested Brigadier-General Hubert Isacke with the Insignia of a Companion of the Order of the Star of India; Colonel Leonard Bagshawe, R.E., Lieut.-Colonel Harold Woodall, Dorset Regt., Mr. Ernest Bell, Mr. Mark Cogswell, and Mr. Charles Tegart with the Insignia of Companions of the Order of the Indian Empire.

On October 18, at St. Mary Abbot's, Kensington, the marriage took place of Cecil William, son of the late N. Chr. Mathiasen, Danish Consul, Gibraltar, and of the late Mrs. Mathiasen, of Gibraltar and Port Said, to Emily Beatrice, second daughter of the late Rev. Harry A. Darnell, Chaplain to H.M. Forces, and late Rector of Leigh Delamere, Chippenham, and Mrs. Darnell, of B 4, Queen Alexandra's Court, Wimbledon.

M. Venizelos paid a visit to Lloyd's and to Lloyd's Register of Shipping on October 17. He was accompanied by M. Caclamanos, the Hellenic Minister, and Sir John Stavridi, Consul-General for Greece. M. Venizelos dined with M. and Madame M. Embirocos at the Carlton Hotel on Saturday evening. There were also present the Greek Minister, M. Caclamanos, the personnel of the Greek Legation, and Sir Arthur and Lady Crosfield.

Sir Henry Richards, K.C., K.B.E., late Chief Justice of the High Court at Allahabad, has purchased The Yarrows, Camberley, which is now his permanent address.

Our Cyprus Correspondent writes:—

Mr. C. H. Hart-Davis, Chief Assistant Secretary to Government, is appointed to act as Chief Secretary.

Mr. H. P. McLaughlan, M.B.E., will act as Chief Assistant Secretary in the C.S. Office.

Mr. G. F. Wilson, Collector of Customs, is to act as Chief Clerk in the Chief Secretary's office.

Among the lectures announced by the Royal Geographical Society are one on "Central Kurdistan," by Major Kenneth Mason, M.C., R.E., and one on "Surveying in Mesopotamia During the War," by Lieut.-Colonel G. A. Beazeley, D.S.O., R.E. The former lecture will be given at the Æolian Hall, 135, New Bond Street, at 8.30 p.m. on November 3; and the latter in the Society's House, Kensington Gore, at 5 p.m. on November 10.

The titles taken by some of the new War Peers are as follows:—

Field-Marshal Sir Edmund Henry Hynman Allenby, G.C.B., G.C.M.G.—Viscount Allenby of Megiddo and of Felixstowe, in the county of Suffolk.

Field-Marshal Sir Herbert Charles Onslow Plumer, G.C.B., G.C.M.G., G.C.V.O.—Baron Plumer of Messines and of Bilton, in the county of York.

General the Honourable Sir Julian Hedworth George Byng, G.C.B., K.C.M.G., M.V.O.—Baron Byng of Vimy, of Thorpe-le-Soken, in the county of Essex.

Mr. H. St. J. Philby, a British political officer, has accomplished what no other Englishman has done in a remarkable journey across Arabia, says the *Globe*. At least half of his journey was over ground entirely new. For over two months he lived in the capital of the king of Central Arabia, a pure Arab of the Bedouin type. He was the first European to live in his palace, and was extraordinarily well treated, although he found the people generally suspicious. In the course of his journey south he discovered the largest surface of water yet known in Arabia. It was described as the bottomless pit, but its extent was only three-quarters of a mile in width by one-quarter across.

APPOINTMENTS, ETC.

The Rome correspondent of the *Morning Post* reports that the Italian Minister at Athens, Baron Romano Davezzano, is to be transferred to the Washington Embassy.

The Secretary of State for India has approved the appointment of Lieutenant-General Sir C. W. Jacob as Chief of the General Staff in India in succession to Major-General (temporary Lieutenant-General) Sir G. M. Kirkpatrick, who vacates the appointment on January 13, 1920.

OBITUARY.

Lieut.-Col. John Edward Orange-Bromehead died on Sunday at Hollam House, Titchfield, Hants, in his seventy-eighth year. He served in the Egyptian Expedition in 1882, and had the medal and the bronze star.

It is announced that Major Arthur Neve has died at Srinagar, Kashmir, aged 61. He went out to Srinagar in 1881 as assistant surgeon at the Mission Hospital, and the next year became chief surgeon. During the war he served as major in the R.A.M.C. in the hospitals for Indian troops at Brighton.

Colonel Richard Mercer Lloyd, who died on October 15, was buried at Exmouth on Saturday. He took part in quelling the Indian Mutiny, and for his services with the Burmese Expedition of 1886-7 was mentioned in despatches. Colonel Lloyd retired from the Bombay Staff Corps in April, 1888.

Surgeon-Colonel Thomas Jackson, Indian Medical Service, of St. George's Hospital, Bombay, died on the 16th inst. of heart failure, while on leave, at Melbourne. He saw service with the Dongola Expedition in 1896, and in the following year was actively employed on the North-West Frontier of India. He had the Egyptian medals and the Indian medal with two clasps.

The death is announced of Sir William Marling, second baronet, of Stanley Park, Stroud. He is succeeded by his eldest son, Colonel Percival Scrope Marling, V.C., C.B., who was born in 1861. The new baronet has seen a good deal of active service in Egypt and in South Africa, and in the European war he was on the Staff with the British Expeditionary Force in 1914-15. He won his Victoria Cross in the Sudan in 1884, when he risked his life to save that of a private. Sir William's second son is Sir Charles Murray Marling, formerly British Minister in Persia.

We regret to have to record the death of Mr. Pierre Zebitch, which occurred in Serbia on September 28. He had journeyed over from London to see his wife and children, from whom he had been separated for five years in consequence of the war, and while there was taken ill and died. Mr. Zebitch was a civil engineer and acted as chief engineer of the engineering works at the Department of Tchatchak (Serbia). He was also consulting engineer of the General Anglo-Serbian Industrial and Financial Company. During the war he gave his services to the Serbian Army as an engineer.

NEWS IN BRIEF.

Xanthi, which has been awarded to Greece, has been occupied by Greek troops.

Severe fighting has recommenced in the region of Zanghizur, in the Caucasus, between the Armenians and Tartar troops.

The Serbian Legation in Paris denies the statement concerning the existence of a plot at Agram against Prince Alexander.

The Alexandria tramwaymen having been granted a 40 per cent. increase in wages and an eight-hour day, the strike has come to an end.

In view of the necessity for economy, the establishment of the Malta Dockyard will be reduced to a peace-time level within the next six months.

About 300 Palestinian Jews who had been expelled by the Turks during the war and taken refuge in Greece, and eight Jews from Persia, have returned to Palestine.

The City Corporation decided last week to present an address of welcome to the Shah on the occasion of his visit to London and to entertain him to luncheon at the Guildhall.

The *Sudan Times* reports that recently a thunderbolt fell on a native woman living at the Hilleh of Abu Rus and killed her. Another native woman who was near her was also injured.

Since the middle of September seventeen vessels have sailed from Bombay, Busreh, and Karachi, carrying 289 officers and 9,033 other ranks from Mesopotamia, and 649 officers and 3,896 other ranks from India.

The Board of Trade have been informed by the Lieutenant-Governor of Malta that, owing to the existence of bubonic plague at Constantinople, that place has been declared to be an infected place within the meaning of Article 1 of the Regulations made under the Fourth Sanitary Ordinance, 1908.

Information has been received in London that the Turks, with a view to invading Erivan, have taken the town of Igdir. Armenians are fleeing in thousands from the Igdir district to Erivan. A report from Tiflis states that the Nakhitchevan Tartars have risen against the Armenian Government.

DOMESTIC ANNOUNCEMENT.

BIRTH.

RUSSEL.—On October 16, at 55, Campden Hill Court, Kensington, to Margery (née Rees), wife of Commander F. A. H. Russel, Royal Navy—a son.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,
Billiards, and Lift.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant,
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON—
TROODOS—Olympus Hotel.
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, and Larnaca.
Head Offices and General Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

FRIDAY, OCTOBER 24, 1919.

INDIA AND PERSIA.

The political conditions which prevail in India and in Persia present at once a parallel and a contrast, for while the two countries have the same starting point and the same objective, they are following very different roads. Each of them has now determined to cast off the last remnants of the vicious Asiatic system, the essence of which was exploitation of the people for the benefit of a small ruling class, and each of them is striving to reach the distant goal of national self-government and national self-respect; each of them has the cordial goodwill of the Western democracies, and for some time to come each of them must depend largely upon Western help. That their roads are different is the consequence of well-known historical causes. The Asiatic system of rule was carried even further in India than in Persia, and for that very reason the latter country never fell into the utter depths of anarchy and misery in which the former was submerged in the eighteenth century, and from which she was rescued with such difficulty by the efforts of the British administration. Persia has managed to retain her political identity, despite the recent menace from the North; India went utterly to pieces, and her political fabric has had to be built up afresh. Thus it happens that while the greater country is pressing towards her objective under foreign stimulus and foreign guidance, the lesser is struggling forward without such support; the future alone can show whether such external support is in the long run a benefit or a drawback, but at the moment the question of practical importance is rather how the two countries can help one another, and by pooling their experiences shorten or simplify the journey which they have undertaken. Of late they have drifted somewhat apart: the closure of the land routes through Afghanistan, and the changes in the course of sea-borne traffic, have combined to interrupt the streams of intercourse which formerly flowed, and it is necessary to go back to the Moslem period of Indian history in order to realise the nature and extent of the ties by which the two countries were formerly bound. In that period they were united closely both by commerce and by culture. Persia looked to the entrepots on the west coast of India for everything which she required to obtain by sea: the ships of Cambay and Calicut sought the market of Ormuz, "the jewel of the ring of India," returning with cargoes as costly as those they had discharged, and each country was necessary to the comfort and convenience of the other. Culture travelled by land while commerce was conducted mainly on the sea, but here there was less of reciprocity, for Persia gave much and received little; Northern India attracted scholars and poets, artists and musicians, and even now the atmosphere of her great centres of culture is predominantly Persian. In Lucknow and Delhi, Sa'adi is still a greater name than Shakespeare, and while English is the chief medium for the discussion of public affairs, the practised orator finds his most effective peroration in an apt quotation from the Gulistan.

In the past, then, India and Persia ministered to each other's material needs, while in the regions of intellect and culture Persia gave, and India took. In regard to the future, we may say at once that this latter feature of their intercourse is not likely to recur. Commerce will continue, and we hope that it will swell far beyond its present volume, but it is most unlikely that either country will seek its intellectual or artistic inspiration directly from the other; both will turn rather to Western sources, and if the synthesis of East and West should ever be completely achieved, we may expect that Persia, like India, will contribute to this result. For the present the direct relations between the two countries are likely to rest mainly on a more material basis: India's foreign rulers have studied, and in many cases solved, the most urgent of the problems with which Persia is now beginning to grapple, and India can best repay her old debt by offering the use of her large and dearly bought experience. India, for instance, has realised, if still somewhat imperfectly, the meaning of equal justice, an idea essentially foreign to the old Asiatic system. Persia has still to realise that idea as the necessary condition precedent of any progress on the road which she has chosen, and if she so desires, she can learn more about it from India than from any of the countries lying North or West. Assuming that internal peace has been established, her next need is for means of transit, without which she cannot hope to develop her great potential resources: it was India that pioneered cheap and effective transit in the East, and Persia will be well-advised to study Indian methods rather than those prevailing in countries where capital has been expended with a lavish hand. Transit being provided, agriculture has to be reorganised to meet the demands of modern markets. India has now sufficient experience of that process to be in a position to render valuable help. The widespread mineral deposits have to be prospected and developed; geologists and mining experts from India can at least perform greater services than predatory syndicates generated in the less reputable centres of European finance. Modern industries have to be established, and commercial methods have to be brought up to date; here again India can, if she is wanted, render substantial aid, and possibly through the agency of that talented race which still looks to Persia as an inhospitable motherland. It is now many centuries since the Parsees were driven by persecution from their home: they have done more than any race, except the British, to enrich the country of their adoption, and it would be a noble revenge for old injuries if they should devote some portion of their abundant energy to the introduction into Persia of those aptitudes and methods which are now so conspicuous in Bombay.

It is through such channels as these that intercourse between the two countries may be developed in the near future, and at first sight the result may appear to be of benefit only to Persia, but when we examine the matter more closely we find that the gain will not be unevenly divided. India still suffers from that intellectual isolation which in the old days was imposed on her by her mountains and her seas; she has indeed absorbed, and in part assimilated, much that England has offered, but as yet she knows little of other countries, and is but imperfectly equipped to play her part as one of the great nations of the world. She needs to widen her horizon, and enlarge her experience of affairs, to learn that England is not the only external source of all things good and evil, and to mix more freely with other races in unfamiliar environments. She would gain much by intercourse with Persia, a country which has always looked West as well as East, and which under the new conditions will be within easy reach of the Mediterranean area; she would see there problems essentially similar to her own being handled under a somewhat different inspiration, and she would acquire, what is at present so grievously lacking, some basis for a wide comparative judgment on men and things. She could, as we have said, offer assistance of great value in the concrete tasks which Persia has now to undertake, but she could learn as well as teach, and we do not doubt that close and frequent intercourse between the two nations would be a source of benefit to each in hastening the time when they may be fitted to take their places as full members of the Commonwealth of Nations.

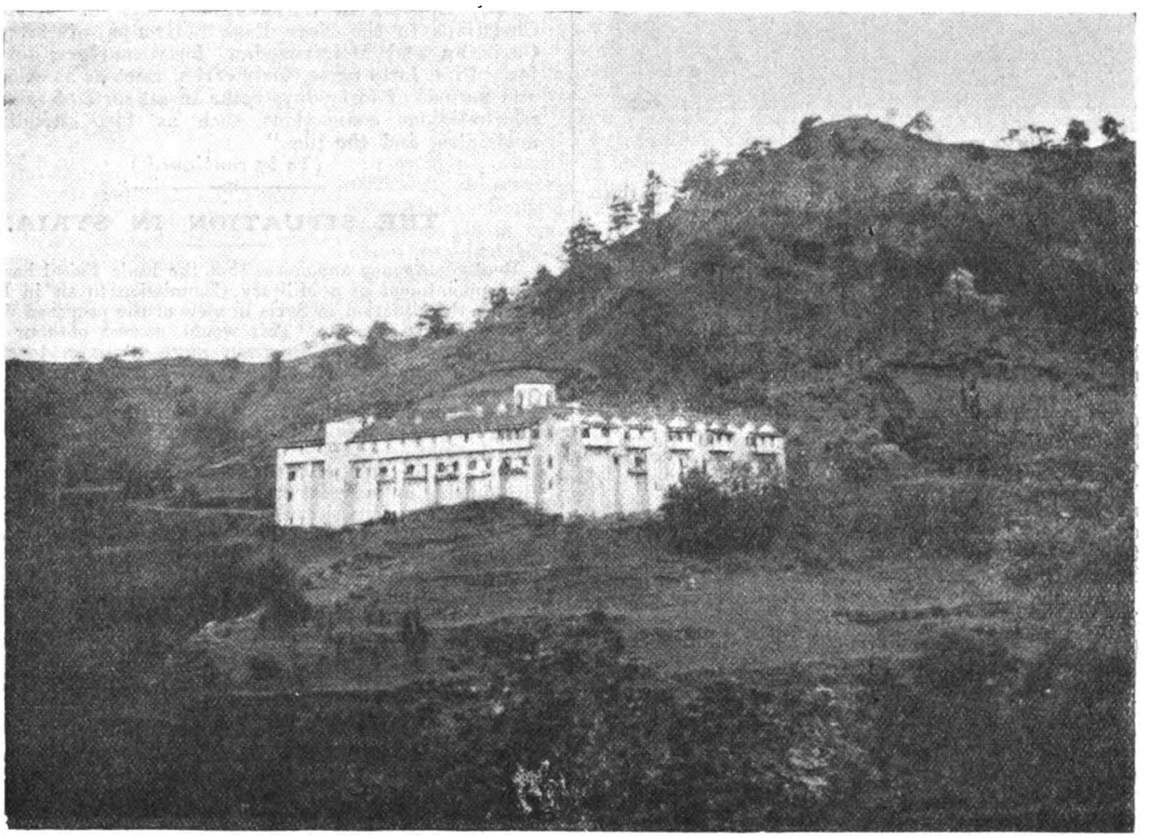
CYPRIOTE SHRINES.

By Lieut.-Comdr. H. C. LUKE, R.N.V.R.

III.

Of the seventy icons generally admitted by the Orthodox Church to be the handiwork of Saint Luke, three enjoy a special pre-eminence and sanctity, due to the belief that the panels on which they are painted were given to the Evangelist by the angel Gabriel. They are an icon of the Panagia preserved in Russia, the "Hodegetria" (the Conductress) belonging to the monastery of Mega Spelaion in the Peloponnese, and the celebrated "Eleousa" (the Compassionate), which is the glory of the monastery of Kykkos, in Cyprus. Kykkos was founded towards the end of the eleventh century to house the "Eleousa," and is situated in the district of Myriánthousa, or Marathasa, at a height of 4,400 feet, in the heart of the Paphos Forest. On account of the importance of the treasure which it shelters, the monastery is privileged to be of the category known as "stavropegiac"—that is to say, it is a "peculiar" exempt from the jurisdiction of the diocesan bishop, and owes allegiance only to the Archbishop of Cyprus. Frequently destroyed by fire and reconstructed, its buildings date in their present form only from the latter part of the eighteenth century, nothing of the original monastery but the "Eleousa" having survived the conflagrations. The icon itself is concealed behind an embossed silver-gilt cover encrusted with emeralds, rubies, and other precious stones; and only a square inch of the picture is visible through an opening made in the case. The whole rests in a massive stand or frame of tortoise-shell inlaid with mother-of-pearl, which is built up against the iconostasis of the monastery church. A life-sized black hand and arm of bronze, affixed to the side of the icon-stand, recall one of the "Eleousa's" most sensational miracles. A Moslem negro in Turkish times once tried to light his pipe by the little lamp burning before it, when a sword shot out from the icon and severed his arm. Close by, encased in silver, hangs the nose of a sword-fish, which was about to devour a sailor, when he prayed to the icon, and all was well. Many other miracles are ascribed by the Orthodox with perfect confidence to the "Eleousa," who is, above all, celebrated as a rain-getter; and annually on September 8 the icon is the object of a popular and well-attended *panegyris*. On this day the monastery swarms with thousands of villagers, many of whom, for want of other accommodation, spend the night on the floor of the church. A few enterprising ones, instead of sleeping at Kykkos, leave directly after the liturgy for the monastery of Chrysorrhoiátissa, which is separated from Kykkos by an arduous journey of seven hours across the mountains. Chrysorrhoiátissa also possesses an icon painted by St. Luke, and its *panegyris* falls on the same date as that of Kykkos. It is a meritorious act on the part of the Orthodox Christians to attend both festivals in one day; and whoever does this seven years in succession has performed the equivalent of a pilgrimage to Jerusalem, and is entitled to the epithet of Hajji.

Two other Cypriote monasteries share with Kykkos the distinction of being "stavropegiac"—namely, Machaerá, on the border of the districts of Larnaca and Nicosia, and the Enkleistra, near Paphos. Machaerá was founded in the year 1200 by the hermit Nilus, whose autograph Ritual Ordinance,[6] written on vellum, is still preserved in the monastery. Beyond this manuscript and the usual wonder-working icon, Machaerá contains little of interest, for the monastery was totally consumed by fire in 1892, and in its existing form is entirely modern. It is pleasantly situated on Mount Chioni at a height of 2,250 feet, and is surrounded by pine forest. The present abbot is a courteous old gentleman, who was formerly a schoolmaster. His immediate predecessor, on the other hand, was completely devoid of letters. This All-Saintly-and-Erudite[7] prelate signed documents with the imprint of his thumb, smeared with ink, and was unable so much as to say his prayers. For the purpose he employed a sort of whipping-boy. The abbot sat in his chair, the boy stood beside him and spouted the prayers; and the abbot's vicarious devoutness was generally regarded as adequate and satisfactory.



MACHAERÁ MONASTERY.

The Enkleistra, which means the Hermitage, was founded in the last years of the twelfth century by the hermit Neophytus, at the head of a beautiful and well-watered valley lying some miles west of Paphos. It was originally intended by Neophytus as a retreat for himself, but the Saint's reputation for holiness was such that, almost immediately, other ascetics grouped themselves around him, and hollowed out their cells in the cliff which he had chosen for his refuge. Saint Neophytus flourished at the time of the conquest of the island by Richard Cœur de Lion, and his is the only contemporary voice that has transmitted to posterity the sentiments of the Cypriotes towards the tyrant Isaac, the English King, and the substitution of Frankish for Byzantine rule in the island. In a letter, happily preserved, to an unknown disciple, Neophytus makes bitter lamentation concerning the misfortunes of his native land. Writing in 1196, four years after the establishment of the Lusignan dynasty in Cyprus, he castigates from his rock-cut cell both conqueror and vanquished, "Inkliter" and Byzantine, and

ascribes to the sins of his countrymen the evils that have befallen them. "A cloud veils the sun, and a mist mountains and hills, and these for a while shut out the warmth and bright ray of the sun; and us, too, for now twelve years, a cloud and mist of successive calamities which have befallen our country wrap around."

By his letter "concerning the misfortunes of the land of Cyprus," and by the publication in England of his Ritual

KYKKO MONASTERY.

Ordinance[8] Noephytus is perhaps the best known in the west of Cypriote Churchmen. He died about 1215 at an advanced age, and was buried in his cell, in the tomb which he had constructed with his own hands to serve him as a bed in his lifetime, and as his grave thereafter. There his body remained undisturbed until 1757, when it was removed to the church that had meanwhile been built on the other side of the glen, to serve the needs of the monastic community, which had long outgrown the founder's cave-chapel. The skull was placed in a casket of silver-gilt, one panel of which opens to enable it to receive the kisses of the faithful; while the original wooden coffin containing the Saint's bones reposes in a large chest surmounted by a *baldacchino*, handsomely carved in a style suggestive of Florentine art. Casket and chest are opened twice a year for the veneration of numerous pilgrims, who are not always composed entirely of Christians. Once, when staying at the monastery with its hospitable and patriarchal old abbot, I saw two unattended Turkish women among the worshippers, conspicuous by their *charshaf* and veiled faces. When the ceremonies were over and the crowd had dispersed, the pair obtained permission to pernoctate (as the Oxford statutes have it) in the church, hoping by the intercession of the Saint to be cured of the epilepsy from which they suffered. Paradoxical as it may seem, Christians and Moslems in the

PANEGYRIS AT CHRYSORRHOIATISSA MONASTERY.

Near East, while hating the doctrines of each other's faiths, take not unkindly to each other's superstitions. I have also seen Turks, both men and women, present as worshippers at Kykkos and Chrysorrhoiátissa on the occasion of the *panegyris*, and kissing the icons on the iconastasis with the same fervour as their Christian fellow-pilgrims. We find the converse of this in the faith reposed by Christian peasants in the Moslem charms known as *khamaili*, amulets, enclosing verses of the Koran and cabalistic inscriptions, which are effective against sickness, death, and the evil eye In view of the points of contact which exist between Christianity and Islam, or, more correctly, between their several superstitions, it is not surprising that there are in Cyprus, as elsewhere in the Levant, shrines sacred to Christians and Moslems alike. One of these is the so-called Turabi *tekyé* at Larnaca, Turabi being an Arabic or Turkish corruption of the Greek Therapon. St. Therapon was a bishop in Cyprus, probably of Kition, some time in the seventh century, and met his death during one of the Arab invasions, to which, as we have seen, the island was at that period subjected. It is not known how the bishop's tomb came to pass into Moslem custody, nor yet how the holy man contrived to become a Moslem worthy. Suffice it to say that as Therapon, or as Turabi, he receives to this day the attentions of the adherents of both faiths.

A more interesting sanctuary frequented by Christians and Turks, though outwardly Mohammedan, is the Kirklar *tekyé* near Tymbou, in the district of Nicosia. The name means "the Convent of the Forty"; and although we do not know who these particular forty may have been—they are vaguely described as the forty Sheikhs—the number constantly appears in the religious lore of Moslems and Christians in the Near East. Groups of forty saints, Christian and Mohammedan, forty martyrs, forty jinns, forty Pirs, forty ogres, forty efrits, meet us at every turn[10]; and periods of forty days recur in all sorts of religious and semi-religious connections, such as fasts, wedding-feasts, noviciates, and the like.[11]

(To be continued.)

THE SITUATION IN SYRIA.

Reuter's Agency announces that the Emir Faisal has proposed the appointment of a Military Commission to sit in London to discuss the situation in Syria in view of the proposed withdrawal of the British troops. This would consist of four delegates, British, French, and American representatives, together with the Emir himself. Its function would not be to deal with the political future of the country—a question for the decision of the Peace Conference—but to adopt the steps necessary for the immediate future, in view of the results which the withdrawal of the troops might occasion.

The Emir states that the Arabs rely so much upon Great Britain that unless great care be taken the removal of the troops will cause a serious situation. If, however, the troops are withdrawn and it is made clear to the people that this does not involve a partition of the country or a final decision, nothing serious will occur.

Great Britain has in principle accepted his proposals, and he is in Paris on the invitation of M. Clemenceau to discuss the matter with him.

LONDON MOSLEMS AND THE TURKISH EMPIRE.

In conformity with the decision of the Moslems in India to hold a special meeting offering prayers for the preservation of the Turkish Empire, and the undiminished power and authority of the Sultan of Turkey as the Khalifah of the Moslem world, the Moslem residents of London assembled at No. 111, Campden Hill Road, on Friday, the 17th inst., to join with their brethren in India in their prayers. The service was led by Mr. Marmaduke Pickthall. After the service three resolutions were unanimously adopted. The first declared that the Sultans of Turkey have been for many centuries past the recognised Khalifahs of the Moslem world, and that the present Sultan of Turkey occupies in relation to the Moslem world the same position as his predecessors. The second emphasised the necessity of the political independence of the Islamic Khalifah. The third protested "in the strongest language at its command against the systematic vilification, in the European Press, of the Turkish patriots who to-day are endeavouring to retrieve the mistakes committed during the past few years, and who are using every legitimate endeavour to stem the tide of unwarranted aggression on Islamic territories by certain European and Christian nationalities, more especially the Greeks and the Armenians."

The Secretary for India wishes to hear from invalided and disabled Regular officers of the Indian Army who are anxious for employment in a civil or quasi-military capacity in the East, with a view to putting them in touch with opportunities of employment that come to his notice. Nothing can, however, be done for applicants unless their medical records show that they are *primâ facie* suitable physically for service in the East. The majority of officers of this class have already been communicated with, but it is possible that some may have escaped notice. Communications should be addressed to the Secretary, Military Department, India Office, Whitehall, S.W.1.

[10] for an example of forty devils, see above.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

It was obvious that Egypt's finances would for the time being be seriously affected by the recent disturbances, and the unsatisfactory position shown in the accounts for April, which are given elsewhere in this issue, is in no way surprising. There was the considerable deficit on the month of £E714,241, as compared with a surplus for the corresponding month of 1918 of £E393,195, decreases of greater or lesser extent being recorded under practically every head except interest on investments. It is anticipated that, with the exception of the railways, post office, and similar services, the losses will be recovered later on, but our correspondent points out that the fall in the Customs receipts will only be made good by the improvement in imports during the next few months.

***

Even if the immediate losses are to a great extent recovered, it is difficult to avoid the conclusion that the set-back which the country has sustained will make its effects felt for some time. During the present year, at any rate, the financial position is likely to cause anxiety to the authorities, and in this connection the remark of our correspondent may be noted, that, "even allowing for the country's wonderful recuperative powers and its habit of disappointing forecasts, especially when they are of a pessimistic nature, it is difficult to see how it will be possible to avoid having recourse to a considerable portion of the draft (on the reserve fund) provided for."

***

A number of excellent openings for British firms are outlined in the letters from our Constantinople Correspondent, which appear in the present issue, and I hope that some of our merchants and exporters will be enterprising enough to try to take advantage of them. Of the openings instanced, I would call special attention to those connected with communications. For instance, the correspondent points out that there is room for at least a dozen motor-'bus services in Constantinople. Then the "Shirket Hairie" and the "Seiri Seifein" steamboat services both need new ships, and this apart it is suggested that "it might be possible to get a concession to run ships to certain ports now served by the State steamers, which are certainly utterly incapable of satisfying the needs of the places at present served by them." Other interesting openings are referred to, notably the scope for the introduction of motor-engines for barges, and our Correspondent makes it quite clear that the possibilities for business in Turkey at the present time are very considerable. It is merely a question whether our business men possess the enterprise necessary for entering the market, and whether, if they do, conditions here will enable them to "deliver the goods."

***

In connection with the first call of 5s. per share by the directors of the Abyssinian Corporation it is announced that the corporation has purchased the important business of Messrs. J. D. Nicholas and Co. in Abyssinia. This firm is established at Adis Abeba, and at Goré, Bouré, Gambela, Sayou, and Gidami, in Western Abyssinia. This acquisition, following the purchase of the well-known business of Messrs. Gerolimato and Armanza, gives the corporation a pre-eminent position in the trade of Western Abyssinia. It is a curious fact that, despite the influential auspices under which the Corporation was formed and also the optimistic survey of the company's prospects by Lord Wolmer at the recent statutory meeting, when he indicated important developments, the shares of the Corporation are quoted at a discount. I presume that the reason is that the investing public here are very largely ignorant of the great possibilities of Abyssinia commercially and otherwise.

***

There seems to be a prospect that a contract will be placed by the Egyptian State Railways with an American firm for the supply of fifty locomotives. The Egyptian State Railways normally look to England for the great bulk of their locomotives and rolling stock, and the prospective loss of this contract, which will be worth at least £500,000, is naturally a matter of great concern to British firms of locomotive builders. It is maintained that British firms were not in a position to contract for the locomotives, as the time available for tenders when drawings and specification reached this country was much too short. It is stated that the contract has not been finally allotted; if so, I trust that an effort will be made to extend the time so that British firms may be allowed to participate. Our firms do not expect to be favoured at the expense of other countries, but they do expect, as they are fully entitled to, that they will be allowed to compete on equal terms with their rivals.

***

Since the question of inadequate postal and cable communications with foreign countries was first raised some months have elapsed, but while in the intervening period improvements have taken place, the position is unquestionably still most unsatisfactory, especially as regards the cables. Our Belgrade Correspondent in a recent message complained bitterly that the British colony there "is without telegrams, for a cable that takes over fifteen days is useless; postage is slow, though it has been improved recently; but parcels post is non-existent; it is urgently and insistently wanted, and nobody can understand why we have not got it." It would not be difficult to give more instances of this character, and I am afraid that our Belgrade Correspondent's remarks apply more or less to many other Near Eastern centres. Why the authorities have not yet been able to remedy this state of affairs is a mystery. It is certain, at any rate, that they have not lacked reminders on the subject, for both from public bodies and the Press there have been continuous complaints.

***

Some remarkable instances of the present delays in the cable service have just been forwarded to the Postmaster-General by the President of the Manchester Chamber of Commerce. There is a delay of four days on messages from China, and an average delay of four days and sometimes five on messages from Persia. "The complaints demonstrate," wrote the president, in giving these and similar instances, "that the delays are common to all the Eastern markets. I desire to urge with all the emphasis I can command that the present unsatisfactory state of affairs should be met by energetic efforts to remedy the service. As things stand, the overseas trade is severely handicapped, and in view of the importance of restoring and developing our exports the cable service should be immediately raised to the pre-war standard of efficiency."

***

The Government of India's policy in regard to civil flying is now announced, and is based on the principles that a large organisation with a small number of well-situated maintenance services is sounder economically than a number of organisations which would involve a correspondingly larger number of maintenance services, and that an air transport organisation should not be dependent on any particular aircraft construction company. It is considered that the development of civil aviation will best be carried out in India by the grant of a monopoly for a period of years for the carrying of mails to a single air transport company which should be independent of any particular aircraft construction company. There would only be a monopoly in regard to the carriage of mails, the rates for which would be fixed by Government, and the company would be free to fix rates for goods and passenger traffic in competition with companies which might be established for that traffic. Such a company, it is recognised, would probably be able to shut out competition for other traffic, and the terms under which such a monopoly would be granted would require careful consideration and discussion, and firms have been asked through the Chambers of Commerce to communicate the conditions which would be agreeable to them to the Commerce and Industry Department as a basis for discussion.

Administration of Palestine.

The Budget Statement for 1919-1920.

The Budget Statement for 1919-1920 of the Occupied Enemy Territory Administration (South) indicates that our administration of Palestine has made considerable progress. The estimates for the preceding year showed receipts £E661,813, and expenditure £E738,649, with an anticipated deficit of £E76,836. The actual receipts came to £E748,258: the actual expenditure is assumed at £E696,883, and although until the Army Pay Department has furnished a statement of its charges against the Administration the latter figure cannot be considered as final, it is evident that a surplus may be expected on the year's working. For the year 1919-20 receipts and expenditure are estimated to balance at £E735,200, and, as the report points out, the Administration of Palestine is costing H.M.'s Government nothing.

Uncertainty of Political Status.

This is a most satisfactory result, but it is evident that if the Administration had been allowed a free hand the result would have been even better. The uncertainty as to the political and economic future of the country has tended considerably to lower the estimates, since they have involved the postponement of several services that would otherwise have been regarded as essential. Moreover, the period of occupation without a settlement has been long, and in order to avoid a complete dislocation of the life of the people, the Administration has been compelled to assume all the ordinary functions of a peace-time government in a way that would not have been called for had the period been shorter.

The conditions under which the Administration is carried on in many respects constitute new precedents. Whilst in other occupied enemy territories a regular civil Government has been set up side by side with the Army of Occupation, in Palestine, although the Administration actually collects and expends the revenues, it is closely controlled in all details by the general staff and the public funds are thus liable to abnormal charges. Another unusual condition lies in the fact that while the Administration is expected out of local revenue to provide for all the functions of the previous civil Government, the country itself, without certain developments which have had to be suspended until the peace settlement is reached is not sufficiently productive to be self-supporting as a separate economic unit. Moreover, the instructions received from H.M.'s Government have precluded the development of the revenue and of existing resources to the same extent as in other divisions of occupied enemy territory.

Improvement in General Conditions

The most noticeable indications of improvement in general conditions have been the increase in population, in stock of animals, and in the area under cultivation. On March 31, 1919, the population was estimated aproximately at 647,850, made up f 515,000 Moslems, 65,300 Jews and 62,500 Christians. Normal conditions have, however, not yet been reached, many exiles have not returned, villages ruined by the war still remain unbuilt, and there is as a result of the uncertainty as to the political and economic future of the country a general feeling of insecurity as to the future of land tenure.

The stock of taxed animals was 531,000 as against a total of 139,000 on March 1, 1918. This increase is rendered more remarkable by the fact that practically all the animals in the country had been requisitioned by the Turks, and at the time of the occupation were therefore seized as booty by the Army, from whom the inhabitants had to buy them back. The total area administered is approximately 8,700 square miles, or about one-fourteenth of that of the British Isles. The area under cultivation is estimated to have increased 15 per cent. since the occupation. This is largely due to the release of lands that were thrown out of cultivation by the military operations in 1918, and by the conscription of the able-bodied population. This has, however, not produced a corresponding increase in the revenue as the latter is derived from tithes, the total of which depends on the market prices of cereals, which have fallen by 35 per cent. during the year. The percentages of the respective communities engaged in agriculture are as follows: Moslem, 69 per cent.; Christians, 46 per cent.; Jews, 19 per cent.

Revenue Figures.

Turning now to details of the Budget, the principal items of revenue are (figures in brackets are for the preceding financial year): Direct taxation, £E228.020 (£E160,311); customs, £E300,000 (£E122,000); law and justice, £E55,000 (£E23,300); relief services, £E43,400 (£E324,486); post office, £E30,530 (£E19,350); telegraphs and telephones, £E19,950 (New). Under expenditure, the main heads are: General administration, £E178,200 (£E126,866); police, £E99,300 (£E98,265); public health, £E90,500 (£E50,861); public works, £E85,750 (£E13,171); education, £E46,000 (£E15,331); relief services, £E64,700 (£E331,905).

Certain funds are not included in the Budget as the revenues are either assigned to the Ottoman Debt Commission or to special loans. This year the revenue assigned to the Ottoman Public Debt amounts to £E50,625, against £E59,447, and the tithes assigned to special loans (railways) in other parts of Turkey to £E103,000, against £E82,000. The total value of the tithes is put down at £E224,835, but on account of the assignment to special loans, etc., the administration only benefits to the extent of £E100,600. The collection, it is pointed out, is made on the pre-war basis, the additional tithes imposed by the Turks since the beginning of the war being entirely abandoned.

The report says that in its present form the tithe will always be troublesome. In time no doubt it will be commuted for fixed annual payments, but before this is possible a cadastral survey and land settlement are absolutely necessary. They are essential also for the proper administration of the house and land tax and of the State domains, and although the resources of the Administration do not admit at present the undertaking of a survey on any extensive scale, the matter is of such importance that a sum of £E6,300 has been allotted for preliminary measures and the training of the staff.

It is interesting to note that the total taxation of the country is just over £E1 a head. The taxes levied this year remain the same as in 1918, with the addition of the professional tax, which had previously been withheld. House and land taxes show a considerable increase on the figure for the preceding year, and the animal tax, which is levied on sheep, goats, buffaloes, pigs, and camels when not used for ploughing, shows a similar large increase.

Customs and the Question of Ports

Customs is, as indicated, the chief source of revenue, and the increase shown is derived mainly from the import of the staple requirements of the country, and is due not only to the growth of general prosperity, but also to improved administration of the Customs. It is pointed out that the increase would certainly have been larger had there been the same facilities at the ports in Occupied Enemy Territory (South) as already exist in Occupied Enemy Territory (West). The difference in this respect is so great that there had been instances where imports intended for Occupied Enemy Territory (South) could only be shipped to Beyrout, to be transported thence at heavy cost by road or sailing boat.

The ports in O.E.T. (South) are Jaffa, Haifa, Acra, and Gaza, and three temporary ports are also opened on the Cæsarea coast during the summer months for the melon export trade. None of these ports is yet provided with a harbour, and although as regards Jaffa and Haifa projects and concessions had been actually under consideration for some time before the war, and the commercial elements in the territory have pressed for the resumption of port developments, and many leading firms of financiers and contractors have offered their services, it has not been possible to do anything more than regulate the ports in view of the orders of H.M.'s Government to suspend the grant of concessions. Jaffa at present shows much larger returns than Haifa, much of the normal trade of which is being diverted to Beyrout, and it is anticipated that until railway communications improve and a harbour is constructed at Haifa this state of affairs will continue. It is noteworthy that the coastal lights are in the hands of a French company, to which a concession had been granted by the Turks.

Another cause diminishing the Customs revenue has been the inefficiency from the commercial point of view of the Palestine military railways, on which freights are high, thefts of goods in transit have been frequent, and on occasion civilian transport has been entirely suspended for several days at a time. The abnormal increase in the Customs receipts from parcels post would indicate that merchants prefer this more expensive method of forwarding on account of the insecurity of the railway.

EGYPTIAN FINANCES.

Effect of Disturbances on Revenue

(From Our Own Correspondent.)
Cairo, September 29.

The State accounts for April, the first month of the current financial year, have just been published, and confirm somewhat the anticipations that were prevalent. Revenue amounted to £E940,734, as against £E2,062,976 during the corresponding month of 1918, and expenditure to £E1,654,975, as compared with £E1,669,781 in April last year. There is therefore a diminution of £E1,122,242 in revenue and of £E14,806 in expenditure, and the surplus of £E393,195 shown a year before becomes as a result a deficit of £E714,241.

The main heads under which a falling off in revenue is registered are direct taxes, £E183,677; Customs, £E312,767; legal fees, £E107,795; railways, £E323,819: ghaffir cess, £E50,549; whilst, with the exception of interest on investments, practically every other head shows lesser decreases.

That the revenue collection during the first two or three months of the financial year, especially during April and May, would suffer as a result of the disturbances, was fully expected, for, apart from the general cessation of business in the interior, it was quite impossible to carry out to any appreciable extent the usual financial operations amongst the fellaheen landowners.

The only items which it is to be feared will not recover what they have lost will possibly be the railways, Post Office, and similar services, but under the other heads, such as direct taxes, domains, ghaffir cess, etc., the loss may be considered as merely temporary, for it is to be presumed that the outstandings will be collected during the other months of the year. At the same time, the drop in Customs receipts will only be caught up if imports improve in the course of the next few months. At the end of May, the last month for which figures are available, they were down by £E4,647,000, compared with 1918.

All things considered, what with the loss in revenue to be expected as the direct outcome of the disturbances, and the increases in pay which have had to be granted to Government officials to enable them to meet the present high cost of living, the Anglo-Egyptian financial authorities will not have an easy time to balance the State accounts for this year. In the Budgetary estimates provision was made for a draft of £E1,550,000 on the reserve fund to meet the expected deficit in revenue and increase in expenditure due to the troubles, and, even allowing for the country's wonderful recuperative powers and its habit of disappointing forecasts, especially when they are of a pessimistic nature, it is difficult to see how it will be possible to avoid having recourse to a considerable portion of the draft provided for.

The Port of London Authority have received an expression of appreciation from the India Office of the energetic and able assistance rendered by the officials of the Authority at East India Dock in connection with the R.I.M.S. "Dufferin," which resulted in the passengers, over 300 in number, being embarked on October 2, with complete success, in little over two hours.

For BUILDING UP your HEALTH take
WILKINSON'S (Estd. since 1829)
ESSENCE OR FLUID EXTRACT OF RED JAMAICA
We cannot speak too highly of it."—Lancet. SARSAPARILLA
(The best "Pick-Me-Up")
Pronounced by the Highest Medical Authorities the Safest and Most Reliable Remedy for
Torpid Liver, Debility, Eruptions, and the most WONDERFUL PURIFIER of the HUMAN BLOOD.
IMPORTANT EVIDENCE.—"We recommend your Jamaica Sarsaparilla."—Medical Review.
The only preparation for removing what may be called the sequelæ of a mercurial course."—Sir R. Martin.
The late Lord Clyde said:—"I am never without it, for when feeling depressed or out of sorts from anxiety or fatigue, a dose or two animates me."
"It cured me of Torpid Liver after all other remedies failed."—Earl of Aldborough.
N.B.—Indispensable to all who value Health.
A World-wide Reputation for over Three-Quarters of a Century.

ROUMANIAN TRADE NOTES.

(From Our Own Correspondent.)
Bucharest, October 1.

Railway Questions.

M. Peritzeanu, General Director of the Roumanian State Railways, in reply to certain criticisms relating to the re-establishment of normal conditions on the railroads, states that the income earned by the railways increased 140 per cent. from January to July this year. The present lack of material, he says, is a great hindrance to the repairing of the locomotives. Up to the present material to the value of £40,000 only has been received from England, and a further £200,000 worth of material is still on the way to Roumania. France has sent a further six locomotives, several of which are defective. With the shortage of material, transmission belting, coke, etc., it is difficult for the railway workshops to make any real progress, and the 200 locomotives which the workshops have repaired since December of last year have been counterbalanced by another 200 which have gone out of service during that period and are in need of repairs. As regards fuel for the engines, although there is, of course, an abundance of oil fuel in this country, the necessary installations for its consumption are lacking in many of the locomotives in present use.

Delays in Serbia.

A matter which is irritating public opinion and causing considerable uneasiness and annoyance to business men here is what appears to be an almost systematic delay in Serbia of goods destined for Roumania. At the present moment four goods trains loaded with commodities from France, Italy, and Switzerland, and consigned to Roumania, have been stopped in Serbia, and there appears to be no definite information as to their whereabouts, while numerous small consignments have been lost, and personal luggage belonging to passengers travelling through Serbia has been frequently the subject of petty pilfering A certain amount of contraband traffic with Serbia was certainly being carried on at one time under the guise of through luggage to Roumania, but this can hardly be considered a warrantable excuse for the wholesale stoppage of merchandise. Petitions have been addressed by commercial houses here to the Roumanian Ministry of Industry and Commerce, asking that this matter should be taken up with the Serbian authorities, with a view to putting a stop to a procedure which is exceedingly annoying, as well as the cause of considerable financial loss.

DISTRESS IN INDIA.

The India Office has issued the following telegram from the Viceroy, Revenue and Agriculture Department, dated October 17:—

Gratuitous relief in all affected districts of Central Provinces except Raipur and Drug, relief works in Angul District of Bihar and Orissa, relief operations Sholapur District of Bombay Presidency, and Government fodder depôts in Maharatwara Districts of Hyderabad, have been closed. Situation further improved in Hyderabad where good spring crops expected. Crops generally satisfactory, but rain needed in the Punjab. Numbers relieved:—Bengal: works, 3,265; gratuitous, 7,734. Bihar and Orissa: works, 6,585; gratuitous, 48,175. Feudatory States of Orissa: works, 6,022; gratuitous, 22,716. Central India: works, 3,100; gratuitous, 7,700. Central Provinces (incomplete figures): works, 12,985; gratuitous, 5,305. Bombay: works, 2,900; gratuitous, 19,671. Hyderabad: works, 17,000; gratuitous, 25,000. Madras: works, 59,706; gratuitous (incomplete figures), 91,875.

British firms intending to open offices in Calcutta or Bombay are advised by H.M. Trade Commissioner to make arrangements in order to secure adequate office accommodation and residences for their staff. There is at present a serious shortage of housing accommodation for Europeans in these cities. Speculation in land and houses has been active in recent months, and great profits have been made. The result is that in order to secure an adequate return on capital rents have been increased in many cases by 50 per cent. and over, and householders are obliged to pay, as it is impossible to secure accommodation elsewhere.

TRADE MARKS IN INDIA.

In connection with recent reports concerning the increased influx of goods bearing imitation of British marks in British India (says the "Board of Trade Journal"), the attention of British manufacturers and exporters is directed to the protection which exists in that country against infringement. No Trade Marks Registration Act exists in British India, and it is not the present intention of the Government to introduce such legislation. The protection at present afforded to British manufacturers is contained in the provisions of the Penal Code and under the Merchandise Marks Act. In the first place it is open to a manufacturer to have recourse to the civil courts to prevent goods bearing imitations of his marks being marketed in India. In the second place, he can take action against the offending party under the sections of the Indian Penal Code which relate to trade, property, and other marks. Thirdly, direct protection is accorded under the Merchandise Marks Act and the Sea Customs Act, which provide that goods bearing counterfeit marks are liable to confiscation, and any person concerned in the offence is liable to a penalty not exceeding three times the value of the goods or Rs. 1,000, whichever is the less.

The Customs authorities are not generally prepared, however, to take action on their own account unless the offence has already been established by a competent tribunal. But under Section 19 of the Sea Customs Act they are empowered to give notice to the aggrieved party and to temporarily detain the goods. Should the goods bear counterfeit trade mark and not a counter-indication of country of origin, the Customs officials are empowered under Section 18 (e) to take immediate action. In cases coming under Section 18 (d), if the aggrieved party furnishes indemnity bond to the Customs, the goods will be detained pending action before the Civil Courts taken by the aggrieved party. The provisions of Sections 18 (d) and (e) are as follows:—18. No goods specified in the following clauses shall be brought, whether by land or sea, into British India. (d) Goods having applied thereto a counterfeit trade mark within the meaning of the Indian Penal Code, or a false trade description within the meaning of the Indian Merchandise Marks Act, 1889. (e) Goods made or produced beyond the limits of the United Kingdom and British India, and having applied thereto any name or trade mark being, or purporting to be, or being a colourable imitation of, the name or trade mark of any person who is a manufacturer, dealer or trader in the United Kingdom or in British India unless:—(i.) The name of trade mark is, as to every application thereof, accompanied by a definite indication of the goods having been made or produced in a place beyond the limits of the United Kingdom and British India, and (ii.) the country in which that place is situated is in that indication indicated in letters as large and conspicuous as any letter in the name or trade mark, and in the same language and character as the name or trade mark.

Firms not having representatives in India would be well advised to instruct some solicitor to act on their behalf. In order that British manufacturers should be in a position to prove the possession of the mark, it is desirable that they should adopt one or other of the following methods:—(1) Advertise their mark with full description in the Government Gazette and other Press; (2) cause copies of their marks to be filed at the various principal Customs throughout India.

ROLLING STOCK ORDERS FOR INDIA.

Modern Transport states that Cammell Laird and Co. have lately received contracts for the construction, at the recently acquired works at Nottingham, of four bogie dining cars, underframes, bogies and ironwork, and for ten third-class bogies, underframes and ironwork for the Bengal-Nagpur Railway. These underframes will each be 67 ft. in length. In addition, Cammell Laird and Co. has an order from the Great Indian Peninsula Railway for 46 bogie carriages, each 68ft. in length, together with the necessary underframes, bogies and ironwork, as also the ironwork with the metallic furniture and other fittings for nine ordinary first and second-class bogie carriages for the Assam Bengal Railway.

Constantinople Business Letter

Some Opportunities for British Enterprise.

(From Our Own Correspondent.)

Constantinople, October 3.

The unsettled state of the country continues to make all but absolutely necessary business an impossibility. Everyone is standing by to see what is going to happen. There have been some heavy consignments of wool and mohair to England during the last month, and that has had its effect on the exchange, the pound sterling having dropped from 370 piastres to about 340.

In the meanwhile preparations can be made for the future by obtaining concessions for the numerous enterprises which must be undertaken as soon as the state of the country permits. The most urgent question, as I have already pointed out in a previous letter, is the housing problem. So serious is the dearth of housing accommodation that it has actually been suggested that hutments no longer required by the army should be brought from Egypt, Salonika and elsewhere in order to relieve the pressure. Any sort of accommodation fetches an astonishing price, out of all proportion to the cost of living. A six-roomed flat in the suburb of Chichli, for instance, costs anything from fifty to eighty Turkish pounds a month, and unfurnished at that. This is equivalent, at the present rate of exchange, to £170 to £280 per annum for very ordinary accommodation. A small furnished flat may cost anything from £300 to £700 a year. It is not surprising, therefore, that there are already one or two companies in the field with plans for rebuilding those areas which have been destroyed by fire. In the meanwhile it might be worth while to take a leaf out of the Americans' book and to see what can be done out here with those bungalows which are shipped and put together in sections. A house here, say with eight rooms and without electric light or bath-room, costs anything from £1,000 upwards. Previous to the war one or two English people bought this kind of bungalow and had it sent out from England. They have been a great success, and if they are still obtainable they would certainly sell well at the present moment.

Communications.

For many years to come any enterprise in Turkey connected with communications by land or by water, will, if properly managed, be a source of big and steady profits. As regards the capital, the roads, though not very numerous, are tolerable in most cases, and quite good where military necessity has been concerned. Communications with the suburbs are very defective at present owing to the want of rolling-stock and ships. The trams are terribly over-crowded, and there are no motor-buses running, although there is most certainly room for at least a dozen services. The vehicles would have to be fairly light, without outside accommodation, and as strong as possible. The tramway company is charging about 3d. per mile at present, and although a reduction of this outrageous charge has been promised, as usual the matter has not yet got beyond that stage. The company, having an absolute monopoly at present of popular communications in the capital, charges what it likes.

October 9.

One of the greatest worries in life in Turkey is the question of transport. Whether it be a question of a short trip up the Bosphorus or a longer journey to one of the places on the neighbouring coast of the Marmora Sea, there is always the same old worry about getting there. A Persian proverb has it that travel is hell! And it most certainly is here in Turkey.

The Bosphorus is served by a steamboat company whose ships were nearly all requisitioned during the war, and a large number were sunk by our submarines in the Marmora. The result is that the service is ridiculously inadequate. The sailings are few and the boats are dangerously overcrowded. The company—known as the "Shirket Hairie"—must sooner or later make up its mind to buy new ships, and as the British took a most important hand in destroying the company's pre-war fleet, it is only fair that the British should replace them—for payment, of course, since business is business.

Again, the Marmora islands and certain of the little ports along the coast of Asia Minor are served by a State concern known as the Seïri Seifein, still worse than the Shirket Hairie. Not only is the service miserably insufficient and slow, but most of the ships are dirty and utterly worn out. The result is that when there is a breakdown there is no ship to replace the old tub that has to be repaired, and one may have to wait days in some wretched Turkish seaside village until the thing has been fixed up. The other day I was in one of these ships which broke down in the middle of the Marmora. We were only six hours late on a journey that should not take more than three, but we were thankful to get to our destination at all.

Practically all the passenger traffic and a certain amount of the commercial traffic also depends upon these ships. There is some talk of the Seïri Seifein being converted into a private company, but in any case new ships are absolutely necessary, and their purchase cannot be long delayed.

It should be possible for an enterprising firm to get some good orders, and it might be possible to get a concession to run ships to certain ports now served by the State steamers, which are certainly utterly incapable of satisfying the needs of the places at present served by them.

Motor Engines for Barges.

A good deal of the miscellaneous carrying trade with Constantinople is carried on by sailing barges called "mahonas." This has been, even in the now almost prehistoric days of cheap materials and labour, an unsatisfactory business, on account of the slowness and uncertainty of the transport. As in the case of the steamers, large numbers of these mahonas have been sunk, but no one can say that Turkey is incapable of progress, for certain enterprising owners have fitted their barges with motor enginee, and get through many times the amount of business that they transacted in the old days. The Bosphorus has some very strong currents, in some places as swift as six and seven knots an hour, and the motor engine is an inestimable boon. There is bound to be a large and increasing sale for these machines in the near future, and even at present it ought to be possible to do a certain amount of business in them.

Petrol Lamps and Appliances.

The excessive dearness of fuel is driving people to think more seriously of using oil as the chief medium of heating and cooking, where hitherto it has been regarded more as an adjunct to coal and charcoal. There are already a number of petrol stoves and lamps on the market, but there is room for a much greater variety, and especially of illuminating lamps.

General Business.

The situation is stationary in this direction, and there is nothing to add to my remarks on the subject in recent letters. A certain amount of business is being done with Russia, but the prohibition of Russian exports stifles everything, except comparatively small transactions. In this connection it is worth while noting that advices from Odessa indicate a very queer state of affairs with regard to the rouble, in which the people seem to have poor confidence. The Bolsheviks left chaos behind them. Bolshevik money has been declared illegal, but there seems to be some prospect of its being exchanged at a rate to be fixed later on, for the legal currency.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated October 15:—

Rainfall nearly general in Burma, North-Eastern India, and to south of peninsula, total fall decreasing. More required western districts Bengal.

Bombay Cotton Market steady. Fully good Broach April-May Rs.493. Piecegoods market quiet. Calcutta jute market quiet, little doing. Hessians quiet, tending downwards. Heavy goods neglected, values unchanged but nominal. No change in bank rates.

H.M. Trade Commissioner in India and Ceylon is at present on a tour, in the course of which he proposes to visit Ceylon, Madras, the Malabar Coast and Hyderabad. He will return to Calcutta early in November.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.
„ „ ALEXANDRIA, JAFFA and BEYROUTH.
„ „ CONSTANTINOPLE, ODESSA and other Black Sea Ports.

Also calling at other ports in Scandinavia, Levant and Black Sea (as inducement offers).

For further information apply to the following agents of the Line:

At LONDON: J. E. Hyde & Co., 1, Lime Street Square.
„ SMYRNA: „ PIRÆUS: „ ALEXANDRIA: W. F. van der Zee.
„ SALONICA: Cauchi Brothers.
„ CONSTANTINOPLE: Theo. Reppen.

Near East Markets.

Turkish Fruit Crops.

Messrs. C. J. Giraud and Co., Smyrna, report as follows under date October 1:—

In our previous report, dated August 1, we endeavoured to explain, so far as circumstances then permitted, the conditions likely to govern the course of business and the movement of the fruit crops during the present season. Politically the situation in the province shows no modification. The International Commission of Inquiry has come and gone, but the result of its investigations is unknown. But the uneasiness existing has not been allayed, and farmers in all districts are collecting their crops with all haste and rushing same to market, or removing their produce to the more important centres where greater safety exists.

Sultanas.

The statistical movement of the present season's produce up to September 30 is as follows:—Total arrivals on the market, about 12,500 tons; total sales reported about 11,500 tons; stock unsold, 1,000 tons.

Shipments made or making:—S.S. Edenhall, for London, 100 tons; s.s. Trentino, for London, 1,600 tons; s.s. Borodino, for London, 1,700 tons; s.s. Rosetti, for London/Bristol, 1,800 tons; s.s. Vittoria, for Liverpool, 2,000 tons; s.s. Queensland, for London, 1,500 tons; s.s. Folda, for London/Hull, 1,500 tons; total about 10,200 tons. The last three steamers are still loading, and the figures given above are estimates of their probable cargoes. About 1,500 tons have also been shipped during the month to Holland, Canada, etc. More activity is now developing on the Continental market, and heavier shipments will have to be reckoned with during October.

Stocks now remaining in the interior are estimated as follows:—In the Magnesia district about 7,000 tons; in all other districts about 7,500 tons. These figures bring up the total crop estimate to about 27,000 tons. Local consumption will require 2/3,000 tons, and some of the fruit in the more outlying districts will probably not be available for transport to our market until more security prevails in the disturbed area. Arrivals now are diminishing in volume, and dealers are experiencing some difficulty in buying in the country.

Figs.

The unfavourable view we took about this product in our last report is, unfortunately, being realised. Total arrivals to September 30 amount to about 15,000 loads, or, say, about 3/3,300 tons. This quantity has been entirely swept off the market for shipment to the United States and Canada. Some very trifling lots have been shipped to Holland, Sweden, Australasia, etc. Supplies have come forward irregularly, and qualities on the whole have not proved satisfactory. Two or three of the leading shippers sent their own buying agents into the interior, and into the disturbed areas, and it is in some measure due to this initiative that some good packing fruit was secured, and the total supply for the month was augmented.

We have just received the following report from two buying agents we sent up country, and who have had occasion to travel over most of the producing area in the Meander Valley:—"The yield this year is proving very short; the causes of the deficiency are the following: The political situation. The emigration of most of the inhabitants from the producing districts in the spring months, which prevented the usual measures being taken for fertilising the fruit on the trees by hanging strings of male figs. This has caused an enormous loss of fruit. Blights, which have been occasioned by the heavy rains. We estimate the likely result of the yield at about 30/35,000 loads. If railway communications are restored all the fruit will be sent to market, otherwise, under the present conditions of transport it is doubtful if 7/8,000 loads more can find their way to Smyrna." If this forecast is realised, the final result of the yield will prove under our original estimates.

The United States are placing further orders on our market, and very few figs will be available for other countries.

United Kingdom Control.

As is generally known, the Ministry of Food in the United Kingdom has established a control over all dried fruits, and has been buying its requirements of sultana raisins direct from the home agents of Smyrna shippers. Prices have been established on a net basis, free of discounts and brokerages, and have ranged from 100s. to 110s. per cwt. c.i.f. U.K. ports, according to grading. This control has so far worked satisfactorily, and the measure undoubtedly has been a wise one. Without the control it is certain that prices would have been forced up to a very high level, and consuming countries generally would have had to pay very much more money for their fruit. First arrivals of new crop sultanas were paid 110s. to 130s. c.i.f., but as soon as shippers and dealers realised the effectiveness of the control, all speculative buying was checked and the market speedily adapted itself to the level of values which the Food Ministry in the U.K. was prepared to pay.

Values locally have been fairly steady, any fluctuations depending on the course of exchange which has declined very sharply, and which probably has entailed losses on shippers who had not sold Exchange in anticipation of their financial wants during the month. The Ministry of Food in the U.K. has so far assured a quantity of about ten thousand tons of sultana raisins. The purchase of this fruit has been entrusted to expert brokers, who possess long experience and a thorough knowledge of the trade, and have bought judiciously. As regards figs, no prices have yet been fixed, but it is apparent that the Ministry of Food is not disposed to buy at the parities paid by markets outside the U.K. It is likely that very few Smyrna figs will be imported into the United Kingdom.

OPIUM MARKET.

Messrs. Barker Bros., Smyrna, report as follows for the week ended October 11:—

Our Opium Market keeps steady and active, with sales amounting to 42 cases at same prices as our last, ranging from 14s. to 20s., and morphine render from 9 per cent. to 12½ per cent. This week's sales, we understand, are to be consigned to London and New York. Exchange has not altered from that of last week, quoted in our report of the 4th inst. The arrivals to date are 725 cases, against 14 at same date last year.

ROUMANIA'S SURPLUS GRAIN

(From Our Own Correspondent.)

October 1.

It is announced that two offers have been received by the late Government for the surplus Roumanian crops remaining from this year's harvest. The first offer came from France, for the whole quantity of grain available for export, payable in francs, a credit for the corresponding sum to be immediately opened with the French banks. The question of price has not been so far discussed.

The second offer was received from Belgium for 100,000 tons of grain, in exchange for which she stated her willingness to give coal. Two delegates from the Belgian Government entered into relations with M. T. Constantinescu, the General Secretary of the Ministry of Industry and Commerce, and prices were discussed. M. Constantinescu informed the Belgian delegates, however, that nothing could yet be settled, as the quantity available for export could not be fixed until exact data were forthcoming as to the result of the maize crop.

WHEAT SCARCITY IN CYPRUS

(From A Correspondent.)

The Acting High Commissioner has empowered the Provost Marshals in all the six districts to nominate inspectors, who may examine the stocks of all persons holding cereals. If they find that any quantities are being unreasonably withheld from the markets, they may appropriate what amounts they deem proper, paying a fair price for the same.

LONDON PRODUCE REPORT.

Currants.

Beyond a continued hardening tendency, there is no feature of interest to report in regard to the market. It is believed that rates in this country will shortly be raised in view of prices in producing centres. Action on these lines is certainly called for if this market is to obtain reasonable supplies.

Sultanas.

The position with regard to this commodity is fully dealt with in Messrs. Giraud's report, which appears in another column, from which it will be seen that the Ministry of Food has assured a quantity of about 10,000 tons. These shipments will be more than welcome in view of the almost barren state of the market.

Sugar.

Imports in September amounted to 1,297,000 cwt., consisting of 552,000 cwt. of refined and 745,000 cwt. of raw sugar. From January 1 to September 30 the imports amounted to 23,579,000 cwt., and at the moment, thanks to the cessation of demand from the Continent, stocks appear to be ample for present requirements.

Coffee.

At auction this week 1,767 packages were offered. The demand was good, and prices showed a tendency to advance. East Indian bold greenish for export made 143s., while medium made 137s. and peaberry 135s. for home consumption. Other prices include Costa Rica best, 152s. to 154s., peaberry 141s. to 147s., and Brazilian 125s. Futures have shown a firmer tendency. Quotations are:—December, 123s. 9d.; March, 117s. 6d.; May, 112s. 6d.; July, 108s. 6d.; September, 109s.

Oilseeds.

The market has been rather quiet. Fine Indian linseed has been done at 40s., while bold Ferozepore rapeseed has fetched the same figure. Cottonseed has been very dull, fine new Egyptian being on offer at 21s. The imports of linseed during September amounted to 509,683 quarters.

Oil Cakes, etc.

Linseed oil cake has been done at 25s. Soya bean cake has realised the same price, while transactions have been effected in cocoanut cake at 22s. and in cottonseed cake at 20s. Refined cotton oil has been steady at from 88s. to 98s., while crude has been done at 80s. Linseed oil has been firm at 90s., but turpentine has been a shade easier at 124s. 6d.

WORLD'S HARVEST ESTIMATES.

The Board of Agriculture has received from the International Agricultural Institute at Rome the following estimates of this year's crops in the countries named:—

Wheat, in Spain, Scotland, Italy, Canada, the United States, British India, Japan, and Tunis, 926,096,000 cwt., or 6 per cent. below last year's production and 1.4 per cent. below the average production of the five years 1913-17; rye, in Spain, Italy, Canada, and the United States, 61,793,000 cwt., or 8 per cent. below 1918, but 47.3 per cent. above the average for 1913-17; barley, in Spain, Scotland, Italy, Canada, the United States, Japan, and Tunis, 198,923,000 cwt., or 12.2 per cent. below 1918, and 6.7 per cent. greater than the average for 1913-17; oats, in Spain, Scotland, Italy, Canada, the United States, Japan, and Tunis, 498,734,000 cwt., or 18.5 per cent. below 1918 and 7.5 per cent. below the average for 1913-17.

Maize, in Spain, Italy, Canada, and the United States, is estimated at 1,508,036,000 cwt., or 11.8 per cent. above last year, and 4.4 per cent above the average for 1913-17; linseed, in Italy, Canada, the United States, British India, Japan, and Tunis, 13,965,000 cwt., or 34.3 per cent. less than last year, and 35.5 per cent. less than the average for 1913-17; the potato crop in Scotland, Canada, and the United States, 259,007,000 cwt., or 11.7 per cent. below last year, but 1.8 per cent. above the average for 1913-17; sugar beet, in Spain, Canada, and the United States, 153,205,000 cwt., or 25.6 per cent. above last year, and 20.8 per cent. above the average for 1913-17.

Engineering Notes.

Railway Ticket Printing.

At a recent show a substantially made and simple little printing machine was attracting considerable attention. Driven by a 1 h.p. electric motor it printed railway and tramway tickets at the rate of 10,000 per hour. Another, almost similar to the above, printed 14,000 railway tickets on one side only in an hour, and another machine could count the tickets at the rate of 36,000 per hour. In view of the fact that the majority of railway and tram tickets used in the East were printed in France, Italy, Germany and Austria—at least up to a year or so before the war—it may be of interest to railway, tram, 'bus and other companies to know the existence of such machines; at the same time it is advisable that their makers should try to introduce them into the markets of that region where any modern means effecting economy is a matter of general interest.

Automobile for the Desert.

The successful application of a propeller working in the air as a means of propulsion for a road vehicle, a river boat, and a canal barge—of which mention was made at the time in these columns—has been followed by some interesting experiments with a kind of sledge mounted on six wheels, driven by a 50 h.p. motor, and similarly equipped with a propeller. This vehicle, which carried three persons, travelled easily over the rolling sand of North Africa at a speed of from 12 to 18 miles an hour, and, according to reports, was able to climb gradients of one to five. However, the war started soon after, and nothing more was heard—at least in public—of this new "mechanical ship of the desert"—for it is hoped that the camel will retain her old title—until quite recently, when it was reported that new experiments with a "bigger ship" were in progress again on the sands of North Africa. It is believed that this new means of transport will solve many of the difficulties of communication in the Sahara, and it is hoped that by fitting such vehicles with wings not only to facilitate their progress, but to enable them on occasion to leap over obstacles in their path. Such vehicles, if perfected, would no doubt prove of considerable value in certain parts of Asia Minor, Mesopotamia, Egypt, as well as in North Africa. The fact that these "semi-aeroplanes" will travel on *terra firma*, and not in the air, will undoubtedly make them very popular among the natives as well as the tourists for trips in the Desert.

Syrian Bitumen.

It is claimed that Syrian bitumen is without a rival in the world, being exceptionally pure and rich in its native state. It is not used for street paving, covering ship's bottoms, or for timbers used in dams, but in the manufacture of black varnish for furniture, leather, etc., it is unsurpassable in efficiency and effect. Dead Sea bitumen is considered to be superior even to the Hasbeya product, and bitumen of prime quality is found also near Latakia in Northern Syria. Asia Minor's mineral wealth, as has often been mentioned in these columns, is great, but undeveloped. The Hasbeya pits are now lying idle, and have been practically abandoned for some years, the product sold before the war being old stock.

Acetylene Lighting.

Lighting by acetylene is becoming quite popular in the East. Besides the ordinary stationary plants there are those used for lighting factories, large warehouses, private houses, etc. There are also in use small hand lamps of a very simple construction, which even peasants can charge with carbide and light as easily as they would fill and light an ordinary paraffin lamp. But for its simplicity, powerful illuminative properties, and moderate cost acetylene appeals particularly to authorities in rural districts for lighting small towns or villages, and to estate owners and farmers for either indoor or outdoor use. There is, however, a wider scope for the acetylene light for outdoor use, and a suitable portable plant that can be employed by contractors, railways, harbour authorities, shipping companies, etc., would be welcomed. For such outdoor purposes, as well as for mines, quarries, farm work, etc., a plant of British design and of simple construction may be mentioned as a type suitable for the East. The plant consists of three main parts, an outer tank holding water, an inner receptacle holding the carbide, and a burner stand pipe. The lights are small and compact in size, being less than one-half the weight of oil lights of equal power. The apparatus is more quickly charged and put into operation than any other portable light made, only water and carbide being necessary, while the action is entirely automatic. With this lighting system there is no possibility of an explosion. The flame is not affected by currents of air, and requires little oxygen for its consumption, a most important feature in its favour when used in tunnels, mines, or other underground work. One or two powerful reflected lights can be supplied from one generator, or a series of smaller burners. This system is cheaper to operate than oil or arc lights, and is extremely simple to handle.

Machinery for Beet Cultivation.

The present hopeless condition of the German and Austrian sugar industry has apparently roused the energies of beetroot cultivators in the Near East, and a determination is manifested on their part to avail themselves of the opportunity to improve their position. It is for this reason, probably, that there have been several inquiries recently from Governments and landowners in the Near East interested in the progress of sugar beet cultivation for modern implements specially adapted for that purpose. In Roumania, South Russia, Asia Minor and other neighbouring districts the average sugar beet grower is making use of the ordinary implements that he uses for the cultivation of other crops, but for such operations as digging beetroot, lifting it, cleaning, etc., he uses methods that are not only inefficient, but also cause considerable damage to the roots. To assist such growers official inquiries are being made for modern implements as used in other beetroot cultivation countries. Most of the implements or machinery used by some of the large sugar beet growers in the Near East are of French, Belgian, or German construction; but there are similar improved and new designs of British construction, which we believe would be more acceptable if they were properly introduced. Some time ago we had the opportunity to describe a new beetroot digging, stripping and cleaning machine, and we now describe another—a new lifter and cleaner, which will interest sugar beet growers in the Near East at the present time.

The Beet Lifter and Cleaner.

This machine is specially constructed to lift and clean beetroots with ease and with the minimum of abrasion and loss. It is on the double disc principle, and is said to give the best results when operating upon rows of beet from which the leaves have been previously stripped. Two women in ten hours, with specially shaped spades, easily remove the leaves from over two acres. When three rows of beet have been cleared in this fashion the machine can be started to work. Two horses (perhaps three of the small size used in the East) are sufficient for its operation, whilst one man without previous experience can guide them and attend to the machine at the same time. The discs penetrate the ground at converging angles, and, it is said, that, however long the root may be, it is completely lifted. Nothing is left behind in the soil and it is claimed that the weight of produce per acre when lifted by this machine is nearly one ton more than when dug by hand. Moreover, none of the roots are bruised or cut. There is a rotary drum at the rear of the machine which, it is claimed, cleans the beets better than chain harrowing and has the further advantage of saving the labour necessary for that implement's employment.

AYAHS' HOME,
26, King Edward Rd., South Hackney, London.
ESTABLISHED 1825.
IN CONNECTION WITH THE LONDON CITY MISSION.
Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron

THE LATE MR. T. A. BURLUMI.

We are indebted to a correspondent for the following appreciation:—

By the death of Theodore A. Burlumi, which took place suddenly on October 19, the Greek world loses a great patriot and England one of its staunchest friends. Born at Patras some 68 years ago, Theodore A. Burlumi came to London as a young man, and gradually built up the great firm of currant merchants which bears his name. From his youth, like most young Greeks of his day, he had learnt to look upon England and France as the saviours of his country's independence, and his love and admiration for England and everything English grew still stronger as the years passed by, so much so that although most of his family ties bound him to Greece, he came to look upon London as his real home. A young man of great ability and intelligence, he soon began to make his mark, and it was not long before he became recognised as the greatest authority on all matters connected with the Greek currant trade. During the war he was chosen as the head of the mission which was sent to Greece to purchase currants on behalf of the British Government. Apart from his business capabilities, Mr. Burlumi became a constant contributor to the Press in this and other countries, and wherever Greek national interests were concerned he was always solicitous to get at the truth and to put Greek feelings and sentiments in their correct perspective before the people of this country. During the recent war he was, of course, a staunch supporter of M. Venizelos, and many a time, both upon the platform and in the Press, he propounded the true feelings of the Greek people. As a journalist, fearless and outspoken, Mr. Burlumi stood very high, and he was in his time president of the Foreign Press Association in London. He has died, as he wished, in harness, and with the great objects of his life either achieved or almost so, viz., the dawn of a greater Hellas and the ties between his country and England and France drawn tighter than ever together.

The report on the working of the Indian Companies' Act in Burma for the year 1918-19 shows that fifteen new joint stock companies, limited by shares, were registered during the year, with a total authorised capital of Rs.1,45,40,000.

TRADE ENQUIRIES.

ENGLISHMAN (30), demobilized officer now in the East, big organising and local experience, speaks French, Arabic, own motor car, desires to represent British firms in EGYPT, PALESTINE, SYRIA, &c. Address, Represent, care of Editor, NEAR EAST.

MR. JOHN KIRSOPP, M.I.M.E., F.G.S., Offers his services, home or abroad, on Mine Management, Supervision of Prospecting or Diamond Boring Operations or Mineral Reporting work; practical experience Northumberland, Durham, Yorkshire and Lancashire coalfields, and extensive experience in coal, oil, etc., Canada, Alaska, United States, West Indies and Spain. First-class colliery manager's certificate endorsed with Surveyor's qualifications. Mr. Kirsopp will undertake technical or research work anywhere.—Address, 36, Gladstone Terrace, Gateshead-on-Tyne.

THE LADIES' LEAGUE (under Royal Patronage), 118, New Bond Street, London, W. Successfully recommends Lady Housekeepers, Chaperones, Companions, Governesses, Lady Nurses, Nurse Companions, etc.

GOVERNESS desires post in India. Usual English, etc. Music, French. Fond of children. Knowledge of health. £50-£60. —Apply H.W., The Ladies' League, 118, New Bond Street, W.

NURSE-COMPANION desires post in India. 5 years' Hospital experience. Good general education. Fluent French; ride, drive. Adaptable. £50-£60. — E.H., The Ladies' League, 118, New Bond Street, W.

SHIPPING INTELLIGENCE.

(From Our Own Correspondent.)

New British-India Steamer.

The trial trip took place, on the 17th inst., of the s.s. "Gairsopoa," a B type standard cargo steamer, built by Palmer's Shipbuilding and Iron Co., Ltd., Hebburn Yard, on account of the Shipping Controller, and taken over by the British India Steam Navigation Co., Ltd. The principal dimensions of the vessel are: Length between perpendiculars, 300 ft.; breadth, moulded, 52 ft.; depth, moulded to upper deck, 31 ft. She carries a d.w. of about 8,200 tons on a draft of 25 ft. 3 in. The vessel is fitted with triple expansion engines supplied by Palmer's Company. The trial trip was in every way satisfactory.

Port Improvements at Busreh.

Amongst the passengers by the C.P.O.S. steamer "Metagama," which left the Mersey for Quebec and Montreal on the 15th inst., was Colonel W. R. Cockrill, C.I.E., R.E., who is proceeding to Vancouver. After being stationed at Dunkirk for nine months, Colonel Cockrill proceeded to Mesopotamia as Port Director. He told a Liverpool Press representative that when he arrived at Busreh, in the autumn of 1917, the port consisted only of a wharf known as the little German wharf, which was only capable of carrying two cranes; whereas, when he left on June 1 this year, the facilities of Busreh as a shipping port had been so developed that they were able to handle 2,200 tons of d.w. cargo a day. Under the Director-General of Movements and Railways at Busreh, they had an engineer's department for construction, a marine department which looked after the navigation and harbour appliances generally, and a set traffic department which loaded and discharged the ships, and forwarded the supplies to the base. When they first took over control they only had eighty miles under the port directorate. They built 600 ft. of wharves, surveyed and buoyed the river with lights, and the wharves were equipped with electric cranes, and the very latest and up-to-date mechanical equipment. They had 15 gantry cranes on the docks, three Donald elevator conveyors, four locomotive cranes, and a 30-ton floating crane. In the early days the ships used to tie up against the small German wharf on the mud, but at the present time Busreh might be very favourably compared with Liverpool in the handling of freight

The Greek Premier at Lloyd's.

M. Venizelos, the Greek Premier, visited Lloyd's on October 17. He was accompanied by M. Caclamanos, the Greek Minister, and Sir John Stavridi, Consul-General for Greece, and was received in the Committee Room by the chairman and committee of Lloyd's. Mr. Charles de Rougemont, the chairman, conducted his Excellency to the Underwriting Room, where he received a most cordial welcome from the members.

In returning thanks to a speech of welcome by the chairman, M. Venizelos said that he supposed that very few people who knew the name of Lloyd's were acquainted with the magnitude of the work transacted there. Founded when the foundations of the British Empire were being laid, Lloyd's had developed to such an extent that it was the pioneer institution, and was supreme in its sphere of activity throughout the world. Among the names of the Empire-makers in British history that of Lloyd's was pre-eminent. As with all British institutions, it bore the stamp of trust and confidence, which centuries had contributed to. He was very glad to have had the opportunity of visiting them as the representatives of an institution whose wonderful resources were so closely connected with the mercantile marine, and which commanded their gratitude and admiration.

After leaving Lloyd's, M. Venizelos was escorted to Lloyd's Register of Shipping in Fenchurch Street by the chairman of Lloyd's and the secretary of Lloyd's (Rear-Admiral Sir Edward Inglefield), where he was received by Sir John Luscombe and entertained at luncheon.

INDIA'S OIL RESOURCES.

Theory of Continuous Belt from Burma to Roumania.

A theory is being discussed in British India that oilbeds exist continuously along a belt stretching from Burma in the east to Roumania in the west. Should the fact be eventually established a discovery of the very highest importance will have been made, for the belt, according to *Indian Engineering*, will lie wholly on the Indian side of the Himalayas.

At present, however, only uncertain indications have been found, the latest of which have been discovered by Mr. Middlemiss, who is at present Superintendent, Mineral Surveys of Kashmir. He has not so far actually found oil in Jammu Province, but has located geological conditions pointing to the existence of a natural reservoir of a type giving good promise of a store of oil, being in all respects similar to oil-yielding structures in the neighbouring Rawal Pindi plateau. In the latter region oil had long been known to be present, but efforts to obtain it in quantity were unsuccessful till the Khaur oilfield near Pindigheb was at last located.

Discussing the general question of the occurrence of oil-beds along the sub-Himalayas, Mr. Middlemiss says: "The whole of the belt of stratified rocks in Jammu embraces a section of the sub-Himalayan rocks of tertiary age from Eocene upwards, which are identical in composition, age, and lithological characters with those of the petroliferous series in the neighbouring Rawal Pindi district. They are also identical in age with, but differ in some particulars lithologically from, the petroliferous series in Assam and in Burma, and also in the newly-discovered fields in Persia. In fact, they form with these known petroleum-bearing areas what is really one continuous but intricately winding belt of deposits belonging to one comprehensive geological epoch, that stretches from Persia on the one hand to the extreme south of Burma on the other. It is also equally true that in general characteristics and in age these rocks exposed in Jammu agree with those of a great proportion of the more distant successful oilfields of the world, notably with those of California, Peru, Russia, Roumania, Galicia, and Sumatra." It is a wide field for the research of geologists, not of prospectors, for, as Mr. Middlemiss states: "The success in average 'wildcatting' without geologic guidance is 1 test in 150. Geologic work has reduced this to 1 in 3."

NEW ROUMANIAN OILFIELD LEGISLATION.

H.M. Commercial Secretary at Bucharest states that a new Decree-Law of September 12 provides that all those properties in Roumania upon which no work has as yet been done shall be subjected in their future working to laws which are to be passed later. This is considered in many quarters as a sort of preparatory measure to enable the Roumanian Government to become an interested party in their exploitation. This point, however, should not be considered as serious, because only those properties upon which no exploitation work has as yet been done are brought into view, and these—or the majority—have been held presumably for speculative reasons. Article 1 acts on the other hand rather in favour of companies having established rights over properties, as their present rights remain valid and cannot be attacked or limited during the period of application of the new law, although it prevents further exploitation on other lands, or transmission of existing rights, and is thus an infringement of the "right" of free sale or mortgage of holdings. An article in the *Moniteur du Pétrole Roumain* of September 15, attacks the new law on the point mentioned above, *i.e.*, that it is an impediment to the free development of the industry; but on the whole it may be taken that exploitation of existing workings is not yet by any means fully developed, and the existing lack of transport facilities is a much more serious obstacle to developments further afield than is shown in the article in question. Stagnation is more likely to result from this last cause than from any other at the moment, although steps are being taken to ameliorate conditions.

LANCASHIRE COTTON.

Advance in Prices.

(From Our Own Correspondent.)

Manchester, Wednesday.

Extraordinary conditions have prevailed in the market during the past week. There has been an important advance in prices, specially in fine goods, and a large business has been done. Rather striking developments have occurred in connection with Egyptian cotton, prices being distinctly dearer. It is reported that spinners in the United States have bought on a big scale in Alexandria, and English spinners have also been in the market to an important extent. This rush of business has been largely due to the scarcity of the higher grades in American cotton. Egyptian yarns are from 5d. to 6d. a lb. dearer than a week ago. A feature of interest has been the large contracts placed by Messrs. Coats, of Paisley, for thread manufacturing, and it is said the prices paid are the highest ever known. Lancashire cloth manufacturers have also been active buyers. Reports relating to the Egyptian growth remain favourable. Bullish advices have again been received with regard to the American crop. Owing to the rise in Egyptian yarns all kinds of fine cloths have been put up in price. A considerable demand has been experienced in piece goods for Egypt and Near Eastern outlets. An increased turnover has transpired in standard makes and miscellaneous cloths for India. Free buying has again been reported for China. Manufacturers are more deeply sold than ever, and there is a good deal of indifference as to selling production further ahead. American yarns have advanced in price, and a healthy trade has been put through. In export yarns 2/42's have moved off freely for China.

NEW COMPANIES.

Palestine Building Company.

The Haboneh (Society for Promoting Building Operations in Palestine), Ltd., has just been registered with a nominal capital of £200,000 in 200 shares of £1,000 each. The objects of the company are, to promote, develop, work, and carry on building industries and undertakings in Palestine in any manner which may seem to the directors to be to the interest of the Jewish race in any country or place, to promote such emigration of workmen and experts from any country into Palestine as may be required for the purposes of the company, and to acquire from any State or authority any concessions, grants, powers, and privileges in Palestine; to buy, sell, improve, manage and deal in land, buildings, hardware, furniture, and household equipment, etc. The first directors are:—Michael Ussisckin, 115, West End Lane, N.W.; Isak Naiditch, 77, Great Russell Street, W.C.; Hilel Zlatopolsky, 77, Great Russell Street, W.C.; Isaac Goldberg, 10, Aylestone Avenue, N.W.2; Samuel Tolkowsky, 20, High Holborn, W.C.; Boris Goldberg, 50, Hanover Gate Mansions, N.W.; Morduch Schalit, 75, Broadhurst Gardens, N.W. The business is to be managed in Palestine, except as the directors may decide to manage any part elsewhere. The registered office is situated at 8, Drapers' Gardens, E.C.

Bucharest Development Syndicate Ltd.

A private company with the above title was registered on October 6 with a capital of 9,900 ordinary shares of £1 each and 2,000 management shares of 1s. each. Objects: to acquire, turn to account lands, concessions, mines, oil and other properties, etc., and to enter into an agreement with E. J. Hart. Subscribers: E. J. Hart, 35, King Street, E.C., C.A. (2,000 management shares), F. W. Kenney, 80-82, Copthall Avenue, E.C., merchant (one ordinary shares). First directors, E. J. Hart and F. W. Kenney. Registered office, 80-82, Copthall House, E.C.

Vickers-Orient, Ltd.

Vickers-Orient, Ltd., has been registered as a private company with a capital of £10,000 in £1 shares to carry on the business of manufacturers of and dealers in steel, iron, brass, and metals of all kinds, shipbuilders and shipwrights, electricians, etc. The registered office is at Vickers House, Broadway, Westminster, S.W.

COMPANY MEETINGS.

The Nizam's Guaranteed State Railways Company, Limited.

A Record Year.

The sixty-sixth general meeting of H.H. the Nizam's Guaranteed State Railways Company (Limited) was held on October 21 at Winchester House, Old Broad Street, London, Mr. C. A. Winter (the chairman) presiding.

The secretary (Mr. F. Adams) having read the notice and the report of the auditors,

The chairman said: With regard to the broad-gauge system, the gross earnings amounted to over Rs.83 lakhs, being nearly Rs.6 lakhs more than the gross earnings of any previous year, the increase being under both coaching and goods earnings. The gross expenses were Rs.10 lakhs over those of any previous year, owing to the cost of works provided for under deferred maintenance having to be re-estimated. During the year a sum of Rs.22 lakhs was set aside for deferred maintenance expenditure. The completion of the permanent-way renewals as far as the British frontier, the renewal of all bridges under standard strength, and the replacement of 15 "L" class engines by 10 standard goods have been provided for. As a result of these heavy debits the net earnings for the year amount to under Rs.32½ lakhs, compared with Rs.40½ lakhs in 1916-17 and Rs.36½ lakhs in 1917-18, the two highest figures. As you will see, we have adopted —I do not know if it is unique—a system for providing for what we have to buy after the war, instead of having our future earnings handicapped. I think we are the only railway in India in that position. Our coaching traffic amounted to Rs.21,64,364, constituting an increase over last year of Rs.2,03,448. Our goods earnings showed an increase of Rs.1,69,823. The working expenses of the year absorbed 61 per cent. of the gross earnings, this high percentage being due to heavy debits to deferred maintenance, as already mentioned.

With regard to the metre gauge, the gross earnings were Rs.12½ lakhs over those of last year, the increase being in both coaching and goods traffic, but principally the latter. The gross expenses were nearly Rs.25 lakhs, compared with the average of Rs.23½ lakhs for the last five years. Owing to the Hyderabad-Godavery Valley Line being comparatively new, it has not been found necessary to provide for very heavy expenditure under deferred maintenance, but after allowing for all works which are necessary, and also re-estimating the cost of works already provided under deferred maintenance, a sum of Rs.3½ lakhs was debited to working expenses during the year on this account. You will see the immense difference between that debit and the debit on the broad gauge. The net earnings for the year amounted to Rs.27½ lakhs, the highest figure during any previous year being Rs.21½ lakhs, in 1915-16. The coaching earnings showed an increase of Rs.3,37,274 over last year, and our goods earnings an increase of Rs.7,95,507. The outstanding features of the year are the occurrence of famine in the Hyderabad State and in other parts of India, and the prevalence of malaria and influenza. The famine conditions caused a heavy increase of grain traffic, and also involved abnormal conditions of traffic working. The scarcity of food made it necessary for the company to purchase rice on a large scale for sale to the employees. There is every reason to suppose that the prevalence of malaria and plague and other epidemics is likely to continue for some years.

It is a matter of great satisfaction to us that we are in a position to recommend a bonus of 1 per cent. We have deferred paying a bonus until our finances were in such a position that a bonus once declared could be regarded as a permanency. Nothing is more unsatisfactory than to have an occasional bonus, whereas one that can be looked upon as a regular addition to the dividend has the effect of improving your stock value. The bonus this year comes out of income—I mean the interest on your investments—with the exception of a little over £2,000 and next year it can be paid entirely out of income. Colonel Sargeaunt, who has been on the board for over 20 years, has resigned owing to ill-health. We have been most fortunate in securing a successor to him in the person of Sir Robert S. Highet, deputy-chairman of the East Indian Railway. You will be glad to hear that Colonel Huddieston, who went over our line the year before last, hopes to start for India some time in November, and will make an inspection of our line and deal with any matters that require attention. I now propose: "That the directors' report and the audited accounts made up to March 31, 1919, submitted to this meeting, be received and adopted."

The deputy-chairman (Lieutenant-Colonel George Huddleston, C.I.E., V.D.) seconded the resolution, which was carried unanimously.

The dividend and bonus recommended were declared, and the retiring directors (Mr. C. A. Winter and Lieutenant-Colonel W. Carew Smyth) and the auditors (Messrs. Cooper Brothers and Co.) were re-elected.

A cordial vote of thanks to the agent and the staff of the company in India, proposed by the chairman and seconded by Lieutenant-Colonel Huddleston, was passed unanimously and the proceedings terminated.

Gharbieh Land Company.

The following are extracts from the report of the directors which was submitted to the shareholders at the ordinary general meeting held in Cairo on July 31:—

The year's transactions have reduced to 7,589 feddans, 4 kirats, 4½ sahms the area of the company's estates, as at February 28, 1919, the cost price of which was £E431,544.234. Since the closing of the accounts we have acquired 233 feddans from the Government, on which we have an option of purchase at a price of £E22½ per feddan. These lands form part of the Sawalem domain, to which they have served as one of the principal boundaries on the application of the scheme of canalisation introduced for the development of the domain. The greater part of the 233 feddans has already been improved, and the price indicated of £E22½ the feddan is very much below their actual value.

Irrigation and Drainage.

The introduction of new methods of irrigation, which we referred to in our last report, have continued to give the best results. You will note, in fact, that, despite the rise in the price of fuel and the increase in the cost of transport, the expenses of irrigation have undergone a decrease of more than 13 per cent. on the total of the previous year, and of nearly 40 per cent. on that of 1916-17. This saving will be increased as the cost of fuel and the expenses of transport decrease. In the expenses of development incurred in 1918-19 are included, for the amount of £E857.143, the works of canalisation (digging, widening and deepening, intakes, bridges, etc.) carried out or completed in the course of the year. These works include the secondary and tertiary ditches of a total length of about 17,600 metres. The increase in the cost of drainage arises principally from the fact that we have again applied in 1918-19 artificial drainage to certain lands previously cultivated with rice, and which, for reasons of economy, had been drained by gravitation alone for two consecutive years.

Building.

In view of the circumstances and of the dearness of building materials, we have had to restrict our activities for the last few years to maintaining our villages in a good state of repair, adding, from time to time, some new dwellings to meet the more pressing needs of the situation. But the development of our estates, since the works of improvement have begun to produce their effects, compels us to occupy ourselves without delay in the creation of new villages to increase the density of the population. We ought from this year to allocate a certain amount for the realisation of this project, for already several of our cultivators are compelled to live some distance from the estates, and it will be difficult to attract others while we are unable to offer them living facilities in proximity to their lands. We constructed in 1918 two warehouses, one stable, four houses for employees, and eight new dwellings for peasants, using for this purpose the wood of an old building which we have had to pull down. Thanks to this, the cost of these works was no more than £E450.

Cultivation.

The net profit on cultivation was £E24,457, against £E23,019 for the previous year. Receipts and expenses were respectively £E37,351 and £E12,894.

The cotton crop of the estates amounted to 6.270 kantars, of which 4.090 have been sold by the company for its own account and for that of the cultivators. As the cotton of 1918 was requisitioned, we have had to deliver to the Cotton Control Commission a quantity of about 3,800 kantars. The prices obtained have been on the whole below those of 1917, but the difference has been partly compensated by the yield, which has been comparatively high.

The company did not cultivate for its own account more than 100 feddans of cotton in 1918. It will not cultivate more than 50 this year, all the other lands reserved for this cultivation being leased.

Sales of Land.

A slight improvement in land transactions began to take place last year in the district where the estates of the company are situated. Offers to purchase have increased to a certain extent, and we have been able to sell in 1918 100 feddans more than the previous year.

The yield and the sale of cotton of tenants, etc., that have taken place after the closing of the accounts have been placed in our books at an estimated value, based on the prices of the deliveries made to the Cotton Control Commission before February 28.

Profit and Loss.

The net profits of the year, after allowing for expenses, interest charges, depreciation, and provision for sales for the account, amount to £E14,204.964, against £E11,424.852 in 1917-18. The previous reduction of £E1,500 for doubtful debts reduces the profits to £E12,704.964, as follows:—Revenue: Profits on cultivation, £E24.457.031; profits on sales of land, £E6,531.264; interest collected or acquired, £E6,003.768; total, £E36,992.063. Expenditure: Charges on 5 per cent. bonds, £E13,136.692; general expenses (deduction made of 1-5th for debit of development account), £E4,072.111; interest paid or due, £E3,857.494; provision for sales for the account, £E1,650; provision for doubtful debts, £E1,500; various payments, £E70.802; total, £E24,287.099. Balance of net profit, £E12,704.964. Deducting from that balance the remuneration of the board of directors, £E1,000, there remains £E11,704.964. Deducting that sum from the debit balance brought forward from the previous year, £E106,259.524, there remains a debit balance of £E94,554.560, which we propose to carry forward to the succeeding account.

The retiring directors are MM. Wacyf Bey Boutros Ghali, L. du Monceau, and H. E. Garle, who are eligible for re-election in accordance with the company's statutes.

We ask you to re-elect for the year 1919-20 Messrs. F. H. Russell and J. C. Sidley, of Russell, Harris and Co., chartered accountants.

Resolutions of the Meeting.

The meeting approved the balance sheet and the accounts for the twelfth year ended February 28, 1919, and gave discharge to the board of directors for its administration. It was decided to carry forward to the following year the debit balance of the profit and loss account of £E94,554.560. MM. Wacyf Bey Boutros Ghali, L. du Monceau, and H. E. Garle were re-elected as directors. Messrs. F. H. Russell and J. C. Sidley, of Russell, Harris and Co., chartered accountants, were re-appointed commissioners for the year 1919-20. The remuneration of the commissioners for 1919-20 was fixed at £E100.

The traffic receipts of the Smyrna—Aidin Railway for the week ended September 27 amounted to £8,518.

Alexandria tramwaymen having been granted a 40 per cent. increase in wages and an eight-hour day, the strike has come to an end.

The directors of Nuwara Eliya Tea Estates announce a dividend of 4 per cent. (8s. per share), less income tax, on ordinary shares for half-year (interim), payable October 30.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Imports.

STAMBOUL, October 4.

A marked improvement has succeeded the stagnation of the previous week. Sales of some importance have taken place for Russia; one notes also some goods forwarded to destinations on the Turkish littoral of the Black Sea. Prices are sustained as much in Europe as in our market. Stocks are not increasing, the arrivals being absorbed by sales.

Produce.

Sugar.—A rapid upward movement is in evidence in the price of stocks following the brisk demand from Russia, and especially from Roumania. Stocks here, represented principally by merchandise in transit, are estimated at about 2,500 wagons. Quotations : £60 to £61 the ton for spot, and £59 afloat. In our market £T32 to £T33 100 kilos.

Coffee, Rice, Oil.—There has been no appreciable change.

Exports.

The falling tendency of the exchange, and the lack of sale of Anatolian products in the markets of consumption has resulted in a considerable diminution of business.

Sales of the Week.—Opium, increased to 16 cases Druggist Old Karahissar, sold, at Ps.770 to 800 the oke; 2 cases Druggist New Karahissar, sold, at Ps.720 the oke. There have been no arrivals, owing to the irregularity in communications. Prices are maintained.

As regards mohair and wool, no change is to be recorded. Arrivals insignificant.

Silk.—A little more in demand; 20 bales of Broussa have been sold at £T13.10 the kilo.

Cereals.—Wheat : Arrivals of the week have risen to 100 wagons. Quotations : Ps.8½ to 11½ the oke, according to quality.

Barley : Arrivals, 30 wagons; price, Ps.7 to 7½ the oke.

KUTAHIA, August.

The new crop of cereals, which is regarded as very good, is beginning to appear in our market.

The market for cereals, one of the chief articles of export of our region, has been especially quiet during the month under review. Exporters have suffered considerable losses, owing to the unexpected falls in the markets of Constantinople and Smyrna.

Cereals : About 40 wagons. Prices.—Wheat : Ps.230 to 240 the kilo. Barley : Ps.85 to 90 the kilo.

Mohair.—No important operations to record. Some holders have hurried their stocks to Constantinople to realise them at the first opportunity. The price, which was high last month, up to Ps.96 the oke, has fallen to Ps.80 without purchasers.

Wool, Opium.—Apart from some small purchases there is no important transaction to record.

Eggs.—Export of the month, 2 wagons.

Manufactures about £T15,000. Colonial produce about £T7,000.

It is understood that the P. and O. "Kalvan," of nearly 9,000 tons gross, which is to be employed as a "relief ship" in the Indian service, is expected to sail from the Thames about November 20.

COMPANY NOTES & REPORTS

The Abyssinian Corporation.

In a letter to the shareholders of the Abyssinian Corporation, the secretary says:—The board of directors, in making the first call of 5s. per share, have pleasure in informing the shareholders that the corporation has taken over the entire business of Messrs. J. D. Nicholas and Company in Abyssinia on advantageous terms. Mr. Nicholas is British, and his firm does an extensive business in hides, wax, coffee and cotton goods. It is established not only at the capital, Adis Abeba, but also in Western Abyssinia, at Goré, Bouré, Gambela, Sayou and Gidami. This transaction, it is anticipated, will prove very profitable to the corporation. By the acquisition of this business, together with that of Messrs. Gerolimato and Armanza, which, as was recently announced, has already been taken over, the corporation gains a pre-eminent position in the trade of Western Abyssinia. Trading prospects are reported to be very favourable, and further funds are required for their immediate development.

Algerian Oilfields.

The following is an extract from a report just received from the lessees of the leased areas, Mesilla and Medjilla, of the Algerian Oilfields, Limited:—"The drilling at No. 12 has entered the Cretaceous formation, reputed sterile; it is of no use sinking further. The nature of the formation has been recognised on the spot by M. Mena and M. Dalloni (geologist at the Faculty of Science, Algiers) and at Paris, by a professor of paleontology at the Sorbonne, after examination of samples received. According to this same professor the well on 2149 appears to have entered the Trias formation forming a breach between the Tertiary formations, which is an unfavourable sign. The ground is very disturbed in this district. Examination of the narrow sections reveals the deviation of the axis of crystallisation." The engineers of the Tliouanet Company are now busy locating the position for a new well. The output from the producing wells remains steady at about 80 tons per month.

Burma Corporation.

The report of the Burma Corporation, Ltd., to December 31, states that the profit and loss account shows that the amount receivable from Burma Mines, Ltd., being the proportion of their profits due to the corporation for the year 1918, was £181,480, against £144,108 for the previous year. The greater part of this amount has been advanced to Burma Mines, Ltd., to meet capital expenditure, increasing the total advances made by the corporation at December 31, 1918, to £585,004. The issued capital remains unchanged. The corporation holding of 721,813 shares of Burma Mines, Ltd., out of a total issue of 724,577 shares remain unchanged. The accounts of the Burma Mines, Ltd., show that the amount realised from sales of lead and silver was £918,696 during 1918, against £739,577 for the previous year, and the total receipts to £1,008,244, against £796,227. The operating expenditure in Burma amounted to £591,277 in 1918, against £479,694 in 1917, which, notwithstanding the greatly increased cost of supplies, and the innumerable difficulties in working caused by the war conditions still prevailing, as well as by an epidemic of cholera and influenza, shows a satisfactory decrease in the ratio of expenditure to the total receipts, the figures being for 1918 59 per cent., against 60.24 per cent. for 1917. Developments at the Bawdwin mine have continued satisfactory. The ore reserves at the end of 1918 were 4,404,000 tons, assaying 24.1 oz. silver, 26.2 per cent. lead, and 18.4 per cent. zinc. The work during 1918 on the Shan lode has developed a fair-sized copper ore body, high in silver, and the above-mentioned reserves include 283,000 tons of copper ore, assaying 21.6 oz. silver, 14.2 per cent. lead, 8.7 per cent. zinc, and 10.2 per cent. copper. The tonnage of ore developed during the year amounted to 324,869 tons, a considerable tonnage when taking into consideration the large footage of driving and cross-cutting necessary to connect the Chinaman and Shan ore-bodies, and to block out the ore. These two ore-bodies are now connected by good haulage-ways on the 653 ft. level, 430 ft. level, and 300 ft. level. The northern extension of the Shan lode as far as developed has turned into copper ore, high in silver, and from the indications below, and on the surface it is believed that any ore-bodies to the north will also be of this nature. The country to the north is very favourable. The "Gold Hole," which contains a copper ore-body, is still 1,400 ft. north and 800 ft. east of the most northerly working. During 1918 the smelter and refinery produced 18,641 tons refined lead and 1,970,614 oz. refined silver. In the first half of the year the estimated production of lead was nearly attained, and the production of silver was exceeded, but unfortunately operations were entirely upset by cholera and influenza epidemics which started in August, and the effects of which in the operations of the smelter lasted to the latter part of November. The Board have recently had the benefit of discussing the question of increasing the smelter output with Mr. Hall, the resident manager, who came to England for the purpose. After careful consideration and discussion with Mr. Addicks, the consulting engineer, it has been decided that an entirely new and modern lead smelting plant and reduction works of a capacity to produce 60,000 tons of lead and 5,000,000 oz. of refined silver per annum should be erected at Namtu. Plans of the new smelter and refinery are now in progress, and the preliminary steps in connection with the erection of the plant have already been taken. The engineers of the Burma Railways Co., Ltd., have completed the survey for the proposed extension of the metre gauge line to Namtu. Owing to the careful consideration and investigation necessary on account of the introduction of a new industry to Indian labour and conditions, progress with the Indian zinc smelting works has not been rapid. Plans for a plant to deal with 10,000 tons of spelter and 30,000 tons of sulphuric acid per annum have now been got out. The preliminary steps have been taken for the erection of works at Jamshedpur, adjacent to the works of the Tata Iron and Steel Company, Ltd., who are the sub-lessors of the site, and tenders are now being invited for the supply of the necessary plant and machinery. Since the last annual meeting Messrs. R. Gilman Brown and H. C. Hoover have resigned their seats, and Messrs. Herbert Guedalla, Percy Wheeler, and John A. Agnew have been elected members of the Board. Steps are being taken for the formation of a new company in India to take over the Bawdwin mine from Burma Mines, Ltd. The new company will be incorporated under the Indian Companies Acts, and will have a capital of 18,000,000 shares of rupees 10 each, of which 13,531,182 will be issued fully paid to Burma Mines, Ltd., as the purchase price, the remainder being held in reserve. These arrangements when carried through will entitle the shareholders in Burma Corporation, Ltd., to receive 14 shares in the Indian company for each share in the corporation. Meeting, River Plate House, E.C., October 29.

Burma Mines

The report of the Burma Mines, Ltd., for the year ended December 31, states that the question of the company's liability, if any, for excess profits duty is under discussion with the Inland Revenue authorities. Meanwhile no provision for the same has been made in the accounts. Mr. R. Gilman Brown has resigned his seat on the Board. The directors are making arrangements for the formation of a new company in India under the Indian Companies Acts. The new company's capital will be 18,000,000 shares of rupees 10 each, of which 13,531,182 will form the purchase consideration payable to Burma Mines, Ltd., and the balance will be held in reserve. Shareholders will receive 14 shares in the Indian company fully paid for each share in Burma Mines, Ltd.

COMPANY RESULTS, Etc.

The annual general meeting of the Egyptian Hotels, Ltd., will be held at 41, Ironmonger Lane, E.C., on October 30, at 4 p.m.

The directors of the Calcutta Tramways Company announce a dividend of 3½ per cent. (3s. 6d. per share), free of income tax, on ordinary shares (interim), payable November 5.

The directors of the Pabbojan Tea Company have declared an interim dividend at the rate of 6½ per cent., less income-tax at 6s. in the £, on account of the year 1919, payable to holders registered October 21, on and after November 7.

The directors of the South Indian Railway recommend a final dividend for the year 1919 of 3 per cent., less income tax, payable on January 1 next, making with the guaranteed interest of 1¾ per cent. payable on the same date, 4¾ per cent. for the half-year ending December 31 next, and together with the payment made on July 1 last a total of 7¾ per cent. for the year, as against 6¾ per cent.

The directors of the Anglo-Egyptian Bank, Ltd., recommend a dividend of 10s. per share, free of income-tax, making with the interim dividend 15 per cent. for the year and a bonus of 2s. 6d. per share; that £23,000 be written off premises account, £10,000 be placed to reserve fund, and £40,000 be carried forward. The annual meeting will be held on November 25.

The directors of the Madras and Southern Mahratta Railway announce a distribution on January 1 next of 1½ per cent., in addition to the guaranteed interest at the rate of 3½ per cent. per annum, which will make, with the interim dividend paid in July, a total of 6 per cent. In addition to this, arising out of the favourable rate of the Indian exchange, the Board recommend the payment of a bonus of £2 per cent. All the above is subject to English income-tax.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Business has been fairly active this week, with the continuation of some irregularity in prices.

In Government stocks the tone has been a firm one all the week with a good many buyers about, but very few sellers, and so the business done has only been on a small scale, and prices are unaltered.

In Bank shares, whilst on the one hand Agriculturals have been a dull market, and are closing 1-16 lower at 5 13-16, and the Prefs. are also ⅛ lower at 7⅛, there has been a sustained demand for National Bank shares, which are closing ¼ up at 19⅞. Anglo-Egyptian Banks are ⅛ lower at 18¼.

In Railways, Delta Lights have been strong, with a good many buyers about, and they close ⅜ up to 6⅞.

Amongst Land shares, Aboukirs are 6d. lower at 29s. on some profit-taking. The news from the property continues to be most excellent, both as regards prices being obtained for the cotton crops, and the sales of land and encashments. Béhéra shares have been inquired for from Egypt, and there has been a certain amount of business done, with the result that the shares close ½ up at 14¼. Consolidated Lands remain a dull spot, but the most recent advices were all of an encouraging nature. For Delta Lands there are several buyers about at the present level. New Egyptians have advanced 6d. to 23s.; and Union Foncières have been in demand, closing ⅛ up at 3⅜. On the other hand, Sudan Plantations are ⅛ lower at 7 15-16.

In Miscellaneous descriptions, the feature has been a decline in Salts and Sodas, which are closing 3-16 down at about 3.

Oil shares are again rather lower. Anglo-Egyptian B. close a dull market at 5⅛. Roumanians have dropped 9d. to 24s., and Traians are 1s. lower at 12s.

In Greek securities the 1890 loan has dropped ½ to 65½. The Fundings and the 1902 loans are both 1 point down at 64 and 65 respectively, and the 1914 loan has dropped ⅜ to 72⅜. Currant bonds remain in demand at 94. Bank of Athens shares have come to business to-day in a small way round the current price at 70s. There has been some business in Piræus-Athens Railway 4½ per cent. bonds round 66xd., and there are some small sellers about of the 3 per cent. bonds round 50.

A branch of the French bank, Credit Foncier d'Algerie et Tunisie, is to be established in Malta.

The area sown with indigo in the Madras Presidency was estimated in September at 65,300 acres, against 114,700 acres last year.

The clerks at the Anglo-Egyptian Bank at Alexandria went out on strike on October 16 in consequence of the refusal of the directors to meet their demands, says a Reuter message from Cairo.

The traffic returns of the Egyptian Delta Light Railways, Ltd., for the ten days ended September 30 were £E11,948, making the total for the year £E128,722. The figures for the corresponding periods of 1918 were £E11,080 and £E149,524.

A first instalment of £10,000 for the purpose of purchasing seeds and fruit trees for the relieving of devastated districts in France has been allocated by the Royal Horticultural Society's War Relief Fund This society has already materially assisted Roumania and Belgium.

The returns of the Egyptian Markets, Ltd., for the week ended October 9 were:—Cattle markets, £508; general markets, £553; total, £1,061; total for year, £43,549. The figures for the corresponding week of 1918 ended October 10 were:—Cattle markets, £505; general markets, £507; total, £1,012; total for year, £39,572.

STRANGERS' HOME FOR ASIATICS,

NOTES OF THE WEEK.

To-day the Shah of Persia is to arrive in England as the guest of the King. Although his visit to our country will be, according to present arrangements, a very short one, not only London, but the provinces also will have an opportunity of giving him that cordial welcome which is assured to him both by reason of the long-standing friendship between Persia and Great Britain and by his own record as a friend of the Allies during the war. Young though he still is, his Majesty has passed through trying times, and he has shown himself able to stand staunchly by his friends in spite of temptations. That is a quality that Englishmen have always held in highest esteem. The visit puts the finishing touch to the new Anglo-Persian Agreement, which cannot well fail to prove advantageous to both countries.

Hopes of the Fiume problem being solved very shortly on the basis of the proposals recently put forward by Signor Tittoni and described in these columns, have now to be abandoned, if that Rome report is correct which says that Mr. Wilson has refused to allow the project to go through. As Signor Tittoni had already declared that his proposals constituted Italy's best offer, the deadlock still remains. Italian feeling on the subject is very sore, and Washington is for the time regarded with as much disfavour as Paris. In view of the repeated failures to find a way out of the difficulty with the aid of so many advisers and outsiders, it might conceivably be no bad thing for the Italians and the Yugoslavs to endeavour to reach an understanding without further assistance of the kind. At any rate, the attempt would hardly bring about a situation more unsatisfactory than the present one.

Egypt continues to suffer more than its fair share of strikes, even in this era of strikes, the railwaymen being the greatest offenders. The agitators, however do not have things all their own way. A threatened strike on the Delta Light Railways came to nothing, and a general strike on the State and other railways, which was to have taken place on Sunday, also failed. The political unrest has been rather less marked, perhaps, but unfortunately there have been riots of a serious kind at Alexandria, where the military had to be called to the aid of the police, and were at last obliged to fire on the crowd. According to one report two rioters were killed and ten injured, while the police had twenty-seven injured. These figures, if correct, would seem to indicate that the police showed great restraint in handling the situation. An Alexandria mob is likely, if thoroughly aroused, to be more difficult to handle, and to show more determination than a Cairo mob; but the authorities have been prepared for such demonstrations for some time; and, though it is impossible to avoid outbreaks, they will in all probability be promptly quelled in all cases.

The outlook with regard to Turkey becomes no more encouraging as the weeks drift by. For one reason or another little or no political news reaches this country from Constantinople, and though some of the Press correspondents appear to be bent on making up for shortcomings in this respect by a wide airing of their own views, the result is not entirely satisfying. It is clear enough, however, that the delay in presenting the Peace terms to the Porte has already had deplorable results. At the time the Armistice was signed Turkey was in really chastened mood, and ready to place herself, practically without reservation, in the hands of the Allies. In all probability she believed that they had quite made up their minds regarding her future, and that there was nothing for her to do but acquiesce in this decision; it was "Kismet," and she was still sufficiently Oriental to accept it unquestioningly. Indeed, it is permissible to hold that quite a considerable number of Turks accepted it almost gladly, believing that, though they must pay for the folly of the Young Turks in plunging their country into war, good might yet come out of evil, and that the Allies would make a sincere effort to help them along the path of reform. Damad Ferid Pasha and his colleagues almost certainly held such ideas when first they took office.

Since those days a change has come over the spirit of Turkey. The Turks have been told so frequently, and by some people so exultantly, that their Empire is to be utterly broken up that they seem to have been forced to the conclusion that they can look for help nowhere outside their own borders, while it must also have dawned upon them that, so far from the Allies' decision on their future being irrevocable, there was, until quite recently at any rate, no clear-cut decision on the subject in the Allies' minds. The way in which Paris has handled certain details of the problem has tended to exasperate every patriotic Turk, "young" or "old"; and the obvious unwillingness of any particular Power to accept responsibility for any step that may lead to real trouble, or expense, has put fresh heart into the waverers and weaker brethren. The result is that the

Digitized by Google

Allies to-day are confronted by a great many difficulties that need never have arisen, if only they had acted promptly and fairly.

We are not particularly concerned about the future of Turkey from the Turkish point of view; although we still retain sufficient faith in the principles so frequently proclaimed by the Allies during the war to believe that the Turks may even yet hope for fair treatment. But we cannot close our eyes to the fact that, as a leading Moslem Power, Great Britain stands in a very different position from many of the Allied and Associated Powers in regard to Turkey. It is all very well to declare that the Indian Moslems' solicitude for the Sultan of Turkey's position as "Khalif" is entirely misplaced, and that the sympathy of other Moslem countries for Turkey in her time of humiliation is incomprehensible. The fact remains that the solicitude and the sympathy exist, and Great Britain cannot, in honour, ignore them. Neither has she the same reasons for wishing to see Turkey humiliated as those which prompt certain other nations; nor should she allow herself to be swayed by the opinions of extremists of the type who wish to see Turkey broken up chiefly because they desire to deprive the Turks of Sta. Sophia. These things may appeal to some people, but they will not appeal to the average Briton, who remembers that our country owes her position in the East largely to the lack of fanatacism which has characterised her rule. For us the problem of Turkey's future is less simple than it is for some of our Allies. It is to be hoped that our representatives in Paris are looking at it from the British Empire's point of view first and foremost.

Although the period within which the Bulgarian Delegation had to sign the Treaty of Peace was understood to expire on October 25, no report has been received up to the moment of going to press that the final act has taken place in Paris. For reasons that are set forth elsewhere in this issue the Supreme Council has no reason to be proud of the Bulgarian peace terms. If no reference had been made during the war to the principle of nationality, if the Allies had not claimed to be fighting for the triumph of right and the introduction of a new spirit of justice and humanity in international relations, the treaty would represent the ordinary punishment that defeated nations have always had to expect. As things are, it has enabled the Bulgarian Government to call attention to a number of points which the Supreme Council may have difficulty in answering. There is not the least doubt that the draft treaty is inconsistent with the eleventh clause of President Wilson's fourteen points and a good deal of the frenzied rhetoric with which the Allies' war aims were proclaimed.

The difficulty confronting the Supreme Council is admitted. Serbia and Greece advanced certain claims, copiously supported by data and statistics. Was the Council deliberately to ignore two valiant Allies, and show favour to a defeated enemy? Unless very strong arguments could be given in support of it, such a course was out of the question. In other words, unless the Supreme Council could put up a case which would convince the Greek and Serbian representatives that they were ill advised in the line that they were adopting against Bulgaria, and unless it could offer a solution which must have appealed to the intelligence of the Greeks and Serbians, it had no alternative to accepting in whole or in part Greek and Serbian dictation of the Bulgarian peace terms. It is impossible to withhold all sympathy from the two States; they prefer to have Bulgaria under their heels to trusting to vague promises on the part of the Entente Powers. The major blame, therefore, attaches to the Supreme Council in Paris rather than to the representatives of Greece and Serbia.

Anyone who really knows the Balkans, and is anxious to promote their prosperity, realizes that both Greece and Yugoslavia will be better off with a friendly Bulgaria than with an unfriendly one. They cannot be blamed for not trusting the Bulgarians at this stage; but it was the business of the Entente Powers to take the whole Balkan situation on their own shoulders, not from any love for Bulgaria, but in justice to our Greek, Serbian, and Roumanian Allies. In the absence of any other definite arrangement, the maintenance of peace in the Balkans devolves on the three States, and they must keep watch and ward accordingly at considerable expense and, no doubt, at the cost of a certain amount of domestic friction. The peace of the Balkans, however, was really the concern of the Entente Powers, and the solution ought to have been one which they could have justified and could have enforced with a clear conscience. They have adopted a cowardly policy, for which the Balkans and Europe will suffer one day, unless the League of Nations takes the matter in hand more successfully.

Lord Morley's idea of including a number of Indians in the Secretary of State's Council at Whitehall is generally admitted to have been one of his happier thoughts, but the practical difficulties in the way of its realisation become more obvious as time goes on. It is not always easy to get the right men, for private and professional ties count for much in India, but the number of premature retirements shows that it is easier to get than to keep, and Indian Members tend to disappear by the time they have become accustomed to the environment. The latest retirement, that of Sir Prabhashankar Pattani, is happily not occasioned by reasons of health, and his connection with the State of Bhavnagar has been so intimate that his selection as Administrator during the minority of the young Maharaja is probably the best that could be made, but this fact only emphasises the loss to Whitehall. The vacancy is not, we understand, to be filled for the present, while the Council itself is in the melting pot, but we trust that at least one adviser with inside knowledge of an Indian State will be included in whatever organisation is ultimately established for the conduct of Indian business in this country.

It is characteristic of the artificial nature of much that passes for public opinion in India just now that such an appointment would probably be unpopular in Nationalist circles. In theory, an Indian State comes much nearer to the Nationalist ideal than a province administered mainly by Englishmen, and theorists would expect an outburst of approval on every occasion when Englishmen call the States into their councils, but in practice the result is very different; Lord Chelmsford's Government have recently appointed officials from the States on various commissions of inquiry, and a glance through the columns of the Indian Press shows that this line of action has won very little support. The gentlemen selected are stigmatised as reactionaries, or something worse; the States from which they come are described as backward; their personal qualities are belittled; and even when nothing positive is alleged to their discredit, the prior claims of various prominent politicians are asserted in unhesitating language. "Nationalist India," in fact, refuses to look for inspiration to States governed by Indians, and this habit of ignoring the experience of so large a part of the country is, if we are not mistaken, going to produce difficulties in the days which lie ahead.

Why the States are so unpopular is a question which cannot be answered in a word. For one thing, some of the strongest Indian rulers have little liking for politicians, and they have not taken the trouble to conceal their sentiments. For another, the British Government is certainly more benevolent than the average of the States, and the politicians who would deny this proposition most vigorously are forced to assent to it by implication. The chief reason, however, is probably to be found in the old Indian theory of the loaves and fishes: aspirants fear that there may not be enough to go round, and any widening of the circle of distribution is, therefore, a thing to be condemned, almost irrespective of the merits of those who may be favoured. The relation between this theory and the "spoils system" of some Western democracies is a subject on which little has yet been written, but it will doubtless be elucidated by

Digitized by Google

Indian experience, and we confess we do not envy the first batch of Indian Ministers so far as the allocation of their patronage is concerned; they must in any case give more disappointment than pleasure, and the incidents to which we have alluded show that the rod is already in pickle.

Now that the necessity for famine-relief is happily almost over, the time is approaching when the Indian Government should make a determined effort to ascertain and publish the whole story of the recent difficulties in connection with the supply of food. It is, of course, a complicated matter, but the main point can be stated very shortly; in previous famines there was free trade in food, and however low the visible stocks might be, there was always food for those who had the money; but this year, when trade has been closely controlled, local supplies have fallen far short of expectations, and people with money have had difficulties in getting what they wanted. Recent statements in the Legislative Council indicate that the Administration recognises that large quantities of food are, so to speak, missing, and in order to furnish a basis for future policy, it is essential that the facts should now be clearly ascertained: Has the missing food been eaten, or has it been hoarded, and if it has been hoarded, who is responsible? Unless these questions are answered now, the next famine, when it comes, will find the Administration hampered by lack of data at a time when its entire energy will be required for the practical business of organising relief.

We notice that some of our contemporaries in India lay the blame on "profiteers," and we have no doubt that "profiteers" have been active in this famine as in others; but the facts regarding them can be learned with comparatively little difficulty, and they will not furnish anything like a complete explanation. Apart from "profiteering," there are two theories to be examined: some authorities hold that the people had been eating more in 1917 and 1918 than ever before, so that the invisible stocks were lower than previous experience suggested: others urge that the measures of control resulted in frightening the people, and thus prevented the invisible stocks from being brought to light. If the first theory be justified, the whole statistical basis of famine-preparation must be promptly revised: if the second be the true explanation, the Administration must retrace its steps; and though India has suffered many commissions of late, we think that room must be made for one more—a body of sufficient authority to get all the facts on record and to indicate what changes of policy are necessary in the primary task of ensuring that even in disastrous seasons the people shall never have to go short of food.

In the House of Lords, on Tuesday, Lord Curzon, replying to a request for information put by Lord Sydenham, made a long statement regarding the Peace Treaty with Afghanistan. The Treaty, he said, was only the first stage in negotiations which are not yet complete; the Ameer and his country are now passing through a period of probation, and when this period is complete there will be a further meeting and a final treaty. Under the agreement, Lord Curzon added, the subsidy formerly paid to the Ameer goes, and the arrears due to the late Ameer are forfeited; so, too, are the privilege of importing arms into Afghanistan through India, and the guarantees for the protection of the Afghan frontiers against unprovoked attack. "In these circumstances we could not possibly insist upon the equivalent of those conditions—that is, upon retaining control of the foreign relations of the Afghan Government." The argument is sound enough, no doubt, and, as we have already recognised, it may be well to be rid of a make-believe which gave but doubtful advantages in exchange for a substantial benefit. If, therefore, the control disappears when the "final" treaty is signed, its demise may not be universally regretted. These facts, however, only make it the more remarkable that the resignation of our prerogative did not receive the same publicity as the rest of the agreement reached.

THE WEEK AT HOME.

A Crisis that Passed.

The defeat of the Government in the House of Commons over the Aliens Bill was wholly unexpected. It produced a good deal of excited talk and journalism, but was easily smoothed over. The whole trouble arose out of a revolt of the Government's own supporters, who thought they had been treated as mere registering machines, and determined to show that they had a mind of their own; it was used in some quarters as a means of discrediting Sir Auckland Geddes. But the trouble was overcome without difficulty, the Government had its way after all, and Monday's proceedings reversed those of the previous Thursday with utmost good-temper.

In one respect at least the storm has done good, for it has shown that nobody particularly wants to upset the Government. The Unionists who voted against the Aliens Bill succeeded in enforcing their point, that they are something more than mere ciphers. The Labour Party also voted against the Government on the good old principle that it is the first duty of an opposition to oppose—but neither Mr. Henderson nor Mr. Adamson could command a majority in the House, and it is extremely improbable that they could obtain a majority in the country. Indeed, their plans for the next General Election are by no means completely arranged. The Independent Liberals under Sir Donald Maclean did not vote at all, and they also recognise in private, what they would do rather than admit in public, that the tide has not yet turned sufficiently to float the Liberal fleet again. Indeed, none of the heavier vessels that were stranded last December have shown any signs of preparing for sea again. Mr. Asquith makes an occasional speech. But Sir John Simon seems engrossed in the law, Mr. McKenna has definitely given up politics for banking, and Mr. Runciman is never heard of. Unfortunately political leaders in these days, like Dreadnoughts, soon get out of date, and some of the younger Liberals, under cover of expressions of loyalty to the leaders of 1906-16, are as ready as Lord Fisher to "sack the lot."

Finance and Currency.

The real trouble with the Government is not the strength of its opponents, but the weakness of some of its members. In nothing has this been shown more clearly than in the failure to deal with national finance. National expenditure has not been reduced as it should have been, and every Government office in Whitehall appears to spend as much as it chooses, while Treasury control has become entirely ineffective. The figures of Government expenditure and revenue which were issued on Monday revealed a very serious state of things, but, unfortunately, there are some indications that the difficulty will be turned to personal ends, and used for a resumption of the vendetta against Mr. Chamberlain instead of a plain recognition by all parties that a new policy must be adopted.

It is a little difficult to understand the persistent objection to Mr. Chamberlain. He is not a great man, and he has little personal magnetism. But he is honest and hard-working, and his speeches, even the dullest of them, usually contain sound common sense. He is less of a mathematician than Mr. McKenna, who has had few equals at figures, but at least Mr. Chamberlain makes his Budgets intelligible, which Mr. Lloyd George never did.

The present complaint against the Chancellor of the Exchequer is that he refuses to introduce a supplementary Budget this autumn. But the objection is unreasonable. It takes some time to prepare new schemes of taxation, which all agree to be inevitable. But hasty taxation may do more harm to the interests of the nation than even a deficit. The real remedy for the present trouble is to reduce expenditure, not to increase revenue, and reduction of expenditure can only come from the Prime Minister's initiative. Unfortunately Mr. Lloyd George's whole temperament is antipathetic to economy.

Meanwhile, an unexpected difficulty is on the horizon. The price of silver is rising steadily. Before the war

Digitized by Google

the real value of a shilling was about sevenpence; but real and face value now practically coincide. If silver rises appreciably further, it will actually pay to melt down our coins for the sake of the metal—in fact, this is already being done in France. The Mint officials frankly admit the difficulty, but there appears a natural reluctance to issue five-shilling notes. It would seem somehow to carry us still further from the days of the golden sovereign. But there is a shortage both of silver and copper coins, although enormous numbers of new coins are being put into circulation. Partly it is due to the penny and shilling-in-the-slot machines for gas and electricity, which lock up millions of coins all over the country, and partly no doubt to the higher prices. When prices double, coinage must double too, or the shortage will be felt.

More War Memories.

Several more war books or articles have been published, and the materials for history are steadily increasing by the publication of personal apologia. Count Czernin, who naturally writes pessimistically about Austria, depicts the ex-Crown Prince of Germany as in pacific mood as early as 1917, but his notes contain little of value. Herr von Bethmann-Hollweg's defence is better done; it reveals a trained mind of the second order—it has always been Prussia's misfortune, as von Bülow said, that most of "our politicians are asses"—but the evidence is mainly negative. He denies the summoning of the Potsdam War Council on July 5, 1914; on Belgium he maintains the usual Prussian attitude that the invasion was a military necessity, and the British objection was mere hypocrisy. As regards the "scrap of paper" incident, the only addition he makes to the account given from the British side was that the British Ambassador burst into tears and begged to be allowed a few moments to recover himself, as he was not fit to appear before the Chancellery clerks in his then state of emotion. Few people on this side of the Rhine will consider that our representative need be ashamed of the revelation.

Hard upon Lord Fisher's breezy memoirs there have been published the reminiscences of Sir Percy Scott, which resolve themselves largely into criticism of the Admiralty. Sir Percy pictures the Admiralty as tied hand and foot by red-tape, which is no particular compliment to Lords Fisher and Jellicoe, both of whom occupied high official position there before the war; and he fortifies his criticisms by many technical details which only the expert can discuss with knowledge. It is probable that these two recent volumes of naval memories, coupled with Lord Jellicoe's book of last summer, will give employment to the naval correspondents of the newspapers through the winter.

Meanwhile, Mr. Fortescue, the official historian of the British Army and of the war, has followed up his attack in the *Observer* on Lord French's unhappy book, "1914," by a long and merciless analysis in the current *Quarterly Review;* and one other outcome of this autumn crop of military literature deserves to be noticed. In General Ludendorff's account of the campaign, which is by common consent the most authoritative work yet published, there occurs the statement that the inner circle of German leaders recognised that they had really lost the war by the end of 1916, and that the unrestricted submarine campaign was their only remaining hope. It will be remembered that the Asquith Government fell in December, 1916, and it does not need great prophetic powers to foresee that strong partisans will soon be claiming that Mr. Asquith, after all, was the man who won the war, although neither he nor anybody else realised the fact for two years afterwards.

Nationalisation and Labour Troubles.

Although a strike which is affecting the engineers drags on week by week, England is for the time being immune from labour troubles. Both Capital and Labour are getting their wind after the railway strike, and watching with interest the development of affairs in the United States. It was our turn in September; now it is emphatically America's turn, and her difficulties seem to be worse than ours, while the American papers complain that their public is less resourceful and less ready to volunteer for emergency work than the British. But the position in the two countries is very different. America has a far larger alien population than we, and the foreign Labour element in the States is more ready to be led away by extremists, while the fact that the trade unions are less strong and have no political representation at Washington in Congress gives an opportunity to the promoter of class-warfare that is lacking here. The mere fact that every British Labour member hopes to became a Cabinet Minister in a Labour Government some day is a strong inducement to keep the Labour movement here on constitutional lines; the real extremists are the men who have stood for Parliament and failed to obtain election. But in the United States, for all the boast of equality, politics are the preserve of the middle-classes, and the revolutionists there are making use of this fact.

But there have been signs enough that British Labour is far from satisfied with its recent progress. The locomotive men on the railways, who were understood to have obtained their full demands months ago, have this week put forward a further claim for an advance in wages and other privileges; and at the resumed negotiations between the railwaymen and the Government a scheme has been put forward by the representatives of the men for a share in the control of the industry. In these democratic days, when Labour demands open diplomacy in foreign affairs, it is rather strange that the leaders should allow—or desire—their own official negotiations with the Government to be shrouded in impenetrable secrecy. But nothing beyond the bare statement has been published, and the public is not allowed to know how much control the railwaymen demand, or given any indication as to the mind of the Government on the subject.

It seems quite inevitable that on this matter a hard and bitter struggle will be fought. Labour has to some extent enlarged its sphere of operations, and whereas before the war its demands were almost exclusively concerned with hours and wages, they are now very largely centred upon a share in the control of industry. The subject is extraordinarily controversial, the literature on both sides is voluble if rather academic; but it is not by arguments that the question will be decided, for nobody pretends that master and man carry on their discussions on crucial points in a serene atmosphere of pure reason.

The Promenade Concerts.

An interesting little ceremony—a presentation to Sir Henry Wood—took place in London last week, when the twenty-fifth anniversary of the Promenade Concerts was celebrated at the Queen's Hall. Sir Henry Wood has been the conductor from start to finish. Before the war his orchestra was equal to any in Europe, and better than most; during the war it suffered, like everything else, by the enlistment of one instrumentalist after another, and one cannot pretend that the air raids, with their very audible "music without," helped either the musicians or the rather sparse audience within. But the performances were maintained notwithstanding, German music and all; and now the war is over the old standard of excellence has been quickly restored.

Sir Henry Wood has been a conductor of catholic tastes. Apart from the regular Wagner, Beethoven, and Tschaikowsky nights, he has introduced a great deal of new music, and one is grateful to him for the opportunity of hearing Sriabin, Sibelius, and Strauss, whose marvellous work, "Death and Transfiguration," was condemned by the musical critics very unfairly a few years ago. A vast amount of new British music has also been performed at the Queen's Hall, but except for one or two pieces by Elgar and Coleridge-Taylor, none of it sticks in the memory or has succeeded in making a reputation for itself. Our deficiency in music is curious, but is probably due to the fact that our composers are too imitative of the great foreign masters. Neither in literature, art, nor politics have we shown any lack of originality, but in music we seem unable to get away from the standard model, with disastrous results.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, October 9.

Settlement of the Tram Strike.

After eight weeks' cessation, the Cairo Tramways resumed their services last Sunday, an agreement having been arrived at between the company and the workers, thanks to the intervention of the Conciliation Commission and H.E. the Governor of Cairo. The workers obtained satisfaction on practically all the important points raised by them, except with regard to their Union, which the company declines to recognise, but to which it does not forbid its employees to belong. The rumoured increase in fares has not taken place, the Government, it is understood, declining to entertain any such idea at the present moment. As far as can be gathered, the company could not prove that the extra expense due to the increase in pay and allowances to its personnel would be more than it could bear, and in the circumstances an increase in fares was certainly not justified. The company is known to have made substantial profits in past years, and it can therefore well afford to give a trial to the new state of affairs. If at the conclusion of, say, a year, it can prove that the net profits do not permit of the distribution of a reasonable dividend to its shareholders, then it will be in a position to demand, and may expect to obtain, consent to an increase in the fares; but the demand for an immediate increase, merely because it might possibly incur a loss on account of the present abnormal state of affairs, backed as that demand is understood to have been by no definite proofs, was certainly not admissible; and the Government acted quite rightly in setting its face firmly against the proposal. It is now hoped that a similar settlement will soon be made with the Alexandria and Ramleh Tramways, but as in the case of these two companies there appears to be some complication in connection with the original concessions, it is to be feared that some little time may yet elapse before a permanent settlement is arrived at.

The Industrial Situation.

It is to be noted that in the Tramway settlement the question of the recognition of the Syndicate, which had been previously one of the main points of dispute insisted on by the Bourse du Travail, was dropped. Likewise, it is interesting to note that the Cairo bakers, who were recently incited to ask for better terms by the Bourse, have repudiated the latter, and have declared their desire to settle their differences directly with their own masters; whilst the effort to bring out the printers and the lithographers has also failed. Since the departure of Messieurs Collalto and Pezzutto, the sinister influence of the Bourse du Travail has indeed been on the wane, and there seems little doubt that the industrial workers of Egypt have no use for such an institution, but prefer to settle their differences with their employers in their own way. Indeed, to-day one hears little talk of trade unions, and we shall probably find in two or three months' time that the doctrines of trade unionism have been forgotten almost as completely as they were ignored in this country three months ago. In the circumstances the Government would possibly do well to hold its hand in connection with its trade union law; for it is always unwise to legislate in advance of public opinion, and that would be the case if such a measure were promulgated at the present juncture.

The Political Situation.

Opinion has become very decided against the early despatch of the Milner Commission to Egypt, and it appears to be pretty generally felt that its arrival at the present juncture would be inopportune, and would create unnecessary difficulties. It is becoming recognised in European, as well as Egyptian, circles, that there may be something in the argument that the settlement of the Turkish peace conditions and ratification of the general Peace Treaty by the Allied Powers should precede the Commission. The Cabinet has fully discussed the question at several meetings this week, and Mohammed Said Pasha has had several interviews with the Acting High Commissioner. These facts have given rise to the rumour of a Ministerial crisis; but at the time of writing there are no signs of any such regrettable occurrence as the possibility of the resignation of the Cabinet.

The extremist Press sustains the violently anti-British tone of its articles already reported. The news of the possible arrival of the Milner Commission in the very near future was the signal for somewhat violent attacks on the Prime Minister, whilst the telegrams announcing the railway strike in England synchronised with the appearance of articles which, when they were not amusingly sarcastic, were exceedingly violent and abusive. It is noteworthy, though not surprising, that the news of the collapse of the strike has been passed over without comment by the extremist Press. In the campaign for "independence" it is not only we British who come in for abuse, our Allies and those foreign statesmen who have publicly approved of the British Protectorate are also being held up to public (Egyptian) scorn. In this connection the following priceless fragment, addressed to President Wilson, which appeared in *Al Afkar* as soon as the news of his illness was received here, is typical of the stuff which is published by the extremist Press and avidly read and quoted by the rank and file:—

TO THE HONOURABLE DR. WILSON.

By my soul, if you are now wakeful and suffering from insomnia and pain, and if you feel your soft bed to be a flame of fire, you have caused the same pain and feelings to a nation who felt her doom in what you decided about her.

Die without praise, and if you live, do live in pain and shame.—Yours truly,

(Signed) ZAKI MUBAREK.

Dr. Wilson, it may be mentioned, was the hero of Egypt some six months ago, and it was to him that Egyptians looked for liberation from the terrible British yoke. On April 22 the President, unfortunately for his reputation amongst the Egyptians, issued his

statement recognising the British Protectorate, and since then the extremists have had nothing good to say about him. *Sic transit gloria mundi!*

Government Appointments.

Although no official announcement has as yet been made, it appears certain that Sir Paul Harvey has accepted the offer of the Financial Adviserships, to which he was appointed in 1907, and from which he resigned in 1912 because, as was understood at the time, he disagreed with the late Lord Kitchener in regard to the expenditure which the latter contemplated in connection with his various projects. Meanwhile, Mr. R. S. Patterson, who is to succeed Dr. Dunlop as Adviser to the Ministry of Education on the expiration of the latter's leave, is Acting Financial Adviser, and on his shoulders has fallen the difficult and somewhat thankless task of dealing with the many economic and financial problems which have arisen during the past few months, and which are daily arising. Sir Murdoch Macdonald, whose prolonged absence in England has been due to work in connection with the Egyptian and Sudan public work schemes, returned this week, and has now resumed his duties as Adviser to the Ministry of Public Works. Mr. J. Langley, Under-Secretary of State for Agriculture has also returned from leave. As regards the three remaining Adviserships, Sir George Macauley has remained at his post at the Ministry of Communications throughout the summer, and Sir Gilbert Clayton, who has been nominated to the Advisership to the Interior, has already taken up his duties there; but there is so far no news of Sir William Brunyate, who, as was previously announced in this correspondence, is to revert to the Judicial Advisership, and Mr. Sheldon Amos continues to act in that capacity.

ROUMANIA.

BUCHAREST, October 16.

The Political Situation.

It is not an easy matter at the present moment to form a correct appreciation of political values. The situation is so complex that until further developments take place it would be unwise to hazard a forecast of the outcome of present issues. Very little reliable information is obtainable as to the programme and intentions of the existing Government, and the censorship, which is still rigorously in operation, prevents a great deal of useful news from finding its way into circulation.

As regards external questions, M. Misu—for whom the portfolio of Minister for Foreign Affairs in the present Cabinet was reserved—has just arrived in Bucharest from Paris, and may be expected to afford the Government considerable assistance in the direction of settling the question of the Austrian Treaty. The Peace Conference, it is stated, has sent copies of a note relating to the position in Hungary through the Legations of each of the four Allied Powers, to avoid its meeting the same fate as the 75 radiograms sent from Paris in August, which were stated never to have reached Bucharest.

It is on internal political questions, however, that public interest in Roumania is now concentrated. The forthcoming elections are of considerable importance, as being the first to be held throughout the whole of "Great" Roumania, and excitement naturally runs high. It is on account of the importance of the elections, no doubt, that the bitterness of M. Bratianu's opponents has attained almost to extreme limits. The present Government is looked upon as a screen behind which the Liberal Party are pulling the strings, and is denounced as being in reality a military dictatorship set up for the purpose of ensuring the continuance in power of the Liberal Party. Yet, in view of the unwillingness of any of the Opposition leaders to take the responsibility of forming a Government, and the failure of all other expedients which were suggested, it is difficult to see what alternative was open to the King other than the formation of the Cabinet as at present constituted. There is, however, no doubt that the Liberals have obtained a strong hold on the economic life of the country in various ways, and this fact gives rise to charges—whether with or without foundation it is difficult to say—that the late Government resorted to unconstitutional methods to gain ascendancy over the commerce and industry of the country.

There is a general feeling among the Anti-Liberals that elections presided over by the present military Cabinet, and under the existing censorship and other restrictions, cannot be conducted on equitable lines, and therefore M. Take Jonescu and General Averescu have both announced their intention of abstaining from the elections. The Liberal Press met these announcements with the taunt of weakness, but they were quickly followed by a declaration by the Socialists of the same intention, and a similar attitude is being adopted by the Opposition parties in Transylvania.

A concerted movement has been initiated by M. Paul Bratashanu by the formation of "The Constitutional League," with the main object apparently of overthrowing the political power of the Bratianu family, and at the inaugural meeting on October 12 no adjectives were spared in execrating the policy of the Liberal Party and in blaming the conduct of M. Bratianu at the Peace Conference, to which conduct is attributed the whole of the present difficulties between Roumania and the Allies.

National Education.

A Commission on the programme of studies and regulations relating to supplementary educational courses has just completed its work. Commencing from this year, all factories, commercial undertakings, workshops, etc., will have to send their apprentices and learners to supplementary educational courses until they arrive at the age of sixteen years. These courses will form an integral part in the primary educational system, and are applicable to the various branches of education demanded by the various regions. All children who do not continue their studies at higher grade schools will be compelled to frequent these supplementary courses up to the age of sixteen years, and fines will be imposed upon parents or guardians who do not carry out these regulations.

There will be four courses: an agricultural one for localities in which the majority of the inhabitants are occupied with farm work, another of an industrial character, a third commercial, and a fourth for instruction in domestic work for girls.

Ceremony at Curtea d'Argesh.

The old monastery at the ancient town of Curtea d'Argesh, for many years the burial place of the rulers of Roumania, was the scene on Saturday, October 11, of a short requiem mass in memory of Carol I., whose decease took place just five years ago. In the absence of the Queen the King was accompanied by Princess Ileana and attended by the members of the newly constituted Ministry. M. Maniu and M. Popovici arrived from Sibiu, together with Col. W. Cozens Hardy, M.P. The ceremony lasted barely fifteen minutes, at the expiration of which the King had a short interview with Col. Cozens Hardy and a somewhat prolonged conversation with M. Maniu, in the presence of General Vaitoianu.

BULGARIA.

SOFIA, October 6.

Reception of the Peace Terms.

The first reports regarding the Peace terms for Bulgaria proposed by the Paris Conference came as a painful shock to almost all Bulgarians. They produced the bitterest disappointment and depression, and brought about a condition of mourning throughout the kingdom. But they did not utterly crush, or paralyse, the staunch Bulgarian spirit, which has survived centuries of slavery and oppression.

Until the return of the delegates from Paris with the document itself, nobody was willing to believe that the radiograms had given truly the verdict of the Paris Conference. But when the three Bulgarian representatives, MM. Theodoroff, Stambolisky, and Sakyzoff, descended from the train, on that memorable September 26, their drawn and sorrowful faces told at once the cruel tale that they were the bearers of Bulgaria's death sentence.

M. Stambolisky on the Terms.

In the course of a long speech, made to a large audience, at the Agrarian Club, M. Stambolisky gave his hearers the impressions he had brought away with him from Paris. The Bulgarian Delegation, he said, was most inimically treated by the French and Allied Press, owing to the slanders set about and the unscrupulous Press campaign carried on by Bulgaria's neighbours, about fictitious "atrocities" committed by the Bulgarian Army and Administration during the war. Only to himself were some courtesy and favour shown, the Press declaring that he had fulfilled his duty to the fatherland to the end, and could with a pure conscience appear before the world's supreme tribunal to plead his country's rights. But, notwithstanding this favour, the general conclusion was that, just as for upright Lot God did not spare Sodom and Gomorrah, so the victors could not spare Bulgaria for the sake of Stambolisky.

M. Stambolisky finds the proposed terms almost insupportable. "We knew," he said, "that we were to be tried, but we never expected that the sentence would be so severe and so unjust. We believed that if the humane principles proclaimed by President Wilson were partly observed in drawing up the Peace with Germany and with Austria, the same humane principles would have full application in the case of little Bulgaria, who, nobody can deny, has always struggled for the union of the Bulgarian race. But, on the contrary, Bulgaria is the only country, so far, to which the principles of barbarism are most fully applied—in her case not only is the principle of nationality violated, but parts are torn from her living body. The modern and Christian world is tearing from us our brothers by blood and language, who for forty years have shared with us independent political life. Parts of the districts of Vidin, Tsaribrod, Strumnitza, and all Macedonia, the whole of southern Thrace, and the whole of the Dobruja are taken away. Thus we are placed in a worse position than we were in forty years ago; and this after we have spent all our wealth for the realisation of our union, after shedding the blood of 500,000 men—the flower of the nation—and after we had hoped, in view of the declarations of the great President of the United States, that the Entente Powers would understand the supreme will of a small and heroic nation so far as to forgive her transgressions, and satisfy her natural yearning for the union of her race, thereby consolidating for all time the peace of the Balkans."

In conclusion, M. Stambolisky said that the Government will protest against this flagrant injustice, but will not go to war for the attainment of national union. There would be a new policy of working by peaceful means, which are sure soon to be crowned with success.

The new Chamber opened on October 2. M. Theodoroff tendered the resignation of the Cabinet, which was accepted. M. Stambolisky was entrusted by the King with the formation of a new Cabinet.

CYPRUS.

Small Pox Precautions.

Owing to the continued danger of a spread of the small-pox epidemic (several more villages, including some of the largest, have again been gazetted as infected), the Officer Administering the Government has issued a General Order regulating the movement of sick or suspected persons. No person can leave an infected area without the written permission of the medical officer in charge. Full instructions are given to the police and medical authorities to see that all provisions of the Order are strictly carried out, and that telegraphic information is reported to the proper quarters. Persons who desire to leave Cyprus must embark within thirty-six hours after reaching the port of departure, and within twenty-four hours after reporting themselves to the Government Medical Officer, provided that his examination is satisfactory.

The Locust Tax.

Under a law which has been in force for thirty-eight years, certain duties, rates and taxes are levied under five schedules, in order to provide funds for locust destruction, the first being in respect of all titheable produce. The others include taxes on buildings, trades and professions, incomes from public offices and pensions, and on sheep and goats. The officer administering has, by Order in Council, directed that the collection of taxes under two of the schedules shall be suspended from March 1, 1920, till further notice, and on the three other schedules for one year from the same date. This relief will be welcomed on all accounts, and it points to a diminution of expenses in fighting the pest. It is, however, regrettable that so little should be published on the subject of the annual locust campaign, as its history under British administration is of great interest to all who have followed what has been, on the whole, a creditable and successful war.

Agriculture.

The annual report of the Director of Agriculture, Mr. G. Bevan, for the last financial year has been published, and presents the record of a prosperous year for agriculturists. A noticeable feature relates to a greatly extended local employment of crushed locust beans (carobs) as food for animals, and to some extent for poultry. This has been strongly advocated by the Agricultural Department, and is quite a new departure, strange to say. Taking the present price of carobs as not exceeding £5 a ton, it has been found by the Cypriots to be a paying form of food under present conditions. The Limasol District has been forward in this respect, and Kyrenia, another good carob area, has also adopted the innovation to a large extent. Local consumption of the bean should now be largely increased. The report is an interesting one in many respects, and calls for further notice.

Miscellaneous News.

On the occasion of a visit from H.M.S. Marlborough, a water-polo match was arranged between teams from the ship and the detachment of the Royal Welsh Fusiliers, in which the latter were victorious.

Cooler weather has set in, and good rains are hoped for.

Prayers have been offered in the churches for the removal of the epidemic, in accordance with the request of the Acting Greek Archbishop.

MALTA.

VALETTA, October 8.

The Emigration Question.

Emigration is the great desideratum in the island, and many attempts have been made in the past to organise some agency for securing the desired end. These attempts have failed in almost every instance, but at last there seems to be hope that we are on the verge of a project, recently launched, "making good." We have before us the report of the Malta Government Delegation on the possibility of the utilisation of Maltese labour in France. It affords hopeful reading, and, contrary to the usual rule here, the Delegation seems to have accomplished the work it set out to do. *En route*, the question of the employment of Maltese dockers at Marseilles was discussed with the Acting Consul-General of that port and other leading members of the considerable Maltese community at Marseilles. There seems to be a great chance of the utilising of Maltese labour in Southern France. On August 30 we find that the Delegation had reached Paris, where protracted and important meetings and discussions took place between the Maltese representatives and M. Herbette, Director of Administrative and Technical Affairs, and M. de Navailles, Chef de Bureau of Foreign Affairs. Matters were threshed out in great detail, and it may be stated that the principle of the employment of Maltese labour on reconstruction work in France has been definitely established; and events have reached such a stage that batches of five hundred men are to leave for France weekly. Already the number of such men asked for is well over 6,000.

A project of this nature bristles with possibilities of friction and failure, but the Delegation have done their work so well and thoroughly that little appears to have been overlooked. Equality with the French on a labour footing, wages, compensation, feeding, and even religion have received the attention of the authorities on both sides. It should be stated that the proposed rates of pay vary from 13.75 francs to 18.75 per day of ten hours. Reference to the possibilities of the employment of

Maltese labour in the French possessions—including Morocco and Northern Africa—did not receive the support of the French authorities, the main reason being that the manual work in those regions is performed chiefly by the natives at about two francs a day. It is hoped that good will come of the Delegation's labours, and that the exodus of so many will help to relieve the economic pressure from which the island is suffering to-day. Discharges from the Dockyard and the demobilization of local labour battalions are the order of the day, and these are swelling the ranks of the unemployed. It is to be hoped that all concerned will rise to the occasion, that nostalgia will not prove a bar to success, and that sentiment will be cast aside. The work will be hard, no doubt; but the Maltese countrymen are strong and sturdy, and should give a good account of themselves.

The Governor's Speech.

His Excellency the Governor utilised the occasion of the prize distribution and the ceremony of the opening of the schools and the university to refer to the present state of the island. Among much excellent advice he stated that he hoped that sufficient time had now elapsed to enable all to view the recent regrettable riots dispassionately, and expressed a wish that they should be relegated to their proper place in the history of the island. The affair, he added, was one of those matters which might happen in any community, but one of which all should be heartily ashamed, and which should not be allowed to interfere with the progress and development of the island. After outlining what he considered to be the true function of a university, his Excellency advocated broader views and a going out into the world of the students and graduates, who should show themselves of such a stamp that they would bring credit to their country and their *Alma Mater*.

"Olla Podrida."

His Honour W. C. F. Robertson, C.M.G., Lieutenant-Governor and Chief Secretary, has left the island for London—it is thought in connection with the question of the reform of the Malta Constitution.

Hotel-keepers—even the English—are said to be selling wine at 2s. 6d. a bottle which can be purchased in the shops at 7d. It is advised that such glaring cases should be dealt with as excessive profiteering.

The reports of the Commission appointed to inquire into the June riots have just been issued. They will be gone into in detail in the near future

ASIA MINOR.

SMYRNA, October 17.

General Hanbury's work of pacifying the Greeks and the Turks in the Aidin Vilayet has recently had a grievous set-back. The Turks have succeeded in circumventing the Greeks, and again successfully attacked the British railway, which is guarded by Greek troops, at two points—Ephesus and Odemish. One bridge was destroyed, and there now only remain about forty miles, out of the 300 miles of railway, available for traffic to Smyrna. Even such articles as butter and eggs have ceased to reach Smyrna. In contrast with the lamentable condition of the British railway, the French line—Smyrna-Karahissar-Panderma line—which is guarded by Senegalese troops, is almost unmolested. There must be some weighty reason for leaving the British line in the hands of the Turks, though British merchants cannot yet appreciate it, and bitterly regret what they consider is a palpable extension of the external muddle.

October 18.

News has just reached Smyrna that the Turks have succeeded in surrounding the Greeks in the town of Odemish, and it is believed that the Greeks have suffered very heavy losses there.

BULGARIA AND THE TERMS OF PEACE.

We have received from a Bulgarian source an appeal addressed to the British and to the American Press urging both to insist upon a radical revision of the conditions of peace in accordance with the principles enunciated by President Wilson.

The following statement accompanies the appeal:—

The future of Bulgaria is organically related to the territorial, national, economic, and cultural rights of the Bulgarian people. The Peace Conference gave no heed to these rights. The "conditions of peace" elaborated by this Conference not only paralyse the national and economic development of Bulgaria, but they also render its political existence impossible. To bring about the ruin and death of the Bulgarian people seems to have been the cardinal thought that presided at the elaboration of the Bulgarian "conditions of peace."

Objectively speaking, these conditions are more cruel and more monstrous than those imposed on Germany and Austria. From these two States are "disannexed" not German provinces, but Italian, Polish, Czech, Slovak, Croatian and Slovenian, Serbian, Small Russian and Roumanian regions. From Bulgaria, on the contrary, purely Bulgarian parts of her territory are torn in order to be given to the Serbs, the Greeks, and the Roumanians. The conditions of peace mean the exodus of more than a hundred thousand Bulgarian inhabitants. They will look for refuge in Bulgaria, where they will join the 300,000 refugees who have already come from Macedonia, and the 170,000 from Turkish Thrace, and the 80,000 from the Dobruja.

The Bulgarians left Moravia in 1878 to establish themselves in Tsaribrod and its environs which the treaty attributes to Serbia, and they will not remain under the dominion of their new masters. They will try to establish themselves in Bulgaria. The new immigrants will be a very heavy burden to the smaller Bulgarian State, mutilated as it will be, without any direct access to the Ægean Sea, and loaded with a contribution of two and a-quarter milliards of francs. Bulgaria cannot give them shelter and food; as she has only a professional army, for which it will be difficult to find volunteers, because her citizens prefer their plough and their individual freedom to any kind of military servitude, she will not be able to prevent or to crush movements of revolt that the injustices and despair will suggest to these unhappy refugees.

The Congress of Berlin in 1878 and that of Bucharest in 1913 have created a ground and conditions that are favourable to troubles and to the "komitajis" in the Balkans. To-day the Conference of Peace not only gives sanction to this state of things, but amplifies it. Must and can Bulgaria be held responsible for these troubles, the germs of which were sown by the great Powers in Berlin, troubles which they encouraged tacitly in Bucharest and which they prepare again in Paris with their atrocious conditions of peace?

Justice demands that these conditions be mitigated. This the whole Bulgarian people demands. This demand, inspired by a sense of duty toward right and peace, asks that the most disastrous clauses of the projected treaty of peace be cancelled.

1. That the territorial clauses be cancelled. This reparation concerns regions that, from the geographical point of view, as well as historically and ethnically, are purely Bulgarian. Never in the course of the centuries, neither politically nor spiritually, have they been under Serbian domination. There have never been, and there are not now, Serbians in these regions. Such a decision is contrary to the declaration of President Wilson, who said that the populations shall not pass from one "sovereignty to another" like pawns in a game.

As to the strategical considerations, they constitute an anachronism in view of the existence of a League of Nations, and with regard to a disarmed Bulgaria.

2. That the contribution be reduced in such a proportion as to be in accord with the financial and economic resources of Bulgaria. For the interest on these two and a-quarter milliards of francs, leaving aside the debts from before the European war and the expenses of administration, with the depreciation of the Bulgarian *lev*, the necessary sum will be more than twice the present budget. After being deprived of its richest provinces—Dobruja and Thrace—the Bulgarian State will be unable to meet all the payments of such a contribution.

3. That to the populations of Macedonia, the Dobruja, and Thrace should be given freedom to decide their own fate; that the inhabitants of these regions be consulted under the control of the Great Powers by means of a plebiscite, and that this consultation take place under occupation of French, English, American, and Italian troops. This would be the only equitable and rational settlement of these three regions.

4. That the professional army be replaced by conscription, and this in the proportions foreseen in the draft treaty. In Bulgaria it will be difficult to find young men ready to abandon their field or their business in order to serve the flag, even if the pay should be tempting. The Bulgarians pay conscientiously their debt of blood; but, rather than be mercenary soldiers, they will go to any other profession. It must not be lost sight of that the professional army will cost at least twice as much as an army by conscription.

5. That the value of the cattle which Bulgaria must deliver should be paid in cash.

6. That in the treaty of peace a clause be included according to which the international commissions will not be imposed unless Bulgaria should not execute scrupulously the obligations foreseen in this treaty.

PRESS ON THE NEAR EAST.

The Englishmen in Egypt.

The following passage is extracted from an article, "Field-Marshal Allenby's campaigns," contributed to the current *Fortnightly Review* by Major Lindsay Bashford:—

Hitherto in its economic life Egypt has remained markedly isolated. Inscrutable, complex, such outside commercial relations as had been established had been chiefly with the Western European nations, whose representatives in Cairo and Alexandria had come to dominate and exploit Egyptian industry. Egypt had no neighbours. It is not possible here to enter fully into the changes which these last years have brought about in Egyptian affairs. They penetrate far below the decorative surface which is all the average Englishman sees or cares to see. The war has brought an immense access of wealth to Egypt, wealth in cash rather than credit, but it is idle to pretend that this wealth has fallen into English hands. Many who study Egyptian progress, halting though it be, are convinced that Egypt stands to-day on the threshold of a large industrial development. Everywhere new gateways have opened through which Egyptian caravans may pass. The eyes of the peoples of the Middle East have turned from Smyrna and Constantinople to Alexandria, and their glance will not lightly be diverted. Egypt has rich neighbours now. Yet more significantly than ever the paradox stands out that, whereas the Englishman has saved Egypt from bankruptcy and governs Egypt well, his industrial stake in the country is a very minor one. He rules, but reaps poor reward for his toil. Throughout the Middle East it is he, more than other Europeans, who is associated with the new and refreshing doctrines of "self-determination," of the rights of smaller races, that the war has evoked! It is he who in the eyes of the Arab world, from the Euphrates to Morocco, most generously endorsed the "fourteen points" of President Wilson which became a chief pretext for the recent Egyptian disturbances and are spreading distrust and restlessness throughout Northern Africa and the Levant. Shallow idealism, pedantically phrased, is very welcome to half-awakened minds, many of which the Englishman himself has taken pains to educate. These things we must consider. It is not enough to hold the reins of government in Egypt; we must control social life and social ideals, and with fair competition greatly strengthen our hold in commerce and industry. Amongst educated Egyptians there are few real separatists, and the prospect of increased prosperity will lessen their number.

"The Future of Syria."

In an article with the above title the *New Statesman* (October 11) says:—

The political settlement of Turkey has been delayed by a number of causes, chief amongst them being the doubt about America's willingness to undertake a mandate. Until we know whether she will or not it is obvious there can be no permanent arrangements made about Constantinople, Asia Minor, Armenia, and the more northerly portions of the old Turkish Empire. But Syria is a separate problem, and if, as has been suggested this week, America is disposed to act as arbitrator between the various conflicting claims, that will probably be much the most satisfactory way out of present difficulties. They are difficulties not so much of principle as of the detailed application of principles. But it is no use denying that they are serious. There is here, as elsewhere, the lumber to clear away of a war treaty concluded before America's intervention had introduced new criteria of diplomacy. The Sykes-Picot Agreement, as everyone recognises, is unworkable, and will be thrown over. But the claims of France will have to be considered and respected, for we do not want the long partnership of the war to be sterilised by Anglo-French complications in Syria. It is bad enough that Egypt should have stood so long between English and French friendship without making another Egyptian problem in Syria. Then there are our promises to the Arabs to be honoured; and in addition we are committed to setting up a national home for the Jews in Palestine.

After asking on what principles these claims are to be adjusted and these promises redeemed, the writer continues:—

When one begins breaking up a great Empire like that of the Turks and distributing the portions amongst the nationalities that it has oppressed, one realises for the first time that even an artificial unity may have its advantages. Turkey had no favourite nationality to indulge in Syria like the Albanians in Europe or the Kurds in the Armenian highlands. She did impartial injustice all round. But there was no question of one part of the country aggrandising itself at the expense of another; every part progressed to ruin at pretty much the same pace. The first natural effect of establishing the various races as nationalities is to encourage a spirit of international rivalry; and one of the first principles of the settlement, therefore, must be to recognise the real unity of the whole country between the Mediterranean and Mesopotamia, and to prevent its natural development from being retarded by internecine strife, as that of the Balkan countries has been.

The article concludes:—

A united Arabia extending from Damascus to Baghdad and from Aleppo to the Hedjaz seems out of the question, and the true future of the Arab national ideal would seem to be a federation of states, a northern state or group of states under a French mandate and a southern group under a British mandate. This Federation might then have some representative centre, which would, of course, have the right of making representations to the League; but that is a very different thing from attempting to govern the whole of renascent Arabia from one capital. Such a country would have no chance of maintaining its unity, and its formation would be quite inconsistent with a division of the mandates between England and France. One administrative unity, one mandate, is the only principle that would work at all. If this vast amorphous Arabia were to form one single unit of Government, either England or France would have to take the sole mandate. But that would be inconsistent with the established expectations both in Britain and France and in the Middle East. The task will have to be divided between us, and if America will help us to do it fairly it will be the most promising way out of a very difficult business.

The Turkish Problem.

In the *Piccadilly Review* of October 23, a new weekly paper, Col. Aubrey Herbert, M.P., writes on the Turkish problem. He commences with an illuminating individual experience:—

I remember, many years ago, paying a visit to a Turkish country gentleman, who was one of the most distinguished Liberals of his country, and whose desire for Anglo-Turkish friendship was almost an obsession. One day he told me this story: "Some days ago," he said, "I was riding over my estate and I found a peasant who was sowing seed. He was sowing this seed on the rock, as well as upon the soil. I told him," he said, "that he was wasting time and money, and the peasant answered, 'Not so; if God Almighty can make the grain grow in the soil, cannot He make it also grow in the rock?' That," said my host, "is my country. Our life depends upon an annual miracle, and this happens to us because we still live in the age of Faith, but one day that miracle will cease to happen, and that will be the end of my country."

When the Turks came in against us in 1914 these words came back to me, and I thought: The miracle has failed; this is the end of Turkey. I felt no elation at this thought, because, though like many other Englishmen who knew the East, I was very anxious to see the Armenians and the Arabs liberated from the oppressive rule of their masters, there was no liberation in view. The end of Turkey was not to be the beginning of freedom for the subject peoples, for they would simply pass under the yoke of Russia and be the victims of another form of persecution.

He continues:—

Great Britain must be deeply interested in the fate of Constantinople and of Anatolia. In India alone we have a population of three hundred millions, of whom a large proportion are Mahommedans. It is hard for a Protestant Englishman to be ordered to coerce the Province of Ulster. It is as hard for Indian Moslems to be ordered to attack the last surviving independent Islamic State. They carried out their duty because they believed that Great Britain, in victory, would take no sectional advantage and that the war that they were waging would not be detrimental to their own religion.

And he pleads for a sane policy which shall make for order:—

Anatolia can only be partitioned with our consent, and our consent must imply something more than acquiescence. Further, Greece, as constituted by the Peace Conference at Paris, is an artificial proposition that will require to be artificially sustained. She is given Bulgarian territory, Albanian territory, and great districts of Mahommedan territory in Asia Minor. She cannot look to Italy for help, France has her own burdens to bear, and without our support the diplomatic victory that M. Venizelos has won will be in vain. Putting all our declarations with regard to the freedom of the peoples aside, the partitionment of Anatolia is extremely difficult to carry out. The class of men in that country, fighting for their own homes, are a superior type of adversary to the troops we met in Palestine or Mesopotamia.

TO READERS OF "THE NEAR EAST."

If you experience difficulty in obtaining single copies of The NEAR EAST, send a subscription to the London Office, and the paper will reach you regularly by post every week, however often you may notify us of a change of address.

SUBSCRIPTION RATES (Post Free):

12 months: £1 : 4 : 4 (abroad); £1 : 2 : 2 (United Kingdom).
6 „ £0 : 13 : 2 „ £0 : 12 : 1 „ „

THE NEAR EAST, 1, Devonshire Square, London, E.C.2.

A NEW FEATURE.

This week's issue contains as a new feature "The Week at Home." To readers both at Home and Overseas this item will afford an interesting summary of the week's happenings in the world of politics, science, literature and the arts. The need for a link of this nature with Great Britain is felt by all Britons domiciled abroad, and the Letter will enable foreign readers to keep in touch with the chief movements in this country.

To all existing subscribers, as well as to the chance readers of this issue, we make a special appeal to commend **The Near East** *to others. The purpose of the paper will not be fulfilled until it reaches regularly every English-speaking resident in the countries that come within its scope; and in the United Kingdom has spread a much wider knowledge of the Near and Middle East, its peoples and their affairs.*

The Near East *serves no propaganda and grinds no axe other than the promotion of a better understanding between Anglo-Saxondom and the East. It has at heart the interests of all the peoples with whose affairs it deals, and for this reason seeks to further the cause of permanent peace in that part of the world.*

Any suggestion that may tend to increase the Paper's usefulness will be welcomed.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

More than once in these columns I have noted long marches done in the Near East, but a story from Leicester, told in the *Sunday Express*, is as good as anything hitherto related. While serving in the Balkans, a Leicester man fell in love with a Serbian girl. After leaving the district he heard that the enemy had raided the place where his lover was, and, not hearing from her, quite naturally gave her up as lost. You may judge of (but will not guess) his surprise when he learned that the girl had walked over Europe to find him, and had landed in England! She had travelled about 1,500 miles in quest of him. Truly "love will find the way"; and its ways are passing strange.

***

We are often told that Persia is the home of that industrious pastime about which my colleague, "Caro-Kann," so learnedly descants. Whether that be so or not, I know that its manner of playing the game is to-day quite eccentric. That this is so is confirmed by a friend of mine recently returned from Persia, who tells me that the greatest insult possible for one Persian chess-player to give another is to make his opponent's king do the maypole round one of his own pawns! He also relates that he was permitted to play against three Persian notables, all of whom had some local reputation in the game, and that he polished them all off in half-an-hour! Another feature in Persian play, not peculiar to them, however, but one which I noticed in a game I was playing when steaming up the Gulf, was their passion for courtly conduct of the game. Each time the queen was attacked it was almost a point of chivalry to call attention to her danger. What would have happened had the queen been removed without the "Take cover" warning I do not like to contemplate.

***

I read in *The Times* the other day the following bright sentences, amounting almost to a *non sequitur*. Here they are:—"Surgeon-General Sir R. Havelock Charles will proceed to India next week for a tour with reference to his work as adviser on medical affairs to the Secretary of State. Sir Havelock Wilson, who had a distinguished career in the Indian Medical Service. . . . ." Sir R. Havelock Charles has suffered a land change (into something neither rich nor strange, however), and one wonders whether he finds to his liking this sudden metamorphosis. I do not know who is responsible for the mistake, but I suppose that the compositor was once an ardent member of the Mercantile Marine; he certainly was not in the R.A.M.C.! It is not always that compositors' mistakes matter so little as in the present case, for sometimes people are seriously offended at such slips. But I do not imagine that Mr. Havelock Wilson, non-official party man as he is, would really be hurt were a knighthood actually given him. To alter Byron: "'Tis pleasant, sure, to see one's name in print; a knight's a knight, although there's nothing in't." CORSAIR.

MUSICAL NOTES.

The Near East is not a subject of extensive knowledge among Englishmen, but of all matters concerning it its music has lain in the completest obscurity. Its politics, commerce, customs, to some extent its literature, are known, but of its music, little or nothing. Many an educated man could not tell you the name of a single composer in, say, Yugoslavia, Roumania, or Greece. As far as I know, there is not a single book in the English language upon the music of the Near East, though one might have thought that we, who spend many words in supporting the rights of small nations, might have uttered a few in noticing their achievements.

This insular ignorance is unjustified. On the Continent Near Eastern music has long been recognised as having in it the possibilities of something very great. About seventy years ago the Polish poet, Mickiewicz, said that the Yugoslavs would become the greatest musical people among the Slavs. And it is not at all extravagant to suppose that out of the freed Balkan peoples will arise a musical genius; the peninsula is, in fact, a most likely source. Their independence gained, their main aspirations satisfied, why should not these nations now produce a man fitly to describe the feelings and thoughts of his country. Until now it has been composers of other nations who have employed as basis of their work the essence (i.e., the folk music) of Near Eastern music, but the time has surely come when folk music will best be used by those whose property it is.

But recent developments must make me qualify a little my remarks on the ignorance of Englishmen upon this subject. Enesco and Flondor, Mokranjac and Savine, for instance, are becoming more than mere names. Of the first and last-named works were performed in London a few weeks ago, and aroused considerable interest. Amid all the signs of a musical revival in England, none, after the very proper desire to find music in itself, is more encouraging than this regard for the countries of the Balkans. It is happily recognised that these small nations, though saturated with musical tradition, will have no fetters to cast off, but will, in expressing what has hitherto been denied them, their national and individual consciousness, produce works of art.

In these notes it will be my purpose generally to remark on tendencies in music (this being of more interest than to give descriptions of pieces), and especially to notice performances both of Near Eastern music and by Near Eastern artists. ANDANTE.

CHRISTIANS IN THE EAST.

The Archbishop of Canterbury has received from the House of Bishops, now in session at Detroit, a request to represent to the British Government its earnest hope that speedy measures will be taken to protect the Christian peoples of Persia and to restore to their homes those dispossessed. In reply, the Primate has sent a telegram assuring the House of Bishops that it may rely on eager support being given to the endeavour to secure all practicable support and protection to the oppressed Christian peoples, not only in Persia, but in the Turkish dominions also. He adds: "We find everywhere confident hope expressed that America will bear her full share in discharging the common responsibility attaching to the outcome of our joint work in the war."

NEAR EAST BOOKSHELF.

AN INDIAN WAR NOVEL.*

This story gives an interesting and vivid account of the experiences of the heroine, who leaves England during the first year of the war to be Superintendent of a Training School in Southern India. She is a natural, plucky girl, and we follow with sympathy the description of the many difficulties with which she meets in her work and also the story of her love affairs.

The main theme of the book, however, is the subject of political unrest in India, and the Government is criticised as being too lenient in its dealings with agitators and for allowing the activities of a lady, thinly disguised as Miss Jane Judd, who is the leader of a religious sect called "Neognostics," and the moving spirit of a seditious newspaper, *The Flame*. There is an attempted native rising, which has tragic consequences, but the plot to bring about a big rising is discovered in time, and the conspirators arrested. The characters—mostly Government officials and their wives—are well drawn, although the conversation of the men is apt to consist of short lectures on Indian politics. There is a spirited defence of Englishwomen in India against the charge of frivolity during the war.

LEVANTINES, PAST AND PRESENT.†

M. Bertrand Bareilles breaks entirely fresh ground in describing the inner life of Christian Constantinople. Our impressions of the heterogeneous population which vegetates under the Crescent have hitherto been derived from tourists. M. Bareilles is an old resident in the Levantine colony, and speaks more than one of its multitudinous dialects. He has produced a profusely illustrated guide to its habitat, and sketched its history, customs, and superstitions with a master hand. As a patriotic Frenchman he deplores the decay of his country's influence in Turkey; and his feeling will be shared by all who recognise the world's indebtedness to France as a civilising Power. It originated in the Crusades, which were an instinctive effort of Europe under French leadership to hurl back the tide of Islamic conquest. "Frank" is still the Turkish equivalent of Levantine, just as Indians dub all Europeans "Feringhis." Although the non-Islamic element outnumbers its Turkish masters by three to one, it has never succeeded in throwing off a hated and hateful yoke. The Greek, Armenian, and Jewish communities cherish an ill-concealed contempt for each other; the gulf between them is widened by religious discord, and grinding poverty keeps them in subjection. To their industry and commercial aptitude is due the amazing fact that a handful of Asiatic nomads should have held Constantinople in its grip for four and a-half centuries, despite the persistent efforts of powerful neighbours to seize the key of the Near East. The Turk's virtues are those of the soldier; he has neither administrative nor organising power; without Frankish aid he would long since have been ousted, bag and baggage, from Europe. But gratitude is not a trait of national psychology. Turkey has adopted the Roman maxim, *Diride et impera*; she consistently fans the flames of racial prejudice, and when a Frankish community grows too powerful she weakens it by wholesale massacre. Moreover, Osmanlis have a monopoly of all employment needing military prestige, and their ownership of the soil is used as an engine for fleecing their Christian subjects without mercy.

For Western readers M. Bareilles' analysis of racial characteristics has peculiar interest. He remarks that all Levantines wear a strong family likeness. They are deeply attached to their religion, cherish the ties of kindred; are energetic, hardworking, and ingenious. Such failings as they exhibit were generated by centuries of cruel oppression, and would disappear with the advent of sympathetic rule. Their patriotism is intense; but it never extends to the Turkish Government. The Greek dreams of reviving the spacious days of Athenian hegemony; the Jew realises that he belongs to a world-wide community which controls international finance; the Armenian looks backward in imagination to a long-past era when his ancestors fought on equal terms with Rome for empire in the Near East. Hence the detestation in which Levantines are held by the fanatical Osmanli is due less to a sense of his own inferiority than to a well-founded dread of their measureless ambitions. The interests of these oppressed communities must be safeguarded in the approaching settlement of Turkey. It would, perhaps, be a wise policy to entrust their protection to America, who alone of the Allied Powers has no private axe to grind, and is happier than any of them in having but a brief spell of history behind her.

F. H. S.

NOT IN THE NEAR EAST.*

After reading these seven short stories, we have quite a clear impression of what must to most readers be a new world—Pell Street, the Chinatown of New York, and of its inhabitants, with their philosophic dignity, flowery speech, and the rich harmonies of colour which they manage to introduce even into that sordid atmosphere. Each of the stories demonstrates the impassable gulf between the point of view of the Chinaman and the European, especially with regard to the taking of human life. We find a hatchetman, or professional killer, giving proof of a most wonderfully self-effacing love, and see cold-blooded murder regarded with the utmost calm as a necessary act of piety to avenge an insult or merely to "save face."

One story, that of a young student, a Manchu by birth, who goes to Pell Street to seek adventure, is lighter in tone than the others, but none of the tales is lacking in humour.

3	21	Monday	10	10
4	22	Tuesday	11	11
5	23	Wednesday	12	12
6	24	Thursday	13	13

The King and Queen of Roumania have arrived at Lugano on a short visit.

The Maharaja and the Maharanee of Baroda have arrived at Claridge's Hotel.

Mr. Augustus van Millingen is returning to Egypt by way of Taranto on November 20.

Mr. and Mrs. Austin Taylor have left England for Ceylon, and will be away for some months.

Sir Alban Young, British Minister at Belgrade, left London on October 28 for the Continent.

Lady Eustace Percy gave birth to a daughter at 6, Smith Square, Westminster, on October 24.

Mr. and Mrs. Locker Lampson have returned to Rowfant, Sussex, from Barlborough Hall, Derbyshire.

M. Vesnitch, the Minister of the Kingdom of Serbs, Croats, and Slovenes in Paris, is shortly leaving France on six months' leave.

Sir Ralph Paget, the new British Ambassador to Brazil, held his first reception there on October 22. Sir Ralph was formerly British Minister in Belgrade.

The Queen, accompanied by Princess Mary, on October 28 visited Hounslow Barracks to bid farewell to the 18th (Queen Mary's Own) Hussars, who are about to leave for India.

Brigadier-General E. S. Hoare Nairne, his Majesty's Military Attaché at Athens, had the honour of being received by the King on October 28.

M. Misu, hitherto Roumanian Minister in London, who has accepted the post of Roumanian Foreign Minister, may be expected to come to London very shortly to present his letters of recall.

The Lord Chancellor has appointed the Rev. F. G. Walker, late Acting Chaplain, E. Sussex County Asylum, and Organising Secretary, Egypt Exploration Fund, to the rectory of Upton Lovel, Wilts.

M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, visited on October 27 the Foreign Office and presented Colonel Rosetti, the newly-appointed Roumanian Military Attaché, to Lord Hardinge of Penshurst.

The marriage arranged between Mr. Frank Noel Cross, D.S.O., Indian Army, of Fulwood Park, Liverpool, and Miss Eileen Bleasdale, of Mossley Hill, Liverpool, will take place at Mossley Hill Church on November 19.

Sir Prabashankar Pattani is vacating his appointment as member of the India Council to take charge, in conjunction with a British political officer, of the administration of the Bhavnagar State during the minority of the ruler, a boy of eight.

A marriage has been arranged, and will take place in November, between Captain Benjamin Wyatt Bagshawe, late R.A.O.C., of Calcutta, and Dulcie Katherine Margaret, younger daughter of Mr. and Mrs. George P. Warren, Tir-Aluinn, Pitlochry, Perthshire.

The "Anjuman Islam" is fortunate in having secured Professor D. S. Margoliouth, M.A., D.Litt., to lecture on January 8 upon "The Lines of Religious Development." Among other lectures are:—"Islam and Happiness," by Khalid Sheldrake (November 13); and "The Call of Mohammed to be the Prophet of Islam," by Professor Henri Leon.

The engagement is announced of Major Eric G. S. Waley, Queen's Westminster Rifles, second son of Mr. and Mrs. Alfred J. Waley, of Alderhurst, Englefield Green, Surrey, and Aida, second daughter of M. and Mme. Nessim Ades, of Kasr-el-Doubara, Cairo.

The engagement is announced of Captain W. A. Evershed, I.A.R.O. (P.W.D., Bombay), son of the late Wallis Evershed (Kendal) and Mrs. Evershed, Edwardes Square, Kensington, and Dorothy, only daughter of Mr. and Mrs. Trevor Jones, 9, Chatsworth Square, Carlisle.

The engagement is announced of Major Cecil Harcourt, 28th Punjabis, son of the late C. K. Harcourt and of Mrs. A. S. Judge, of 14, Eldon Road, Kensington, and Winifred Elliott, only daughter of Judge and Mrs. Walworth Howland Roberts, of 16, Palace Gardens Terrace, Kensington.

The marriage was celebrated on October 23, at St. Anne's Church, Eastbourne, between Captain Lionel Hearsey, M.C., 2nd Bengal Lancers, of Kheri, Oudh, India, and Dorothy Maud, younger daughter of Mrs. Herbert Nicholl, Holmbury, Upper Avenue, Eastbourne.

The Rev. T. H. Watson, who has been inducted to the vicarage of St. Anne's, Great Singleton, Lancashire, served as Chaplain with the Forces in Salonika, Egypt, and Palestine.,

H.I.M. THE SHAH OF PERSIA,
who arrives to-day in London as the guest of the King.

The marriage was celebrated on October 25, at the Parish Church, Misterton, Notts, by the vicar, between William James Hodson, tea planter, Marjagram, Cachar, India, and Constance Claire, daughter of Dr. and Mrs. Spencer, Bolsover, Derbyshire. Indian papers, please copy.

The marriage was celebrated on October 27, at St. Anne's, Brookfield, Highgate, by the Rev. J. H. Newsham-Taylor, between Horace Montgomery Lee, of Borjuli, Assam, India, and Mary, daughter of Mr. and Mrs. T. M. Sturgess, of Bournemouth, Hants, late of Victoria, British Columbia.

There are two Arab Delegations now in this country in order to offer to the King their congratulations on the successful conclusion of the war, and to present to his Majesty a scimitar, or "sword of peace," as a memento of that happy event. One, representing Central Arabia, is headed by the Sheikh Faisal, who is the second surviving son of Ibu Saud, the ruler of Central Arabia. The second Delegation is from the principality of Koweit. This is headed by the nephew and heir of the ruling Sheikh, who has done splendid service to the Allied cause. The chiefs paid a visit to Greenwich on October 23, and were shown over the Observatory by the Astronomer Royal.

The marriage arranged between Paymaster-Lieutenant W. E. N. Butcher, R.N.R., eldest son of Mr. and Mrs. G. W. J. Butcher, of 9, Tregunter Road, South Kensington, and Antonia

Digitized by Google

Josephine, daughter of Mr. H. C. Mortimer, of Malta, will take place on November 5 at the Oratory Brompton.

The engagement is announced of Major Hamilton Gardiner, M.C., Egyptian Civil Service (late Royal Field Artillery), only son of Major-General H. L. Gardiner, C.B., and Mrs. Gardiner, of Hilden, Rye, and Diana, eldest daughter of Mr. and Mrs. W. H. Patterson, of 25, Queen's Gate Gardens, S.W.7, and The White House, Rye.

A marriage has been arranged to take place in November, at Port Said, between David Graham, elder son of the Rev. Canon Evans and Mrs. Evans, of Knutsford, and Irene Maud, second daughter of the late James Moir, M.I.M.E., M.I.N.A., of Bombay, and Mrs. Moir, and grand-daughter of the late James Moir, surgeon, of Aberdeen.

The marriage was celebrated on October 25, at the Church of Our Lady and St. Joseph, Ealing, by the Rev. Father Dunleavy, between Claude Winstanley Elliott, of the Egyptian Civil Service, surviving son of William Elliott Tiddy, of Ascott-under-Wychwood, and Hilda Constance, daughter of the late William Ogden, Indian State Railways.

In celebration of the first anniversary of the restoration of independence to the Czecho-Slovak State, Dr. Ferdinand Veverka, the Chargé d'Affaires of the Czecho-Slovak Republic, held a reception on October 28 at 9, Grosvenor Place. Among those present were the Greek and Polish Ministers and the *Chargé d'Affaires* for Serbia, Roumania, and Russia.

A marriage is arranged between Captain Kenneth Herbert Metcalfe Davison, 106th (Hazara) Pioneers, younger son of Major-General K. S. Davison, C.B., and of Mrs. Davison, The Stowe House, Whitney-on-Wye, and Kathleen Lucy, youngest daughter of Mr. and Mrs. J. Collett-Mason, Nieuport Hall, Eardisley, and will take place on November 12 at Almeley Church.

A marriage has been arranged, and will shortly take place in Malta, between Major W. H. Brooke, M.C., West Yorkshire Regiment (Leeds Rifles), A.D.C., only son of Mr. William Brooke and Mrs. Brooke, of Leafield, Moor Allerton, near Leeds, and Marjorie, youngest daughter of Field-Marshal Lord Plumer of Messines, G.C.B., G.C.M.G., G.C.V.O., Governor and Commander-in-Chief, Malta, and of the Lady Plumer, O.B.E.

The King of the Hellenes, on the occasion of the conclusion of peace, conferred the following decorations upon members of the Anglo-Hellenic League in London:—To be Knight Grand Commanders of the Order of George I.: The Hon. Pember Reeves and Dr. Ronald M. Burrows, respectively chairman and acting chairman of the League; Sir Arthur Crosfield to be Knight Commander of the same Order; Mr. John Mavrogordato, honorary secretary of the League, and Mr. Harold Spender to be Knight Companions of the Gold Cross of the Order of the Redeemer; Mr. Nicolas Eumorfopoulo to be Knight Companion of the Gold Cross of the Order of George I.; and Lady Crosfield and Lady Meiklejohn to be Knight Companions of the Silver Cross of the Order of George I.

The arrangements for the visit of the Shah of Persia to this country have now been completed. It is announced that he crosses the Channel to-day in the Royal yacht Alexandra. His Majesty will be the guest of the King at Buckingham Palace. To-morrow the Shah will be entertained at the Guildhall by the City Corporation. He will be presented with an address of welcome in a gold box, and a luncheon will be given in his honour. On Tuesday, November 4, he will go to Manchester, where he will be received by the Lord Mayor and Corporation, and be conducted over one of the cotton factories and other places associated with the commerce of the City. On the next day the Shah will go to Scotland to see Edinburgh and Rosyth.

THE FOREIGN OFFICE.

It was announced last Friday that the King has been pleased to approve of the appointment of the Right Hon. Earl Curzon of Kedleston, K.G., G.C.S.I., G.C.I.E., to be Secretary of State for Foreign Affairs, in succession to the Right Hon. A. J. Balfour, O.M., M.P., and of the appointment of the Right Hon. A. J. Balfour, O.M., M.P., to be Lord President of the Council, in succession to Earl Curzon of Kedleston.

Lord Curzon received from the King at Buckingham Palace on Wednesday the Seals of Office, and took the oath as Secretary of State for Foreign Affairs, and kissed hands upon his appointment.

APPOINTMENTS, ETC.

Mr. R. S. Troup, Assistant Inspector-General of Forests, India, has been elected Professor of Forestry at Oxford.

Our Malta Correspondent writes (October 14):—Luigi Camilleri, Esq., LL.D., has been appointed one of his Majesty's judges in the island of Malta and its dependencies. The choice is a highly popular one.

The *Egyptian Gazette* of October 10 states:—"We are given to understand that Mr. A. D. Alban, O.B.E., H.B.M. Consul at Cairo, has been appointed Consul-General at Alexandria, and that Mr. Geary has been appointed to succeed him as British Consul at Cairo." Mr. Alban has had much Consular service in the Levant and Egypt. Mr. Geary's experiences cover Persia, Constantinople, the Balkans, the Levant, and Egypt.

OBITUARY.

The death occurred on October 25, at Upton Leigh, Cheltenham, of Henry Strode Lemon, late Bank of Bengal, eldest son of the late Henry Lemon, of Exeter.

Colonel Hugh Wodehouse Pearse, D.S.O., late of the East Surrey Regiment, died on October 23 in his sixty-fifth year. He had the medal for the Afghan War.

The death has occurred at Brighton, at the age of 66, of Lieut.-Colonel George Boodric O'Donnell. He retired from the Indian Army in 1912, taking up his residence at Brighton. He was a frequent writer on Indian affairs.

General Sir Robert Macgregor Stewart, G.C.B., Colonel-Commandant, Royal Artillery, died on October 23. He served in the Hazara campaign of 1868, in the Kandahar Field Force in 1878, and in the Sudan Expedition of 1885. From 1887 to 1897 he was A.D.C. to Queen Victoria.

Colonel Arthur William Macnaghten, late of the Bombay Cavalry, died in London on October 24. He served during the suppression of the Indian Mutiny, with the Abyssinian Expedition of 1868 (when he was mentioned in despatches), and commanded the 2nd Bombay Light Cavalry in the Afghan War of 1880.

Mr. Wilmot Corfield, author and philatelist, died at Longton Grove, Sydenham, on October 27, in his 61st year. He went out to Calcutta in the early 'nineties, and there took an active part in the investigations of the Calcutta Historical Society. He wrote "Calcutta Faces and Places in Pre-Camera Days," and contributed largely to "Bengal Past and Present." Selections from his topical verse, which appeared in the Calcutta Press under the name of "Dâk"—the Hindi equivalent of post-office—were published in 1910, when the author was leaving India, under the title of "Dâk Dicta," and in 1911 under that of "More Dâk Dicta." A lifelong philatelist, he edited for three years the Calcutta *Philatelic World*, and collaborated with the late Mr. C. S. Crofton in writing "The Adhesive Fiscal and Telegraph Stamps of British India."

THE ICHABOD OF PARIS.

No one among the Allies who during the grim conflict through which we have come felt buoyed up by the certainty of the ultimate triumph of right can view with any complacency the record of the Paris Conference. The war ended with the complete defeat of the enemy; the Allied Powers had only to come together to determine the settlement, which none could dispute. They had already proclaimed the aims for which the war was being waged and the terms on which peace would be made; they had fought for liberty and humanity, for the principle of nationality, for the right of self-determination for oppressed peoples. Among nations thus brought together in a life and death struggle for high ideals it seemed impossible that any serious antagonism could arise in the framing of a European settlement. A clash of interests in various regions was inevitable, but a just and equitable decision, it was thought, could be relied upon in view of the number of the Allies forming the tribunal and the clear enunciation of the principles by which they would be guided in drafting the treaties of peace. The mere delay in the conclusion of the task of the Paris Conference has proved how vain these anticipations were, while an insight into its workings can hardly fail to disgust any impartial and right-minded man. One of the British representatives, General Smuts, has described the Conference as "a seething cauldron of human passion and greed." The results of its deliberations bear witness to the accuracy of his description. As far as the outside public is aware, the work of formulating the conditions of peace to be imposed upon Germany was carried through in a fairly satisfactory manner; in every other direction, however, the Conference has resembled a rudderless ship on a storm-tossed sea, with an unquelled mutiny on board. The Allies were set to find a settlement that would conform entirely, or as far as was physically possible, to the principles of nationality and equity, and to secure its acceptance by all concerned; they had broken the most formidable military combination that could be brought against them, and there could be no question of any serious challenge to their verdict. The problem was complicated, but not new; throughout the war it had been the certain corollary to victory, and there had been ample time for agreement on the broad issues and on most of the important details. But when the Paris Conference met it became clear that the Governments of the Entente Powers, far from having taken steps to arrive at an understanding on controversial points, had made no attempt to master the rudiments of the different problems.

The chief sufferer by this neglect is the Near East, the former storm-centre of Europe, and the one region in regard to which it would have been expected that the Allied Governments would be at pains to ensure an acceptable and lasting settlement. Their contribution to such a settlement so far has been to enlarge the sphere of potential unrest, and, if possible, to increase the bitterness between the component elements. An elementary knowledge of the Near Eastern problem prescribed as an essential to any solution that it should be imposed from outside, and should be rapid in its enforcement. When the Armistice came the Allied Governments had no solution to impose; worse still, they abdicated their authority and repudiated the moral responsibility that they had incurred with the proclamation of their war aims by allowing their own Allies to fight among themselves. From that moment an evil genius has taken charge of the Allied settlement of the Near Eastern question. During the war the broad foundations of a working agreement between the Italians and the Yugoslavs had been satisfactorily laid; they have since been at one another's throats, and a mutual animosity has been fanned which will not die down for years. For centuries Montenegrins and Serbians have been brothers in race and interests; by allowing the Serbian troops to occupy Montenegro after the clear warnings that dynastic trouble was afoot, the Entente Powers have sown the seeds of intrigue and hatred, with every prospect of a bounteous harvest. History may be searched in vain for any controversy or strained relations between Roumania and Serbia; the Entente Governments allied to both of them have contrived to make them enemies to-day. In all the countries of the Balkan Peninsula the Paris Conference, which, by promulgating the considered verdict of the Entente Powers, ought to have won for itself the prestige and respect attaching to a wise and upright judge, even where cherished aspirations were doomed to disappointment, is anathema, and Europe must surely rue the day when such a grave and far-reaching trust was confided to such ill-equipped and inadequate hands.

To the ignorance and ineptitude which has set Italians, Yugoslavs, and Roumanians by the ears or allowed them to quarrel of their own accord has now been added the injustice of the Bulgarian peace terms. There was no call for any special tenderness on the part of the Entente Powers towards Bulgaria; but it was necessary that the whole position in the Near East should be understood, the lessons of the past taken to heart, and a serious attempt made to settle once and for all a problem that had been the most fruitful cause of war in Europe. Naturally the other Balkan States—Greece, Serbia, and Roumania—could not be expected to view the question as dispassionately as the Entente Powers; more or less evenly matched against Bulgaria, they had come to regard their traditional enmity as a life and death struggle, and they would feel compelled to take full advantage of any victory that they gained in order to safeguard themselves against the next challenge which they could only regard as sooner or later inevitable. In these circumstances peace could only come to the Balkans by a reasoned agreement, enforced, if need be, by the Entente Powers; the equity of such an agreement, all things taken into consideration, having been acknowledged, it would be left to the Powers to guarantee that its terms should never be upset. President Wilson must have had some such solution in mind when he stipulated in his Fourteen Points that the relations of the several Balkan States to one another should be determined by friendly counsel along historically established lines of allegiance and nationality, and international guarantees of the political and economic independence and territorial integrity of the several Balkan States should be entered into. Can the Paris Conference claim that it is in this spirit that it has formulated the Bulgarian peace terms? If we could persuade ourselves that the real interests of Greece, Roumania, and Yugoslavia had been consulted in the draft treaty, something might be said for it, and in the cause of peace and an early settlement the terms could be accepted without cavil. But the three Governments know, as well as anyone else acquainted with the history of the Balkans, that such a treaty imposed by force can only be prevented from being upset by the constant exercise of repressive force. It is neither our desire nor our concern to save any enemy country from its just deserts, but the interests both of Great Britain and of the Near East require that no further injustices should be perpetrated in the Balkans. A just territorial settlement turns on the principle of nationality; it cannot be influenced by Bulgaria's attitude in the war. Other methods than annexation of territory must be found as the penalty for waging an unsuccessful war. Yet in spite of the Allied indictment of territorial aggression the treaty openly enforces the annexation of Bulgarian territory. There is no need on this point to rely upon Bulgarian claims; the question is beyond dispute. Yugoslavia has no stouter champion than Mr. R. W. Seton-Watson and no one writes more authoritatively on

Digitized by Google

the Near Eastern question. In 1914 in "The War and Democracy" occur the following passages:—

"If Southern Slav unity is to be achieved, a binding promise, under the guarantee of the Entente Powers, must be given to Bulgaria that, in proportion as the work of Serbo-Croat unification is achieved, the Macedonian frontier will be revised in favour of Bulgaria" (p. 281). . . . "By far the thorniest problem is provided by the future ownership of Kavala, which the Treaty of Bucharest assigned to Greece in August, 1913, but which, from an economic point of view, is Bulgaria's port on the Ægean, and as vital a necessity for her future development as it is a superfluous luxury to Greece" (p. 282). . . . "Who is to replace her (Turkey)? Bulgaria will, it is to be hoped, recover Adrianople and the Enos-Midia line, of which she was so cruelly robbed last year."

Such was the settlement proposed by an acknowledged authority, who could not be accused of impartiality in dealing with Balkan affairs, but is a confessed Serbophil in the accepted sense of the word, which implies "ante-Bulgarism." In May, 1915, the Allied Governments accepted Mr. Seton-Watson's solution of the Balkan problem, and offered it to Bulgaria. The offer, as we all know, was neither accepted nor rejected, but months passed before the Allies could prove to the Bulgarian Government that they were able to enforce the terms they offered, and by the time they had secured Serbia's consent the opportunity, of which probably King Ferdinand had never intended to make use, had passed. In the light of all that is known of the Balkan question, in the face of the Allies' declarations, and of the eleventh of President Wilson's fourteen Points, can it be maintained that the Bulgarian peace terms conform to the Allies' standard of honour and justice? Just in so much as the Bulgarians realise that the terms fall short of that standard and have been dictated by the "human passion and greed" that has prevailed at the Paris Conference, so will they be prompted to work and scheme for the cancelling of the treaty, and by these means will unrest be kept alive in the Balkans to the prejudice of Greek, Serbian, and Roumanian interests and of European peace.

THE TRUTH ABOUT INDIAN REFORMS.

(From a Correspondent.)

It has become more or less common knowledge that some members of the Joint Committee on the Indian Reforms Bill have been greatly impressed by the artificiality of much of the proceedings, and by the difficulty of ascertaining the real sentiments and aspirations of the people whose future they have to determine. To meet the wishes of these members, the Chairman recently decided that, for one day only, the Committee should move from the Palace of Westminster to the Palace of Truth, in the hope that the change of atmosphere might conduce to a clearer revelation; for obvious reasons no official report of this session has been issued, but the following summary gives a fair idea of the line taken by the various witnesses, who, it will be seen, were unusually representative.

The first witness said that he was not only Moderate but modest, and for this reason desired to withhold his name. As regards constitutional matters in general, he observed that the advantages of democracy had been dinned into his ears ever since he went to college, and, though he had no practical experience, he supposed they must exist. He was therefore in favour of an Indian democracy, but he urged strongly that the British should retain sufficient powers to prevent the democracy from making respectable people uncomfortable. As to the details, he hoped the fundamental Statute would provide for a progressive rise in salaries and for a reduction in the price of food.

Mr. Jang Bahadur, who followed, said he was an Ultra-Extremist, and consequently had to be careful in his public utterances, which necessarily failed to represent his real views. He pointed out that for forty or fifty centuries, or perhaps more, India had been the paradise of small oligarchies, and he insisted that these conditions should now be restored. The British should keep the coasts and land frontiers, so as to prevent the system being disturbed by such accidents as had occurred so often in the past, but the interior should be handed over to him and to his friends, who were, he admitted, few in number, but with the aid of British bayonets would be able to hold the people in check. All that was needed was a liberal paper constitution with a closely restricted franchise, but this boon should be conferred at once, before the masses had drunk more deeply of the dangerous ideas which were spreading to them from the West. Some of them, he said, were already beginning to talk of their rights, but if only he and his friends were put in charge at once, they could stop this nonsense before serious harm was done; if action was delayed, he could take no responsibility for the consequences.

The next witness, the Moulvi Abdul Wahabi, said he was concerned only with one point: that the new constitution should ensure the effective supremacy of Islam; given that essential, the particular form of government was immaterial, but the fundamental Statute should ensure to every Moslem entire freedom to slaughter cows when and where he pleased. Asked whether he recognised that Hindus would object to this provision, he referred in picturesque language to the ultimate destination of all infidels, and said that such wretches deserved no consideration whatever.

Bechu, Gossain, who came next, took somewhat different ground. He said he lived chiefly between Hardwar and Benares, and constantly talked politics with the ablest and saintliest men in all India. They cared nothing for formal provisions so long as they were assured of predominating influence inside the Government; the early British rulers, acting in ignorance, had curtailed this influence very seriously, but it had been largely restored of late by the efforts of their generous supporter, Lord Morley, and they asked for nothing more than a continuance of this enlightened policy. Questioned regarding the Moslem claim for liberty to slaughter cows, the witness pointed out that, since anyone who killed a cow had to visit 333,000 hells in succession, it would be the truest kindness to prohibit the practice altogether.

A small group of peasants then entered together, and their spokesman, who gave the name of Ram Prasad Kurmi, said they represented three-quarters of the population of India. They were ready to govern the country if the Emperor ordered it, but they were poor men, and they had to look after their fields. What they really wanted was an order to keep up the price of grain and to lower rent and interest; if the Emperor would do that, and would forbid any town-bred officials to come into the villages, they could get along fairly well. Questioned about the position of agricultural labourers, the deputation, speaking in chorus, said the labourers were getting utterly intolerable, and must be taught their place; the proper wage was twopence a day, and anything more was sheer robbery.

The next witness was Ganga Pasi; he was very nervous, and gave his evidence mostly standing on one leg, but his views were quite clear. He said he was an agricultural labourer, but burgled and robbed on the highways in his spare time. He objected strongly to the police, and also to Excise restrictions, but otherwise approved of the present administration: if power were given to the

KING GEORGE

KING OF SPAIN.

Digitized by Google

peasants, they would reduce his wages, and then he would have to steal more, while if it were given to the upper classes, they would make him work for nothing, as his fathers had always worked before the British came. In reply to a member of the Committee, he said he could now earn threepence a day, and would be satisfied with fourpence; he explained his nervousness by saying he had noticed two policemen in the corridor.

The Chairman now announced that there had been an unfortunate contretemps. He had arranged for the presence of two witnesses belonging to the lowest of the depressed classes, but one of them had been arrested that morning for obstructing traffic. It appeared that he had tried to walk across Westminster Bridge in the middle of the roadway, shouting "Pollution!" at the top of his voice, and members would understand that he was only doing what immemorial custom required in his home in Malabar, but an ignorant policeman had taken him into custody, and though his release had now been ordered, and he would be handsomely compensated, he could not reach the Palace in time for that session. The Chairman added that the remaining witness desired to give evidence from the doorway, so as to avoid the risk of polluting any member of the Committee.

Bhawani, sweeper, then took his place in the doorway, carrying the broom and basket emblematic of his functions. He said his community strongly supported the present administration, but if any change was to be made, they claimed a predominant position for themselves; they were the most necessary caste in all India, and by a three-days' strike they could bring the country to its knees; their communal organisation was practically indistinguishable from that of the Soviets, and they were quite prepared to assume political responsibility. He wished, however, to protest against the new-fangled systems of sewage disposal, which took the bread out of honest men's mouths, and he suggested that at the present juncture a rise in wages would not be out of place.

No more witnesses being in attendance, the Chairman closed the proceedings by remarking that it had been a most interesting day, but that, while much new evidence had been given, he was more than ever impressed by the fundamental unity of Indian sentiments and aspirations.

THE ARAB HORSE SOCIETY.

A Council meeting of the above Society was held on Wednesday, October 15, at the Grosvenor Hotel, London, Mr. S. G. Hough (Vice-President) in the chair. The following new members were elected:—Aldridge, Denis, Sketchley Hall, Hinckley, Leicestershire; Armitage, Mrs. T. C., The Oaks, Chorley, Lancs; Bird, J. Harington, 82, Belsize Park Gardens, N.W.; Clegg, Henry C., Bibsworth House, Broadway, Worcestershire; Eliot, General Sir Edward Locke, K.C.B., Naval and Military Club, Piccadilly, W.; Jones, Lieut.-Colonel R. Godfrey, Bry-y-Mor, Island Estate, Newquay; Jones, Walter, Morgan Hall, Fairford, Glos.; Lewis, Sidney W., Nowell House, Stocksfield-on-Tyne, Northumberland; Lyon, Miss M. C. E., Harwood, Horsham, Sussex; Mackenzie, Major-General Sir Colin, K.C.B., 94, Piccadilly, W.; Sampson, C. C. W., Longhurst, Haigh, Wigan; Snowball, Lieut. G. N., Summerhill, Berwick-on-Tweed; Tabet, Constantine N., Beyrout, Syria; Tabet, Gabriel P. H., Beyrout, Syria; Timmis, Major F. Woollaston, Las Minas de Rio, Tinto de Huelva, Spain.

The Council received further entries for the Stud Book, the entries closing on November 15 next. Preliminary arrangements were then made for the classes for Arabs and Arab-breds in 1920. The offer of Messrs. Horsburgh and Snowball to be honorary auctioneers was accepted. The Council then adjourned until their next meeting on December 3 at the Grosvenor Hotel, London.

SMYRNA REFUGEES.

We have received from Lausanne a copy of an "Appeal to the Great Powers and to the World's Opinion in Favour of the Refugees of Smyrna," signed for the permanent Bureau of the Turkish Congress of Lausanne by the President, K. Essad, and by the Secretary, H. Alitcher. The document cannot, owing to its length, be reproduced here, but its matter consists of a burning appeal for the end of the Greek occupation of Smyrna. It protests that peace is impossible while the Greeks remain at Smyrna; it states that all impartial observers condemn the Greek landing; and finally it proclaims that Turkish independence "they will never give up, to submit to the Hellenic yoke—never so long as the last Turk has not fallen by the eastern shores of the Ægean Sea will the Greek reign there in peace."

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Territorials in India.

Oct. 23.

Viscount PEEL, Under-Secretary for War, asked by Lord Harris what arrangements were being made for the relief of the Territorial officers and men serving in India, said the Forces in India under demobilisation on October 1 amounted to about 2,900 officers and 48,000 of other ranks. In these figures were included the Territorials in India, but it was not possible to extract from the return their precise numbers. In order to provide reliefs for these troops, 24,391 officers and men of the Regulars had already been embarked; 20,159 more were to be embarked during the present month, and 4,182 in November, making a total of 48,732. Only the small number of 2,168 were left to complete the demobilisation.

Peace Treaty with Afghanistan.

October 28.

A debate took place on Afghanistan, but one too long for reproduction here. Lord CURZON said, in replying to Lord Sydenham, that the treaty with Afghanistan was only the first stage of the negotiations between the Ameer and ourselves. The old subsidy, amounting to 20 lakhs of rupees per annum, was refused altogether, and there was no guarantee of protection against an unprovoked attack on our former Ally. We were waiting to see how the Ameer would conduct himself.

HOUSE OF COMMONS.

Egypt's "Nationalists."

October 23.

Captain W. BENN asked the Under-Secretary for Foreign Affairs whether his attention had been called to an appeal made by the Egyptian Nationalists to the United States Senate, and what steps, if any, he proposed to take in consequence.

Mr. HARMSWORTH: The reply to the first part of the question is in the affirmative. It is not proposed to take any action in the matter.

The Army in Egypt.

Mr. FORSTER, Financial Secretary to the War Office, answering Lieutenant-Commander Kenworthy, said: The monthly cost of the British Army of Occupation in Egypt and Palestine is £2,400,000. I regret I cannot at the moment give separate figures, but I hope to be in a position to do so early next week.

Lieutenant-Commander KENWORTHY: How much is recoverable from the Egyptian Government, or does the total come from the Imperial Exchequer?

Mr. FORSTER: This goes on the Imperial Exchequer.

Mr. FORSTER informed Lieutenant-Commander Kenworthy that in September the number of white troops in Mesopotamia was 21,000 and the number of Indian troops 79,000. Of the British troops 501 had voluntarily enlisted for the post-war Army.

British Mission in Yemen.

October 28.

Colonel YATE asked the Secretary for War whether the British Mission to the Imam of Yemen, which was stated to have been captured by independent Arabs on the road from Hodeida to Sanaa, had been released.

Mr. HARMSWORTH (who replied) said that three or four British officers, headed by Colonel Jacob, were on the way to visit the Imam of Yemen, when they were intercepted and detained by a small section of independent Arabs who did not recognise the authority of the Imam. The members of the Mission were being well treated, and all were in good health and in uninterrupted communication with friends. It was hoped that their release would shortly be effected.

Topics in Parliament.

(*The subjoined headings are those given in the official report.*)

INDIA: Waterways (Bengal and Assam).—PERSIA (TARIFF). EGYPT. INDIA: Chaplains (War Gratuity and Leave)—Persons Interned. (October 22.)

EGYPT: Nationalist Appeal to United States.—Army of Occupation (Cost). DEMOBILISATION: Mesopotamia.—Wiltshire Regiment. (October 23.)

INDIAN QUESTIONS. DEMOBILISATION: Troops in Mesopotamia: TROOPS IN EGYPT, LEAVE. INDIA: Army Reserve (Service Gratuities). EGYPT (LORD MILNER'S MISSION). (October 27.)

INDIA AND THE KHALIFATE.

We have received from the Islamic Information Bureau a copy of the following telegram from Seth Haji Mian Mohammed Chotani, president of mass meeting. It is dated Bombay, October 17, 1919:—

"Fifty thousand Mussalmans of Bombay, assembled in mass meeting, held in Jumma Masjid after Friday prayers, passed the following resolution, which I beg to forward:—This public meeting of the Mussalmans of Bombay, assembled in the Jumma Mosque, and held after solemn Friday prayers for the continuance and permanence of the temporal power of Khalifat ul Muslim, expresses its greatest anxiety and indignation over the threatened dismemberment of Turkey and the removal of the Holy Places of Islam from the Khalifa's control, and trusts that his Majesty's Ministers will secure fulfilment of the pledges of the Right Hon. Lloyd George, given on behalf of the British Empire, regarding Turkey, and thereby restore the confidence of the Mussalman subjects of his Majesty. This meeting approves of the proceedings and adopts the resolutions passed by the All-India Moslem Conference held at Lucknow on September 21, 1919."

Numerous telegrams to the same effect as the above have been received from other Moslem centres.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The directors of the Peninsular and Oriental Steam Navigation Company propose this year to place the amount of the usual bonus of 6 per cent. on the Deferred stock of £200,000 to the reserve fund, and instead they propose to make a distribution of £200,000 of Deferred stock to the Deferred stockholders. The Deferred shares of £100 stand at about £650, so that it will be realised that a 6 per cent. stock distribution, which is what the proposal amounts to, will mean a very substantial bonus for shareholders. For the rest, it may be noted that the directors, after providing for the usual dividend on the Preferred shares, recommend a dividend of 6 per cent. on the Deferred stock for the six months, making 12 per cent. for the year.

***

To provide for developments, it is understood that an increase in the capital of the Anglo-Persian Oil Company is to be expected. In outlining the programme of the company at the annual meeting in March, the chairman, Sir Charles Greenway, indicated that a further issue of capital would be required in due course for its fulfilment. The company has, of late, greatly enlarged its interests. Its most recent acquisition has been the Scottish shale oil companies, while it holds concessions for oil lands in Mesopotamia, Canada, and elsewhere, and has commenced the construction of a very large refinery at Swansea. Obviously, the development of new oilfields would give abundant scope for the employment of fresh capital, to say nothing of other enterprises connected with the transport and distribution of oil. The company's latest issues were 1,000,000 Participating Preference shares at a premium of 2s. 6d, and £1,800,000 of Five per Cent. Debentures, but in view of the wider prospects now before the company a much larger issue may be looked for this time.

***

While the result of the Athens Exhibition has not been in doubt, in view of the extraordinary interest aroused in that important undertaking, not only in Greece, but throughout the Near East, it seems possible that its success may be even greater than was anticipated. It is, at any rate, quite clear that through the exhibition British traders will have been given an opportunity in the Near Eastern markets such as they could not have hoped to enjoy through any other medium, and as the Federation will be permanently represented in the most important Near East centres there are special grounds for hoping that the fullest advantage will be taken of this favourable position. First (telegraphic) news of the exhibition received is highly gratifying.

***

During the twelve months ended April 30, 1918, there was a great improvement in the earnings of the Egyptian Hotels, Ltd., and this position has been practically maintained during the past year, the net profit amounting to £33,200, as compared with £33,700. With the balance brought forward the disposable balance is £36,100, and after making provision for the payment of the arrears of preference dividend it has been found possible to propose a dividend on the ordinary shares of 5 per cent., leaving £10,400 to be carried forward, as against £2,900. This is the first distribution to the ordinary shareholders for a number of years, and in view of the improved prospects of the company there seems no reason why this should not at any rate be maintained.

***

The general meeting of Harrison's and Crosfield, Ltd., was notable for an important review by the chairman, Mr. George Croll, of the prospects of the rubber and tea industries. As regards the former, he recalled that at the annual meeting of the Rubber Plantations Investment Trust in 1918 he estimated that the production of plantation rubber would be 314,000 tons for 1919, 354,000 tons for 1920, 381,000 tons for 1921, 403,000 tons for 1922, and 430,000 tons for 1923, and that if the 1919 production was to be consumed there would have to be an increase in consumption of about 100,000 tons over 1917. His revised estimate of production for the present year is about 320,000, to which have to be added some 40,000 tons of wild rubber, making the total production 360,000 tons, while he anticipates that in 1920 the production will be between 360,000 and 370,000 tons. As regards consumption this year, he estimates the imports of the United States at 220,000 tons, of the United Kingdom at 40,000 tons, and the total at 350,000 tons; in other words, practically the same as production.

***

In Mr. Croll's view consumption in the two following years will also take care of production, and he expressed the opinion that those who are interested in the producing end of the industry need not be apprehensive of production outpacing consumption. As regards the future, he pointed out that while the uses of the commodity are manifold and ever increasing, the great future of the industry is bound up with the development of motor transport. In this connection he remarked that the recent railway strike had probably been the means of awakening in this country a determination to have at the earliest possible date adequate facilities for road transport, and he expressed the conviction that in view of the impetus which had already been given to this means of conveyance, the rubber industry was more likely to be faced with a shortage of the raw material than with any prospect of over supply.

***

As regards tea production, attention was drawn to the possibility of a world shortage in the future. They were approaching the period, said Mr. Croll, when it was highly probable that there would not be sufficient tea produced to meet adequately the world's requirements. The more profitable returns from rubber and the impossibility of extension during the war had resulted, he pointed out, in very small additions to the planted acreage in recent years; and he expressed the view that when America had liquidated the abnormal shipments of Java and Sumatra teas, and Russia was able to buy more freely, "the consumer in this country will in all probability have to be more economical in the use of this cheapest and best of beverages." In this connection it is interesting to note that while the figures for production in India were practically stationary from 1915 to 1917, the figures for 1915 being 372,000,000 lb., as against 370,000,000 for 1917, those for Ceylon show a progressive decline from 1915, when the total was 211,000,000 lb., to 1918, when it was 180,000,000 lb. The exports from Java also show a marked and continuous decrease, though in this case difficulties arising from the war are no doubt largely responsible for the reduction from 101,000,000 lb. in 1915 to 62,000,000 lb. in 1918. However one regards the position, it cannot be said that the outlook is at all satisfactory, and it is at any rate obvious that the prospects of a decline in the price of tea through increased production are of the slightest.

***

One of the most important factors in regard to the development of British trade with Morocco is the question of adequate shipping facilities. Before the war the position in this respect was most unsatisfactory, and while the service at the present time is certainly improving, it will clearly have to be largely developed if British interests are to meet with proper support. Unfortunately, circumstances have not favoured the establishment of shipping services to Morocco. Reference is made in the report of the British Merchants' Morocco Association (which will be found on another page) to the restrictions in the export of produce from Morocco, which, it is pointed out, "have undoubtedly added to the difficulties of providing an increased and regular cargo service." Once these restrictions are removed, British companies will have every inducement to arrange services to Morocco, but the fact that until that action is taken they might have to undertake services at a loss naturally has a deterrent effect.

Conditions in Persia.

Oil and Agriculture.

At a meeting of the Persia Society on October 22, an address was given on "War and Post-War Developments in the Persian Gulf," by Mr. C. A. Walpole, who has spent many years in the country. He began by describing conditions in Mohammerah as he found them in 1909, and went on to speak of subsequent developments up to the outbreak of the war.

The Anglo-Persian Oil Company's pipe-line was completed, he said, in August, 1912, and its kerosene appeared upon the local markets some ten months later. A certain amount of competition was met with from Roumanian and American oil. The former, which was marketed by the German firm of Wonckhaus and Co., soon disappeared, though the latter (Standard Oil, of course) of which there were very heavy stocks in the Persian Gulf, continued selling to a small extent. Owing to the war and the ultimate exhaustion of stocks, this source of competition also eventually ceased, and it was to be hoped that their American friends would not revive their "coals-to-Newcastle" policy, which, apart from its doubtful financial success, must be regarded as a serious waste of tonnage, seeing that their oil had to be transported in cargo ships all the way from America, whereas Persian oil was actually produced on the spot.

Exclusive of oil, the largest item of the export trade was the date business. It was a regular, straightforward business, and in so far as Mohammerah was concerned, was chiefly in the hands of the native, the groves being entirely owned by the Sheikh of Mohammerah. In the Busreh district the position was different—the trade was handled to a very large extent by European firms, though this was only after the crop had been *picked;* in other words, the native attended entirely to the cultivation and picking, handing over the picked fruit to the merchant, who attended to the packing, shipping, marketing, etc.

Next in importance came the grain business, i.e., wheat and barley. Though the cultivation of this was also at present carried out entirely by the native, this business was of far greater interest, in that it introduced such important questions as irrigation, the scope for the introduction of agricultural machinery, the improvement of land and river transport, etc. Moreover, the quality of Karun wheat was particularly good, the demand for it in Europe was always far in excess of the supply, and it was therefore clear that on this particular line of export much of the future prosperity of Arabistan depended. That the soil of the Karun Valley was particularly well suited for the growing of cereals, there could be no doubt: of this the native was fully aware, and that his profits in this respect were very considerable was proved in that he would at the particular seasons of the year throw up all other work, however remuneratively he was being paid, in order to do his ploughing and harvesting. At the present time the procedure in respect of grain was as follows: When the first rains fell (about the second or third week in November) ploughing and sowing commenced, thereafter rain fell at intervals during December, January and February, there being no cause for anxiety until late March—early April, by which time the sprouts made their appearance. It was then that the all-important "Nao-raz" rain was essential, and the measure of success of the crop depended almost entirely on the amount and date of arrival of this rain. Should no rain fall after early March (this happened not infrequently) the crop was practically an entire failure: should heavy rain fall about March 20 ("Nao-ruz," or the Persian New Year's Day) a good harvest was assured. The benefits of artificial irrigation were therefore patent, and in this respect there were, of course, two expedients: (1) The installation of pumps worked by oil engines; (2) irrigation from the rivers by means of dams and canals. The first expedient was practised with much success, but only on a small scale, on the Tigris in pre-war days, since when, however, through the encouragement and assistance of the British Government, this method of irrigation had greatly increased. On the Karun, however, though strenuous efforts had been made to introduce it, nothing had been done, owing partly to lack of enthusiasm on the part of the native landowner, and partly to the dislike of the Persian of any innovation, more especially one involving capital expenditure. He was speaking now of pre-war days, when the native was poor and the advantage of modern machinery almost unknown. He might say that he thought matters were now very different, and that granted satisfactory terms of credit could be arranged with the native, this method of irrigation would be readily adopted. The Anglo-Persian Oil Company had recently instituted a model farm near Shuster worked on these lines which was fully illustrating its advantage to the native. Also, many native merchants of Ahwaz and Shuster had during the past five years purchased mechanical flour mills and rice-shelling machines, which were running most successfully.

Use of Agricultural Machinery.

On their farm the Anglo-Persian Oil Company were also using up-to-date agricultural implements, and the economy in time and labour thereby effected was not being lost on the native. It should not be difficult to popularise the use of such machinery, more especially reaper-binding machines and thrashing machines, the introduction of which should prove of the greatest benefit, not only to the cultivator directly but to trade generally, in that, by its use, more labour would become available for other work—a point of the utmost importance in Arabistan and Mesopotamia at the same time. But the Karun Valley, of which he had been speaking, was not of nearly as great importance as a potential producer of grain for export as Central Persia, that rich and extremely fertile portion of which could, with direct and cheap rail transport to the Gulf, produce millions of tons of wheat and other cereals at a price which would enable it to compete in the European markets with the grain now imported from India, the Argentine, and other countries, and possibly even with grain grown in Mesopotamia.

While on the subject of farming, he might say that the Anglo-Persian Oil Company had also made small, but very successful, experiments in the growing of vegetables and cotton. The latter, namely, cotton, could, he thought, be grown on a large scale, and made to pay well, and this would also apply to Central Persia, which already grew considerable supplies for the Russian market. In fact, almost all branches of farming could, he thought, be successfully carried out. Even with the very inadequate pasture at present existent, sheep did very well indeed, and were farmed on a large scale by the natives. There was also a good opening for chicken and dairy farming which, if taken in hand by experts, and good breeds of birds and cattle introduced, should pay well.

Regarding the other method of irrigation, namely, by means of dams and canals, here, again, they have an illustration of its success in the Irak. He referred, of course, to the Hindieh barrage, the first of a series projected by Sir William Willcocks, and completed by Messrs. Sir John Jackson in 1914. On the Karun nothing of the sort has been attempted in modern times, with the exception of a small experiment by the British political authorities to revive an old canal system on the Mian-ab, the piece of land immediately below Shuster lying between the two branches of the Upper Karun, the Shat-Ait and the Gurger. Though, as just stated, the experiment was carried out on a small scale only, the result was satisfactory and economical, and would have opened the eyes of the native to the advantages of this method of irrigation.

Apart from the great initial expense of any extensive irrigation scheme in the Karun Valley, the point arose as to the effect which such a scheme would have upon the navigability of the Karun River. In the late summer months the Upper Karun was only navigable with difficulty, it being unsafe to load craft much below 2 ft. 3 ins. to 2 ft. 6 ins., and, with a large quantity of water diverted for other purposes navigation would, unless a very complex and expensive system were adopted, become impossible. A suggestion had been made not to tap the Karun, but that water might be obtained from the River Kerkeh, a fair-sized but unnavigable river some 25 to 30 miles west of the Karun, but whether or not such a scheme would be feasible, technically or politically, he was not in a position to say.

A further alternative was to utilise the water of the Karun for irrigation, and to construct a railway to replace river transport. Such a scheme, of course, brought up many outside considerations, which could not be dealt with here, but adhering simply to the point under review, the issue would seem to depend mainly on the relative cost of transport by river and transport by railway. Notwithstanding the flat nature of the ground between Mohammerah and Dizful, it might at first sight appear questionable whether rail could economically be substituted for river transport. But a closer study of the question showed conclusively that the former was by far the more economical method of transport, given a sufficiency of traffic. Among the direct advantages of rail transport would be the regularity of service—the time saved in transit—the elimination of transhipment from the Upper to the Lower Karun River (a most expensive item), and the greater security against loss and damage; whereas river transport must always necessarily be costly owing to the fact that only vessels of very shallow draught, and consequently of small cargo-carrying capacity, could be employed.

As regards Central Persia they might almost say that the problem of irrigation had been solved since the days of the Medes and Persians, by means of wooden and other aqueducts, which brought water down most efficiently from the surrounding sources to the cultivated lands, and this system could doubtless, were there a remunerative outlet for the crops, be extensively amplified at moderate cost.

Railway Projects.

In any case, now that Persia had at last determined to put her house in order and develop her undoubtedly large natural resources railways must come at no distant date. That a railway connecting Central Persia with the Persian Gulf and thereby short-circuiting the present enormously roundabout and expensive route, via Baghdad and the River Tigris, or even the contemplated lorry and rail route to the Mediterranean, via the Baghdad Railway, was of primary importance, there could be no doubt, and that such a line should, at the same time, tap the fertile district of the Karun Valley, would seem equally desirable. As already stated, and as could be seen by a glance at the map, the alignment Mohammerah-Dizful presented no great difficulties. This alignment was surveyed in detail by the Persian Railways Syndicate on behalf of the Persian Government as long ago as 1913, and a reconnaissance of the country northward as far as Khoramabad and Hamadan was also made. The map here showed the country as extremely mountainous, but, as a matter of fact, by following certain valleys and gorges, a good and perfectly feasible alignment was found, which it was the intention at once to survey in detail, had not war interrupted the Persian Railways Syndicate's operations. Such a line besides serving the Karun Valley and the grain-producing districts around Dizful, Jerrahi, etc., would tap one of the richest and most fertile parts of Persia, namely, the country round Burujird and Kermanshah, and enable the produce therefrom to be shipped in the Gulf at a cost even less than that of the grain shipped from Bombay or Karachi.

(To be continued.)

The Roumanian Press Bureau states that Mr. William Cozens Hardy, M.P., is now in Bucharest for the purpose of entering into negotiations with the Roumanian Government regarding the development of Roumanian natural resources.

Administration of Palestine.

The Budget Statement for 1919-20.—II.

The main activities of the Agricultural Department have lain in reparation and in planting for re-afforestation. The total number of trees planted during 1918-1919 was 369,000. A large number of these were on Government waste land and where private owners used their own lands for afforestation the house and land tax was remitted. The number of trees estimated to be planted during 1919-1920 is 1,820,500 exclusive of private undertakings. Forest nurseries are maintained at Jerusalem, Beersheba, Beth Jemal, Gaza and Haifa, and a definite programme of afforestation has now been drawn up, dealing primarily with the hill tracts in the neighbourhood of Jerusalem, and with the planting of eucalyptus in malarial districts and of grasses and shrubs for the treatment of sand encroachment on the coast. In addition veterinary provision has had to be made for the elimination of cattle disease, which had been very prevalent under the previous regime, and in connection with which constant vigilance is necessary in view of the import of animals from O.E.T. (East) and their transit to Egypt.

It has been found necessary for the economic revival of the country to give direct assistance to the people by means of loans for agricultural improvements as was done by the Turks. Already some £E40,000 has been paid out on easy terms (6½ per cent. on the security of the land repayable over a period extending up to 5 years) to cultivators whose lands were ruined by the war, or were so heavily encumbered that they could not be worked. The greater portion of these loans so far has gone to save the orange gardens at Jaffa, and to tide over the temporary embarrassments of cultivators owing to the suspension of all land transactions. It is estimated that some £E100,000 in small sums will be required during the current year.

As regards the State Domains, owing to the fact that the Turkish records no longer exist, and to the want of a survey and a record of rights, considerable doubt exists in certain cases as to the exact limits of the State Domains, and cases have recently occurred where private proprietors have produced the title deeds to land which previously had been assumed to be public property. The greater part of the privately owned land in the territory is in the hands of small proprietors, but there is a number of large estates regarding which information is now being collected, and in which the peasants have occupancy rights and the proprietor is held responsible for the due payment of the taxes.

Police.

The police force has been reorganised and the estimated expenditure this year is for a slightly smaller force on higher rates of pay. Police duties last year were provided for throughout the territory on the European model, Egyptian military units being employed to make up for the deficiencies of the locally recruited force, but the general principle now followed is to improve the quality of the regular police and to resuscitate so far as possible the old Oriental system of local responsibility for watch and ward, a small highly trained regular force being held in reserve for emergency. The strength of the police force is still relatively high especially under a military occupation, but the special character of the country and the relative smallness of the military force at the disposal of the authorities, also the possibility of fanatical or nationalist outbreaks during the present period of uncertainty, are factors that cannot be neglected.

Public Works.

A Public Works Department has now been formed. Its expenditure has been confined to the maintenance of the necessary roads and buildings occupied by the Administration: beyond that it has not been possible to do anything to develop the country, though there are many works to be undertaken such as irrigation in the Jordan valley and Beisan, and the construction of new roads on an organised plan. The improvement of the water supply of towns and villages throughout the territory has been the subject of close attention, whilst the total lack of a proper drainage system in Jerusalem and elsewhere is a cause of great anxiety, as until this deficiency has been remedied most careful restriction of the water supply is necessary. The temporary nature of the Administration has precluded the initiation of any scheme in this connection, and has delayed the inauguration of an Archæological Department, for which a credit of £E10,000 was proposed and the scientific work of which was to be controlled by a Board consisting of the director of the Public Works Department, and the heads of the French, Italian, American, and British Archæological Schools working in Palestine.

Public Health.

Expenditure under Public Health has been directed to anti-malarial measures, general public health and hospitalisation. Vital statistics and the general condition of the population indicate clearly that anti-malarial measures are an essential preliminary to all other steps for the moral and material improvement of the country. The disease occurs everywhere and affects every class of the inhabitants though the percentage is highest among the exotic Jews. It is due largely to the cistern system of water supply in vogue throughout the country, to the want of proper drainage in swampy land and to unsuitable irrigation in certain areas. The measures in hand are the oiling of cisterns and use of gold-fish and the drainage of certain agricultural areas, whilst it is proposed to increase the prophylactic use of quinine by the sale of this drug at the Post Offices.

Medical inspection and sanitary organisation of every town and village have been provided for. Unhealthy trades have come under regulation, and three regular epidemic staffs have been maintained at convenient centres to provide against the occurrence of epidemics. The departure of the American Red Cross Commission and a reduction of the assistance formerly rendered by the Zionist organisation have entailed a considerable increase of hospitalisation, whilst analytical and bacteriological laboratories have had to be established, and proper provision for quarantine at the ports to meet international conventions has had to be made.

Education.

Expenditure on education has been confined to the continuance under more efficient administration of the provision made by the Turks before the war with the addition of two new normal colleges, one for male and one for women teachers. Subject to inspection from headquarters the management of the schools is relegated to local educational committees. The number of children provided for in this way is 10,000, boys and girls, mostly Mohammedans. The Christian and Jewish communities maintain their own schools, the former, providing for 7,000 children, being open to all religions alike, the latter providing for 10,000 children, being confined to Jews. The Christian Schools are generally self-supporting, whilst the Jewish are maintained by funds from outside sources. A small provision has been made in each district for technical instruction in the industry most prevalent there.

Relief Measures.

Relief measures have had to be carried on during the year owing to the continuation of the abnormal economic conditions produced by the war. In Jerusalem alone there are approximately 10,000 persons or 1-6 of the total population in need of relief, and in most of the towns of the territory the burden has been greater than the local community could bear, and grants have therefore had to be made by the Administration, endeavours always being made to provide work rather than gratuitous relief. Special measures have also had to be estimated for to relieve particular elements of the population, such as in the case of the failure of the Beersheba cereal crop from want of rain, repair of war damages of certain villages which were in the firing line, and obligations due to the withdrawal of the American Red Cross Commission, the Syrian and Palestine Relief Fund and other charitable institutions.

Municipalities.

The number of town municipalities remains unchanged, but rural councils in addition are now being formed for the self-government of village circles as prescribed by Turkish law. It is hoped that before the end of the year all purely local services throughout the country will be provided and administered by these bodies. A new group of local corporations, exercising an important influence, has now developed itself in the revival of the chambers of commerce, which collect their own funds and are recognised by the Administration as semi-official representatives of commercial communities. The municipalities' Budget is excluded from the central accounts and, largely as a result of financial co-ordination and advice from the Administration, their revenues have made considerable progress, the total income this year being estimated at £E89,239, as against £E34,604 during the preceding year.

The report points out that the idea of local self-government and financial responsibility has been assiduously fostered by the Administration, and that there has also been a very marked improvement as regards efficiency. The majority of the municipalities are Mussulman in composition; some are entirely Christian, and in the towns where there is a Jewish element this is also proportionately represented. They have succeeded in rendering themselves financially independent, and except in the case of a few of the poorer bodies no grants in aid or loans from the Administration had been necessary. It is not thought that the assistance required in this respect during the current year will amount to more than £E2,500.

ROUMANIAN TRADE NOTES

Oil Production and Export.

(From Our Own Correspondent.)
Bucharest, October 16.

The daily production of petroleum in Roumania before the war averaged about 5,000 tons daily. This figure has not been reached since the destruction of the oil wells in 1916, and the recent strike of workmen on the oilfields hindered the production considerably. Since the settlement of this dispute, however, the production has reached the figure of about 3,000 tons per day, and considering the present lack of material this production is as satisfactory as could be expected. Furthermore, the limited shortage of accommodation for oil and products at present available has also an influence on the growth of production, and the recent decree suspending the consolidation laws will have the effect of stultifying fresh enterprise for some time to come.

The contract made with the Standard Oil Company by the Government through the Export Bureau "Birex"—in which are grouped together for export purposes the largest producing companies in Roumania—provides for the export by February 28, 1920, of 70,000 tons of oil products. A further contract has been recently concluded with Lieut.-Colonel J. W. Boyle—acting on behalf of the British Government—for the sale and export of 50,000 tons of oil products.

Control of Prices.

The Craiova Chamber of Commerce has created a department for the purpose of combating profiteering. With this object in view it will control the invoices of the merchants and stabilise selling prices. The price lists which the shopkeepers are legally obliged to affix in their shops will be visèd by this department. It is stated that the Ministry of Industry and Commerce considers this a practical measure, and has under consideration the advisability of making its application general throughout the country.

As the result of proposals made by the mixed commission working in connection with the Bucharest Chamber of Commerce, it is suggested that a Superior Council shall be set up by the Ministry of Industry and Commerce for the purpose of advising on all questions relating to the reduction in the cost of living and to deal with the fixing of prices, branches of this Council to be set up in connection with the various Chambers of Commerce in all parts of the country.

THE BRITISH MERCHANTS' MOROCCO ASSOCIATION.

The second annual report of the council of the British Merchants' Morocco Association states that many matters of varying degrees of importance have been dealt with, and the labours of the council, more especially in connection with the safeguarding of British interests in Morocco, are likely to prove of permanent benefit to the members of the association. The preservation of British treaty rights, in regard to Moroccan trade, continues to engage the attention of the council. Germany, by the peace treaty, relinquishes all her rights within the Shereefian Empire. No information is, however, available as regards the application of the terms of the peace treaty by Spain to the Spanish Zone. As regards the other signatories to the Act of Algeciras, France now desires to be relieved of the obligations of the Act of Algeciras and the Franco-German Treaties of 1909 and 1911, as also of the system of the Capitulations. There is every reason for hoping that, in any event, British interests will be adequately safeguarded, and it is understood France is morally pledged, subject to the surrender of the international servitudes, to the principle of the "open door" in the French Protectorate—*i.e.*, commercial, economic, and industrial equality for all the Allied Powers who were signatories to the Act of Algeciras. The council have continued to press for the appointment of a British Commercial Attaché to Morocco, and it is hoped that an appointment will be made. A special Commission, consisting of Mr. E. H. Mulock and Mr. L. N Barker, was despatched to Morocco in October, 1918, by the Department of Overseas Trade. These gentlemen made an extensive and lengthy tour in Morocco, and, it is understood, were impressed with the opportunities presented for the development of British trade—both present and prospective. Their official report, which will shortly be available, is eagerly awaited.

Shipping Services.

In the meantime, by the courtesy of the Department of Overseas Trade, conversations have taken place between the council and Messrs. Mulock and Barker, and matters of interest to British traders have been discussed. Messrs. Mulock and Barker lay great stress on the necessity for greatly increased cargo steamship services between the United Kingdom and Morocco. It will be of interest to members, as evidence of the desire on the part of the Department of Overseas Trade to develop British trade with Morocco, to know that arrangements have been made whereby members of H.M. Consular Service returning from Morocco to this country are to be put in touch with the association. The council is advised that a branch of the Bank of British West Africa, Ltd., will shortly be opened at Rabat. Notwithstanding many difficulties encountered by the steamship companies during the later stages of the war, the steamship services between this country and Morocco were, if not adequate, at least reasonably maintained. Steps were taken by the association in September last, in support of measures instituted by the British Chamber of Commerce for Morocco, with a view to obtaining the release of the Bland steamers, Gibel Hamam and Gibel Derif, from requisition. The representations made by the association resulted in expediting the restoration of the s.s. Gibel Derif to Messrs. Bland. Representations were made to the Ministry of Shipping in January last in support of an application by the Power Steamship Company for permission for the steamer Pangbourne to resume loading homewards. The Royal Mail Steam Packet Company also took steps to obtain permission for the steamer Arzila to load on the homeward berth. Permission was obtained in the case of both steamers, to the benefit of British trade. The restrictions on the export of produce from Morocco have undoubtedly added to the difficulties of providing an increased and regular cargo service, but it is hoped that the British steamship companies will in the near future take active steps to cater effectively for the Moroccan trade, and thus render it unnecessary for British merchants to look elsewhere The council realise that the question of transport between the United Kingdom and Morocco is of vital importance to members of the association, and, now that the war is over, the council will make every effort to secure an adequate steamship service. It is understood that the P. and O. Steam Navigation Company intend to resume, as soon as possible, their passenger service with Tangier. The facilities obtained by the association from the War Trade Department in October, 1917, for a specified period, for the import of China green tea into England for transit to Morocco, were renewed by the authorities, enabling a continuance of the trade without a break, limited only by the freight space available. The association was also instrumental in obtaining a modification of the restrictions on the export of green teas in warehouse in London. Permission to export reasonable quantities of dyes to Morocco was obtained in November.

Restrictions on Exports.

Steps taken by the association in December, 1918, were successful in expediting a modification of the restrictions on the export of candles in January. Whilst on this side exports to Morocco are no longer restricted by Orders in Council, the operation of the high French rate of exchange is considerably curtailing orders from the French Protectorate; the low rate of pesetas, on the other hand, is in favour of exporters from this country to the Spanish Provinces and Zone of Morocco. The position in regard to the export of produce from Morocco to this country continues, so far as the French Zone is concerned, to be very unsatisfactory to British merchants. The restrictions on exports were instituted as a war measure, with the object of maintaining the provisioning of Morocco and of supplying, as far as was possible, the needs of France, and His Majesty's Government acquiesced in these measures as being necessary for the successful prosecution of the war. So soon as the Armistice was signed, the council at once renewed its efforts to secure greater freedom of export, and the restrictions on the export of certain classes of produce were gradually removed. Wheat, barley, maize, oats, sorgho, beans, and lentils remain up to the date of this report under prohibition of export, and are being purchased by the French Protectorate authorities in order to ensure the provisioning of the French Army in Morocco and the civil population, any balance remaining to be sold by the French authorities. Eggs may only be exported to France. These regulations operate against British trade rights in the French Protectorate, and H.M. Government are being pressed to obtain the early restoration of freedom of export of all produce under British Treaty Rights. The question of the teaching of the English language in Morocco is now engaging the serious attention of the council of the association and of the British Chamber of Commerce for Morocco. Active steps are being taken by the chamber as regards a British school at Tangier. British schools are required in all the principal towns in Morocco, and correspondence is being exchanged between the association and H.M. Government, who are being appealed to for official support. Members are asked to follow the example of the Bank of British West Africa, Ltd., by promising their definite financial support and encouragement. The continued neglect of the provision by the Spanish authorities of good roads between the International Zone of Tangier and the French Protectorate is deeply regretted by all desiring rapid means of communication. Great Britain has a warm friend in Senor Merry del Val, the Ambassador in London, and British trade enterprise in the Spanish Provinces and Zone of Morocco is cordially welcomed by the Spanish authorities. Representations have been made to the Colonial Office on the subject of the pilfering of goods shipped to Gibraltar in transit to Morocco, and the association was advised in April that official measures had been instituted for checking the evil. Messrs. Bland advise that they are co-operating in every possible way with a view to the protection of cargo under their control.

PALESTINE AND ITALIAN COMMERCE.

L'Esplorazione Commerciale of Milan in its September issue draws the attention of its readers to the commercial possibilities of Palestine. According to our contemporary, while before the war the value of all Ottoman exports and imports amounted to about £2 per capita, those of Palestine attained £6—that is, £750,000 and £1,310,000 respectively for a population of 375,000, and showed a steady increase from 1886 onward. The Ottoman Government fully appreciated that Palestine was the millenary old highway between Asia Minor, Arabia and Egypt and dowered her with a greater railway mileage than any other portion of the Empire. To this is now added the Cairo-Gaza railroad. Apart from very favourable prospects for stock-raising, the Palestinian industries that have a certain future are wine and spirit making, marmalade, soap, tobacco, cigarettes, and fisheries. The country has abundance of water for both irrigation and hydraulic power. There is, moreover, the tourist traffic, which may vie with that of Switzerland, as it attracts Christians, Jews, and Moslems, and must now notably enrich this land of natural and historic beauty. "It would be unpardonable," adds our contemporary, "if the statesmen, churchmen, merchants, industrialists, and agriculturists of Italy, the nearest of the great Powers, were not alive to the great importance that without doubt Palestine has for us."

An Italo-Greek Committee.

Under the auspices of the Italian Colonial Institute an Italo-Greek Committee has been formed in Rome to further the economic and intellectual relations of the two countries. The president is Dr. Giacomo Guiseppe Mondello, member of Parliament, and the Greek Consul-General at Rome is among the councillors. There are four vice-presidents. Development of the exchange of artistic productions, of technical and commercial students and teachers, and of ideas between the professional classes of the two countries is a chief plank in the programme of the committee.

"DELAYS IN SERBIA."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—With reference to the paragraph "Delays in Serbia," published in your paper of October 24 (page 444), the Press Bureau of the Kingdom of Serbs, Croats, and Slovenes in London is authorised to make the following statement:—

1. The Government of the Kingdom of Serbs, Croats, and Slovenes decided some time ago to take measures of reprisal against the Roumanian Government by stopping goods and luggage destined for Roumania. These measures are the result of the Roumanian Government's decision forbidding the export of material manufactured at the Recisa (Resitza) factory, near Temesvar, and ordered by our Government for the reconstruction of a bridge across the River Save, near Belgrade, the reconstruction of which is in the interests of European communications.

2. Small luggage was not detained by our authorities, but heavy luggage was stopped and stored in the railway warehouses at Szabadka. In order to help travellers, the heavy luggage, which had been confiscated up to September 12, was returned to them through their respective Consuls at Bucharest, by the decision of our Minister of Finance.

3. The measure of reprisal will be removed immediately upon the removal of the sequestration of material for the bridge by the Roumanian Government, as the sequestration is utterly unreasonable and the material greatly needed.

Thanking you in anticipation for the publication of the above,—Yours truly,

L. SMODLAKA.

The Serbian Press Bureau,
115, Gloucester Road, S.W.,
October 24.

A Reuter message states that the imports into India for the month of September amounted to £11,201,000 and the exports to £20,644,000. The imports have increased by £1,625,000 and the exports by £7,729,000 as compared with the corresponding month last year. The exports surpass all previous records.

Engineering.

POWER GAS.

As power gas is likely to come more largely into use in all parts of Europe in the near future it is interesting to recall that its first appearance as a commercially possible power producer was not on an experimental or small scale, but the inventor was so confident of its success that he spent a fortune in the laying down the equipment necessary on the strength of the results of a few laboratory experiments and his unbounded confidence in his own accuracy and ability.

His faith justified itself, and the plant, as soon as it was completed, began to turn out power gas on a bigger scale than any gas works had previously turned out the specially rich gas used for lighting purposes. The apparatus required has changed very little since the day it was designed; few departures have been made from the ideas of the original inventor, and the simplicity of the apparatus required for the manufacture of power gas from almost any material of a carbonaceous nature is one of the chief sureties of the continued popularity of the process.

It does not matter what material is available, whether it be good coal, ordinary brown coal or lignite, peat, sawdust, old and rotting timber; in short, any combustible rubbish. It can all be dealt with in a gas producer and turned into power gas which can be used in any modern gas engine or in other ways. The apparatus is not costly, and no skill is required to work the apparatus—in fact, it may practically be said that it works itself!

The advantages of using power gas have been summarised, and are as follows:—The cheapest kind of fuel can be made use of, and consequently ample supplies of power can be obtained at a very low cost. Very little labour, and that only of an unskilled quality, is required, and the heating value of the gas is equal to, roughly, about 86 per cent. of the total heat energy contained in the fuel from which it is produced, and it can be obtained on a large scale at a price of rather less than one penny per 1,000 cubic feet. What this means will be realised when it is mentioned that one ton of rough coal dust will provide upwards of 150,000 cubic feet of power gas having a heating value of at least 140 British thermal units per cubic foot. The quantity of gas required to produce an indicated horse power hour in a large gas engine varies, but it may be taken as being between 50 and 60 cubic feet. One ton of ordinary low-grade fuel, then, will produce at least 2,500 horse-power-hours, if gasified in a proucer and used in a gas engine. This means that it will produce 2,500 horse-power for one hour, or 1 horse-power for 2,500 hours, or any other combination, as 25 horse-power per 100 hours. That is to say, that one ton of low quality fuel, turned into power gas and used in a gas engine, will give out 300 per cent. more power than it would were it used in one of the finest furnaces in the world for steam-raising purposes.

It has been pointed out, and rightly, by those engineers who so strongly advocate the use of power gas, that in every steam plant working with a variable or intermittent load a considerable amount of the power is absolutely wasted. Of course, some loss under this head is quite unavoidable, as the plant has to be ready when at work to supply any sudden demand that may be made upon it. It was soon realised that the use of the large gas engine, in conjunction with a power gas producer, reduced the stand-by losses, as they are termed, to a minimum.

In connection with the most modern forms of power gas producers a regenerator is used by which a very large proportion of the heat that would otherwise be wasted is used to full advantage. This heat is transferred, as a matter of fact, to the air-blast which is so essential a part of the apparatus. This transference of heat cools the gas before it is passed to the cleaning portion of the apparatus, and so has another advantage which it would not otherwise possess. In the washer a fine stream of water meets the gas and washes any dust from it and cools it still further. After being washed in this manner it passes, if the production is on so large a scale as to merit this addition to the apparatus, to an acid tower, where the ammonia present in the gas is removed and changed to sulphate of ammonia. As everyone is aware, this is one of the most valuable fertilisers known to modern science, and where the plant is on a large enough scale the recovery of the sulphate of ammonia will more than pay for the fuel and establishment charges, and so allow of the power being obtained for nothing.

A REMARKABLE ENGINE.

For many years engineers have sought to design an engine which should be more efficient than the locomotive used for railway purposes, the big steam engine as used for driving factories and workshops, and even the internal combustion engine as fitted in the most modern and up-to-date motor-cars. Until recently it was believed that the latter type represented the utmost limit of efficiency in the improved form in which it is being used for the biggest aeroplanes. At the same time it was known that the steam turbine and the heavy oil engine of the Diesel and semi-Diesel types ran it very closely in most essentials.

A point about both the internal combustion and the Diesel engine which is worthy of notice is that they only develop their full horse-power at what are known as their critical speeds. That is to say, that if an engine of this type gives, for example, twenty horse-power at 1,000 revolutions per minute, it will not give out ten horse-power at 500, but at that speed would perhaps only produce about one or one and a-half horse-power. With the steam turbine this advantage was not found to exist to the same degree, and in the ordinary steam engine it was found that a fair standard of efficiency can be maintained irrespective of engine speed.

Further disadvantages connected with the internal combustion engine, of whatever type it may be, are that it cannot start itself from rest and that it cannot carry an appreciable overload for more than a comparatively short time. It is also necessary to keep the cylinders as cool as possible; in fact, the heat generated during the working stroke actually tends to impair the efficiency of the engine, and it is necessary for this to be removed as quickly as possible.

It has always been known to engineers that this removal of heat, necessary though it is in the present state of our knowledge, actually represents a waste of power; in the perfect engine every atom of heat should be utilised in producing pressure on the piston and consequent power. In fact, in the steam engine, of whatever type, one of the first considerations of the engineer is to save as much heat and prevent as much wastage as possible. It is for that reason that he covers bare steam pipes, cylinders, and boilers with some substance which is a non-conductor of heat.

There were some serious steps taken about half a century ago to make some use of this heat wasted during the working of engines of the internal combustion type. At that date gas engines, working from ordinary coal gas, were the only engines of the kind in use, although some years before a scientist had devised an engine which ran on gunpowder, introduced in the form of small charges at each downward stroke into the cylinder. The method suggested and tentatively adopted was to force a tiny jet of water into the explosion chamber at each stroke, to cool it and at the same time to add to the power by being converted into steam. There was very little in the idea as at that time carried out, and it gradually became forgotten.

Now, however, a far more scientific method of utilising waste heat has been devised by a British scientist, and it is claimed that the 'Still" engine is not only more efficient than any other engine at present on the market, but that it constitutes a revolution in engine design—a revolution of which the far-reaching effects cannot as yet be estimated.

The new engine can use in its main cylinder any of the known forms of liquid or gaseous fuel. That is to say, that it will run on alcohol, benzol, petrol (essence), paraffin, petroleum, naphtha, coal gas, acetylene gas, uncleaned producer gas, gas from the distillation of wood, peat, coal, lignite, oil gas or heavy or fuel oils. It will not only work perfectly on these fuels, but it will make full use of every atom of the heat which in other types of explosion engines, as they were once called, was lost in the process of cooling the cylinders and in the exhaust gases.

The power thus gained is used in each upward stroke of the piston, and since in the ordinary internal combustion engine only one stroke out of four is used for power purposes it is obvious that the addition of what is, in effect, two more working strokes per cycle must increase not only the efficiency but what is known as the flexibility of the engine. It also adds greatly to its smoothness of running.

The heat hitherto lost in the manner mentioned is used for raising the temperature of the water which is used, in this as in the earlier types of engines, for cooling the cylinders during the explosion stroke. This water is arranged to work in a circulating system which may be either part of the engine or of an ordinary steam-raising system outside.

A secondary advantage of the uniform cooling which is obtained in this way is that the temperature of the cylinder is kept constant, and is consequently not called upon to withstand the tremendous strains and stresses met with in internal combustion engines of the ordinary type; strains and stresses which are sufficient, where the design is not good, not only to distort the cylinders and valve pockets, but even in extreme cases to crack the latter and so to do considerable damage. But the chief advantage of the new engine, which renders it epoch-making in the history of engine design, is the great increase in efficiency obtained.

There have been ample proofs given that by the new design the quantity of steam generated from the jacket or water-cooling device alone averages over 3¼ lb., and from the jacket and exhaust combined 6 lb. per brake horse-power. These figures in themselves do not convey much impression of the great increase in efficiency to the mind of the reader who is not possessed of great engineering knowledge, and so it may be said, to make the matter clear, that this hitherto wasted, but now utilised, heat gives an additional pressure of 14 lb. per square inch of piston surface during each return stroke of the piston.

Tests show that the average pressure during the explosion, or power producing stroke, of an internal combustion engine of the most improved and efficient type is about 90 lb. per square inch of piston surface, and we see, consequently, that from the new method of working, without any addition to the fuel being required or any further attention being necessary; in short, without any further cost whatever ex-

Digitized by Google

cept the standing charges (establishment charges, overhead charges, as rent, rates, taxes, interest on capital, depreciation, etc.) an effective working pressure per complete cycle is gained of 90 plus 23 or 113 lb. per square inch. This represents an increase in efficiency of no less than 31 per cent., a result which amply justifies the small additional cost necessary to fit the water circulating and steam utilisation system.

In some forms of this engine, as has been mentioned above, an external boiler can be used. It is the usual practice for this to generate steam at a pressure of 72 lb. per square inch, and when this is the case we get the remarkable result of 90 lb. (the pressure generated by the gas explosion) plus 72 plus 72 or 234 lb. of useful pressure in a cylinder in which by the ordinary internal combustion engine method only 90 lb. of pressure would have been available. Such an engine could be started up from cold on steam raised by the outside boiler, and it would then commence working on its liquid or gaseous fuel as an internal combustion engine as soon as the first cycle was completed.

A further point, and one in which this engine possesses a decided advantage over an engine working on heavy oil, such as a Diesel or semi-Diesel engine, is that the first charge of fuel injected into the explosion chamber can be fired with a compression only one half of that previously required.

It is perhaps too early to say exactly in what direction the new engine will prove most useful. It does not appear as though it could be adapted as yet for small high-speed automobile engines, but it is certainly one that should prove superior to any other existing type for stationary work, whether for driving mill or agricultural machinery, for pumping or for generating electric power. It should also prove specially useful for marine work, and in that connection it may be mentioned that it is already considerably developed. There is no doubt that it will ultimately either decrease the initial cost of power equipment in industrial and manufacturing work or greatly increase the power obtainable from engines occupying the same space as the less efficient units of present-day type and design. In locomotive work, for both passenger and goods transport, it should give splendid results, either enabling trains to travel more quickly with engines of the same size as at present, or by allowing more goods or passengers to be hauled by engines of the present size and weight.

MISCELLANEOUS TOPICS.

Land Cultivation at Night.

Owing to the scarcity of labour and machinery during the latter part of the war, a resourceful Lincolnshire agriculturist decided to continue the work of ploughing at night by the use of flares placed at various points in the field. The experiment apparently gave satisfactory results, for others soon followed his example, and the news reached certain landowners in the Near East, who, it is said, have recently been making inquiries as to the kind of lights used, and how they were used. Ploughing at night is not a novelty, however, for it has been practised in New South Wales first by a British farmer some years ago, and, we believe, has been popular since, among large farmers there. It is probable that the use of "flares" was a temporary arrangement for the occasion, but in New South Wales the lighting was more systematic. In that case two powerful acetylene headlights were attached to the traction engines, or tractors which were drawing the ploughs, and the ground was so well and brilliantly lighted that the operator could work over the field quite as well as by daylight. It seems that the practice is likely to spread, and in view of the climatic conditions in the Near East, where the hurrying on of field work is very often necessary, we think that landowners and farmers using either steam traction engines or oil tractors for ploughing and other field work would welcome this practice of working at night. Acetylene is very much in use there, even in rural districts, and the fixing of the head-lights, which it is advisable to provide from a British maker, is the work of an ordinary mechanic.

Mining in Syria.

In last week's issue reference was made in these columns to the high qualities of Syrian bitumen. Apart from bitumen, Syria possesses great mineral wealth, and just a year before the war a company was formed locally to procure mining concessions, and had five or six projects in hand including prospecting for petroleum, etc., in the Yarmuk Valley at about 118 miles distance by rail from Damascus on the Haifa-line, and also in the Ghor el Arbian vale, which is rather nearer, and at Kafraniye, and again for iron in the district of Salt and near that town. In the vicinity of the Dead Sea it was proposed to prospect for iodine, bromine, asphalt, and bitumen. As to the coal or lignite at Erni on Mount Hermon, no mining is now going on, but a concession for the term of ninety-nine years has been applied for.

Condensation of Milk.

With the exception of a few of the larger towns, there is generally a great scarcity of milk in the East during certain months of the year, while at some periods it cannot be obtained at all, and only during the summer is there an abundance of it everywhere. It cannot be a matter of surprise, therefore, that condensed milk should be coming more and more into use in that region, in spite of its present high price, which is the consequence of the recent war and the heavy import duty, condensed milk being classed in some countries as an article of luxury. At present only the "European provision stores" and local chemists sell condensed milk.

Apart from this scarcity in the East, it is a well-known fact that the consumption of condensed milk is on the increase everywhere, and only the difficulty of obtaining small milk-condensing plants has hitherto prevented the establishment of such enterprises in the colonies or abroad, where milk is abundant and cheaper than in Switzerland or Holland. But now, with the invention and introduction of small plant of this description, such discouragement disappears, and we hear that already in Australia there are about twenty or thirty condensed milk factories of various sizes. In the East, and especially in the Balkan States, Asia Minor, Greece, etc., the establishment of such factories would herald a new era for the pastoral and agricultural classes.

A Small Condensing Plant.

The plant that is most adapted for a beginning in the East is a small one, simple in construction and handling. By it the superfluous fresh milk during the summer can be economically used and put aside ready to be placed on the market when a favourable opportunity occurs. The condensed milk produced by this plant could easily compete with the brands imported. The machinery consists of an engine and a vacuum pump, a sugar-melting pan, a condenser connected with a vacuum pan by a vapour pipe, a couple of scalding pans, a cooling tank, tin churns, and other accessories for air suction, water circulation, etc. The new milk is first turned into either of the scalding pans, and after being heated to the required temperature is drawn by a pipe into the vacuum pan, where it is reduced by continuous boiling, but at a temperature not exceeding 120 degs., to somewhere about one-quarter of its original bulk. It is next drawn off through another pipe into the tin churns, and placed in the cooling tank, which is provided with agitators or stirrers, the condensed milk, after being cooled in this tank, being then ready for packing into the well-known small tins for retailing. This plant is made in various sizes for dealing with from five up to 300 gallons of new milk per hour.

Petroleum Motors for Egypt.

In Egypt power gas motors or semi-stationary steam engines are mostly employed where great power is required, whilst motors using crude petroleum are favoured where medium or small power is sufficient. The latter are widely used by cultivators for working irrigation pumps, mills, etc. Motors of from 10 to 50 h.p., burning mazout or petroleum residues, are said to have a great future in Egypt on account of the low price of petroleum residues imported from Sumatra and Roumania and the presence of petroleum deposits in the neighbourhood of the Red Sea.

MACHINERY AND RAILWAY PLANT FOR SOUTH RUSSIA.

H.M. Vice-Consul at Rostov-on-Don, under date of September 15, reports that several of the Railway Companies and Government, Industrial and other establishments in South Russia have formed an association, with a capital of 50,000,000 roubles, for the purpose of making purchases abroad of the various machinery, railway plant, and other goods required by the subscribers. It is proposed to work the scheme on the barter principle, and as some of the members are very influential they may succeed in obtaining the necessary goods for transport. The temporary address of the head office is as follows:—The Buying Committee of the Economic and Technical Association of the Liberated Provinces of Russia, 116, Bolshaya Sadovaya Street, Rostov-on-Don.

Near East Markets.

LONDON PRODUCE REPORT.

Currants.

The outstanding feature of interest is the new schedule of maximum prices for dried fruits which allows an increase of 4d. per lb. for currants at 1s. 2d. The Government has purchased a large quantity of currants, and the distribution for the Christmas trade is on the point of being made.

Sultanas.

An increase of 6d. is allowed for in the new schedule, which raises the price to 1s. 6d. per lb. The alterations as regards this commodity and currants are viewed with satisfaction by the trade.

Coffee.

This week 3,674 packages were offered at auction, and met with a fair demand. Costa Rica good bold greenish was done for export at 155s. to 155s. 6d., and for home consumption at 146s. Uganda bold greenish came to business at 138s. for export, while medium fetched 129s. for home consumption. The present position is that supplies are ample, and quotations are, therefore, steady. There is unfavourable news of the Ecuador crop, which is reported to be the smallest on record. This country cannot be affected directly thereby, but it would obviously mean an increased demand for the South American product. The futures market has been quiet. Quotations are: December, 122s.; March, 117s. 3d.; May, 112s. 10½d.; July, 110s. 6d.; and September, 108s. 9d.

Sugar.

The raw market has been steady but quiet, with a moderate demand on the part of manufacturers. The American beet sugar production is expected to amount to 953,000 tons, compared with 765,000 tons. It is further estimated that there will be a surplus for export of beet sugar in Slovakia, Moravia, and Bohemia of 881,000,000 lb.

Oilseeds.

Linseed has been very firm. Calcutta to London, November-December sold at 42s. 6d. per cwt., Bombay do 44s., while the quotations for Calcutta to Hull is 43s., and for Bombay to Hull 44s. 6d. Rapeseed has remained firm. Real bold Ferozepore October November is quoted 36s., while Toria is 37s. Egyptian cotton seed has been exceptionally firm.

Oil Cakes, etc.

Cottonseed cake has been done at from 10s. to 22s. per cwt., while rapeseed cake has fetched 18s. There has been a marked demand for fine soya-bean cake at 500s. per ton. Decorticated arachis cake has been done at from 480s. to 500s., but there has been a poor demand for palm kernel cake at 340s. Oils are quiet, linseed is 90s. spot, and the same rate for November-December.

SUDAN PRODUCE.

The following particulars are taken from the C.E.B. report for August :—

Gum.

The exports during August were, via Port Sudan, 535,089 kilos of Hashab gum of the value of £E24,279, 5,083 kilos of bleached of the value of £E212, and 101,369 kilos of Talh of the value of £E3,298; and via Halfa 78,646 kilos of Hashab, of the value of £E3,103, and 97,485 kilos of Talh of the value of £E2,387.

Kordofan Province.—3,336 kantars were sold in the El Obeid market during the month, as against 10,240 during the same month of 1918. The average price was £1.485 m/ms. per kantar of 100 rottles. 2,085 kantars arrived from Nahud, compared with 617 kantars last year. There were no arrivals at Rahad during the month. In the Um Ruaba two kantars were sold at an average price of £1.000 m/ms. per kantar, as against 1 kantar last year.

Sennar Province.—697 kantars of Hashab and 258 kantars of Talh gum were exported from Singa out of store. There has been none on the markets.

Cotton.

Red Sea Province.—Tokar.—Two excellent floods watered the Delta about the 8th and 16th. The first one seems to have been of considerable volume and irrigated many hods in the east central portion of the Delta. Sowing began on the western side (which received some irrigation with the first of the two floods) about the middle of the month. Considerable areas are still reported too wet for sowing. As far as one can tell at present the prospects for next season are good.

Berber Province.—Crops on the pumps have continued to do well except at Kitiab, where the formation of a sandbank under the pumps stopped the pumping for some fifteen days. The cotton has lost a good many bolls owing partly to climatic conditions and partly to shortage of water. Maize also has done badly at Kitiab, but the damage is due more to stem borer than water shortage.

EGYPTIAN CROPS.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in September :—

Cotton.

Lower Egypt.—The improvement noted last month has continued, and the notation figure now stands at 93. The first picking was general by the middle of the month. Yields are uneven this season; in many cases well above the average of recent years, in other cases disappointingly low. The prospects of the second picking are rather poor. It is becoming increasingly frequent for cultivators to delay the first picking, so as to take all the cotton in one picking.

Middle and Upper Egypt.—The crop is about normal. Picking is well advanced.

The weather has been favourable and the water supply sufficient. The attack of the pink boll-worm has, over the whole season, been less serious than in the last three years, and this fact has no doubt been partly responsible for the increase in the first pickings. The percentage of bolls attacked, however, during the last week of the period under review has rapidly increased.

Maize (Nili).

The weather has been favourable to the growth of the plant, and water supply ample. Slight attacks of cotton worm, green worm and stalk-borer were reported from various provinces.

Millet (Nili).

The crop is well advanced and promises an average yield.

Millet (Sefi).

Weather favourable and water supply ample. Harvesting has just come to an end, and the yield is reported as satisfactory.

Rice (Sefi).

The crop has improved considerably in Daqahlîya. Rice worm was noticed in Beheira, and stalk borer in Daqahlîya. The crop is a little below the average.

Rice (Nili).

Rice Nili in Faiyûm is growing satisfactorily, but some fields have suffered from the scarcity of water.

Sugar Cane.

Weather favourable and water supply ample. The crop is satisfactory.

MALTA TRADE NOTES.

(From Our Own Correspondent.)

Malta, October 1.

The coal restrictions preventing holders of stocks of coal from selling or transferring them have been repealed.

Local discussion to-day as far as foodstuffs are concerned centres round the potato crop, the lack of rain to date causing matters to look serious.

October 8.

Owing to a shortage in certain articles of food, chiefly butter, tea, lard, and sugar, the Army and Navy Canteen Board has decided upon rationing, and customers have been notified to this effect.

TRADE WITH YUGOSLAVIA.

Free Import of Goods for Reconstruction.

The Board of Trade are in receipt, through the Foreign Office, of a translation of a circular Order issued by the Director of Customs Department of the Ministry of Finance to all custom houses in the kingdom of the Serbs, Croats and Slovenes (and published in the *Official Gazette* for October 5), providing for the total exemption from customs duty for the period of one year of certain goods required in the reconstruction of the country, and for the application of the "minimum" (conventional) customs rates of duty, for a fixed period, on certain other goods irrespective of their country of origin.

The provisions of the circular, which came into effect on October 5, are as follows: The Ministry of Finance of the Kingdom of the Serbs, Croats and Slovenes, Directorate-General of Customs, by Order dated September 26, has made the following arrangements with a view to facilitating the importation of certain goods required in the reconstruction of the country. These arrangements are applicable throughout the whole of the Kingdom of the Serbs, Croats, and Slovenes :—

(1) The following goods are exempted from the payment of import duty for the period of one year, irrespective of the country of origin: Steam boilers with all accessories for fixed and portable steam engines, machinery and parts of machinery, fixed and portable engines, agricultural and artisans' tools and implements, raw materials and half-manufactured goods which are not obtainable in the country or are not obtainable in sufficient quantities, auxiliary chemical materials and dyes required by the manufacturing industry, all lubricating oils, anthracite and brown coal, and coal briquettes, naphtha and other mineral oils—except kerosene—which are used as fuel for the production of energy.

(2) Import duties at the rates of the "minimum" (conventional) customs tariff are to be levied, for the period of one year, and irrespective of the country of origin, on the following articles: All building materials as far as they are not obtainable in the country, electro-technical articles, printer's type of all kinds, envelopes, paper for printing and writing, printing ink, pencils for writing and drawing, black or coloured, drawing charcoal and indian ink (solid or liquid), pen nibs, writing ink, rubber erasers, wood for fuel, wooden or tin boxes for packing purposes, pharmaceutical and other jars and bottles used as receptacles for goods, bottles for beer and mineral waters, scales and balances, instruments, and accessories for laboratories, cotton, cotton wool, cotton yarns and plain cotton textiles, tulle, bobbinet, point-net, and other like tissues (cotton), hosiery (cotton), cord, twine, and string made of cotton yarn, flax and hemp, jute, manila hemp, New Zealand hemp, coconut fibre, and yarns and textiles made of flax, hemp, jute, manila hemp, New Zealand hemp, shoddy, yarns, and textiles of coarse or combed wool or of animal hair, worsted above No. 16, yarns of carded wool, underwear, collars, and cuffs, men's felt hats, leather footwear of all descriptions.

(3) As soon as the manufacture of any of the articles enumerated in paragraphs (1) and (2), at present not produced or manufactured in the country, is commenced, the customs authorities will take into account the country of origin of such articles when imported.

Bulky objects enumerated in paragraphs (1) and (2) above are exempted from the payment of porterage charges for the period of one year.

(4) For the period of six months, import duties at the rates of the "minimum" (conventional) tariff, and without regard to the country of origin of the goods, are to be levied on the following, viz., chemicals, medicines, and all products used for healing disease.

When importing products for healing disease, which may also serve for other purposes besides industrial, apothecaries and druggists who are the only authorised importers of such products, shall submit to the Minister of Health a certificate stating that the products in question are to serve solely for healing disease.

COMPANY MEETINGS.

Harrisons and Crosfield, Ltd.

The eleventh annual general meeting of Harrisons and Crosfield, Ltd., was held on October 24 at 38, Eastcheap, E.C., Mr. George Croll (the chairman of the company) presiding.

The secretary (Mr. H. P. Church) read the notice convening the meeting and the report of the auditors.

The Chairman, in the course of his speech, referred to the fact that, after thirty-eight years of strenuous work in the business of Harrisons and Crosfield, Mr. Heath Clark had resigned the chairmanship of the company, but retained his seat on the board. He also referred to the accession of strength which the board had received in the persons of Mr. Eric Macfadyen and Mr. A. McGregor MacColl, and to the fact that two of the directors, Messrs. Welch and Macfadyen, are at the present time making a tour of the company's branches and those of the affiliated companies in the East. After reviewing the position of the company as disclosed by the balance-sheet, the Chairman said: The net profits shown by the accounts are £200,271 8s. 3d. This is a somewhat smaller balance than we were able to point to a year ago, but, taking into account all the difficulties which we have encountered during the past twelve months, it is a result of which we have little cause to complain. Including the balance of £37,530 8s. brought forward from last year, the total credit balance is £238,101 16s. 3d. Out of this we have already paid the entire dividends for the twelve months on the preference and preferred ordinary shares, amounting respectively to £36,165 and £37,500. We have also paid the fixed dividend of 10 per cent. on the deferred ordinary and management shares, and have divided a further sum of £30,823 14s. 8d. between the holders of shares of those two classes. The balance of profit now available is £115,701 4s. 6d., and the directors propose to transfer £14,024 of it to the general reserve, £15,000 to the reserve for income-tax, and £3,000 to the staff special reserve. They also propose to utilise £9,000 for payment of a bonus to the staff. After these allocations, there will remain a balance of £74,677 4s. 8d., out of which it is proposed to distribute a further £36,529 13s. 4d. among the holders of the deferred ordinary and management shares, leaving £36,147 11s. 4d. to be carried forward.

After paying special tribute to the loyal co-operation of the members of the staff, both at home and abroad, the chairman proceeded: As the outcome of war conditions, much of the import trade of eastern countries went to Japan and America, who had unique opportunities of introducing their manufactured articles to take the place of those previously supplied by this and other European countries. It is now up to the British manufacturer to recapture the lost ground, and it is to be hoped that before long the industrial situation in this country will permit of an effort being put forward in this direction. An extensive and lucrative market awaits British manufacturers when they are able to meet the market requirements at competitive rates.

In previous years you have allowed Mr. Clark to make a few general remarks on the two great industries of rubber and tea, with which the business of this company is so closely associated, and, with your permission, I should like to follow the same course to-day. (Hear, hear.) During the past twelve months the plantation rubber industry has emerged from the somewhat difficult position which it found itself in after four years of war, during which time the production increased from 1,000 tons in 1914 to about 250,000 tons in 1918. Up to the early part of 1918 the growing production was readily absorbed, but the world's shipping position then became so acute as to necessitate drastic restrictions, and there was a consequent large accumulation of stocks in the producing countries, with a considerable decline in prices there.

In October last year, when Mr. Clark addressed you shortly before the Armistice, the price of first grade plantation rubber in the Singapore Market had recovered 6d. per lb. from the lowest point which was reached in August, 1918, when the value there was the equivalent of 1s. 3d. per lb. London landed terms. After the Armistice, the Singapore price improved further, to a London equivalent of 2s. per lb., and this was fairly well maintained, until the middle of this year. Movements of the London market during this period were very different. The freight shortage of 1918 kept the supplies available here at a low level, and prices ruled firm until after the Armistice, when gradually improving shipping facilities enabled stocks accumulated in the East to be brought to the London market for realisation. As a consequence the price here declined steadily until the bottom was reached in June, by which time it was realised that the requirements of rubber—particularly in the United States—were sufficient to absorb readily the accumulation of 1918 crop, which rapidly passed into the hands of the large manufacturers of rubber goods, whose stocks had been seriously depleted by the necessary restrictions on imports during the concluding stages of the war.

Supply and Demand.

When addressing the shareholders of the Rubber Plantations Investment Trust, at the annual meeting of that company in 1918, I dealt with the question of supply and demand in the light of the information which was then available to me, and I should like to-day to refer to some of the figures I then gave. I estimated that, on the basis of certain figures which I had quoted, and assuming that there was no artificial restriction of output, the production of plantation rubber for 1919 would be 314,000 tons; for 1920, 354,000 tons; 1921, 381,000 tons; 1922, 405,500 tons; and 1923, 430,000 tons. I further stated that in 1917 the world's consumption of rubber was, approximately, 255,000 tons, 52,000 of which were derived from sources other than the Middle East, and that if the 1919 production, which I estimated for was to be consumed, an increase in consumption of round about 100,000 tons over 1917 would have to take place. I went on to say "It is commonly supposed that there has been a great war consumption of rubber, but this is not my view. . . I believe that if we had had no war, the consumption of rubber would have been very much greater, and, provided that normal conditions of shipping and trade are quickly established, I do not see any reason why the large increase in production probable in 1919 should not be easily absorbed."

I have recently had the figures of production and consumption carefully examined, so far as they are available (and I may say, in parenthesis, that there is room for considerable improvement in statistical information regarding our industry). After making allowances for the accumulation of 1918 crop which was exported from Eastern countries during the first half of 1919, I now estimate the production of plantation rubber for this year at about 320,000 tons, to which have to be added some 40,000 tons of wild rubber, making the world's production of rubber this year 360,000 tons. I do not propose to revise the figures I gave in 1918 for the succeeding years, beyond saying that I have now reason to believe that they will be somewhat in excess, and that 1920 will probably be somewhere between 360,000 and 370,000 tons, in place of the figure of 354,000 tons which I then gave.

Current Year's Consumption.

With regard to consumption for the current year, the United States of America have imported over 150,000 tons in the first eight months, and I expect to see their total for the twelve months somewhere in the neighbourhood of 220,000 tons. Against this, the net imports of the United Kingdom of 40,000 tons make a poor showing, particularly as the stock at June, 1919, was 13,500 tons more than it was twelve months before. Making allowance, for this, I estimate the consumption in the United Kingdom during 1919 will be about 40,000 tons; France took 14,500 tons in the first six months, and may take 30,000 tons for the twelve months; Italy I estimate at 15,000 tons; Canada is taking upwards of 10,000 tons; Japan a similar amount, and allowing 25,000 tons for the rest of the world—including late enemy countries—we have a total consumption of 350,000 tons, against 360,000 tons produced. The difference of 10,000 tons does not represent a free surplus of supply over demand, but is the small net increase in the quantity afloat, which rises automatically in ratio to the larger annual turnover.

No Fear of Production Outstepping Consumption.

Those of us who have been closely associated with the plantation rubber industry have always looked to the years 1919, 1920, and 1921 as the critical ones, from the point of view of the possibility of over-supply. I have shown by the figures I have given you, which are at least approximately correct, that the consumption during 1919 will take care of the production, and I have every reason to believe that the same will apply to 1920 and 1921, so that those who are interested in the producing end of this great and growing industry need have no fear of production outstepping consumption, provided, of course, that we have no great industrial upheavals in the consuming countries. As you are no doubt aware, British capital owns, approximately, 80 per cent. of the plantation rubber industry, and I wish I could say the same with regard to the consuming end. In this connection I wish to draw your particular attention to the relative increase in the net imports of the United States of America and the United Kingdom. In the twelve months July, 1914, to June, 1915, the United States of America took 74,000 tons, while in the twelve months July, 1918 to June, 1919—notwithstanding shipping difficulties and the Government restrictions which were in force for a part of that period—they took 180,000 tons—an increase of 140 per cent. In the same periods the United Kingdom's net imports were 21,000 and 50,500 tons respectively, but, as this country has a large transit trade, part of the increased stocks, which are destined to be re-exported as raw rubber, must be deducted. I have accordingly estimated 40,000 tons as the net imports for our own use, which shows a net increase of 90 per cent. in the four years. While the uses of rubber are manifold and ever-increasing, the great future of the industry is bound up with the development of motor transport, which, I think you will all agree, is destined to play a vital part in the solution of the world's traffic problems. We could have had no more graphic illustration of this than the recent unfortunate railway strike, which has probably been the means of awakening in this country a determination to have, at the earliest possible date, facilities for road transport on a scale adequate to our needs, and I am convinced that, in view of the impetus which has already been given to the utilisation of this means of conveyance, the rubber industry is more likely to be faced with a shortage of the raw material than with any prospect of over-supply.

Tea.

As on a comparatively recent occasion I gave a somewhat full survey of the position of the tea industry, I propose on this occasion to deal very briefly with the ground then traversed. The contracts between the Ministry of Food and producers in India and Ceylon have now practically terminated. Some of the teas delivered under the Ministry of Food contracts are still coming forward in public sale, but the bulk of the tea now being offered is on behalf of the actual producers, the prohibition of private imports of tea into this country having been withdrawn at the close of last year. The tea trade has now been practically freed from control. In December last, the Government intimated that the export of tea from the United Kingdom could be resumed under certain restrictions, but the total shipments for the 9 months from January to September were only 22,000,000 lb., compared with 41,000,000 lb. for the corresponding periods of 1914 and 1913. It will be seen that exports have been confined within smaller dimensions than was anticipated. This is largely attributable to the heavy loss in exchange involved by purchases of tea for countries affected by very adverse exchange rates on London. This applies particularly to Russia and the newly established States on the Western frontiers of Russia; to Germany, Austria, Bulgaria, and Turkey; and in a lesser degree to our Allies, France and Belgium. Purchases of tea for these countries are affected by the loss in exchange between Eastern currencies and

Digitized by Google

sterling, and also by the heavy loss between sterling and the local currency of purchasing countries; and consequently tea can only be imported there at a very high cost, which tends to restrict consumption to small dimensions.

British Preference a Mistaken Policy.

Under the Finance Act of this year, British-grown tea was given a preference of 2d. per lb., the rate of duty payable being reduced to 10d. per lb., whilst foreign-grown tea continues to be liable for 1s. per lb. in all cases, even where produced by British capital as the result of British enterprise. As I stated on another occasion, I consider the granting of this preference a mistaken policy. In my opinion, the preference granted will afford no real benefit to the producer of British-grown tea, seeing that a large proportion of the British crop will necessarily be disposed of in outside markets, in keen competition with foreign-grown tea, which will be compelled to depend more largely upon those markets, where it can be realised in competition with British-grown tea without any handicap. From the consumers' point of view, a disadvantage of the preference is that it will undoubtedly tend to cause a certain quantity of foreign-grown tea to be diverted from the United Kingdom, and consequently raise the retail price in this country. During the past 9 months, duty has been paid on approximately 12,000,000 lb. of tea from sources other than British India and Ceylon. This quantity is composed mainly of tea from the Dutch East Indies, and it has been possible to sell these teas in this market at a satisfactory price to the producer mainly owing to the fact that the loss in exchange in the case of India and Ceylon is much greater than the loss in exchange on tea produced in the Dutch East Indies.

Increased Consumption.

Throughout the war it was evident that the consumption of tea was on the increase in all countries which were able to secure supplies, and, with the removal of rationing in this country, a similar increase has apparently taken place. During the nine months ended September 30, duty was paid on 292 million pounds, or an average of 3½ million pounds monthly, against a pre-war average of rather less than 27 million pounds. Taking the last six months, April to September inclusive, the increase is even more marked, the monthly average being 36½ million pounds This increase has been partially caused by distributors buying more heavily than usual in order to replenish depleted stocks, but the figures are no doubt inflated as the result of long delays which occur in the handling of tea, both in the port and warehouses and on the railways. Apart from this, however, the large scale on which duty payments have continued for months past indicates fairly conclusively that consumption has increased very considerably, and no doubt this is partly attributable to the higher wages which large sections of the working classes now receive, and to some extent to the liquor restrictions.

Stock in Bond.

Stock in bond throughout the United Kingdom at the end of September was 156 million pounds, compared with a normal pre-war stock at the end of September of approximately 100 million pounds. Compared with pre-war ideas, this stock is large, but, owing to the innumerable delays in landing and handling tea, which up to the present appear to have been insurmountable, the stock does not seem to be by any means beyond the actual requirements of buyers. Freight from the East is still far below requirements, and there is a large accumulation of tea awaiting shipment from all the countries of production. With freedom from Government interference, the tea trade is gradually assuming normal conditions, and, with the law of supply and demand now becoming operative, a considerably higher level of prices has been established, and, in my opinion, is likely to be maintained.

The Price of Tea.

Recently the Ministry of Food has shown some anxiety in regard to the rise which has taken place in the price in public sale, and they have no doubt been influenced to some extent by the ill-informed criticisms which have appeared in different quarters, with the result that there has been some talk of Government control being reinstated. I sincerely hope that no such foolish step will be taken. Under the scheme of Government control, all tea was retailed at 2s. 8d. per lb., it being illegal to sell below that price. On the removal of control, free competition led to a considerable decline in retail prices, and the consumer has been able to buy freely at 2s. 4d. per lb. and under. At present, notwithstanding the fact that public sale prices are on a high level, tea is still being freely retailed at 2s. 6d. per lb. This price is, of course, much higher than that at which the poorer qualities of tea were obtainable before the war, but in considering this it is essential to remember that since the commencement of the war the duty on tea has been raised from 5d. to 1s. per lb., with the exception that this year the duty on British-grown tea has been reduced to 10d. per lb. In addition, the estate cost of production, including the heavy loss which is now being made on the supply of rice to the labour force, is fully 2d. per lb. higher, while the loss in exchange, with the rupee standing at slightly over 2s., as against 1s. 4d. in 1914, further increases the cost by 3d. to 4d., according to the extent of the funds which it is necessary to remit to the East. Added to this, the heavy increase in freight, landing, and selling charges in this country accounts for a further 2½d. per lb.

It will, therefore, be seen that, on the basis of the present duty, there has been a rise of approximately 1s. per lb., and, when this is borne in mind, it will be seen that the present retail price to the consumer compares very favourably with what he paid in pre-war days. (Hear, hear.) Any attempt to interfere artificially with the law of supply and demand will be prejudicial to the interests of the industry as a whole, for tea is not produced in this country, neither is this the only country in which it is consumed. We are approaching the period when it is highly probable that there will not be sufficient tea produced to meet adequately the world's requirements. In recent years there have been only small additions to the planted acreage, owing to the more profitable return obtained from rubber and the impossibility of extension during the war years. The conditions prevailing during the war years have obscured the real position, and when America has liquidated the abnormal shipments of Java and Sumatra teas made necessary by their exclusion from this country, and when Russia—a very large tea-drinking country—is again able to buy more freely, the consumer in this country will in all probability have to be more economical in the use of this cheapest and best of beverages In support of this contention, the following figures may be of interest:—

Production in India reached its maximum in 1915, when nearly 372,000,000 lb. were produced; in 1916, production declined to 368,000,000; and in 1917 the crop was 370,000,000 lb. According to the latest advices, the North Indian crop at the end of August was 21,000,000 lb. below the crop of the corresponding period for 1918, and unless this shortage is made good during the next month or two—which is improbable—the total production for 1919 may be as low as 350,000,000 lb. In Ceylon, the maximum production was attained in 1915, with a crop of 211,000,000 lb., and has successively declined to 202,000,000 lb. in 1916; 193,000,000 lb. in 1917; and 180,000,000 in 1918.

In the case of Java, figures of actual production are not available, but the exports reached their maximum in 1915, with a total of 101,000,000 lb., declining in 1916 to 98,000,000 lb.; in 1917 to 80,000,000 lb; and in 1918 to 62,000,000 lb. This rapid successive decline was due to the difficulty of shipping Java tea, and the prohibition on its importation into the United Kingdom, and for a time, into Australia. The decline in production, however, was not so marked as it would appear from these figures, as, at the end of December last, it was estimated that the stock of tea in Java approximated to 20,000,000 lb. It is, therefore, quite possible that in view of this accumulation, the shipments from Java this year will exceed their previous maximum. Sumatra is still relatively a small source of supply, but, from exports of half a million lb. in 1914, the figures have steadily grown until in 1918, five and a half million lb. were exported, while this year, during the first five months, 3½ million lb. were shipped. From the foregoing figures, it will be seen that, under normal conditions, with the law of supply and demand freely operating, there is little prospect of the price of tea declining.

He concluded by proposing the adoption of the report and accounts.

Mr. Charles Heath Clark seconded the motion, which was carried unanimously, and the dividend recommended was declared.

The retiring directors (Mr. Eric Macfadyen, Mr. A. McColl, Mr. H. J. Welch and Mr. H. F. Church) were re-elected, and Messrs. Price, Waterhouse and Co. were re-appointed auditors.

A cordial vote of thanks to the chairman and directors, as well as to the staff both in London and in the East, terminated the proceedings.

COMPANY NOTES & REPORTS

Egyptian Hotels.

The report of the Egyptian Hotels for the year ended April 30 states that after charging all expenses the profits of the hotels were £35,540. After providing for the charges payable in London and Cairo the accounts show a profit of £33,179, to which must be added the balance brought forward, £2,928, making together £36,107. Debenture interest took £3,392 and depreciation of plant, fixtures, and fittings at hotels £4,581, leaving an available balance of £28,133. The directors recommend the payment of two years' dividend of 5 per cent. per annum on the preference shares, thus completing the payment to 1919, and a dividend on the ordinary shares of 5 per cent. for the year, leaving a balance to be carried forward of £10,383 The directors recommend that the vacancy on the board should now be filled by the election of Mr. H. M. Snow, director du Chemin de Fer de la Turbie.

Dejoo Tea.

The report of the Dejoo Tea Company for 1918 states that the net profit amounted to £7,649; £3,609 was brought forward, which with interest on deposits gives a total of £11,351. The directors recommend a final dividend of 6 per cent., making 10 per cent. for the year (less income-tax), to transfer to reserve for equalisation of dividends £2,000, and to carry forward, subject to excess profits duty, £4,993. The larger balance proposed to be carried forward is to provide for the expenditure which has to be incurred for labour, machinery, and buildings to replace depreciation during the war. Estimate for 1919 provides for a crop of 800,000 lb., but owing to drought and sickness among the coolies the directors are afraid that this estimate will not be realised.

The revised final jute forecast estimates the current crop to be 8,486,234 bales.

The India Office announces that up to October 18 Indian Treasury bills were issued to the following amounts:—October 16, 1917, to March 31, 1919, Rs.136,39,05,000; April 1, 1919, to October 18, 1919, Rs.53,23,75,000; total, Rs.189,62,80,000. Bills discharged amounted to Rs.124,70,90,000, leaving bills outstanding on October 18, 1919, Rs.64,91,90,000.

STRANGERS' HOME FOR ASIATICS,
WEST INDIA DOCK ROAD, LIMEHOUSE, LONDON, E.
"I was a stranger and ye took me in."
CONTRIBUTIONS ARE SOLICITED from the many who owe fortune or competence to India and China and will be thankfully received by the SECRETARY or by MESSRS. BARCLAY & CO., LTD., 4, LOMBARD STREET, E.C.

AYAHS' HOME,

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

STAMBOUL, October 11.

The gradual freeing of the ports of South Russia from Bolshevist occupation has had the effect of increasing the commerce in transit from our port for Russia. Several shipments have been made this week, especially for Odessa, and one notes the presence here of a number of Russian buyers.

Mention may be made here of the passing of a Dutch vessel which, after having discharged a part of its cargo at Constantinople, continued its voyage to Russia with a direct shipment. It can be foreseen that if there is a development of these direct consignments the transit trade, at present so flourishing at Constantinople, will be affected in consequence.

Manufactures.—Business is favourable. Arrivals of the week, four steamers from England and two from Italy. Prices are maintained. Stocks here continue to increase.

Produce.

Sugar.—Market firm. The demand for Russia and for Roumania is maintained. Prices are high for fine produce. Quotations are £63-£64 per ton spot, and £58-£60 afloat. In our market, £T34 100 kilos. Offerings are few.

Coffee.—Market weaker, with a tendency to fall. Arrivals, 800 sacks despatched on consignment.

Oil.—Arrivals, 100,000 drums of American. Price, £T5.25 the drum. Shipments from Batoum are awaited.

Exports.

Opium.—Sales of the week have been eight cases fine Hadji Keuy at Ps.975 the oke. No transactions in druggist. Prices nominal: Ps.715-720 New Karahissar, Ps.750 Old Karahissar.

Mohair.—Arrivals of the week, 410 bales. Sales, 40 bales Eski-Chehir at Ps.82 the oke.

Wool.—Arrivals, 250 bales. Sales, 500 bales at Ps.47-48 the oke.

Silk.—Fifteen bales Broussa have been done up to £T13.50 the kilo, against £T13.10 last week.

Cereals.—Arrivals of wheat of the week being of little importance (some 50 wagons), the price has been firm. Quotations.—Wheat, extra fine, Ps.11½-12 the oke; 1 and 11, Ps.10 the oke; extra hard, Ps.13-14 the oke; 1 and 11, Ps.11-12 the oke.

Flour.—Large arrivals of American have caused a notable decline, which has led to a new decrease in the price of bread.

DAMASCUS, October 9.

Imports.

There has been a marked improvement in the position since our last report. The town of Damascus, which was overstocked with goods, has been able to despatch a part to Aleppo, and even to resell to Beyrout, which normally supplies our market. On this account prices have improved, and importers are more ready to undertake transactions, especially in cloth manufactures, which are in demand in view of the approaching winter season.

Exports.

Wool.—The season's yield has so far been only 1,500 bales, of which 500 have already been despatched. The exports are going particularly to America.

Cereals.—Considerable consignments have been despatched from Haman for Palestine and Egypt. The crops of 1918, very good, and those of 1919, satisfactory, leave a large surplus for export. Prices of cereals have risen from 20 to 30 per cent., and it is more than probable that during the winter the rise will be pronounced.

The receipts of the Egyptian Markets, Ltd., for the week ended October 16 were:—Cattle market, £561; general markets, £595. Total, £1,156. Total for year, £44,705. The figures for the corresponding week in 1918 ended October 17 were:—Cattle markets, £562; general markets, £549. Total, £1,111. Total for year, £40,683.

(Over 80 Branches in the Near East.)

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

LANCASHIRE COTTON.

Further Advance in Prices.

(From Our Own Correspondent.)

MANCHESTER, Wednesday.

Prices throughout the market have continued to go against buyers, and the general tone has been stronger than ever. Conditions prevailing in Lancashire at the present time are most remarkable. Producers are in a position to dictate terms of fresh contracts to their customers. Demand in practically all sections exceeds supply, and there is a scramble for goods. Rather violent fluctuations have transpired in Egyptian cotton futures. After a substantial fall, as a result of profit-taking, the decline has been recovered. News relating to the crop shows scarcely any change. Owing to the shortage of supplies of the higher grades of American cotton, there has been an active demand from spinners for the Egyptian staple. Some Liverpool importers are said to be experiencing much difficulty in fulfilling their contracts. A substantial advance has again occurred in Egyptian yarn prices. Spinners are extremely busy, and when business negotiations take place they have matters all their own way. Quick delivery of numerous counts and qualities is quite out of the question. In piece goods for Egypt and the Near Eastern markets generally inquiry has continued on a considerable scale, but perhaps on the whole the turnover has been rather smaller, owing to increasing difficulties in arranging terms of fresh contracts. Very few buyers, however, anticipate being able to purchase at lower figures in the near future. A rather irregular business has been done in cloth for India. Most offers from the other side remain low, but a certain amount of speculative buying has been done by Manchester merchants. A persistent demand has been met with for China, Java, and Singapore in grey staples and miscellaneous fabrics. Manufacturers have strengthened their position, and some firms have closed their order lists for the time being. American yarns have advanced in price with a healthy undercurrent of demand. Favourite marks are getting very scarce. India shippers have bought bundles on a freer scale, and fair lines have been put through for China. Producers of coarse counts are deeply sold for the Levant.

Egyptian Cotton Crop.

Details have just been received relating to the Egyptian cotton crop for last season. The growth amounted to 4,826,342 cantars, the acreage being 1,315,572 feddans, the yield per feddan being 3.68 cantars, or about 25 per cent. less than in the previous season. The smaller output is due to the restriction of the acreage by the Government. The total shipments from Alexandria to all parts during the twelve months were 655,158 bales, against 685,295 bales in 1917-18. The takings of Great Britain amounted to 408,943 bales, as compared with 493,295 bales in the previous season. The total to the Continent was 143,724 bales, as compared with 94,609 bales in the year before. The United States took 78,454 bales, against 76,640 bales in 1917-18. The prospects for the new crop in Egypt are generally healthy, and there is an expectation of an output of about 6,000,000 cantars.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news, received from the Director-General of Commercial Intelligence, Calcutta, dated October 24:—

Weather dry everywhere except in Lower Burma and South India. Rain required for winter Paddy in parts West Bengal and Bihar and Orissa.

During the week ending Saturday, October 11, preparations and sowings spring crops continued except in Bombay, where just commencing. Harvesting autumn crops continued Central India and Bihar and Orissa. Winter rice crops practically over Burma and Bengal. Harvest progressed Southern India, out-turn fair. Plucking tea continued Assam. Jute harvesting nearly completed Assam. Steeping and washing continued Bengal. Cotton picking commenced United Provinces of Agra and Oudh and North-West Frontier Province, continued Burma, Punjab, and Behar. General crop conditions good, but rain badly needed unirrigated crops Punjab.

All India first indigo forecast:—Acreage, 208,100; yield dye, 27,300 cwt. (Last year's corresponding forecast:—Acreage, 300,700; yield, 44,100.)

Bombay cotton market irregular. Fully good Broach April-May, Rs.525 As.8. Piecegoods market active, demand encouraging, with improved prices. Calcutta jute market dull, nothing doing Gunny market steady. Hessians, improved tone. Heavy goods steady.

COMPANY RESULTS, Etc.

The directors of the Ouvah Ceylon Estates have declared an interim dividend of 5 per cent., less tax at 6s., payable November 15.

The directors of the Spring Valley Ceylon Estates have declared an interim dividend of 7½ per cent., less tax at 6s., payable November 15.

The directors of the Telbedde Ceylon Estates have declared an interim dividend of 10 per cent., less tax at 6s., payable November 15.

At a court of directors of the Royal Exchange Assurance it was decided to pay, on November 6, an interim dividend of 7 per cent., less income tax, on the capital stock of the corporation, in respect of the half-year ended June 30.

The registered address of the Dunlop Rubber and Clipper Tyre Companies will, after October 31, be removed to Dunlop House, 1, Albany Street, London, N.W.1. The registered address of the Parent Tyre Co. will still remain 150-152, Clerkenwell Road, E.C.1.

East Indian Railway Company. — The register of the company's 4½ per cent. debenture stock, 1935-1955, will be closed from November 10 to November 29, both days inclusive, for the purpose of preparing warrants for the payment of interest for the half-year ending November 31.

Peninsular and Oriental Steam Navigation. —Dividend on the deferred stock of 6 per cent. free of income-tax, making a total distribution on the deferred stock of 12 per cent. for the year. Instead of paying the usual bonus of 6 per cent. the directors recommend that the amount of this should be added to the reserve fund. They also propose to make a distribution of £200,000 of deferred stock at par to the deferred stockholders. Warrants will be posted on December 16.

CEYLON AND INDIA.

The Talaimannar Route.

In the report of the Principal Collector of Customs, Ceylon, for 1918, it is stated that the goods traffic service, which was opened on the Talaimannar Route in September, 1914, has continued to demonstrate its usefulness and importance. While the amount of import duty collected during the year was somewhat less than that of 1917, the decrease was entirely due to the prohibition of the export of rice from Southern India in September following the crop failure.

While reliable figures as to the annual value of trade by this route with India are still unavailable, it may be pointed out that the approximate weight of goods carried over it increased from 3,216 tons in 1915 and 4,791 tons in 1916, to no less than 25,378 tons in 1917, there being a set-back, however, to 16,046 tons in 1918. The route proved of incalculable service in the conveyance of mails and parcels to and from Europe in 1917 and 1918, when the mail steamers had ceased calling at Colombo, besides serving as a means for the importing of food during the shortage of tonnage.

The most urgent necessity for the development of trade by the route is the provision of additional warehouse accommodation, and there is room for improvement in Customs facilities for the examination of goods and the collection of duty. The public works completed or in progress during the year included the construction of export and shipping offices, two sheds for additional storage of coconut oil and plumbago, and the erection of a 5 ton crane for unloading barrels.

DISTRESS IN INDIA.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agriculture Department, dated October 24:—Our telegram dated October 17. Tests works in Bihar and Orissa, relief works in Manila District of Central Provinces and Ahmednagar District of Bombay Presidency, and some camps in Hyderabad, have been closed. Numbers relieved:—Bengal: Works, 4,319; gratuitous, 4,914. Bihar and Orissa: Works, 2,632; gratuitous, 45,844. Feudatory States of Orissa: Works, 5,819; gratuitous 20,027. Central India: Works, 3,000; gratuitous, 7,100. Central Provinces: Works, 7,827; gratuitous, 5,754. Bombay: Works, 2,685; gratuitous 15,113. Hyderabad: Works, 15,000; gratuitous, 20,000. Madras (incomplete figures): Works, 56,688; gratuitous, 85,794. Prospects are everywhere favourable except that the rabi area in the Punjab may be below normal owing to the early cessation of the rains. Prices still remain high, but show a downward tendency. Difficulties as to supplies appear to be at an end everywhere, except in Bengal and a few isolated areas such as Coorg and Hyderabad.

INDIAN BANKS AMALGAMATION.

Mr. Montagu, Secretary of State for India, replying to Sir J. Rees, said:—Subject to the settlement of some important matters of detail the Government of India have been authorised to proceed with legislation for enabling the three Presidency banks to be amalgamated. It is contemplated that under the proposed scheme the amalgamated bank would be the custodian of the Government balances in India, and would undertake to open 100 new branches in five years.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put export advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

With one or two exceptions there has been a rather easier tendency this week both for Egyptian and for Greek securities; in the former case owing to the various telegrams regarding unrest in Egypt, and in the latter owing to some Continental selling in connection with the present depression in the value of the franc.

In Government securities Egyptian Unifieds have been dealt in to a fair extent in the neighbourhood of 78¼, and finished ½ down at 78. The 3½ per Cent. Prefs. are unchanged at the ex div. price of 66¾, and some business has been done. City of Alexandria bonds are 2 points down at 78.

In Bank shares there is no change in Agricultural Ordinaries, but the Prefs. are ⅛ lower at 7. Anglo-Egyptian Banks have receded ¼ to 18, and Land Banks are ⅛ down at 6⅞. There has been some quiet buying of National Banks round the current level.

In Railways, Delta Lights have dropped back ¼ to 6⅝.

As regards Land shares, Aboukirs have been an exceptionally strong spot, and, on local buying, have improved 3s. to 32s. Small transactions have taken place in Béhéras, but, at the close, the price is ¼ lower at 14. Egyptian Consolidated Lands are fractionally easier at 2s. 3d. Union Foncières, after receding to 3½, close unaltered at 3⅜. Sudan Plantations have been a good spot, and, after rising to 8⅝, finish 9-16ths higher on the week at 8½.

In Miscellaneous descriptions Alexandria Waters are ⅛ down at 11½, and Salts and Sodas finish 1-16th easier at 2 15-16 in spite of a large business during the week.

In Greek securities the 1881 and 1884 loans are 1½ down at 64; Monopolies have remained firm, closing unaltered at 56, after business up to 57. Rentes and the 1890 Loans are 1 point down at 53 and 64½. The 1902 Loan has also dropped a point to 64. The 1914 Loan has been very firm, and, after business up to 73, closes about 72½. The "Currant" bonds have been in demand, with small business at existing level. Bank of Athens have dropped ¼ to 3¼.

Amongst the Oil shares Anglo-Egyptians close ⅜ up at 5⅞. Roumanians are 6d. better at 24s. 6d., and Traians have improved a like fraction to 12s. 6d.

TRADE ENQUIRIES.

ENGLISHMAN (30), demobilized officer now in the East, big organising and local experience, speaks French, Arabic, own motor car, desires to represent British firms in EGYPT, PALESTINE, SYRIA, &c. Address, Represent, care of Editor, NEAR EAST.

MR. JOHN KIRSOPP, M.I.M.E., F.G.S., Offers his services, home or abroad, on Mine Management, Supervision of Prospecting or Diamond Boring Operations or Mineral Reporting work; practical experience Northumberland, Durham, Yorkshire and Lancashire coalfields, and extensive experience in coal, oil, etc., Canada, Alaska, United States, West Indies and Spain. First-class colliery manager's certificate endorsed with Surveyor's qualifications. Mr. Kirsopp will undertake technical or research work anywhere.—Address, 36, Gladstone Terrace, Gateshead-on-Tyne.

LADY SECRETARY DESIRES POST. Shorthand, Typing, Book-keeping, knowledge of French, control of small office. 80s.—F. H., The Ladies' League, 118, New Bond Street, W.

THE LADIES' LEAGUE (under Royal Patronage), 118, New Bond Street, W. Successfully recommends Lady Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Lady Nurses, Nurse Companions, Secretaries, etc.

GOVERNESS DESIRES POST. Knowledge of Kindergarten, Music, French, Needlework. Excellent references. £60-70.—H. W., The Ladies' League, 118, New Bond Street, W.

NOTES OF THE WEEK.

It is announced that the Supreme Council of the Peace Conference has approved the text of the Treaty to be concluded by Greece and the Allied Powers for the protection of minorities in Greece. The Greeks, who have had a wide and painful experience of the persecution to which minorities can be subjected, will probably raise no objection to anything in the Treaty; or if they object to any detail, they will not resent the Great Powers' intention to keep an eye upon them in this matter, as the Roumanians and Serbians have done. As for Roumania, at the time of writing it is understood that she has not yet replied to the Entente's Note of October 12, and consequently a telegram was sent on Monday, by M. Pichon, through the French Minister in Bucharest, asking for "a clear and positive reply" in the shortest possible time.

The further delay in the signature of the Bulgarian peace treaty has been occasioned by the necessity of returning a detailed reply to the points raised by the Bulgarian Delegation in its comments on the draft treaty. Certain modifications of the original document have been made, but they do not affect the delimitation of Bulgaria's frontiers. One of the concessions said to have been granted is power to create a special corps of frontier guards, volunteers, not numbering more than three thousand. At first sight this clause looks as if the Allies had placed their *imprimatur* on the Komitadjis the cause of most of the trouble in the past in the Balkans, and it is devoutly to be hoped that there is some other explanation of the concession. Frontier guards on each side of a boundary which satisfies neither country can hardly fail to be a fruitful source of armed collisions. If the Supreme Council imagines that in this way peace has been secured for the Balkans, it has placed a fitting climax on a lengthy record of blunders.

In replying to the Bulgarian objections to the peace terms, M. Clemenceau had no difficulty in drafting a scathing letter. In so far as a people is responsible for the acts of its Government the indictment stands: but the fierce denunciation framed in the name of the Allied and Associated Powers reveals no knowledge of the Balkan problem and less willingness to try to understand it. M. Clemenceau says that these Powers "wish merely to establish a peace which shall be just and, consequently, durable and fertile." The peace, however, is not just; it is doubtful whether it can be durable; it certainly can only be fertile of trouble. But the earlier the treaty is signed, the sooner can the work of repairing the mistakes of Paris and of introducing lasting peace and harmony in the Balkans begin.

It is as difficult now as it has been at any time since the Armistice to form a clear conception of the situation in Turkey. It looks as if various parties, but chiefly the "Committee" and the "Anti-Committee" groups, are manœuvring and struggling for position, with the representatives of the Powers looking on, helpless. This may be an utterly erroneous view, and it is difficult to believe that Paris can really be as inert as it looks in this matter But it is obvious that the world is paying quite heavily already for the indecision regarding the future of Turkey which, Mr. Lloyd George has told us plainly, is due to the delay of the United States in making up its mind about the mandate for Asia Minor. The trouble in Egypt, for instance, it is becoming daily more apparent, cannot be settled until the Turkish Peace Terms are at least made known. Again, the glimpses we get of events in Armenia are calculated to give us the impression that the Armenians would welcome almost any decision rather than continue to endure the present state of suspense, varied only by frequent guerilla fighting; while the situation in Western Asia Minor is bound to be full of risk until the Powers speak out firmly and clearly.

In these circumstances it is by no means astonishing to find Captain Ormsby-Gore asking in the House of Commons why we have to await the decision of America, considering that she had not been at war with Turkey. In reply, Mr. Bonar Law suggested that the House would not desire that we should do anything to give the impression that we undervalued American assistance in the general settlement. Judging by the past, such a possibility is extremely remote, the tendency being strongly in the opposite direction. But when the question cries so urgently for settlement, and when there seems to be a prospect that America may finally decide not to join the League of Nations, and may even decline to ratify the Treaty of Versailles, it is permissible to ask how much longer things are to be left in such an unsatisfactory and highly dangerous state.

Although the fact is unlikely to have much weight with the Peace Conference, the Turks themselves are

Digitized by Google

undoubtedly suffering much by the delay. Rumours are current that a plot is afoot for the removal—some reports suggest the assassination—of the Sultan and the placing on the throne of Prince Mehmed Selim, the eldest son of Abdul Hamid. Apart from other considerations, which are not likely to influence Paris considerably, such a change would be very prejudicial to Entente interests, and it is much to be hoped that the Allies will let it be clearly understood that under no conditions whatsoever would any plot of this character be allowed to achieve its ultimate purpose. The relations between Sultan Mehmet VI. and Mustapha Kemal Pasha have always been friendly, and it is difficult to credit the rumour which has it that the latter sees eye to eye with the C.U.P. in regard to the desirability of a change of ruler. But, indeed, it is difficult to credit most of the rumours coming from Turkey, or purporting to convey information regarding Turkey at the present time, and it would be wise to take them all with a large amount of salt.

There have been further riots in Alexandria, and reports from other parts of Egypt indicate that the country is in a thoroughly unsatisfactory state. It looks as if the agitators had succeeded beyond the most extravagant hopes of some of them; and it is certain that many of the more responsible Egyptians have not yet realised how far the mischief has spread, or how bitter and unreasoning is the spirit of hatred that has been aroused. A traveller, with a wide experience of the Near East and a thorough knowledge of the language and customs of Egypt, who recently spent a considerable time in that country, declared that it was pitiful to see everywhere evidence of such rabid xenophobia, and especially of such intense hatred of the British, as had sprung up quite lately. The fact is that the lower class Egyptian, egged on by some of his semi-educated countrymen, has become dangerous; while many of the better class have not grasped the fact, and others, who are well-disposed towards the British, are—for reasons explained recently by our Cairo Correspondent—afraid to attempt to use their influence in any moderating way.

These points are illustrated by the account of a very ugly riot at Alexandria last Friday. "A delegation of lawyers, merchants, and notables" of that city, we are told, "prevailed on the Governor to order the withdrawal of the police and troops, giving an undertaking that there would be no demonstrations or disorders." Such an undertaking would certainly only be given in good faith, but subsequent events proved that the lawyers, merchants, and notables had failed to gauge the temper of their fellow-townsmen. After a service at one of the principal mosques, a "demonstration," of the kind beloved by the Egyptian, took place. It began quietly enough, but suddenly—as the result apparently of an Army ambulance colliding with some of the demonstrators—the mob lost its head and at once started looting. As a result of the representations of the notables, neither police nor military were available to deal with the trouble at once, and for over an hour the rioters had things all their own way. Then the police appeared, and succeeded in quelling the disturbance without military assistance. The most disquieting fact about the trouble is that it took place on the Moslem Sabbath, and immediately after the Friday Prayer. That the agitators have sought to stir up the latent fanaticism of the masses is not to be doubted; but so far the responsible leaders of Moslem opinion have behaved with a wisdom and restraint that have rendered such attempts far less dangerous than they might easily be. It would be a bad day for Islam if ever the counsels of moderation should go unheeded and the fanatics gain the upper hand.

An event which may prove to be of considerable importance to the Arab world took place on Thursday of last week, too late for notice in our columns. On that day, at Buckingham Palace, the two Missions from Arabia, which have been in England some time, were received by the King, who was accompanied by the Queen and Princess Mary. The first Mission came from Nejd and was headed by Ibn Saud's son, Sheikh Faisal ibn Abdul Aziz; the second was from Koweit, and was led by Sheikh Ahmed ibn Jabir ibn Subah, nephew and heir of the ruler of Koweit. Both came to offer congratulations upon the victory of the Allies, and bore handsome presents for the King, and the members of both parties are understood to have been much gratified by their reception by his Majesty. The occasion was significant, because it emphasises the increasing importance which Arabia and the Arabs are assuming in world politics. Before the war it was the rarest thing for any Arab of rank to visit England, but since the Armistice we have already been able to welcome several, and in the near future we shall probably welcome others. In the present case, the Nejd Mission has taken the opportunity of conferring with the India Office and the Foreign Office, and will doubtless have explained fully Ibn Saud's views on the development of Arabia. That is a point to the good. We must realise that the Arabs expect to be considered no less than our other Allies.

Two items of news brought by the last Indian mail indicate that some of the provincial Governments are moving in the matter of explaining their attitude and actions to the people whom they govern—a matter the importance of which has been urged on various occasions in these columns. Mr. Candler, a well-known journalist, has entered on his duties as secretary of the Publicity Committee in the Punjab, while the *United Provinces Journal*, originally a war effort, has now appeared in the more pacific guise of "a popular educator." The progress of these ventures will be watched with interest, not entirely unmixed with anxiety. There is much necessary work to be done, but there are pitfalls in the way, and we have only to glance at some of the "departmental" journals recently issued in this country to appreciate the danger hinted at by our Indian contemporaries, that the new organisations may sink to the position of blowers of official trumpets. That result would be disastrous, but we may perhaps trust to the vigilance of the unofficial Press to check any tendency towards undue adulation, and it is a promising sign that in the United Provinces special attention will be given to agricultural and industrial topics, in regard to which there is almost unlimited scope for the dissemination of useful knowledge, and—at the moment—but too little room for flattery.

Perhaps the occasion is appropriate for suggesting that the authorities at Whitehall and Delhi might with advantage bring their own publicity arrangements into some sort of order, to the extent, at least, of coming to an agreement regarding matters of fact. The Afghan Peace is a case in point. In August the world at large was told of a treaty all take and no give: a little later, on the 23rd of that month, England was told that there was give as well as take, but India had to wait for this information until the last week in September, and India is somewhat hurt by this apparent neglect. Or take the "mystery" of the Chief of the Indian General Staff: it was recently announced in England that General Jacob would succeed to this position when it becomes vacant next January, but in India it has been stated without contradiction that the vacancy actually occurred last September. Again, Mr. Montagu recently stated in Parliament that increased rates of pay for Army officers in India would shortly be announced, but the rates had been published in India two days before this statement was made. All this is bad administration, to say the least, and the authorities cannot complain if their statements, like some other forms of currency, tend to circulate at a discount.

The decision of the Government of India to appoint a commission on sugar production will meet with universal approval, tempered only by regret that the step was not taken twenty years ago, when the question first attracted public attention. Had action been taken then, it is

Digitized by Google

possible that by this time India might have become an exporting country; but in any case she would not be such a serious competitor in the market for the world's insufficient supplies, and our present inadequate ration might be considerably larger than it is. Regrets are, however, useless, and the great thing is that the subject is now to be investigated by a body of experts charged with the duty of marking out a clear line of policy for the future. The task is no easy one, for at every stage, from planting the cane to selling the sugar, there are obstacles to be faced, and a great variety of prejudices or predilections to be taken into account; but we believe that the thing can be done, and that India can, if she chooses, develop from her present position the greatest sugar industry in the world.

It is a sign of the times that the Commission is instructed to examine the effect of protective duties, a degree of liberty, or licence, which, so far as we remember, has never hitherto been granted in India to any body of the kind. The extent of the change in atmosphere may be gauged by the fact that as lately as 1916 the tariff question was specifically excluded from the purview of the Industrial Commission, and if we look a little farther back, we must try to imagine what Lord Morley, for instance, would have said about such a proposal. We have not the least intention of anticipating the work of the new Commission by saying whether the Indian industry needs a protective tariff or not, and, indeed, we do not envy them the task of examining the question in all its ramifications, but we are glad that the examination is to take place; India is very nearly solid in favour of protection, and while her knowledge of economic science is not one of her strongest points, it is only right that her often-expressed wishes should receive a respectful hearing.

The question of Afghanistan has again been raised in the House of Lords, and Lord Curzon replied, but without adding, except in one particular, any definite information to what he had stated the previous week. The exception was the admission that the letter of Sir Hamilton Grant "which no doubt was composed by him in the first place, was previously seen and approved by the Government of India, and was telegraphed by them to the Secretary of State in this country for sanction." His Majesty's Government, Lord Curzon continued, "referring to the urgent representation of the Government of India that an assurance to the Afghans such as that contained in the letter was essential to the conclusion of the peace negotiations, and having regard to the conditions of the treaty itself, decided not to withold their assent." This admission is likely to confirm the critics in their opinion that, having lost the war, the Afghans won the peace by securing the one thing on which they chose to set any value at all.

INDIAN ARMY COMMITTEE.

The Committee appointed by the Secretary of State for India in July last, under the chairmanship of Lord Esher, have completed the taking of evidence in this country, and will leave to prosecute their inquiries in India on Saturday.

Lord Esher and Lieutenant-General Sir J. P. du Cane will remain in this country, and at the sittings in India the chair will be taken by Sir Michael O'Dwyer, as the member taking precedence in official rank. During the absence on the Committee of Lieutenant-General Sir H. V. Cox, the Acting Secretaryship of the Military Department at the India Office is filled by Lieutenant-General Sir Alexander Cobbe, V.C., lately acting G.O.C. in Mesopotamia. The members of the Army Commission leaving on Saturday, in addition to those named, are Sir Godfrey Fell, Lieutenant-General Sir C. W. Jacob, Major-General Sir W. Gillman, and the secretary, Brigadier-General C. M. Wagstaff. They will be joined in India by Lieutenant-General Sir H. Hudson, Adjutant-General in India, and Sir Malik M. Umar Hyat Khan, Tiwana, the representative on the committee of Indian officers.

The War Office states that since September 17 twenty-two vessels have sailed from Bombay, Basra, and Karachi, carrying 339 officers and 9,245 other ranks from Mesopotamia, and 1,018 officers and 7,518 other ranks from India. The total number of troops embarked since July 26 is 852 officers and 19,565 other ranks from Mesopotamia, and 1,347 officers and 8,217 other ranks from India.

THE WEEK AT HOME.

The Financial Debate.

The House of Commons ran away from its projected attack on the Government's financial policy, or lack of policy, last week. A White Paper issued two days before the debate showed that the position was even more serious than had been supposed, and the gap between revenue and expenditure greater than even that constitutional pessimist Lord Buckmaster had imagined. But Mr. Austen Chamberlain disappointed his critics by a closely-reasoned speech, and took all the sting out of the attack by promising that there should be no increase of taxation next year. How it is to be done nobody knows, but for the time being at least nobody cares. If there is one thing that is sufficient unto the day it is the taxes thereof.

The attitude of the Liberal and Labour parties in replying to the Chancellor of the Exchequer demonstrated once more the extreme feebleness of the Opposition. It is not so much afraid to strike as incapable of striking hard; its attacks are about as formidable as the "good hard knocks" of the curate in the play. On financial matters the Liberals have suffered an irreparable loss of debating power by the defeat of Mr. Asquith and Mr. McKenna; the Labour critics were not more ineffective than their rivals in Opposition—they could not well have been more ineffective had they tried—but equally incapable of driving a point home. The one constructive suggestion from that quarter was made by Mr. Clynes, who agreed that the bread subsidy should be taken off, but proposed that all wages should be increased by a shilling a week to make up for it—in other words, when we lose on the swings we are to charge more on the roundabouts. Mr. Lloyd George had no difficulty in securing his usual triumph; a good case could have been made against the Government for extravagance and waste, but it was not made. Nor was there any real attempt to make it.

Liberal and Labour Dissensions

One reason for the slackness of the attack on the Government is the fact that the Opposition are more busily engaged in fighting among themselves at the moment than in combining against the Cabinet. The Independent Liberals, whom some wit nicknamed the "Wee Frees," are weeer and freer than ever. The Whip is in open revolt against his leader, and the party is split from top to bottom. Sir Donald Maclean, the titular leader of the group, is one of the old school of moderate Liberals; he speaks with the restraint of Mr. Asquith, and one feels that he always has the feeling of responsibility engendered by the old tradition that the Leader of the Opposition is the heir-apparent of the Prime Minister. Mr. Hogge, on the other hand, is an irresponsible. In the old days of Liberal autocracy he would just as soon criticise Mr. Asquith as the Tories, and the habit survives to this day. In Mr. Hogge's eyes the proper function of a political leader is as a target for Mr. Hogge; which is vastly amusing to the rest of the world, but perhaps not quite so pleasant for Sir Donald Maclean.

While these diversions continue in the Independent Liberal camp, the Government have nothing to fear from that quarter; and the reiterated rumour that Mr. Asquith contemplates an early return to the House has again been formally denied. The ex-Prime Minister is fast becoming a prehistoric figure, a creature of myth and legend, to the new generation at Westminster; and his occasional speeches in the provinces do nothing to counteract the impression. He indulged in a little formal criticism of the Government this week, but what he said attracted less attention than the extraordinary fact that he should have thought it worth while to go to Aberystwyth, of all places in the world, to say it. One curious result of the speech, by the way, has been that the East Fife Liberal Association have delivered an ultimatum to their old representative, giving Mr. Asquith fourteen days to make up his mind whether he will stand again at the next election. So far his decision has not been made public.

The Labour party is in an even more ridiculous position. It has always consisted of firebrands and ex-

Digitized by Google

tremists on the one hand and of moderate and rather stuffily conventional orators on the other. The last election kept the extremists out of the House, and let the moderate men in; only one man, a Glasgow member, could by any stretch of the imagination be called an extremist, for although Mr. Thomas, the railway man, occasionally says extreme things, any child in politics can see that he does not really mean them, and, like the chameleon, only changes his colours to be in conformity with his surroundings. The result is that the ordinary Labour member utters endless platitudes in the House, which nobody listens to except the official reporters, and they only because they are compelled; while the firebrands dance without in the wilderness, and utter incantations and imprecations in the *Daily Herald*.

The *Herald* is itself in rather a comical position. It is an entirely revolutionary organ, whose aim is to destroy capital and the "taint" of capitalism everywhere. It is always attacking "the capitalist Press" as unfair, dishonest, and prejudiced; but this week it has begun to appeal for more capital to carry on, announcing that it cannot go ahead as fast as it ought to on account of shortness of cash. The wicked capitalists do not seem to have responded in the proper spirit of forgiveness to this ingenuous request.

The City Boom.

As a matter of fact the City has other things to think about in these days. While the leader-writers in Fleet Street are shaking their heads over the appalling prospects of the Government and the country, and waxing eloquent over the universal insecurity of industry, it is a sober fact that trade is flourishing, and that new companies are issuing their prospectuses at the rate of a dozen a day. A few of these, no doubt, are of the wildcat order, but most are of the solid industrial kind which appeals to the steady investor. On Monday last over ten millions of new capital were asked for, either by well-established companies which are enlarging their businesses, or by entirely new industries; which gives the lie to the theory that the war has killed British enterprise. Most of these new issues appear to be successful in getting the money asked for; only one or two companies have failed to go to allotment in the last few months, and although in the case of one huge issue recently the underwriters were left with half the shares on their hands, the day-to-day dealings of that particular company on the Stock Exchange do not show any serious depreciation in the shares.

Apart from these solid undertakings, which make the banks and the issuing houses busy, the Stock Exchange is enjoying a boom of its own. As a reaction after the war, when everybody bought War Loan and locked it up in the safe with the internal confession that 5 per cent. for doing one's duty was not so bad after all, it is a relief to have a real gamble in the most speculative shares on the market. Oils and rubbers are the only favourites at the moment. Everybody buys them, but nobody holds them for more than a few days, and then sells them at a profit—or a loss; the idea of waiting for a dividend simply does not enter into the game at all. It is very amusing, and very exciting, and so far nobody seems to have burnt their fingers very badly; indeed, it has been almost impossible to go wrong for even rubbish has mounted to enormous prices and still finds purchasers.

The moralists and the pessimists deplore the boom, and declare that we are living in a fool's paradise, from which there will soon be a speedy and a sorrowful awakening. Their predictions may come true—even a pessimist is sometimes right by accident—but those on the inside declare that no serious harm is being done. In the aggregate the amount of business transacted is enormous, but the individual transactions are small. If a man with five thousand pounds to invest puts four thousand into a solid seven per cent. industrial, and has a fling with the odd thousand, he is not likely to commit suicide if he loses the latter so long as he keeps the former. And there is always the possibility at the present moment that the odd thousand may become two in a night.

There is the story, for instance, of the man who bought the wrong shares over the telephone. On leaving his office he was run down by a taxi, and taken to hospital with a broken leg. A week later he remembered the transaction, realised his blunder, and persuaded the nurse to ring up his broker to find out how much he had lost. The reply was that he had made two hundred pounds. The hospital got half as a donation, and one version of the tale says that the patient refused to prosecute the taxi-driver and married the nurse. But doubtless that is an exaggeration.

The American Strikes.

The Labour troubles in the United States are being watched with interest in England, but as the issue develops it is realised that no really effective parallel can be drawn. The idea of stopping a strike by a legal injunction, often practised successfully in America but apparently abortive on this occasion, could not be applied to a British dispute; nor is the warfare between Capital and Labour likely to proceed to such extremes at home as across the Atlantic. Both sides at the moment are threatening a fight to a finish, with results that may be serious for American industry, but still more grave for the social life of the country, which is threatened by a class war. The present difficulties are peculiarly repugnant to President Wilson, who is not only prevented by illness from attending in person to the dispute, but is also forced to see its unfavourable reaction upon his whole international policy.

Undoubtedly it was his hope that the United States should be the moral leader of the world in the League of Nations, standing above the battle of rival European interests, and either composing quarrels or dealing out impartial justice to the recalcitrant from the lofty height of Washington. He would be a bold man who cherished that expectation any longer. The politicians at Washington have no belief in America's moral leadership of the world. The general public either lacks interest or doubts the advisability of looking for trouble abroad when there is trouble enough and to spare at home. The cynical suggest that the American mandate should be confined to America. It may be surmised that many of the very vocal opponents of the League of Nations are not altogether sorry that the Labour troubles of America have diverted attention from that instrument, and that they will use the interval as a means of forging further arguments against their aversion.

The Home Labour Situation.

Official Labour is congratulating itself this week in England. Its candidates have won the bulk of the borough elections, more through the apathy of the Progressives, Municipal Reformers, and Ratepayers' Association candidates and supporters than for any other reason; Labour was the only party that could induce its followers to go to the poll, and therefore deserves its victory. It has been seized as a portent of the next House of Commons both by the victors and the vanquished—a fact which proves how short political memories can be. If the past is any criterion, the moral is precisely the reverse. The London County Council was consistently Liberal or Progressive while the Conservatives were in power; in 1907, a year after the Conservative downfall in Parliament, the L.C.C. for the first time returned a Conservative majority, and the Progressives have been in a minority ever since.

But Labour has another reason to be pleased with itself. As a result of the railway strike, the Government has been compelled to recognise by statute that wages shall not be reduced until September, 1920; apparently it has not yet dawned upon the triumphant politicians that this enactment also standardises the high prices against which they protest in every speech. Further, Labour has compelled the Government to omit from its Bill any real curtailment of the right to strike, which is always jealously guarded as the fundamental weapon of the worker. Perhaps it does not make much difference after all. There have been many attempts to stop strikes by enactment, but in effect if men choose to go on strike they go on strike, and the law which forbids them to do so under penalty is not enforced. The attempt to square that particular circle has been made again and again by optimistic politicians, and has always failed.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, October 16.

Accession Anniversary of the Sultan.

Last Thursday was the anniversary of the accession of Sultan Fuad. In the morning his Highness held a reception at Ras El Tin Palace, which was attended by the largest number of notables seen at such a ceremony for some time, and on the same afternoon his Excellency Mohammed Said Pasha, the Prime Minister, gave a very successful tea party at the Jardin Antoniades in honour of the occasion.

It is understood that the seat of Government will be officially transferred back to Cairo towards the end of the month, by which time Lord Allenby will have returned and Sir Paul Harvey will have taken up his duties as Financial Adviser.

Indemnities for Riot Damages.

In the Budget for the current year a sum of £E1,000,000 was set aside to meet claims arising out of the disorders which occurred last March. A Commission has now been appointed by decree of the Council of Ministers to examine and settle claims for damage suffered by the general public. The Commission will consist of H.E. Yehia Pasha Ibrahim, President of the Native Court of Appeal, as President; Sir Alexander Wood Renton, late of the Ceylon Courts, as Vice-President; and Mr. P. F. Sanderson, of the Native Court of First Instance; Mr. W. A. Betts, Director of Municipalities; Hussein Kamil Bey, of the Ministry of Interior; Rafla Tadros Bey, of the Ministry of Finance; and M. De Saint Plancat, of the French School of Law, members. It is authorised to receive and examine claims, and either to reject them or to fix the amount of the indemnity, there being no appeal from its decisions. No claims will be entertained for indirect damage or for the loss of specie, jewellery, silver articles, objects of art, antiques, stocks and shares, rents, or crops. At the same time, if any of these articles were warehoused for sale or pledged in security of loans, an indemnity may be accorded if written documents, stamped by the courts, can be produced as proof. Likewise, indemnities may be accorded to owners of crops stolen or destroyed while in barn or standing. Claims relating to buildings will be settled on the basis of the value of the buildings at the time they were damaged; those for loss or deterioration of goods forwarded through, or received by, the State Railways will be dealt with according to its regulations by that Administration; but with that sole exception, all claims for damage are to come within the jurisdiction of the Commission. It is expressly laid down in the decree that the Native Courts will not be competent to hear cases for compensation brought against the Egyptian Government, and that the institution of this Commission relieves the Government and its Administrations of all responsibility in regard to any claims for compensation whatsoever made by the public at any time in connection with the recent disorders. All claims have to be submitted to the Commission, or to the Egyptian State Railways, not later than November 15 next; and the credit of £E1,000,000 will be distributed *pro rata* between the claims admitted by the Commission.

The Alexandria Tram Situation.

An interesting development has taken place in connection with the Alexandria tram strike. At the last Council of Ministers correspondence which had been exchanged between the Prime Minister and the municipality on the subject of the concessions was submitted; and the Council approved in principle the proposal that the Government should cede to the municipality its right to purchase back the concessions held by the Alexandria Tramways and the Ramleh Railway Companies, and that it should agree to give its financial support to the municipality in this matter, provided that the scheme for the purchase be concluded without having been first submitted to the Government for approval. This sudden development came as a great surprise, and has aroused much comment.

It appears that although they hold separate concessions the two companies have for all intents and purposes amalgamated and have mixed up their accounts by transfers of shares and other transactions to such an extent that it is almost impossible to obtain an exact account of the revenue of either. It further appears that the Alexandria company cannot raise its fares without the permission of the municipality, but that the Ramleh company is free to do so. The municipality refused its permission to the Alexandria company, whereupon the Ramleh company announced its intention of doubling its own fares and of resuming the service. The service has so far not been resumed, but the company has requested the Courts to appoint a sequestrator to examine the books and control its accounts. Exactly what has led up to the sudden decision of the Government to intervene is not quite clear, but we can be certain that it would not have taken this step unless it had very good legal grounds for doing so. In any case, it is high time that something was done to bring about a resumption of the service, and it will be interesting to watch developments and see whether the municipality is able to run these services without any increase in fares and at the same time to meet the demands of the men.

The Students.

There is trouble once more in the Government schools, which opened a fortnight ago. The ringleaders are the the students of the school of enginering, who protested against certain regulations having to do with the syllabus and the examinations, and who refused to resume their studies unless their demands were immediately agreed to. They sent telegrams of protest to the Prime Minister; but his advice and the friendly efforts made by Egyptian officials to bring them to a more reasonable frame of mind proved unavailing, and the students have steadily refused to do any work, though they attend their school and eat the meals which are provided for them by the Ministry of Education, and part

of the cost of which is included in the fees. Meanwhile, these students have been trying to get their comrades in the other higher schools to follow their example. In some cases they have succeeded, but most of the schools have confined themselves to a one-day strike to show their sympathy. The situation is far from satisfactory; for the students have not contented themselves with submitting demands directly connected with the administration of their schools, but together with their comrades in other schools, they have issued pamphlets and addressed telegrams to the Prime Minister, calling upon him to stand for independence, and telling him that he had better do his duty, and so forth.

There seems little doubt that this is all part of the campaign engineered by the Extremists to embarrass and browbeat the Cabinet, and the vernacular press is encouraging this lack of discipline by giving the fullest publicity to the actions and writings of these students and schoolboys. It is regrettable, to say the least of it, to find that their parents and those into whose hands the reins of government would presumably fall if independence were granted to Egypt, are unable—I might even go so far as to say unwilling—to control the strikers and make them return to the studies which alone can fit them eventually to take the part in the administration of their country to which they seem so to aspire. In no other country would such behaviour on the part of students and schoolboys be tolerated for one moment; nor would youths of such an age elsewhere dream of interfering in politics and endeavouring to dictate to those set in authority over them as these youths are doing.

CAIRO, October 23.

The Residency moved up to Cairo this week and the seat of the Government will be transferred back to Cairo in a few days' time. The staff and archives, etc., came up by special train, but their departure from Alexandria and arrival in Cairo took place with such a little fuss that the Extremists jumped to the conclusion that the train had brought the Milner Commission which—presumably owing to our fear of hostile demonstrations—we wanted to introduce secretly into Cairo. They accordingly spread the news round, and in Alexandria hostile demonstrations took place. It was not long, however, before they found out their mistake, but the excitement which was noticeable enables one to foresee what may happen when the Commission actually arrives.

The Milner Commission.

Indeed, the Milner Commission is the sole topic of the hour, and must be proving a godsend to the vernacular press, since it enables it to fill its columns with articles, telegrams, etc., and to command an extraordinarily large and ready sale.

The phase which is at the present moment most interesting the Press is an interview which the Prime Minister is understood to have given last week to some Egyptians who went to interrogate him on the question of his attitude towards the Milner Commission. These gentlemen, although Extremists, were, as far as can be gathered, delegated by no particular section of the Extremist element, and, apparently, took it upon themselves to put the question to the Prime Minister. It is interesting to note, however, that one of them disappeared on the way down to Alexandria. Important business seems to have detained him at Tanta, and he left the task of confronting the Prime Minister to his colleagues. They succeeded in drawing from him a statement to the effect that he had asked for the postponement of the Commission because many problems remained to be settled in Europe, among them the status of Turkey, and he considered these problems should first be settled; that if the Commission came in spite of his representations, he should regard it as a sign on the part of the British Government of its lack of confidence in him and his colleagues; that in the course of a recent interview with the Mudirs in the presence of the Adviser to the Interior he had forbidden them to take any hand in politics; he had ordered them to occupy themselves solely with the administration of their provinces and especially with the maintenance of public security for which he held them personally responsible, and had told them that if any one endeavoured to bring pressure to bear on them or the people in political matters they were to report at once to him. (The reason for the latter injunction was that there has been of late much talk in the vernacular press of propaganda carried out on behalf of the Milner Commission by Government officials. This allegation has been proved to be without foundation, particularly in connection with certain mysterious blank forms which, it was definitely stated, the Omdas and fellaheen were being forced to sign, and the statement with regard to which has had to be denied by the Press Bureau.)

The account of this interview which has been circulated by the Egyptians who interviewed him has been published by every paper, and has been accompanied by such comments and has been given such complexion as have evidently been thought best to suit the views of their readers. It has, as stated, aroused considerable discussion amongst the Egyptians, who are divided in their opinion as to whether they should have confidence or not in the Prime Minister. On balance, however, opinions seem to incline to give him support.

Recrudescence of Demonstrations.

With the return of the cooler weather Egyptians appear to be reverting to more active means of expressing their feelings, or, rather, the agitators are finding it easier to persuade the rank and file to fall in with their suggestions in this connection. Lately there have been one or two minor demonstrations in the provinces, and on several Fridays the usual mid-day prayer in Alexandria has been followed by small manifestations. On Friday last, however, quite the largest crowd that has been seen for some time assembled outside one of the principal mosques in Alexandria, and on the conclusion of the service, when its ranks were swelled by worshippers from within, it moved, with banners at its head and amid the usual Nationalist cries, towards the European quarter of the town. The demonstrators reached the American Consulate, outside which they shouted "Down with the Milner Commission," "Long Live Independent Egypt," etc. They were driven off by Egyptian troops and police, and tried to reach the Italian Consulate for the same purpose, but were stopped and forced to disperse on reaching the European quarter. There were very few casualties, and none of them serious, but it looks as if from now onwards we may expect a repetition of popular demonstrations.

The Tram Strikes.

Since my last letter the Alexandria and Ramleh trams have resumed their services on the suburban lines with doubled fares. Residents objected very strongly to the

extra charge, and most of them declined to pay, their names being taken by the conductors with a view to possible action against them by the company. It is understood that the company has taken legal advice on the matter, and has asked the Government if, in the event of its re-establishing the old tariff, the former will indemnify it for any loss it may incur. The Government reply has been that until the company takes proper measures to ensure collection of fares such a proposition cannot be entertained for one moment, and the general opinion is that if the company were to establish a more efficient control it would substantially increase its receipts—it is, indeed, notorious that hundreds of passengers travel daily without ever paying a millieme—and would quite possibly cover the extra charge entailed by the improvement in pay and service conditions which it has had to grant to its staff. As regards Cairo, the position has improved considerably, and not only are tram services working normally, but the Heliopolis Metropolitain has succeeded in converting its one month's compromise into a permanent agreement with its men.

Trouble on the Railways.

Meanwhile, however, trouble is threatened on the State Railways. For some time there has been a certain amount of unrest amongst the men, but they have been kept quiet by promises that their demands were receiving consideration, and by the knowledge that a special commission is sitting to deal with the question of wages. Of late, however, they have become more restive; and the climax came a few days ago, when they threatened a general strike throughout the service unless their demands were immediately granted. The general manager personally interviewed them, and went thoroughly into the points of issue. These personal interviews showed that these points were but minor grievances susceptible of easy adjustment, and an understanding on the subject was arrived at with the men, who agreed to continue at their posts. The railway officials labour under no delusions, however, and have made all arrangements to carry on the service in the event of a sudden general strike.

The reason that they are taking all these precautions is that it has been for some time common knowledge that the extremists had planned a wholesale and simultaneous cessation of work throughout the country as a popular demonstration against the Protectorate and the Milner Commission, and that a general railway strike naturally formed part of their plan of campaign. Personal contact with the State Railway men has made it perfectly clear that outside influences have been at work, and that without those influences they would not have contemplated their present step. It is because of the increased activity of political agitators throughout the country, and the conviction that they have been tampering with the railwaymen, that there is reason to fear that the trouble is not at an end; and those responsible for the transport arrangement, on which, apart from anything else, the feeding of the towns depends, are quite rightly taking their precautions.

ROUMANIA.

BUCHAREST, October 23.

The Political Situation.

The general situation appears on the surface to have remained much the same during the last fortnight. The voices that were raised in some of the local papers against the Military Ministry are now inclined to turn against M. Bratiano, who, it appears, is generally singled out for such attentions when other attractions fail.

The elections have been postponed again, and prefects are touring the country preparing for the great event. The mass of the people show indifference, real or feigned, to politics, and declare that they will abstain from voting; a smaller section, including most of the Socialists, has decided not to vote on the ground that they do not trust the whole arrangement. Nosidered that they will return M. Bratiano to power. doubt the Liberals will vote, and it is generally conAll the talk about abstaining from voting may be but a cover to some deep design of other party leaders; there is certainly some discontent abroad, and an outbreak, if not probable, is always possible. In fact this country, like every other, is getting weary of diplomatists and politicians, and wants to get on with its business. There is a vast amount to be done, and there are none too many hands to do it.

Hungary: A Rumour.

Concerning Hungarian affairs, a report has got into the papers that that country is to have an English peer as Governor, a well-known administrator. His name figures with v. Moltkes, Borgias, and others, in a quaint little publication called "Semi-Gotha." This entertaining work came out in the winter of 1913-1914, and professed to give traces of Semitic origin or connection amongst the noble families of Europe. The book was promptly suppressed by the German Government, but not before it had achieved a considerable circulation. The suggestion, therefore, coming at a time when the Hungarians are said to be seriously thinking of taking to the pogrom habit, affords considerable amusement in certain circles here, and is regarded as further evidence of the Supreme Council's tact and discernment.

CYPRUS

The Question of "Union." OCTOBER 14.

The Pan-Cypriot meeting was duly held on October 12 (September 29, O.S.), in the courtyard of the Greek Archbishop's palace at Nicosia, under the presidency of the Bishop of Papho. It was addressed by that prelate, by M. A. Liassides, Mayor of Nicosia, and by M. E. Zeno, a member of the Legislative Council. A resolution was then passed and signed by the representatives of the towns and of 475 villages, as well as by the bishops and higher clergy. It records the aspirations of the Greek community for the incorporation of the island in the Greek Kingdom. One of the clauses says: "We also give assurance on this official occasion that we consider it a question of honour that, under the free institutions of Greek rule, we shall live in harmony and in equality of civic rights with the co-inhabitant Mussulman minority."

The Bishop then wrote to the acting High Commissioner, asking him to appoint a time at which he could hand to His Excellency a copy in triplicate of the resolution. The High Commissioner replied verbally that before he could say whether he would receive His Eminence or not he must take cognisance of the resolution. The Greek leaders appear to have taken umbrage at what they considered "an unusual and unprecedented mode of reply in the Government annals of Cyprus," and the Council thereupon decided to express their surprise at the "paradoxical tactics," and sent copies to the High Commissioner, with a request that he would forward them to the Secretary of State for the Colonies. On the following day telegrams were sent to the Prime Minister, the Colonial Secretary, the leaders of the Houses of Parliament, M. Venizelos, and the Foreign Minister at Athens. The telegram was as follows:—

A Pan-Cypriot meeting was assembled yesterday at Nicosia under my presidency. There were present 914 representatives of the entire Hellenic people of the island, who unanimously approved a resolution in favour of union with Greece, appealing to the liberal English nation and the Government of His Majesty for the speedy fulfilment of their just aspirations, which they have submitted through their legal representatives now in London, and declaring that any other solution not in accordance with their aspirations would cause them bitter disappointment and despair. The resolution has been duly submitted to the High Commissioner for transmission.

(Signed) JACOBOS.
Metropolitan of Papho, Acting Archbishop.

30/9/1919 (O.S.).

The object of the meeting was, of course, to show more convincingly, as the time for a decision regarding Cyprus draws near, that the desire for union is shared by the whole "Greek" community. Whatever the truth may be, it must be borne in mind that such a resolution could be obtained at any moment through the machinery, elaborated during forty years, which is controlled by the Committee. Also, as regards the term "Hellenic," that in respect of nationality, there are but a very few individuals in the island who are Hellenic. The Cypriot Greeks were *rayahs*—*i.e.*, Ottoman subjects—until they became, during the war, British subjects. But the ties of language and religion have been brought into prominence. No one blames genuine Greek aspirations, though the manner of expressing them in Cyprus may have been often lacking in judgment. It is to be hoped that, whatever the "solution," the present injurious state of suspense may lead to a more prosperous future for the island.

Miscellaneous News.

There have been some light rains, and farmers who sow early are already busy in the lowlands.

The officer administering the island and Mrs. Malcolm Stevenson have been holding fortnightly receptions on Wednesday afternoons.

Canon F. Newham, Inspector of Schools, has returned from leave in England, and taken up his duties.

MALTA.

MALTA, October 14.

Findings of the Riots Commission.

The Report of the Royal Commission on the recent riots is now available. There is little to be gleaned from it, but certain of the findings are creating the usual "pros" and "antis," an attitude no doubt due chiefly to the scarcity of stirring events in the island. To give some idea of the report, we cannot do better than go to the document itself. From it we cull the following facts of interest:—Twenty-six sittings were held, and 150 witnesses were examined on oath; all buildings associated with the British, including the Governor's Palace, during the riots had to be closed; the Union Jack was burnt in the public street; the police, if not actually siding with the rioters and looters, played the part of spectators. It is the fashion in Malta for anybody who wishes to make himself known to clamour against everything that is English; Dr. E. Mizzi is generally supposed to be the leader of the Italian Party, members of which party are dubbed in the report as semi-imbeciles or hot-heads. Dr. E. Mizzi, the Dante Alighieri, and the Giovine Malta, it is laid down, should be carefully watched, especially if foreigners or persons of foreign origin hostile to England become the followers of this Dr. Mizzi or members of the above associations. "The lack of initiative and the unsoldierly spirit of the officers and men of the Royal Malta Artillery before Colonel Francia's house on June 8 was deplorable"; the students who attacked Mr. Azzopardi and who damaged the property of the University could easily have been identified, and should have been punished as an example. The causes of the riots are put down to certain local facts, each and all of which have been made capital of not only by the Italian Party, but by a certain section of the Italian Press; these causes are set down as labour unrest, the high cost of living, violent articles in the Press, the grievances (more imaginary than real) of the University students, the constitutional question, the religious question ("certain members of the clergy have made capital out of expressions used by the Society of Protestant Truth or some other Bible Society," says the report), Mr. Azzopardi's unpopularity, hurried and misunderstood legislation, the work of the Food Control Board, profiteering and the lack of social intercourse between the English and the Maltese—thus allowing the Italian element to creep in. So runs the report, and it will be easily seen that the causes enumerated are sufficient to set a small island of ninety square miles ablaze. What will happen now it is difficult to surmise, but that there will be no further riots goes without saying; for the authorities concerned have gained by their experience and are well on the *qui vive*. What is wanted are suitable remedies to be applied promptly and rigorously.

Emigration.

Despite the efforts of the committee which has recently visited the Continent in connection with the subject of emigration, there is little keenness shown locally in taking advantage of what has been done. This lukewarmness is attributed to the fact that the wages are not high enough, but it is more probably a desire on the part of those who ought to go away to remain at home. Nostalgia accounts for much here, but it seems a pity that so many prefer dry bread at home rather than buttered toast and marmalade a few miles across the Mediterranean. For a decade there has been a constant cry of "emigrate"; and this makes the local backwardness in the matter quite deplorable. There seems nothing in the way to prevent the young, strong, and sturdy trying their luck, but here again it is "Wait and see" which is the order of the day. It has been well said locally that what the country needs is a practical knowledge of the world.

A new series of provisional postage stamps arising out of the Greek occupation of Asia Minor emanates from Rodosto, where four varieties of Turkish stamps have been overprinted with a large cross, the words "Ellenika Dioikesis" (Hellenic Administration), and new values, all in Greek characters. Turkey is shortly to be provided with a new postage stamp issue, in place of the present Austrian product, which will be printed in London, like the handsome pictorial issue of 1914. The new design is attributed to Fuad Bey, who engraved those of the attractive stamps issued by the King of the Hejaz.

CENTRAL KURDISTAN.

On November 3, at the Æolian Hall, Major Kenneth Mason gave an address before the Royal Geographical Society on "Central Kurdistan." The subject of his lecture was, he said, the country mainly south of the depopulated Nestorian and Jilu belt, west of the Turco-Persian frontier, and north-west of the Suliemania district. The district has suffered much during the war. For instance, one section of a tribe, which in 1914 numbered 150 families, now numbered only seven. The Kurds were for the most part a warlike community; before the war they all carried arms and lived largely by raids. Very few tribes, however, now felt strong enough to give scope to their predatory instincts, and he believed they would now have to settle down to agriculture if they were to live.

Roads and telegraphs were necessary if the country was to be developed. Tobacco used to be produced largely in the country, and timber grown there would, he thought, be worth its weight in gold in Mesopotamia. He thought there was coal in more than one place, and there must be oil. The time would doubtless come when, somewhere in the Kurd highlands, hill summer stations would be erected, so that families of officials in Mesopotamia might escape the insufferable heat of the plains. Major Mason added that the process of taming brigands by League of Nations methods was not an easy one, and our political officers in Kurdistan had in front of them a very difficult task.

AUTONOMY FOR ALBANIA.

A well-attended meeting of the Balkan Committee was held on October 30.

Miss M. E. Durham, speaking on the question of Albania, described how the Powers had failed to set Albania on her feet after giving her independence by the Treaty of London in 1913. During the war, when the country was occupied and devastated by troops of nearly every belligerent, the sufferings of the people were harrowing in the extreme. Since the armistice Serbia, Italy, and Greece had been competing for the lion's share of Albanian territory. The Albanians themselves would not tolerate partition, and demanded full recognition of their national rights.

After discussion, the following resolution, moved by Mr. Nevinson, and seconded by Sir Arthur Evans, was carried unanimously:—"The Balkan Committee declares itself in favour of autonomy for Albania within frontiers not less extensive than those fixed by the Treaty of London of 1913, rectified where necessary in accordance with the wishes of the inhabitants, such autonomy to be controlled by a High Commissioner under the League of Nations with a view to complete independence for Albania within a term of years."

ARMENIA.

Viscount Gladstone presided on October 29 at a luncheon given by the Armenian Bureau in connection with the first presentation in this country of a film founded on Mr. H. G. Gates's book "Ravished Armenia," and also to a considerable extent on the official report prepared by Viscount Bryce on the atrocities perpetrated by the Turks during the war.

Lord Bryce observed that history contained no such record as that of the crimes carried out by the Turkish officials and soldiery in Armenia. Confirmation of these iniquities had come from German missionaries, who unsuccessfully had made representations to their own Government to stop them. Not only had the German Government stood aloof and allowed the Turks to do their fiendish work, but they had suppressed facts and prevented the truth from being known in Germany. It was impossible, he declared, ever again to allow the Turk to rule in Armenia, and it was the duty of the Christian Powers to step in and aid the remaining inhabitants in the task of establishing a competent government.

RESCUES FROM LEPROSY.

The Mission to Lepers (formerly the Mission to Lepers in India and the East) held a public meeting on October 30 at Sion College, Sir Alfred Pearce Gould in the chair. The Mission is now working at ninety-five stations in twelve countries, entirely supporting forty-six asylums, containing about 5,000 lepers, aiding with money grants or Christian teaching forty-four other asylums or settlements containing about 9,000 lepers, and supporting and educating nearly 600 untainted children of lepers in its twenty homes and other associated institutions.

Six large submarines have arrived at Bombay en route for the Far East. They are the first seen in Bombay.

At a recent auction held by Messrs. Walter Bull and Co. a set of eight unused 1916 Salonika stamps were sold for £28.

A petition has been delivered to the Prime Minister in the name of the Armenian Red Cross and Refugees Fund, asking the Government not to withdraw the British troops from the Caucasus before provision has been made by the Peace Conference for the protection of the people from the Turks.

Reuter's Johannesburg correspondent, writing on November 4, says:—At a Jewish reception here to-day General Smuts mentioned that Mr. Lloyd George had asked him to take command in Palestine during the war. He added that he had declined, feeling that he had had enough of fighting and that he would be more useful at the centre of things.

PRESS ON THE NEAR EAST.

Egypt.

Sir Valentine Chirol commenced in *The Times* of November 5 a very important series of articles on Egypt. In the first article he comments on the extraordinary danger of the present situation, and then examines the causes of the grave position, the chief of which he finds in the absence of a clear Egyptian policy. And so, he says, the Anglo-Egyptian bureaucracy has strayed after "the false gods of superficial efficiency and easy opportunism."

In the meantime, a new generation of Egyptians was growing up who had known neither the days of the oppression nor those of the deliverance. They are largely the product of a slipshod system of education, as ill-conceived as it has been clumsily carried out, for the results of which, however, we have ourselves mainly to thank. It is generally admitted to constitute our one great failure, and the one which it will be most difficult to make good. A modicum of ill-assorted intellectual training, almost entirely divorced from moral discipline, has engendered a turbulent spirit of revolt against all parental authority at home as well as against every form of political control, especially at the hands of foreigners, who are accused of denying to the Egyptians, out of sheer selfishness, the right to apply the lessons of freedom and independence which are taught by every text-book we have imported into their schools. The conflict of a new and in itself not unreasonable sense of nationhood, with the restrictions of a foreign tutelage, even when disguised under the form of a "Veiled" Protectorate, was further exaggerated by the religious susceptibilities of a Mohamedan people who watched with growing alarm the rapid decay of the Ottoman Power, the last great Mohamedan Power in the world, under the powerful impact of the West.

But so long as foreign tutelage preserved the form of a "Veiled" Protectorate, even the most advanced Nationalists felt that the future was not definitely prejudged against them nor the door irrevocably closed upon their ultimate aspirations.

He concludes by exposing the folly of changing the "veiled" Protectorate into an open Protectorate without explaining the meaning and purpose of the transformation.

England and Turkey.

The Islamic Information Bureau have recently issued a small weekly paper called the *Muslim Outlook*. The following note, taken from the issue of October 30, will give some idea of what the paper stands for:—

It is astonishing to note how little change the fall of Czarist Russia has produced in British policy till now. The English attitude towards Turkey and the East in general had some colour of expediency while Russia overshadowed everything. It is suicidal now. With a word the English could have disarmed Turkey and regained the fervent loyalty of many millions of Eastern people at the moment when the Russian Czardom fell. That generous, hearty word was never spoken. But one small change was made. It was announced in Parliament that Great Britain, when required by Russia to transfer the Caliphate away from Turkey, had refused, declaring the question of the Caliphate to be the concern of Muslims only. The announcement came too late, unfortunately. If it had been made three years before it might have saved us from a little of that bitter indignation against England which the anti-Turkish propaganda roused in Muslim minds. As it was, the demand of Russia and refusal of Great Britain were derided as a fairy-tale by people who for three years had experienced the propaganda. How many a chance to win again the old enthusiastic loyalty of Muslims was thrown away for lack of one good man! The Muslims cannot reasonably be blamed for holding fast to an opinion which everybody who knew anything about the matter knew they held with fervour. England is to blame for wantonly assailing that opinion to please Russia! What wonder if they drew together for defence. They feel that in the historic Muslim Empire their religion and their hope of progress is attacked. Let England make a generous gesture towards the Turkish Empire, and the present awful strain would be relieved. The Turks have been more sinned against than sinning for two centuries; England herself has used them badly in the last ten years. But the statesmen in this country are tied up in their own war-time propaganda, with the result that they concede grudgingly, under pressure from events, even the fulfilment of their own most solemn promises. That, alas! is not the way to regain the confidence of the East.

CROWE & STEVENS,

Steamship Agents and . .
Commercial Representatives,

PATRAS, PIRÆUS, ATHENS,
SALONICA.

Persia.

The *Newcastle Chronicle* of November 1 devotes, on the occasion of the Shah's visit, a leading article to future British relations with Persia. Our responsibility to Persia, it says, is no light one, but one that we are quite capable of justifying.

So far as the merely internal conditions are concerned we are well placed. We have on the spot a sufficient military force for the maintenance of the order that has been so conspicuous by its absence of late years in Persia. There is no reason to suppose that the work of reconstruction can be hindered by political troubles—in spite of the fact that a good many people are willing to try to make them—but the business of reconstruction is immense. . . .

Externally the imminent history of Persia may well depend upon the development or decay of Bolshevism. The Bolshevists to-day are on the whole of the northern frontier between the Caspian and Afghanistan. We have seen something of their handiwork in the Afghan rising, and all experience of their methods teaches that a helpless State—for without our assistance Persia is helpless—could not easily have worse neighbours. They are better, perhaps, than the Turk whom they have superseded, if only for the reason that their infamies are apt to be somewhat less artistically complete in their manifestations. But it is a poor choice, and if it were only for such security against outrage and pillage as our presence affords, the bulk of Persian opinion—that opinion which is spontaneous, as opposed to that which represents a mingling of the philosophies of Lenin and Enver Pasha—would be as satisfied as is our distinguished guest with the alliance. It brings us, incidentally, a fresh and vital interest in those adjustments of the nearer Middle East which the League of Nations will have to make. We shall have to watch, for instance, on behalf of ourselves and our Persian friends, the future of the very dubious Republic of Azerbaijan. That community is one of the plague spots of the region—avowedly pro-Turk and reactionary—and occupies territory which is properly a portion of Persia, and contains the second town, Tabriz, in point of size. So that in taking over the responsibility for Persia's future we have provided ourselves with many problems that we could well have done without. At the same time, we may, and probably will, have the means of facing and countering directly many other problems which would have become more formidable had we taken a less heroic course.

Islam.

The *Glasgow Herald* of October 29, in an article called "The Menace of Islam," tries to find a way out to the problem of the future of Turkey. It enumerates some of the disquieting signs now visible in the Moslem world, and endeavours to find out which and to what degree pro-Turkish contentions are justified. It refers to Turkish oppression of Christian races, and says:—

It is only by bearing in mind and bringing fairly into play such elementary facts as those we have just noted that even a beginning can be made towards counteracting the influences now at work in favour of giving Turkey much more than is her due in the coming settlement. We are far from saying that it would be desirable to make Turkey pay the full penalty for all she has done and sought to do to the detriment of Christianity and civilisation. This country is itself a great Mohammedan Power, and in the war the Mohammedans of India helped us against their co-religionists in a manner and to an extent which we cannot and would not forget. In deference to their susceptibilities, our representatives have, we sincerely believe, already done a great deal towards averting from Turkey that destruction which Mustapha Kemal falsely declares we are trying to achieve. But between this and positively championing Turkey's cause, as we are asked to do, there is a distinction with a difference which we cannot allow to be wholly obscured, either by passionate pleas or half-veiled threats. We are told by Mr. Justice Ameer Ali that the Turks "will not submit to the cruel persecution of enemies who have yet to undergo years of pupilage to fit them for governing virile races possessed of long traditions of rulership." Has Turkey been guilty of no "cruel persecutions," and have her long traditions of rulership produced any enduring movements in the way of good government and contented and prosperous subject peoples? As for the menace of a militant Islam, with its back to the wall, that is real enough, and rendered all the graver by intrigues which are spreading throughout India, Afghanistan, Central Asia, and Egypt. But Islam is divided, and the indifference of many of the Young Turks to religion, save as a political weapon, may prove an insurmountable obstacle to any such union of Islamic interests as pessimists have foreshadowed. There is no doubt that the prospect before us with regard to this problem is not alluring; but it will not be improved by an exhibition of weakness or surrender of principles. We can appreciate the intensity of Moslem feeling in India, and should be unwise not to make such concessions to it as are fit and practicable; but it is not sufficiently realised by Indians that there are intense feelings on the subject of Turkey outside Islam, and that these, too, have a backing of moral and material force.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Afghanistan. November 4.

A debate took place on this subject, which is referred to elsewhere in this issue.

HOUSE OF COMMONS.

The Future of Syria. October 29.

Answering MAJOR GLYN, Mr. BONAR LAW said: No final statement in regard to the future government and administration of Syria and Palestine can now be made. The settlement of the future of these territories rests with the Peace Conference, which has not so far been able to consider the question of peace with Turkey, because the United States of America have not as yet defined their attitude in regard to the responsibilities they may be prepared to undertake. So far as Syria is concerned, the British Government announced to the Peace Conference last March that in no circumstances would Great Britain be prepared to undertake a mandate for Syria. Owing to the delay in the conclusion of the Turkish peace, already mentioned, we are making arrangements with the French Government and the Emir Faisul for the immediate withdrawal of British troops from Syria and for the assumption of the duties of occupation by the French and the Arabs pending the conclusion of the Turkish peace. I should like, further, to add that, if the Peace Conference grants to Great Britain a mandate for any of the territories of the ex-Turkish Empire, it is the intention of his Majesty's Government to introduce forms of administration which will give every encouragement to the growth and development of local governments and institutions.

An Armenian Republic.

In reply to Mr. A. WILLIAMS, who asked whether the Government was aware of the grave reports as to the position of the Armenian Republic at Erivan, and whether they would even now send these people means of defending their lives,

Mr. CECIL HARMSWORTH said: While his Majesty's Government have received similar reports to that referred to by the hon. member, other reports of a much more reassuring nature and of very recent date are also reaching them. Colonel Haskell, Allied High Commissioner for Armenia, who is at present on his way from the Caucasus to Paris, if he has not already arrived there, is expected to report on the whole situation in these districts, and the most serious consideration will doubtless be given by the Peace Conference to any recommendations which he may make for securing the safety of the Armenians.

Montenegro. October 30.

Mr. RONALD MCNEILL asked the Under-Secretary of State for Foreign Affairs whether the De Salis Report on conditions in Montenegro had yet been received; and, if so, whether he would lay it upon the table of the House?

Mr. HARMSWORTH: The report has been received, but the publication has not been considered desirable in present circumstances.

Mr. MCNEILL: Is the hon. gentleman aware that it is generally believed that this report is very condemnatory of the action of Serbians in Montenegro, and under these circumstances does he not think that the House of Commons is entitled to have the report?

Mr. HARMSWORTH: I have the report, but I think I can assure the House that it will not be convenient to publish it at the present time.

Mr. MCNEILL: Can my right hon. friend give any reasons for that decision?

Mr. HARMSWORTH: I do not think I could do so in answer to a question.

The "Goeben." November 3.

Mr. LONG (First Lord, Admiralty) informed Sir A. FELL that the "Goeben" had been surrendered partially repaired. She was in charge of a Turkish skeleton crew, in accordance with the terms of the Armistice. Every precaution was being taken to prevent her being scuttled and sunk.

Turkish Peace. November 4.

Replying to Captain ORMSBY-GORE, Mr. BONAR LAW, Lord Privy Seal, said:—I can assure my hon. and gallant friend that the Government fully realise all the evils resulting from the delay in settling the peace terms with Turkey, and are doing everything in their power to hasten a settlement. Captain ORMSBY-GORE asked the right hon. gentleman to say why we had to wait for the decision of America, considering that she had not been at war with Turkey. Mr. BONAR LAW did not think that that was quite conclusive. After all, America was in the war, and he was sure that the House would not desire that we should do anything that might appear to under-value the assistance that America might give in the general settlement. Answering a supplementary question, the right hon. gentleman said that he did not think it would be desirable to have a discussion upon the subject. The Government was in the hands of the House in a matter of that kind.

Armenia.

Captain ORMSBY-GORE asked what steps had been taken by the Allied Powers in Paris to ensure against further massacres of Armenians pending the decision of the American Government as to the future part they might or might not play in protecting the remnants of the Armenian nation.

Mr. CECIL HARMSWORTH: I would refer the hon. and gallant member to the reply given to the hon. member for Consett on October 29. There is a British force at Batum, and certain of His Majesty's ships are available for use in these waters if required. The protection of the Armenians is, however, only one of several objects served by these dispositions, the cost of which is borne by His Majesty's Government. Captain ORMSBY-GORE asked whether they were to understand that none of our Allies were contributing in any way to the protection of the Armenians. Mr. CECIL HARMSWORTH said that he should not like the hon. member to assume that.

Topics in Parliament.

The subjoined headings are those given in the official report:—ROUMANIA (PETROLEUM RESOURCES). DEMOBILISATION. Troops in Mesopotamia and India.—Troops in East. BLACK SEA ARMY. PUNJAB INQUIRY COMMISSION. (October 28.)

INDIA: Tibetan Boundaries.—Punjab Riots.—Oil Products (Export).—Proceedings against Newspapers.—Calcutta University Commission.—Army Officers' Pensions.—Locomotives.—Army Furlough and Retirement.—Government of India Bill.—International Labour Conference.—British Officers Medically Unfit.—Officers' Medical Aid.—Government Control of Rice (Burma). SUDAN GOVERNMENT LOAN. DEMOBILISATION: Signal Company, Mesopotamia. MESOPOTAMIA (MEDICAL SERVICE). INDIA: Civilian Services (Pensions).—Regular Army Officers (Distinction).—Educational Service (Pay).—Income Tax Offices (Gratuities). (October 29.)

PALESTINE. EGYPT: Lord Milner's Commission.

TURKEY. (PEACE TREATY). WILTSHIRE REGIMENT.—(RETURN FROM INDIA). EGYPTIAN EXPEDITIONARY FORCE. (November 3.)

CORRESPONDENCE.

SERBIAN CLASSES FOR ENGLISHMEN.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I wonder how many people are aware of the many educational advantages procurable in London.

A course of teaching has been started at King's College recently, with the idea of making those aspirants to commercial relationship with the Balkans familiar with Serbian, one of its most important languages.

A well-known professor from Belgrade has recently been appointed, with the object of cementing the already existing entente between Serbia and ourselves, to give a course of instruction in the Serbian language, which should prove as useful to those whose business may lead them to the Near East as to all students interested in a language full of philological interest.

The secretary of the University will supply all particulars.—I am, etc., LOUIS CAHEN.

Hook, Hampshire, October 24, 1919.

Appointed in 1914 to settle international disputes arising in Morocco, the Arbitration Commission on Mining Claims in Morocco has resumed its labours under the presidency of M. Gram, the Norwegian Minister of State.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

MUSICAL NOTES.

The most prominent feature at the present time is the winter season of opera, which commenced at Covent Garden on November 3. In studying the list of operas selected by Sir Thomas Beecham for performance, one is naturally interested to see whether or how the war has affected the British public in this popular form of music. Wagner we have, inevitably; Verdi, Puccini, Bizet, are apparently still indispensable; the Russians—Borodin, Moussorgsky, and the rest, for whom Sir Henry Wood really achieved the superficial miracle of popularity, are there; and of the two British composers represented Delius is the most important. It is, when the deplorable and increasing commercialism in music is considered, a good list, though not a representative one—that probably will not arrive until the world possesses real peace again—but one which will attempt to persuade the public to wear clothes other than those (*e.g.*, "Carmen" and "Faust"), which are now worn threadbare. In the *répertoire* are the names of unfamiliar works by familiar composers; it will be interesting to notice whether the public, which before the war was far more kind than discriminating, still is under the spell of a fancied name, or whether it has gained some power of independent judgment.

There are two other matters, the main interest of which is musical—I mean the Russian ballets at the Empire Theatre, and the revival of Gilbert and Sullivan's operas at Princes Theatre.

In the first, the staging and the dancing are extraordinarily good, increasing greatly the effectiveness of the music. The orchestra is admirably conducted by Adrian Boult, who in many ways, and for some composers, is the best British conductor.

The second, the Gilbert and Sullivan operas, is a matter the musical merits of which are still very stoutly maintained in this country, though outside this island (and its colonies) the opinion is all the other way. There is no doubt, however, that these operas are well inside the heart of the British public, and there appears to be no prospect of their being dislodged. No purpose will be served by discussing their merits and demerits here—the issue is decided, and the verdict of the past thirty years has been confirmed by the present generation. So far "The Gondoliers," "Iolanthe," and "The Mikado" have been played at Princes Theatre, and all have been enormously popular. The vitality of these pieces seems inexhaustible, and the present company, excellently conducted by Geoffrey Toye, exploits this freshness to the full. Yet in these operas we have received no more than we deserve, and it is improbable that, however well done, they will retain with the next generation their present popularity. Though it is by no means certain, it is possible that the new sense of values created by the war will condemn the bad patches (that is, the sugary sentimentality and trivial prettiness) of Sullivan, and that his operas will fall into an undeserved oblivion. The question will be whether his excellent humorous music will or will not save him.

ANDANTE.

The Georgian Information Bureau denies that the Georgian Government is placing an embargo on the importation of any war material through its territory into the Armenian State.

NEAR EAST BOOKSHELF.

SWITZERLAND IN WAR-TIME.*

During the war one heard little of Switzerland, and knowledge of its attitude towards the war and of its treatment of the various warriors was not common. In this simple yet moving narrative, Colonel Picot dispels this ignorance. He explains the life and activities of British prisoners of war in Switzerland, and recounts, with a modesty which unsuccessfully attempts to conceal the very great part he himself must have played, the arrangements made for alleviating the discomforts of the suffering prisoners. Of the Red Cross organisation, of the Swiss medical arrangement, and of the methods of employment and training of the interned, an illuminating account is given. A final chapter deals informingly with the artistic, musical, and social impressions gained at Berne during war conditions. One very interesting point Colonel Picot makes incidentally in his book—he shows, while insisting upon (and amusingly illustrating) the divergences between English and Swiss mentality and customs, the immense generosity to and pity for the sufferers of the war shown by the Swiss. Fundamentally, he thinks there is a common ground on which the various races may stand, and in this attitude of the Swiss people he finds a striking demonstration of a possible all-world brotherhood. Another point in this book, which is full of bright incidents, is the great service which British women rendered in Switzerland. It is not extravagant to say that they were the life and soul of the various organisations created for the benefit of the interned. Finally, one must state—though to readers of THE NEAR EAST the mere name of the author will be a sufficient guarantee of the worth of this book—that its contents are of such a nature as to make a very wide appeal.

THE MAKING OF THE FUTURE.†

Since reconstruction became the most overworked word in the language, many have tried their hand at "The Making of the Future," but here we have the beginnings of what promises to be a whole series devoted to the subject. Conscious as we probably are of each other's imperfections, there is no doubt that we all stand more or less in need of reformation; the trouble begins when we discuss ways and means. Here is Mr. Fawcett, for example, who is so bitten with the federal idea that he has recreated the Heptarchy, as it were, and divided England into twelve provinces—why not thirteen—as the first step towards the millennium. By an unlucky chance, the first of his provinces that we happened to open the book at was East Anglia, and we discovered with a shock that his East Anglia does not include Essex, which is lumped in with a sort of suburban omnium-gatherum with Kent, Surrey, and Sussex, apparently on the ground that Essex is economically dependent on London. If Mr. Fawcett means by this that Essex grows the produce which the Londoner eats, well and good; but one fears it really points to a belief that Essex is merely a "dormi-

tory" county. Perhaps Mr. Fawcett has never travelled further than Ilford. In any event, no two counties could be more different for soil, geological and geographical formation than Kent and Essex. Their history has always been different, and to unite these two, while dividing Suffolk and Essex, which are as difficult to tell apart as twins or teashop waitresses, strikes one as an unnatural division. If the makers of the future cannot do better than that, we should advise them to look at the past, which is precisely what Mr. Patrick Geddes (apparently no relation of the Minister of Transport) has done. He writes quite pleasantly about Westminster and Mayfair in "Our Social Inheritance," but the thing has been done before.

A GREAT AND GOOD MAN.*

Sir Valentine Chirol has written a very beautiful little memoir of an Englishman whose nobility of character and public achievements are too little known. Unfortunately, this book does not call for detailed review, because, although Sir Cecil Spring Rice did see service at Constantinople, Teheran, and Cairo, it is not mainly with the Near East that his name will be connected. We may, however, note the quiet loyalty to his country which informed all his works. "Steadfast as any soldier of the line," says Alfred Noyes, in a poem quoted in this book, "he served his England." Sir Valentine makes very plain the reverence of and devotion to ideals which stamped the life of Cecil Rice, and shows clearly that a refined character can make a clean affair even of world politics. Cecil Rice was no "ineffectual angel," and the result of his efforts has already been felt.

THE FUTILITY OF THE STRONG MAN.†

We are told on the cover that this is the love story of a strong man, but we sought in vain in the character of Captain Dalton for any attributes that suggested strength, even those usually shown by that rather incredible person—the fascinating, though ruthless, "strong" man of conventional fiction. We could only heartily endorse his description of himself as "a perfect specimen of a cad." Nor did we succeed in following the adventures of any of the characters—who all seemed to have a habit of falling dangerously ill when the situation became difficult—with any greater sympathy.

The heroine wins our interest more than the others, but is considerably handicapped by her name of Honor Bright. Most of the action takes place in a small station in Bengal, and the local colour is convincing, and on the whole interesting.

DREARY NEBULOUSNESS.*

Although Mr. Kahabardar's mother-tongue is Gujerati, it is into English lyrics that he has here attempted to put the promptings and yearnings of his soul. But we can say at once that the result is not poetry. He has, indeed, used the words and forms that poets use; but his vocabulary is monotonously small, and his command of English imperfect. His verse is but "words, words, words"; and Mr. Chesterton's condemnation of all this modern song of Beauty and Art and Love—the result of which is to "double you up and drag you down and damn your soul alive"—is in this case singularly apposite.

Shall the Remnant Perish?

Left Naked to Die

Our Agents assure us that in the battle areas of Asia Minor the retreating Turkish armies have destroyed the Armenian village homes and burned their crops—leaving the country absolutely without food. The greatest distress prevails—many of the poor Refugees have even been stripped of their clothes and left naked to die.

Existing on Roots and Leaves

Thousands of adults and children have not tasted any normal food for weeks, but have existed on roots and leaves and dandelions. The olive-green colour of their skin and deep sunken eyes testify to their ghastly sufferings.

Mad with Hunger

That these poor people—mad with hunger—have in many cases eaten the flesh from the bodies of their dead comrades needs no further proof than the Reports which have reached us from our own representatives in Armenia.

Shall we remain inactive whilst these people die? We have not known what starvation means in England, so let us gladly give what we can to help these unhappy people.

For the Honour of England

send help to save the remnant of the Armenian Nation. £20,000 is needed this Autumn to continue our work at Adana, at Ismid, and at Erivan.

Subscriptions and Donations should be sent to the Hon. Treasurer, Col. Gregory, V.D.

Lord Inchcape has left London for Paris.

The Queen of Roumania is staying at Locarno (Switzerland).

Lady Procter and Miss Procter have left for India, where they are spending the winter.

M. Roussos, the Greek Minister at Washington, left London on October 30 for New York.

Colonel Arion, Equerry to Prince Nicolas of Roumania, left London on November 2 for Paris.

Lieut.-Colonel C. S. Martindale and family have left 32, Chapel Street, Belgrave Square, for Malta.

There is no change in the state of the Persian Minister's health. He is still confined to his room.

The marriage of Captain W. Pickering and Miss Freda Hadden will take place in Colombo on December 4.

M. Politis, Minister for Foreign Affairs, has been appointed Greek representative on the League of Nations.

Colonel Sir Robert Williams, M.P., has left for Egypt and Palestine with Mrs. Madocks and Miss D. R. Williams.

Mr. Peter Haig-Thomas and Lady Alexandra Haig-Thomas have left for Egypt, and will be absent for some months.

Field-Marshal Lord Grenfell has left Overstone Park for St. Rode, Bournemouth East, which is his address for the winter.

Sir George McMunn, Commanding-in-Chief, Mesopotamian Expeditionary Force, has been on a tour of inspection in Northern Persia.

Dr. S. C. Carrington has been appointed to a Professorship of English at the French Jesuit College, Cairo, and left Malta on October 22 to take up his appointment.

Mrs. Archibald Little, better known in connection with the Far than with the Near East, is now paying a visit to her sister, Sister Augustine Bewicke, at Salonika.

The last meeting of the Royal Asiatic Society, 22, Albemarle Street, before moving into the new premises, 74, Grosvenor Street, W., will be held on November 11 at 4 p.m.

The Right Rev. Foss Westcott, Bishop of Calcutta, Metropolitan of India, late Bishop of Chota Nagpur, has been elected an Honorary Fellow of St. Peter's College, Cambridge.

It is reported that Dr. Dragoutine Koyitch, the Chargé d'Affaires for the Kingdom of Serbs, Croats, and Slovenes, has resigned. He will leave London this week for Belgrade.

According to the latest information available, Viscount and Viscountess Allenby, who had been visiting the grave of their only son in France, were leaving Paris for Egypt on November 4.

M. Venizelos left London on November 2 for Paris, where he will remain until the Treaty of Peace with Bulgaria has been signed. He will then proceed to Greece, breaking his journey for a day in Rome.

The marriage took place on November 1, at St. Bartholomew's Church, Southsea, between Henry Howard Long, second surviving son of the late Lieut. A. H. Long, Royal Navy, and Dorothy Frances, widow of the late Lieut.-Commander C. S. Morris, Royal Navy, fourth daughter of the late Colonel E. R. Reay, Indian Army, and Mrs. G. A. Nicolls.

The marriage arranged between Captain J. H. Grove White, I.M.S., youngest son of the late W. Grove White, and of Mrs. Grove White, 18, Elgin Road, Dublin, and Frances Katherine, second daughter of the late J. H. W. Rolland and of Mrs. Rolland, 4, Gledhow Gardens, S.W., will take place at St Columba's, Pont Street, on November 12.

The engagement is announced between J. H. Ireland-Jones, son of the Rev. P. Ireland-Jones and Mrs. Ireland-Jones, of Karachi, India, and Ruth, daughter of Mrs. J. L. Cotton, of Hartsleap, Sandhurst, Berks.

The marriage has been arranged, and will shortly take place, between Samuel Manning Manning-Kidd, of Oxenways, Membury, Devon, and Margaret, widow of Lieut.-Colonel Walter Charles Farwell, Indian Army.

Sir Roper Parkington is presenting a commemorative tablet, with the approval of his Excellency the French Ambassador, to be placed in the French Hospital in memory of the French soldiers of London who were killed in the war.

The engagement is announced of Leslie A. Anstiss (of Calcutta), the only son of Mr. and Mrs. Anstiss, of Honor Oak Park, and Marion, the fourth daughter of the late William Parker and Mrs. Williamson, of Forest Hill.

At the Greek Legation on October 29 the Greek Minister handed to Mr. F. W. Emett, Director of Reuter's Intelligence Bureau, the Insignia of the Gold Cross of George I., which has been conferred upon him by the King of the Hellenes.

The engagement is announced between Brevet Major Allan C. Arnold, M.C., Middlesex Regiment, only son of Lieut.-Colonel A. S. Arnold, late 26th Light Cavalry (Indian Army), and Marie Louise, only daughter of Mr. and Mrs. Antonio Muriedas, of Madrid.

An engagement is announced between Captain Henry Dane, Q.V.O., Corps of Guides, F.F., younger son of Sir Louis Dane, G.C.I.E., and Lady Dane, of The King's House, Lyndhurst, and Florence, elder daughter of Major H. T. Timson, of Stydd House, Lyndhurst.

The engagement is announced between Major John E. Carey, 28th Punjabis, youngest son of the late Mr. and Mrs. H. Carey, of Guernsey, Channel Isles, and Alicante, Spain, and Gladys, youngest daughter of the late Dr. Gregory Kealy and Mrs. Kealy, of Glengarry, Woking.

The engagement is announced between the Rev. Robert W. Howard, chaplain of St. Aidan's College, Birkenhead (T.C.F., France, 1916-19), and Ruth Marjorie, second daughter of Mrs. Simpson, 4, Richmond Road, Headingley, and the late Rev. W. B. Simpson, of Madras.

It is announced that the marriage was celebrated on September 25, at Christ Church, Simla, by the Rev. Canon Menzies, between David Ranken Lyle, Indian Civil Service, and Muriel Wreford, daughter of Nathaniel Heard, Principal of the Government School of Arts and Crafts, Lucknow.

The Central Arabian party, in charge of the political officer, Mr. H. St. J. Philby, left London on November 3 to spend two days at Cambridge. The members of the Koweit Mission proceeded to Glasgow on November 3. Thence they sailed on the following day for the Persian Gulf.

Sir Walter Becker had the honour of being received by the King, on October 30, when his Majesty invested him with the Insignia of a Knight Commander of the Most Excellent Order of the British Empire (Civil Division). Lady Becker was also present on this occasion at Buckingham Palace.

The engagement is announced between Lieut. A. E. de B. Jennings, Royal Navy, only son of the late Colonel R. H. Jennings, C.S.I., R.E., and Mrs. Jennings, of 20, Roland Gardens, S.W., and Veronica, second daughter of Mr. and Mrs. Nevile Gwynne, of Bevendean, Oxshott, Surrey.

Dr. Ronald M. Burrows, Principal of King's College, London, underwent a serious operation on November 4 in a London nursing home. As far as it went the operation was successful. Unfortunately, however, it could not be completed, and Dr. Burrows has to undergo another operation in a week's time.

The marriage was celebrated on October 30, at Ealing Wesleyan Church, by the Revs. C. W. Andrews and J. Flew, between the Rev. J. Mervyn Young, of Burma, son of the late Rev. David Young and Mrs. Young, of Ealing, and Constance, daughter of J. R. Wooster, Esq., and Mrs. Wooster, also of Ealing.

A marriage has been arranged, and will shortly take place, between Major G. E. Cathcart, O.B.E., R.A.M.C., youngest son of the late Major H. D. Cathcart, Indian Army, and Pauline, daughter of the late Lewis Berkeley Calcott, M.R.C.S., L.S.A., of Oundle, Northants, and Mrs. Berkeley Calcott, of 11, Heene Terrace, Worthing.

A dinner was given on November 3 at the Lyceum Club, with Mrs. Clarke Nuttal in the chair. The principal guest was Lady Surma d'Mar Shimun (sister of the Patriarch and temporary ruler of the Assyrian nationality in Kurdistan), who has come to London as a delegate to the Government, with the object of settling the future of the Assyrians, who were our Allies in the Great War. Among the other guests were the Rev. W. Wigram, head of the Mission to the Assyrian Churches; Captain Mac-Roberts, late Military Governor of Busreh; and Sir Henry Stone, Director of Public Instruction, Madras.

Digitized by Google

The engagement is announced of Charles Francis Moysey, only surviving son of Major-General C. J. Moysey, C.M.G., and of Mrs. Moysey, of Bathealton Court, Wiveliscombe, Somerset, and Emily Mary, only daughter of Lieut.-Colonel H. St. P. Maxwell, C.S.I., of 20, Oakley Avenue, Ealing.

The marriage was celebrated in November 4, at St. John's, Notting Hill, by the Rev. W. H. Mackean, D.D., between Ernest, younger son of J. L. Bolden, C.V.O., of 28, Lansdowne Road, Holland Park, and Hyning, North Lancashire, and Florence, fifth daughter of the late W. A. Allardice, Esq., of Mylemone, Mysore, India.

Mr. Archibald Forder, a missionary who was rescued by the British troops at Damascus after four years' captivity in the hands of the Turks, has arrived in England, and was received by the King at Buckingham Palace. For the good work he did in Damascus during the war by insisting upon the decent burial of the British dead and recording their names, General Allenby, on behalf of the military authorities and the bereaved relatives, personally thanked Mr. Forder, and a report of this invaluable work was forwarded to his Majesty. Mr. Forder has lived as a missionary among the Bedouin tribes of Arabia for twenty-four years.

THE SHAH OF PERSIA.

His Imperial Majesty the Shah of Persia was received, on landing at Dover on October 31, by the Prince Albert and by members of the Persian Legation. Accompanied by Prince Albert, he travelled by special train to Victoria Railway Station, where he was met by the King. On arrival at Buckingham Palace he was received by the Queen, accompanied by the Princess Mary. In the evening the King and Queen gave a banquet in honour of the Shah, at which the Prince Albert, the Princess Mary, the Princess Beatrice, and Prince and Princess Arthur of Connaught were present. On November 1 His Imperial Majesty received at Buckingham Palace the Ambassadors, Ministers, and Chargés d'Affaires to the Court of St. James's. Then, accompanied by Prince Albert, he visited the City of London, and at the Guildhall was presented with an address from the Corporation by the Lord Mayor, who afterwards entertained him at luncheon. Large crowds assembled on the route of the procession from Buckingham Palace and accorded the Shah a warm welcome.

In the afternoon he paid a private visit to Windsor Castle, attended by his Suite and the Gentlemen specially attached. Before leaving he deposited wreaths on the tomb of His Majesty King Edward VII. in the Albert Memorial Chapel, and on the tomb of Her Majesty Queen Victoria in the Royal Mausoleum at Frogmore. Accompanied by the Prince Albert, and attended by his suite, he honoured with his presence at dinner the Earl Curzon of Kedleston (Secretary of State for Foreign Affairs) and the Countess Curzon of Kedleston, at their residence in Carlton House Terrace. During the evening, accompanied by the King and Prince Albert, he visited the Empire Theatre and witnessed a performance of Russian ballets.

On November 3 he went to Aldershot to see a microcosm of the British Army and the Royal Air Force. In the evening, accompanied by Prince Albert, he visited His Majesty's Theatre and witnessed "Chu Chin Chow." The following day he proceeded by train to Manchester, where he stayed two days. On November 5 he left for Edinburgh, where he stays until to-night. To-night he goes to Dover, leaving that port to-morrow for Calais.

OBITUARY.

The death occurred on November 1 at Mundesley, Norfolk, of Captain Charles John Gunning (late) Indian Army, eldest son of the late Colonel John Campbell Gunning, Indian Army, and of Mrs. Gunning, Grasmere, Fleet, Hants, in his 54th year.

Sir Henry William Bliss died on October 28 in his eightieth year. He was for five years a member of the Council of Madras, and acted as Governor in 1896. He was made a K.C.I.E. in 1897, and retired from the Indian Civil Service in the following year.

The death took place on October 29 at his residence in Chesham Place, S.W., of Major-General Sir Alfred Henry Wilmot Williams. Sir Alfred, who became Colonel Commandant R.H.A. in 1905, was at the siege and fall of Sevastopol in the Crimean campaign, and fought at the action at Mooltan in the Indian Mutiny campaign. In 1880 he was appointed an extra A.D.C. to the late Duke of Cambridge, and subsequently became an Equerry-in-Waiting. Sir Alfred was created a K.C.V.O. in 1904.

Sir Roland Knyvet Wilson, of Delhi, Bt., the well-known jurist, died at Richmond on October 29, in his 80th year. Though Sir Roland had not lived in India, his keen interest in her legal and social institutions and his wide erudition, if not his first-hand experience, fitted him well for the Readership in Indian Law at Cambridge, to which he was appointed in 1878. He filled the position for fourteen years, and the large number of Indian civilians who then and previously passed through his hands held him in deep respect. His brief "Introduction to the Study of Anglo-Mohammedan Law," in 1894, was followed within a year by his comprehensive "Digest" of that law.

The death occurred on November 2, at Foulden Hall, Norfolk, of the Dowager Baroness Amherst of Hackney. Lady Amherst, who was a Lady of Justice of the Order of St. John of Jerusalem, was a lady whose interests and activities were extremely wide and varied. A keen traveller, Lady Amherst had an intimate knowledge of the Near East, and had journeyed much in Upper and Lower Egypt. She made her first trip up the Nile in 1860, and was one of the first Englishwomen to visit Palmyra. She wrote a history of Egypt from the earliest times to the present day, and catalogued and arranged the large collection of Egyptian antiques which she and the late Lord Amherst accumulated at Didlington.

NEWS IN BRIEF.
